He is at once an unknown and the most publicly limned presidential challenger in history: microscoped by journalists straining to Woodward Bernstein themselves to glory; probed by an opposition convinced that if the scalpel cut deeply enough, the flesh would prove corrupt; nakedly revealed by his own uncommonly candid observations on religious conviction and sexual temptation.

In the end, a large and vital undecided bloc fell Carter's way—as comfortably as 3-2 among those who decided only in the campaign's waning hours. They responded to no flash of insight into the candidate, but to their own viscera: to party loyalty, to a gut realization that a limping economy needed fresh initiatives, perhaps above all to some empathy, some mysterious communication with the Georgia peanut farmer which said "trust me."

This appeal had elevated Carter in two arduous years of stump speeches and fleshpressing from obscure former Southern governor to captor of the Democratic Party and peaceful vanquisher of its chieftains. It had buoyed him to an impossible 35-point poll margin in the heady days before Republicans declared a truce in their blood war and handed their banner to the sitting President.

But Jimmy Carter's invocation of faith and love was ephemeral as Summer-cloud phantoms, easily dissipated by skillful Republican-raised doubts, and by the iconoclastic huffings and puffings of a media corps who with notable but rare exception covered the campaign like cubs chasing fire engines.

Those comforting Carter Summercloud assurances coalesced once more in the days before Nov. 2, tangible enough to sustain a three-point lead for the Democratic candidate—a clear majority of those who did not succumb to the confusion or self-gratification of nonvoting.

Still, Mr. Carter goes to Washington a stranger—at least, to most Americans. Trust him? They'd *like to*, after White House betrayals of confidence. They *want to*, after perceiving the American military/economic giant Gullivered by nations heretofore no more than blips on the globe. They *need to*, with consumer prices ever higher, and friends and family and sometimes themselves unable to find jobs.

So trust him they will, at least for the time. But President Carter must move fast to allay their concerns, for their trust is based on hope, not understanding of the man.

After such intense examination, external and internal, why is Carter a mystery? The reasons are a melange of regional, cultural and individual characteristics.

The simplicity of Carter's origins itself is out of sync with an America grown urban and doubting. Many of us grew up in small towns and later moved to larger cities; that is a common national pattern. But it enhances Plains' dimensions to characterize it as a "small town." Even today, double the population of Carter's youth, it is a village. And Jimmy Carter wasn't from *Plains* originally. He was from *Archery*, little more than a postal identification. He was a farm boy, considered a country outsider by the Plains kids when he enrolled in their school.

Later the boy and his family moved to Plains—a broadening of horizons barely perceptible by today's measure. But no matter his later experiences—Naval Academy, career officer's life, Georgia senator, governor, national candidate—the boyhood perspectives of Plains and Archery indelibly colored the man's vision.

. . . A community so small you knew everyone, and lifewise everyone knew you and your comings and goings . . . the rust-red main street of Georgia clay, dusty in drought, aslosh after a downpour . . . boyhood chores: pumping water, cuting stovewood.

THE CARTER PROMISE

(By Martin Shartar)

November 3 was bright and sunny in Atlanta, especially for Democrats, and noticeably so for Congressman Andrew Young. He was downtown early—smiling, shaking hands, thanking voters who had returned him to Washington for a third term. Clustered at bus stops, they were a demographic microcosm of Young's constituency: black domestics headed toward suburban kitchens, youthful white Northsiders inbound to downtown offices.

That mix had cast 66.7 percent of the majority-white Fifth District's vote, forming a coalition almost beyond analysis. Even the Voter Education Project's profile of Young's 1972 victory had hedged at offering a simple explanation for that historic campaign—Georgia's first black U.S. Representative since 1870, the first Deep South black congressman since Reconstruction, perhaps the first black American ever elected by a majority-white district.

The VEP report settled for "an intangible chemistry" between the candidate and his constituents. An hour's conversation with Young clarifies the chemistry. Its distillation is a uncommon meeting of equality and humanity.

Ask him, for example, what Jimmy Carter owes to black voters, more than 80 percent of whom—nationwide—nudged the white South Georgia peanut farmer into office.

"He owes black people the same thing he owes white people," says Young, "and that's good government and the best return they can get on the tax dollars invested in this country."

Delivering good government is a managerial challenge. "Nobody's ever tried to manage this government," declares Young. "It's a $400 billion corporation, and there's never been a President who conceived of his job as minding the store. The President expects the government to run itself, but I think Jimmy Carter has been sensitized to the management functions of the Chief Executive. And I think he's the first President who has been.

"Essentially, Presidents don't think in those terms, and the Congress didn't have a Budget Committee until this last session. We were a rich country, we thought we had endless resources and just went on and did anything we wanted to do, figuring it would all work out. Now we've got to be a little more careful."

Experience as a Southern governor will help Carter juggle diminished resources, Young suggests. "As governor of a state that's always had to be conscious of its resources, the only way he could do anything good was to manage well. He had to make the government work to have a little money extra to do some of the creative things he wanted to do."

Though described as "the Congressman who has the incoming President's ear" and the person to whom Carter is most politically indebted, Young minimizes his access *and* influence: "That's a very overrated kind of thing . . . That kind of potential power is like money in the bank. You've got it as long as you don't use it. When you start using it, it runs out quick."

Discounting influence, Young voices specific expectations from Carter's administration. "I think the key word is going to be a reconciliation of tensions in our society. If you're going to deal with inflation and unemployment, the tension between business and labor is going to have to be minimized—they have to learn to cooperate.

"The tension between Congress and the Executive branch has got to be reconciled if we're going to reorganize the government and deliver human services.

"The tension between political and economic realities has to be reconciled . . . Much of the time in the Ford and Nixon years we had foreign policy and international economic policy operating at cross purposes, literally cancelling each other out. [Carter's appointees] will tend to work as a team, and foreign policy will be integrated with domestic policy."

Young acknowledges other divisions that must be healed—urban/rural, urban/suburban, white/black, upper/lower income groups—but believes that Carter has already begun such healing.

"Just by sending Amy to a public school which happens to be 60 per cent black, 10 per cent white and 30 per cent other minorities, he'll establish a tone that will say more about race relations than any executive order or any law passed ever could. In that act, he also makes a bridge between the classes. For the President to show a new respect for public schools makes them the 'in' thing rather than private schools."

Asked if that doesn't sound overly optimistic, Young responds: "No—because I re-

member how quickly the mood changed when the John Kennedy style replaced the dour Eisenhower years. The country was revitalized almost on the eve of that Inaugural speech. It didn't have anything to do with the laws passed . . . it had nothing to do with anything except that there was a new style sweeping the country.

"And almost regardless of what he says, Jimmy Carter is a new phenomenon in the world. He represents a kind of Southern culture and style more exotic to the Eastern Establishment than anything that could come out of Boston and the Kennedys.

"That pervasive style creates a mood in the nation, a mood that will make people invest their money because they believe that good things are going to happen. People who've been pessimistic about the future will begin to feel that here's a guy who really looks like he can take charge and run things."

Other positive attitudes stem from Carter's victory, says Young. "For a man to come from Plains, Ga., a suburb of nowhere, to the top position in the world today—there's no way that can't inspire hope in all kinds of people all over the world. I got a phone call the night before the election from a friend in Africa. He said he had to talk to me *before* the election because he wanted me to know that 'the people say Carter is going to win.' . . . He meant that strange collection of folk-wisdom once attributed to witch doctors, a kind of identification with Jimmy Carter as a poor boy having made good. You get the same thing from so many places. It's important to identify with somebody who came from obscurity to prominence."

What chords did Carter harmonize to get from Plains to prominence? "He stood for all that people used to believe in and were losing faith in," Young answers. "He was personally well disciplined, he worked with his hands, he studied, he walked through the fields . . . I think it was significant that the TV commercials were all from Plains, showing a guy running for President in an open shirt and blue jeans and boots, reminding people very subtly of a simpler lifestyle when life was well-ordered and meaningful, and saying that we can still have that again."

That appetite for order transcends nostalgia: "I think we can never go back to where we were, but there are values from the past that are still relevant. It's significant that the controversy in the campaign was Carter's religion. Everybody had to make a personal assessment of their own religious faith. If they had no religious faith themselves, were they threatened by somebody who did believe in something beyond himself?"

Carter's notorious *Playboy* interview elicits laughter from Young. "Whatever else you can say about it, he said 'I'm not going to lie,' so he was brutally candid about his personal lusts. When have you ever seen a campaign where something like that would be an issue?"

Discussing the integration of Plains Baptist Church as a campaign issue, Young detects a hint of political dirty trickery. "I refuse to think this was a spontaneous event conceived of solely by [the Rev.] Clennon King. He wasn't paid—he's very sincere—but he's also very vulnerable."

And segregated churches are not a regional characteristic, says Young. "Everybody's church is still segregated . . . Maybe the Plains Church did pass a resolution in 1965 which they'd never bothered to cancel, but 11 o'clock Sunday morning is still the most segregated hour of the week . . . You'd be hard-pressed to find a couple of hundred truly integrated churches among the thousands that exist."

Young detects something beyond irony in massive black support for a Deep South candidate. "There's a note of irony to people who don't know the South and were therefore surprised. There's also a kind of beauty in it, a poignancy that fulfills the prophecy that Frederick Douglass made over 100 years ago and Martin Luther King Jr. made again in 1957. Douglass said that the struggle for freedom is the struggle to save black men's bodies and white men's souls. King said, 'Give us the ballot and we will elect to the halls of Congress and high places in this land men of good will who love mercy and do justly.' And it's happening.

"People saw in Jimmy Carter not a man who is perfect. We blacks tend to assume that all of American life is contaminated by racism—every single aspect of it—and Southerners who know that and have struggled with it in their own personal lives and in their own families, as Jimmy struggled between his mother and father from childhood, are far more trustworthy on the race issue than somebody who may have read about the problem in a book but never confronted their own racism.

"When the Congressional Black Caucus met with all the Democratic candidates, it was interesting that all of them except Jimmy Carter had Washington experience and knew most of us personally. Yet, when they came into the room with 15 or 16 black folk, they were all nervous. And it was obvious—they were defensive. They just didn't act themselves. Jimmy didn't know anybody in the Caucus personally but me, and he came in and immediately was at ease and relaxed. And people gave him a much harder grilling than they'd given anybody else, in part because I asked them to.

"I never told him this, but I went to [Rep.] Barbara Jordan and said, 'Barbara, I want you to ask Jimmy Carter any questions that comes to your mind. I don't want you to take my word for it that he's a good guy, I want you to be as tough on him as you possibly can.'

"And she said, 'Well, I'll be glad to take that invitation.' She shot four or five very straight questions—and is so authoritative in her manner of speech—but it never flustered him. He gave answers—not the things she wanted to hear all the time—but when he disagreed with some of her conclusions, he explained why. And people were appreciative of the fact that he was man enough to come in there and in a comfortable, relaxed way be himself and not be intimidated.

"I think he won more points by his disagreement than by saying the things we'd have liked him to say, because that was a mark of integrity. But he was more comfortable and relaxed than any of the others, and yet they were supposed to be the liberals and he was supposed to be the Southern moderate or conservative even.

"I think that was a thing people sensed across the country, and it could only have happened because in a way he grew up in an integrated neighborhood."

Call it what you want, Young agrees there's no white flight out of Plains.

Young also agrees that topping the list of Carter priorities is bolstering the economy. "We've got to get the economy going, and I think that's going to happen in part because of this new confidence that his Administration will inspire." Acknowledging that the market did not reflect that confidence immediately following Carter's victory, Young comments: "Republicans took a whipping. The American people vetoed them. They've got most of the money, and I think they haven't yet come to their senses. It's hard for these guys to admit that they do better financially during Democratic administrations and that Democratic economic policies have ultimately proved better for them than the Republican policies they believe in and advocate.

"There's a kind of schizophrenia there that in a good number of American businessmen takes a little time to heal. 'Pretty soon they'll realize they have an excuse to say, 'Well, maybe we misjudged him. He's not so bad after all."

And that will probably be history's evaluatin of Gerald Ford, Young suggests. "The most positive thing that can be said for Ford's presidency is that he held us together through a crisis that would normally have pulled a nation apart. He could have done a lot better in that he had a mandate from Congress that was 387 to 36 in his favor.

"Knowing that Congress, he could have worked with it and developed a cooperative approach to problems. If instead of letting us pass something, him veto it, we modify it and then come back—had he gotten together with us in the first place and agreed to a modified version and had it passed cooperatively, he would have continued in that great tradition he came into the White House with.

"But Ford got concerned too soon with Ronald Reagan snipping at his heels. It was almost as though every decision he made was designed to counter Reagan's potential influence within the Republican party. If he had kept his promise not to consider running for President, but just have pulled the nation together and been the best President we could have for two-and-a-half years, I think he would have been elected almost by acclamation.

"But he really blew it, and in a way it's tragic because he *is* a very good guy. But he didn't know who he was, and Jimmy Carter very definitely knows who *he* is."

Young describes the Carter *he* knows: "[He's] one of the best disciplined, most serious, dedicated and intelligent people I've ever met. I think, as the title of his autobiography says, he wants the best. And he understands that the best is not something for Jimmy Carter. He knows we can only have the best for this country if we are able to have the best for the least of these in our midst. As the German theologian Dietrich Bonhoeffer said, the Christian life is really a life lived for others.

"I think that's the way Jimmy Carter conceives of his life, and I think that's also the kind of burden he feels. It's a self-imposed burden that is more important than winning or losing an election. I think Jimmy Carter is going to be the kind of President who will do what's right as he sees it and not cut corners anticipating the next election."

When will the least of these be embraced by the rest of us? "I think we're getting that was already," Young responds. "We are all perfectionists in this country, and no matter how good we do, we're always much more aware of our imperfections that we are of our progress."

Evaluating Carter's election as a mark of progress, Young summarizes his positive assessment of our national mood *and* measure: "With this election we've said in a sense that the American political system can really work, that you can grow up in America in a little country town—in a backwood even—attend a segregated school and still become President of the United States.

"You can overcome racism and poverty and ignorance and disease. Jimmy Carter's life and his career demonstrate that it can be done. In a way, he challenges us to say 'Let's do it for everybody. Let's really make this the great nation that we want it to be.'"

Because of assassinations of Kennedys and King, Vietnam and Watergate, says Young, "We've begun to doubt that we are as great as we originally thought. But I think now that we're ready to see that that's life, that we're not perfect.

"I'm reminded of a quotation that Dr. King used from an old Negro preacher that said: 'We ain't what we oughtta be, we ain't what we're gonna be, but thank God we ain't what we was!'

"We can achieve so much with the technology we have, with the tremendous human resource and now with the leadership that's going to be coming from lots of different places. I don't think that Jimmy Carter is a one-man savior of this nation, but I think he will inspire lots of people to save themselves.

"He makes *me* want to be better than I've been, because I see in him a man I have to look up to. I'm not nearly as disciplined as he is, or as organized. I know that next term I'm going to be a lot better legislator than I was last term, and the things I sort of took for granted I'm really going to work on.

"I think that mood—*that we can do it*—is the pay-off of this election. And I think we will."

THE PRESS ON GUARD

Within a few weeks the relationship between President Jimmy Carter and the White House press corps will change, and what Americans will read, see and hear will be historic roles replayed: The presidency and the press will again have become adversaries.

And increasingly so because of the heightened skepticism by reporters who feel they were burned by misleading statements from the White House during the eras of the Vietnam War and Watergate.

The knowledgeable prediction comes from William (Bill) Moyers, in an execlusive interview with Atlanta. Moyers, now with CBS–TV as a producer, was press secretary to the late President Lyndon B. Johnson, and later publisher of *Newsday*.

"At first they [the White House press corps] will be curious, then inquisitive, then skeptical," he said. "You can expect a good relationship in the beginning as reporters jockey to find the proper perspective from which to look at Carter, to find out who's *in* and who's *out*, who's seen and unseen. In the White House, people unseen are often more important than the people seen. It takes a long time for the fans, when a new ball team comes to town, to learn the signals, and know how to watch the game. And that's like the first six to eight months of the new President's term.

"There is a period of fencing, probing, letting things settle in. It's not a honeymoon; they've already gotten married and moved into the house. It's a period of putting the furniture in the right place, moving it around while the house itself may besettling on new foundations. There's always a period in which protocol prevails, and you're deferential to one another. Then the innate differences in the mandates of the press and the President become sharper, more evident, more imperative. That's when they begin to quarrel, bout, challenge. The President has a mandate to govern the affairs of state; the press has a mandate to find out what he's doing."

As press secretary to Johnson, Moyers said he had no obligation to advise him which reporters were perhaps more hostile, which reporters the President should ignore for fear of hostile questions.

"The President always knew who was hostile and who was after what, because he read the papers closely and had scuttlebutt coming to him from the press corps and friends. There were times when I would inform him that a reporter was working on a story about his [Johnson's] financial arrangements, or that another was trying to find out when he was going to sign the loan to India, or one was inquisitive about whom he was going to appoint as ambassador to the U.N. Yes, if I did my work well, I knew which reporters were looking for what; I knew their general bias or curiosity about certain stories, and I would inform the President beforehand."

The role of a press secretary requires, beyond competence, the skill of a diplomat, and the agility of an acrobat. Jody Powell, press aide, has had a special relationship with Carter for years. The question is whether Powell will be funnel or filter between the press and the President.

"Both," said Moyers, "and more. A good press secretary tries to overcome the frustrations of that scriptural admonition that no man can serve two masters. Professionally, Powell has to understand the role of the press, but *personally* he has to be loyal to the President. It is a delicate exercise. Powell has to help the press, he has to report the President's activities, has to interpret the press' needs to the President, and there are times when the loyalties will confound him, and it will be difficult to do either/or. He'll have to be a little of both, and that will alienate the President at times, anger him, and at times frustrate the press. And Jody is in the middle."

But early in the new presidency, the "press will be more professionally tolerant than later when they realize the difference between [the President's] indecision and 'stonewalling.'

"I can't judge how intimate Jody is with Carter. It would surprise me if anybody could be any more privy to a President's thinking or activities than I was when at the White House. Before I became press secretary, I had spent thousands of hours with Johnson privately. I had lived in his house for six months during the 1960 campaign, and I had been closer to him than Lady Bird during the 1964 campaign. Being that close to a President is both helpful and harmful.

"You have to know a great deal about what the President is doing to know what *not* to comment on. I suspect Carter and Powell will be in trouble not because they [may] lie but because they will discover you cannot *always* tell the truth on the press' agenda or timetable. There are times when you do not lie, but you do not tell the truth because to tell the truth would be harmful to policy at that moment."

Moyers does not find post-Vietnam and post-Watergate White House reporters more critical, but they "are more *aware* of having been burned in the past. They were at a disadvantage during the Vietnam war because the Administration was trying to put the best face on information it was receiving, while reporters *in* Vietnam were dealing in interpretations and they contradicted those in Washington. The White House press corps, however, with limited access—because the access *is* limited by the White House—was confined largely to writing the President's interpretation, which was always the positive interpretation.

"It's not surprising that the most important coverage of Watergate was done by two [*Washington Post*] police reporters who were not close enough to the tempting, seductive allures of the White House to be taken in. Now the White House press corps is more determined than ever to play the Doubting Thomas. It *should*, because it's been twice burned. I don't believe they're trying to be on a peer relationship with the President. I don't know anybody in the press—except maybe some small, smug arrogant columnist who's been giving the President-elect advice about who he must appoint to office—who really considers himself on a peer relationship. And some of the columnists in Washington would never admit that the President's their peer: They would not come down to that level!"

The danger signals that the President is limiting his promised accessibility to the media are obvious; said Moyers. What are the signs?

"If Carter reduces the number of press conferences. If he issues an order to the White House staff to channel all press inquiries through the press secretary's office. If he chooses favorites in the press corps. If he becomes offensive, removed and wary . . .

"But remember: Presidents very seldom have press conferences except to serve their own convenience. And that's legitimate. The most important stories do not come out of press conferences, but from the hard and analytical work by plodding reporters calling around Washington. That is exemplified by John Osborne in *The New Republic* magazine. Osborne, the best President-watcher there is, very seldom sees the President. What he does is watch the White House, talk to people throughout the government, read, widely, and then he makes analytical judgments. And that's where you get most of your information as to what a President's up to.

"Any time a President calls a press conference, it's because he wants to espouse the *official* view of reality. But if we learned anything from Vietnam and Watergate, it's that we need an alternative view to the official view of reality: therefore, the press conference is insufficient."

Accessibility to the media is easier read than done. Just ask Moyers:

"When I left Washington [eight years ago] there were 1,600 journalists—American and foreign—accredited to the White House. How the devil does a press secretary or the President serve all of them? Many in the Texas press corps turned on me when I became press secretary because, though we had been friends in Texas and in the first days of the Johnson Administration, they felt I had 'sold out' to the national press. Well, I *did*, unfortunately, because the President had become more than a regional official.

"I know the problem Jody will face. He will have more than 1,600 members of the White House press corps wanting a bit of his time. That adds up to 37 hours a day. The President relies on him for personal advice and counsel, wanting 10 hours of his time a day. That's 47 hours. Powell's wife would like to see her husband at least 15 minutes a day. His children would like to see him 30 minutes a day. And he needs a little bit of time to go to the bathroom. Now which of these obligations . . .?"

Based on his own experiences, Moyers does have a parting shot of advice for Carter and Powell: "Learn to breathe deeply, laugh a lot, and recognize that both of you—you and the press—are trying to be responsible in a democratic process."

THE RIGHT HONORABLE PIERRE ELLIOTT TRUDEAU, PRIME MINISTER OF CANADA

Mr. SPARKMAN. Mr. President, tomorrow the Congress will have the pleasure of hearing at a joint meeting the Prime Minister of Canada, the Right Honorable Pierre Elliott Trudeau. It is not my intention this morning to deliver a long speech of welcome, although "welcome" is on the lips of all of us. Rather, I would like to review for my colleagues the formidable career of our distinguished visitor and the present relationship which exists between our two countries.

Mr. Trudeau was born in Montreal in 1919. After graduating with honors in law from the University of Montreal, he was called to the Bar of the Province of Quebec in 1943. He received a master of arts degree in political economy from Harvard University, and did postgraduate work in law, economics, and political science at the University of Paris and the London School of Economics.

Mr. Trudeau was elected to the House

of Commons in 1965. He was appointed Parliamentary Secretary to the Prime Minister in January 1966 and in 1967, he was appointed Minister of Justice and Attorney General of Canada. In April 1968, he became Prime Minister of Canada, and was reelected in the October 1972 general election.

Mr. Trudeau was married in 1971 to the former Margaret Sinclair. They have three sons.

The Prime Minister governs the second largest country in the world although its population is only about a tenth the size of the United States.

Canada has a common frontier with only one country, ours, but sometimes we forget that not only does it run 3,500 miles from east to west, but also 1,500 miles in the northwest along Alaska.

Climate and geography have forged close links between the peoples along our invisible frontier and although in some cases this has brought disagreement, we share a common culture, similar political institutions, and close business and commercial bonds.

The cross border trade every year comes to over $40 billion—greater than between any other two countries in the world.

It is estimated that 70 million of our citizens cross the border to visit the "other" country; about a million Canadians live here and about half that many Americans live in Canada.

About 60 percent of all unionized Canadian workers belong to American "international" unions. The real value of U.S. direct investment in Canada is probably in excess $50 billion, and the balance of trade between the two countries continues to show a Canadian deficit.

Even in the cultural field, the United States looms as a giant influence. More than half of the Canadians say they prefer U.S. television programs to Canadian. They read our books, magazines, and newspapers. Canadians feel that our impact is so great we stifle the development of a Canadian counterpart.

A study published a bit over a year ago by the Canadian Standing Senate Committee on Foreign Affairs contains two significant paragraphs which should make each of us more sensitive tomorrow to the Prime Minister's words of friendship and his enumeration of his country's concerns which he will be bringing to the attention of President Carter. I shall quote only part of each:

> The United States has 10 times the population and over 10 times the gross national product of Canada. In military terms it is a superpower, in economic terms a giant. Because of this disparity, Canada is more dependent, more sensitive and more vulnerable to the state of the relationship than is the United States. For Canada, it is by far the most important of all its external relationships.
>
> It is the Committee's opinion, that in a nationalist atmosphere, the Canadian government must go out of its way to ensure that difficult problems are handled in as balanced and mature a fashion as possible. . . . Further, it is important that the government be fully conscious of the number and variety of issues in contention between the two countries at any one time. . . . Once the priorities have been established, policy choices must be made as well as the strategy and techniques for proceeding. The Committee urges the government to be ever mindful of setting a constructive tone. Style and timing . . . are key elements in creating an atmosphere conducive to cooperation and problem solving.

Mr. President, I am certain that the Right Honorable Pierre Trudeau fully represents in his own self and position the "key element" conducive to cooperation and problem solving. The United States is honored and flattered that his Government has set such high store on "setting a constructive tone" that he has come to address a joint meeting and visit with this country's highest officials in the early days of President Carter's administration.

COMMENDING LITHUANIANS ON THEIR DAY OF INDEPENDENCE

Mr. LUGAR. Mr. President, I am pleased at this time to recognize Lithuanian Independence Day and to pay tribute to the proud people of that country who so steadfastly cherish their religion, their cultural traditions and their native language.

While 1977 brings the 59th anniversary of the Lithuanian Declaration of Independence, it also marks the 37th year the Soviet Union has occupied Lithuania.

Much to their credit, the Lithuanians have not despaired. Although their country is physically occupied, their minds and spirits are not dominated. The Lithuanians are a strong and noble people. They deserve the support of all freedom-loving peoples throughout the world.

Accordingly, we should demand that the Soviet Union fulfill its commitment to uphold the International Covenants on Human Rights and to meet its obligations under the final act of the Conference on Security and Cooperation in Europe.

Mr. President, I join with the Lithuanian community in Indiana and elsewhere in our country in expressing admiration and support for the people of Lithuania.

OFFICE ACCOUNT OF SENATOR BOB DOLE, JULY–DECEMBER 1976

Mr. DOLE. Mr. President, funds from my office account are utilized on a nonpartisan basis to help meet expenses incurred by my Senate office operation. All expenditures are in accordance with Senate rule 42. Records on the account are kept by Dean Crawford, a CPA, in Lawrence, Kans.

In accordance with the reporting requirements of Senate rule 42, I ask unanimous consent that the semiannual balance sheet statement for the last 6 months of 1976 on this account be printed in the RECORD. Additional information on the operation of the account or specific entries is available upon request.

There being no objection, the balance sheet was ordered to be printed in the RECORD, as follows:

BALANCE SHEET

Account balance, June 30, 1976	$1,108.96
INCOME	
Contributions	1,845.00
Reimbursement for nonqualifying travel expense inadvertently made from office acount on May 10, 1976	345.00
Total income	3,298.96
DISBURSEMENTS	
Transportation—charter	218.50
Office copies, photos, cards, etc	2,204.63
Accounting services	225.00
Total disbursements	2,648.13
Account balance, Dec. 31, 1976	650.83

(This concludes additional statements submitted by Senators.)

CONCLUSION OF MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask that morning business be closed.

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in adjournment for 2 minutes.

The PRESIDING OFFICER. The question is on agreeing to the motion.

The motion was agreed to; and at 1:15 p.m. on Monday, February 21, 1977, the Senate adjourned until 1:17 p.m., the same day.

AFTER ADJOURNMENT

Monday, February 21, 1977:

The Senate met at 1:17 p.m., pursuant to adjournment, and was called to order by Hon. ROBERT MORGAN, a Senator from the State of North Carolina.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of earlier today be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

WAIVER OF CALL OF THE CALENDAR

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the call of the Calendar under rule VIII be waived.

The PRESIDING OFFICER. Without objection, it is so ordered.

MORNING BUSINESS

The PRESIDING OFFICER. The Chair lays before the Senate messages from the President, reports and communications from the representatives of departments, and other communications addressed to the Senate, such bills, joint resolutions, and other messages from the House of Representatives that may re-

main from the previous day's session undisposed of.

The Chair now calls for the presentation of petitions and memorials, reports of standing and select committees, introduction of bills and joint resolutions.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The Chair now calls for concurrent and other resolutions.

MISSING IN ACTION IN SOUTHEAST ASIA

The PRESIDING OFFICER. The Chair lays before the Senate a resolution coming over under the rule, Senate Concurrent Resolution 2, which the clerk will state.

The assistant legislative clerk read as follows:

Senate Concurrent Resolution 2, relative to military personnel missing or killed in action and body not recovered, in Southeast Asia.

RECESS UNTIL 2 P.M.

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate stand in recess until the hour of 2 p.m. today.

The motion was agreed to, and at 1:25 p.m., the Senate recessed until 2 p.m.; whereupon, the Senate reassembled when called to order by the Presiding Officer (Mr. MATSUNAGA).

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

MEASURES REREFERRED JOINTLY PURSUANT TO SENATE RESOLUTION 4

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that consistent with the provisions of Senate Resolution 4, agreed to by the Senate on February 4, 1977—legislative day, February 1—the following bills be jointly referred as indicated:

S. 8, previously referred to the Committee on Agriculture and Forestry, be re-referred jointly to the Committee on Agriculture, Nutrition, and Forestry and Environment and Public Works;

S. 121, previously referred jointly to the Committees on Commerce, Interior and Insular Affairs, and Public Works, be jointly referred to the Committees on Commerce, Science, and Transportation and Environment and Public Works;

S. 182, previously referred to the Committee on Commerce, be referred jointly to the Committees on Commerce, Science, and Transportation and Environment and Public Works;

S. 199, previously referred jointly to the Committees on Commerce and Finance, be re-referred jointly to the Committee on Energy and Natural Resources and Finance;

S. 407, previously referred jointly to the Committees on Armed Services, Finance, Labor and Public Welfare, and Post Office and Civil Service, be jointly referred to the Committees on Armed Services, Finance, Governmental Affairs, and Human Resources;

S. 517, previously referred jointly to the Committees on Labor and Public Welfare and Post Office and Civil Service, be jointly referred to the Committees on Governmental Affairs and Human Resources.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, as stated in the RECORD of Friday, February 11, 1977, bills previously referred to only one committee will not be re-referred to reflect only a change made in the name of the committee by Senate Resolution 4 where the committee retains jurisdiction. If and when such measures are reported, the new name of the committee will be shown on the reported version of the bill.

Mr. President, I ask unanimous consent that notwithstanding the provisions of Senate Resolution 4, agreed to February 4, 1977—legislative day of February 1—the Committee on Energy and Natural Resources, formerly the Committee on Interior and Insular Affairs, retain jurisdiction of S. 186, and that if and when that committee reports the measure, it then be referred to the Committee on Environment and Public Works. This has been worked out with both committees as reflected in the legislative history of Senate Resolution 4. All subsequent legislation dealing with water resources, as required by Senate Resolution 4, will be referred to the Committee on Environment and Public Works.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Committee on Commerce, Science, and Transportation be discharged from the further consideration of S. 122, and that the bill be referred to the Committee on Energy and Natural Resources. This bill is now in the jurisdiction of the Committee on Energy and Natural Resources under the provisions of Senate Resolution 4, agreed to February 4, 1977—legislative day of February 1—but the rereferral could not be made automatically pursuant to that resolution because the original referral to the Commerce Committee was made by unanimous consent. This matter has been cleared with both committees.

The PRESIDING OFICER. Without objection, it is so ordered.

ANNOUNCEMENT ON APPOINTMENTS TO SELECT COMMITTEE ON NUTRITION AND HUMAN NEEDS

The PRESIDING OFFICER. The announcement by the Chair on Friday, February 11, 1977, appointing the Senator from Vermont (Mr. LEAHY) and the Senator from Nebraska (Mr. ZORINSKY) to the Select Committee on Nutrition and Human Needs should have included that those appointments were made in lieu of the Senator from Georgia (Mr. TALMADGE), the Senator from Wisconsin (Mr. NELSON), and the Senator from California (Mr. CRANSTON), resigned.

ORDER FOR RECESS UNTIL TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today it stand in recess until the hour of 12 noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER TO PROCEED TO HOUSE OF REPRESENTATIVES AT 12:15 P.M. TOMORROW AND TO RESUME CONSIDERATION OF SENATE CONCURRENT RESOLUTION 10

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow at 12:15 p.m., the Senate gather in a body to proceed to the House Chamber for the purpose of a joint meeting to be addressed by Prime Minister Trudeau.

I ask unanimous consent further that upon the completion of that joint meeting, the Senate resume its session and that it then resume consideration of Senate Concurrent Resolution 10, a concurrent resolution revising the congressional budget for the U.S. Government for the fiscal year 1977.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR TIME TO BEGIN RUNNING ON SENATE CONCURRENT RESOLUTION 10 FOLLOWING JOINT SESSION TOMORROW

Mr. ROBERT C. BYRD. I ask unanimous consent, Mr. President, that on tomorrow the time on Senate Concurrent Resolution 10 not begin running until the Senate resumes its session following the recess for the joint meeting with the other body.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. NUNN addressed the Chair.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senator may speak out of order.

The PRESIDING OFFICER. Without objection, it is so ordered.

ALL-VOLUNTEER FORCE—NEEDS MAJOR DEBATE

Mr. NUNN. Mr. President, as U.S. News and World Report stated in its February

14, 1977 issue, "A major debate is shaping up * * * over the fate of the country's 4-year-old experiment with All-Volunteer Armed Forces."

One of the principal reasons for this is that no single item will have as much impact on the future of our national budget as the volunteer force.

I have been concerned about the long-term feasibility of the All-Volunteer Force concept since I came to the Senate. Last year I hired William R. King, professor of business administration at the University of Pittsburgh, to work on my Budget Committee staff and to begin a comprehensive study of the All-Volunteer Force. Dr. King has just completed what I consider to be a significant work on this subject. His conclusions support my concern that the AVF may be a luxury which we may no longer be able to afford. Despite highly favorable economic and demographic conditions, the AVF has apparently not lived up to many of the expectations that the Gates Commission formulated for it.

Because I think the question of the viability of the AVF and the exploration of possible alternatives to it demand a full and comprehensive public discussion, I am beginning hearings on the AVF in the Senate Armed Services Manpower and Personnel Subcommittee on February 23, 1977. Dr. King will present his full report to the subcommittee on this date. During the course of this year's hearings, the subcommittee will review all aspects of the defense manpower authorization request and the posture of our current forces, and will also pursue issues on the All-Volunteer Force with all the military services.

The U.S. military has been "all-volunteer" since early 1973. The decision to go from a draft to an All-Volunteer Force—AVF—was made by President Nixon in 1968 when he promised an end to the draft in his campaign speeches. Congress approved this action in 1971.

In my opinion, the draft card burnings, campus riots, and sit-ins of the era probably had more to do with the decision to end the draft than did any careful analysis of the merits of an AVF.

The Pentagon has exerted great effort to make the AVF work. Our Nation has spent many extra billions of defense dollars each year on such things as increased pay, new barracks, and civilians to perform traditional KP chores. Despite this, we are operating on the "ragged edge" with high recruiting costs, undermanned reserve forces, and insufficient recruits for the active forces.

The situation for the future looks even less bright. While the number of people in military age groups peaked in the past few years, these numbers will drop off substantially each year for the next 15 years.

While unemployment was at an all-time high for youth in recent years, the improved employment situation has already begun to reflect itself in recruiting results for the last quarter of 1976. The Army was 6 percent under its recruiting objectives and the Marine Corps was off 15 percent. If forecasts of future reductions in unemployment are accurate, the better opportunities available in civilian life will pose even greater problems for military recruiters.

Military recruit pay increased 193 percent in real terms between 1964 and 1973. This compared to an 11 percent real increase for comparable civilian blue-collar workers. Such huge increases in military pay simply cannot continue unless we are willing to see huge increases in the defense budget. Yet without increased pay and bonuses, the ability of the AVF to obtain adequate numbers of recruits is in grave doubt. Despite soaring recruiting expenditures, it is becoming more difficult to convince young people to join the military unless they have few other options.

Some recent data suggests that the incremental cost of recruiting those Army recruits most difficult to persuade may be in the astronomical range of $5,000 to $12,000 each, while the average cost for all services is about $1,200 each.

Because of these high incremental recruiting costs, the cost of expanding the active forces to levels such as those which we had in the Vietnam era would be prohibitively expensive. The "All-Volunteer" Force can be more accurately described as a peacetime, high unemployment, increasing pay, decreasing force level volunteer force.

The fact that all is not well in the AVF is also made clear by Army attrition figures. In fiscal 1976, more enlisted soldiers left the service before the end of their normal term of duty than left at the end of their normal term, including those who retired. Of these early discharges, 70 percent were for adverse reasons, such as training dropouts and disciplinary probelms.

While the Active Forces are facing these problems, the problems of the Reserves are even greater. The selected Reserve is now 52,000 below its authorized floor—the level which the services believe they must maintain. The individual Ready Reserve is in even greater difficulty with a shortfall of 180,000 that is expected to continue to get worse.

These reserve problems are a direct result of the lack of a back-up draft. During the draft years, men who wanted to avoid active military duty were motivated to enlist in the reserves. By doing so, they performed the sort of service that they desired and the Nation was served with a strong reserve force. Now, these "draft-motivated" men have left the reserves and replacements have not been coming forth in adequate numbers.

The volunteer concept has an appealing sound. After all, what is more American than volunteering to serve the country? The fact is that the volunteer military force seems to have changed the concept of military service from one of "serving the Nation" to one of "getting a job."

This job orientation of military service has led to other things that are detrimental to the effectiveness of a military force. Job dissatisfaction and complaints are reflected in the high enlisted turnover rates. Demands for military unions are now increasingly being heard.

The current and potential problems of our active-duty AVF, coupled with the seriously undermanned reserves and the fact that we have no back-up draft, constitute a potentially serious defense problem for the Nation. Our Active Forces are operating on the edge of serious problems and our backup reserve forces are becoming weakened. These things suggest that we would be well advised to begin careful consideration of some alternatives to the AVF, such as a reserve draft or a comprehensive program of national service.

The time has come to take a long, hard look at the AVF. Is it working? If so, will it continue to work in a less encouraging economic and demographic climate? If not, why not? What alternatives would there be to an All-Volunteer Force? Simply a return to military conscription? Or perhaps the institution of a national service obligation?

These issues must be addressed and they must be addressed soon. There should be a thorough national debate and we should not rush into any hasty solutions. The Soviet Union has armed forces more than twice the size of ours. By virtue of comparatively low personnel costs, the Soviets have managed to undertake an unparalleled quantitative and qualitative expansion of these forces.

In the face of these facts, the United States can no longer continue down the road of steady contractions in its force levels and decreasing proportions of the defense budget allocated to weapons systems in order to meet the ever rising cost of military manpower.

If present trends continue for a period of years, we may look forward to the prospect of having exorbitantly paid but increasingly ill-equipped forces. The Soviets are not deterred by U.S. pay scales or retirement benefits. They are deterred by the size, mobility, readiness, and armament of our combat forces.

MISSING IN ACTION IN SOUTHEAST ASIA

The Senate continued with the consideration of the concurrent resolution (S. Con. Res. 2) relating to military personnel missing or killed in action and body not recovered, in Southeast Asia.

Mr. ROBERT C. BYRD. Mr. President, what is the pending business before the Senate?

The PRESIDING OFFICER. Senate Concurrent Resolution 2 is under consideration.

Mr. ROBERT C. BYRD. I thank the Chair.

Mr. HELMS. I thank the Chair.

Mr. President, I will not take up the time of the Senate in discussing this resolution at great length. The issue is clear: Should we have a complete accounting for MIA's, or should we not? It is the opinion of the Senator from North Carolina that we should have such an accounting, and that we should hold North Vietnam to the terms of the Paris agreement and demand such an accounting. Any inclination on the part of the United States to back down from demanding an accounting for MIA's, or to declare them to be presumed dead, will

only take the pressure off North Vietnam to cooperate. Indeed, under the terms of the agreement, the Communists are required only to supply information on the missing, not on the presumed dead; so it is to the interest of the United States and in the interest of the parents, wives, and relatives of MIA's not to make any summary alteration of status of MIA's until there is such an accounting.

I would like to make three short points about my resolution now pending.

First, this resolution does not link the MIA question to any other issue. Certainly there are other issues that can be associated with it, and many of us will make those associations in differing ways. But this issue is so important that the Senate ought to express its will upon it in a statement devoted solely to that one issue. The whole subject of Vietnam is one on which many of us feel strongly, and many of those opinions are opposite in tenor. Yet there is one aspect of the war upon which all can unite in good conscience, and that aspect is the problem of getting an accounting for MIA's.

Second, this resolution calls upon the President, in his capacity as Commander-in-Chief of the Armed Forces, to require an accounting of MIA's. It does not lay blame upon any President, nor does it tell the President how he is to obtain such an accounting, nor does it link the obtaining of an accounting to any other problem in international relations. I think that it is only fair to give the new administration a chance to study the best methods of obtaining an accounting; and it would be a mistake to demand that President Carter proceed in a certain specified way before he even has an opportunity to try. The Members of the Senate themselves may differ among themselves as to the best procedure; but they should be able to agree on the principle that we still ought to require an accounting.

And that brings up the third point, namely, that it is our duty also, as U.S. Senators, to go on record, too. We cannot stand back and leave the decision entirely to the executive branch. Surely President Carter will be guided to a great extent by the opinion of the Senate at the present time. It is now 4 years since the Paris agreement was signed. President Carter is new to Washington. If the Senate does not go on record now, President Carter might not fully understand the prevailing sentiment throughout this country today.

There is no doubt in the mind of the Senator from North Carolina that we have an obligation to use the authority of our offices to insist upon such an accounting. I must confess a degree of shame in our country's record of failing to demand a full accounting of our MIA's long before now. There are repeated reports that American soldiers are still being held captive by the Communists. Meanwhile, the families of these more than 800 men have been virtually ignored in their pleas to the U.S. Government. No longer can we let them down.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution was agreed to.

The preamble was agreed to.

The resolution (Senate Concurrent Resolution 2), with its preamble, is as follows:

S. CON. RES. 2

Concurrent resolution relative to military personnel missing in action or killed in action and body not recovered in Southeast Asia

Whereas article II, section 2 of the Constitution of the United States designates the President of the United States Commander in Chief of the Army and Navy (military forces); and

Whereas, on August 10, 1964, the Senate and House of Representatives of the United States Congress passed Public Law 88-408 authorizing the deployment of the United States Armed Forces for the maintenance of international peace and security in Southeast Asia; and

Whereas over eight hundred members of the Armed Forces authorized by the Congress and dispatched by the President to Southeast Asia are still categorized as prisoner of war or missing in action and are still unaccounted for; and

Whereas article II, section 2 of the Constitution of the United States grants to the President of the United States further power, by and with the advice and consent of the United States Senate, to make treaties; and

Whereas on January 27, 1973, the Paris Agreement on Ending the War and Restoring Peace in Vietnam (designated the Paris agreement), which, by its terms became effective on that date, was executed by duly authorized representatives of the United States, the Republic of Vietnam (South Vietnam), the Democratic Republic of Vietnam (North Vietnam) and the Provisional Revolutionary Government of the Republic of South Vietnam (the Vietcong); and

Whereas article 8(b) of the Paris agreement provides:

"The parties shall help each other to get information about those military personnel and foreign civilians of the parties missing in action, to determine the location and take care of the graves of the dead so as to facilitate the exhumation and repatriation of the remains, and to take any such other measures as may be required to get informaton about those still considered missing in action",

which article establishes an obligation under international law upon the parties to the agreement in favor of members of the United States Armed Forces who are categorized as missing in action and a further obligation to, if possible, exhumate and repatriate the remains of those categorized as killed in action. This obligation runs to the United States as a party to the agreement; and

Whereas the State Department as the responsible agency of the executive branch of the United States Government has exhibited no positive direction or leadership in meeting its responsibility of enforcing article 8(b) of the Paris agreement or seeking alternatives that might otherwise resolve the prisoner of war/missing in action problem; and

Whereas, on September 11, 1975, the United States House of Representatives formed the Select Committee on Missing Persons in Southeast Asia, to report within one year on the status of persons held as prisoners or missing in action and unaccounted for in North and South Vietnam, Laos, and Cambodia, which committee has been responsible for identifying or accounting for less than one-tenth of 1 per centum of Americans unaccounted for in those areas; and

Whereas the Joint Casualty Resolution Center's recent withdrawal from Thailand leaves no United States agency in Asia to locate Americans still prisoner or missing and unaccounted for in Indochina; and

Whereas knowledge that some unaccounted for military and civilian personnel, fifty-seven of whom were known to be alive and who have not been returned, were at one time prisoners of war and alive was manifested through enemy propaganda broadcasts, foreign media reports, photographs, and other sources, personnel who may be presumed to be living and retained for purposes of bargaining or blackmail by the Vietnamese, Cambodians, or Laotians now in power: Now, therefore be it

Resolved by the Senate (the House of Representatives concurring): 1. That the President of the United States recognize his duty and responsibility as Commander in Chief of the Armed Forces of the United States and require an accounting for the person or remains of all military personnel responding to the orders of the Office of the President and who are presently categorized as prisoner of war, missing in action, or killed in action (body not recovered) in Southeast Asia on the personnel rosters of the United States Army, United States Navy, United States Marine Corps, or United States Air Force.

2. That the President of the United States, by executive fiat, require the Secretary of State to pursue, with diligence and tenacity, enforcement of the Paris agreement of January 27, 1973, with emphasis on enforcement of article 8(b) of that agreement.

3. That the Congress of the United States, having passed Public Law 88-408 authorizing the deployment of the United States Armed Forces for the maintenance of international peace and security in Southeast Asia, recognize a corresponding continuing duty and obligation to determine the fate of Americans missing or unaccounted for consequent from enforcement of that law.

4. That the President of the United States, through and by the Secretary of State, hold the Democratic Republic of Vietnam (North Vietnam) and the Provisional Revolutionary Government of the Republic of South Vietnam (the Vietcong) responsible to account for and provide essential information not otherwise available to satisfactorily dispose of the prisoner of war/missing in action problem in accordance with the Paris agreement or seek alternatives that might otherwise resolve the question of those Americans unaccounted for in Southeast Asia.

5. That responsible officeholders in the executive and legislative branches of the Government of the United States, both elected and appointed, should immediately address the authority for their office, individually and collectively, toward a satisfactory resolution of the prisoner of war/missing in action problem, make a public accounting, and remove any question as to the integrity of their function.

Mr. HELMS. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. STEVENS. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ESTABLISHMENT OF A PRESIDENTIAL TASK FORCE ON MIA/POW'S

The PRESIDING OFFICER. The Chair lays before the Senate another resolution coming over under the rule, which the clerk will now state by title.

The legislative clerk read as follows:

Mr. DOLE (for himself, Mr. YOUNG, Mr. ALLEN, Mr. GRIFFIN, Mr. TOWER, Mr. DOMENICI, Mr. THURMOND, Mr. MCCLURE, Mr. DANFORTH, Mr. WALLOP, Mr. HUDDLESTON, Mr. GOLDWATER, Mr. ZORINSKY, Mr. DECONCINI, Mr. GARN, Mr. HOLLINGS, and Mr. SCHMITT) proposes Senate Concurrent Resolution 3 to urge the establishment of a Presidential task force on MIA/POW's.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION FOR THE APPOINTMENT OF A COMMITTEE TO ESCORT THE PRIME MINISTER OF CANADA INTO HOUSE CHAMBER

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the President of the Senate be authorized to appoint a committee of Senators on the part of the Senate to join with the committee on the part of the House of Representatives to escort the Prime Minister of Canada into the House Chamber.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be descinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR DECONCINI ON WEDNESDAY, FEBRUARY 23, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Wednesday, after the two leaders or their designees have been recognized under the standing order, Mr. DECONCINI be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATORS CURTIS, DANFORTH, WALLOP, AND SCHMITT ON WEDNESDAY, FEBRUARY 23, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Wednesday, after the recognition of Mr. DECONCINI, the following Senators be recognized, each for not to exceed 15 minutes: Mr. CURTIS, Mr. DANFORTH, Mr. WALLOP, and Mr. SCHMITT.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATOR DECONCINI ON THURSDAY, FEBRUARY 24, 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Thursday, after the two leaders or their designees have been recognized under the standing order, Mr. DECONCINI be recognized for not to exceed 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

ESTABLISHMENT OF A PRESIDENTIAL TASK FORCE ON MIA/POW'S

The Senate continued with the consideration of the concurrent resolution (S. Con. Res. 3) to urge the establishment of a Presidential task force on MIA/POW'S

Mr. ROBERT C. BYRD. Mr. President, what is the pending question before the Senate?

The PRESIDING OFFICER. Senate Concurrent Resolution 3 is now pending.

UP AMENDMENT NO. 49

Mr. DOLE. Mr. President, I send to the desk an amendment in the nature of a substitute for Senate Concurrent Resolution 3 and ask for its immediate consideration.

The PRESIDING OFFICER. The amendment in the nature of a substitute will be stated.

The legislative clerk read as follows:

The Senator from Kansas (Mr. DOLE), for himself and Mr. YOUNG, Mr. GRIFFIN, Mr. ALLEN, Mr. TOWER, Mr. DOMENICI, Mr. THURMOND, Mr. GOLDWATER, Mr. HUDDLESTON, Mr. MCCLURE, Mr. DANFORTH, Mr. WALLOP, Mr. ZORINSKY, Mr. GARN, Mr. DECONCINI, Mr. HOLLINGS, and Mr. SCHMITT, proposes unprinted amendment numbered 49.

The amendment is as follows:

Strike out all after the resolving clause and insert the following:

Whereas, during the Vietnam war era, millions of Americans served their country honorably in military service in Southeast Asia;

Whereas on January 21, 1977, a Presidential pardon was granted to draft resisters who refused to accept their military responsibility during the Vietnam war era, and who rejected an earlier opportunity to accept clemency and perform alternate service for this country;

Whereas the Department of Defense still lists approximately 2,500 United States servicemen missing or not returned from Southeast Asia; and

Whereas the Governments of Vietnam, Laos, and Cambodia have failed to abide by basic humanitarian principles to provide the fullest possible accounting for all Americans listed in a missing status in their respective territories: Now, therefore, be it

Resolved, That it is the sense of the Congress of the United States that the honor of those Americans who upheld the dignity of the law and who served in the Armed Forces of the United States in Southeast Asia should be reaffirmed, and that the United States Government should do everything possible to address the problems of those who served in the Armed Forces during the Vietnam war era;

SEC. 2. There should be established, in view of the recent issuance of a general pardon for United States draft evaders of the Vietnam war era, a Presidential Task Force on Prisoners of War and Missing in Action to propose courses of action to achieve the fullest possible accounting for all Americans listed in a missing status in Southeast Asia, including the return of remains, and to make recommendations concerning United States policies relating to prisoners of war and Americans missing in action.

Amend the title so as to read: to reaffirm the honor of those who served in Southeast Asia and to urge establishment of a Presidential Task Force on MIA/POW's.

Mr. DOLE. Mr. President, I send to the desk an amended version of Senate Concurrent Resolution 3, to be considered in lieu of that which I introduced on January 10 of this year.

Mr. President, I might say that this was necessary because my original resolution sought concurrent establishment with the pardon issued by the President; since the pardon was issued on January 21, prior to the consideration of the resolution, it was necessary to amend it in the fashion it has been amended.

I am joined in this effort by several cosponsors, including Senators YOUNG, GRIFFIN, ALLEN, TOWER, DOMENICI, THURMOND, GOLDWATER, HUDDLESTON, MCCLURE, DANFORTH, WALLOP, ZORINSKY, GARN, DECONCINI, HOLLINGS, and SCHMITT.

The purpose of this resolution is to reaffirm the honor of those veterans and servicemen who served in Southeast Asia, and to urge the establishment of a Presidential Task Force on MIA's and POW's.

Let me say first of all that it is not the purpose of this resolution to criticize the general pardon that was granted to Vietnam-era draft evaders on January 21, 1977, although the Senator from Kansas strongly disagreed with that action.

The Senator from Kansas recognizes that there are some in this body, such as myself and the distinguished Senator from North Carolina, the distinguished Senator from Alabama, and other Senators, who strongly opposed the pardon. There are some who feel the pardon was good. There are those who feel that the pardon did not go far enough. The Senator from Kansas recognizes the differences on the question of pardoning Vietnam-era draft resisters, and this resolution does not seek to address that issue.

The purpose of this resolution is simply to express the sense of the Congress that the honor of those Americans who served with dignity in our Armed Forces in Vietnam and other parts of Southeast Asia is not diminshed by the granting of the pardon. The purpose of this resolution is to reaffirm the basic conviction that service to our country at the call to military duty is honorable.

This resolution states that we should get on with addressing the remaining problems of Vietnam veterans and of the unresolved MIA and POW question. In this respect, it reiterates our high priority of resolving these matters.

The Senator from Kansas has been contacted by numerous veterans from Kansas expressing concern that the pardon somehow degrades the honor of their service in Vietnam. They expressed the feeling that they are being dishonored by the pardon.

I believe that we should at this time reaffirm the honor of service in our Armed Forces, particularly the honor of

those who served in Vietnam and Southeast Asia. Regardless of our views on the war or our views on the pardon, I hope we can all agree that military service during the Vietnam era was honorable.

For those who were in the service at that time, or who were called up in the draft, it was not a question of whether they agreed with the war or not, but whether they would uphold the dignity of the law and respond honorably to the call to military duty. We should reaffirm our recognition and gratitude for their service.

There were 3,403,100 Americans who served in Southeast Asia, including 2,594,200 who served in Vietnam, during the period January 1, 1965, through March 31, 1973. They came from every State, and I hope every Senator will agree with me that they deserve our support and our gratitude.

PROBLEMS UNRESOLVED

There are still many problems that exist for those who served in Vietnam. We should reaffirm the priority we place on helping them solve their problems.

For Vietnam-era veterans between the ages of 20 and 24, there is still an unemployment rate of 18.3 percent. When we consider minority Vietnam veterans of the same age group, the unemployment rate jumps to 22.1 percent.

Clearly, the rate of unemployment among these Vietnam veterans is far above that of the average national rate. I believe we should give a high priority to getting them employed and in addressing any other problems that may exist.

I might add that one of the greatest problems is the lack of employment of Vietnam-era veterans in the Federal Government. Less than 1 percent of all the employees of the Department of Labor, for example, are Vietnam-era veterans.

PRESIDENTIAL TASK FORCE ON MIA'S

This resolution also calls for Presidential creation of an MIA task force. The emphasis is on getting early Presidential attention to the MIA matter, and all of my colleagues who are concerned about our MIA's should be able to support this resolution.

My resolution does not specify the composition or precise duties of the task force, which would be points of Presidential discretion. However, a task force should coordinate all existing information on our missing servicemen to provide a basis for further investigations. It should propose further courses of action by the executive branch for obtaining additional information from the governments of Southeast Asia. And the task force should propose future courses of action on related policy questions which might affect an accounting, such as normalization of relations with Vietnam, or U.N. membership for that Government. I also think the task force should be composed of civilians who are knowledgeable about the MIA issue, so that its efforts can be distinct from those of the Department of Defense or the State Department. It should not work at odds with those departments, but rather to assist and supplement their efforts.

We need a specialized group of this type, since the joint casualty resolution team, and the House Select Committee on Missing American Servicemen have terminated their activities. Significantly, the final report issued by the House select committee last month concluded that the North Vietnamese do have information on a large number of Americans killed in Indochina which has not been presented to our Government. After more than a year of investigation, the committee reported:

That each of the governments of Indochina is capable of providing some information of the fate and place of burial of a number of missing Americans.

That the North Vietnamese have information on a large but undetermined number of aviators shot down over North Vietnam and along the Ho Chi Minh Trail in Laos, as well as information on some Americans killed, or once held, in other areas of Indochina.

That the provisional revolutionary government had information on many Americans lost in air or ground combat in South Vietnam as well as the remains of 40 POW's who died in captivity. These data are now maintained by the Socialist Republic of Vietnam.

That the governments of Indochina may be capable of returning the remains of more than 150 Americans, including any located through crash site investigations.

That in addition to remains, the governments of Indochina can provide some information on other individuals and MIA-associated incidents.

Both major party platforms support further efforts to achieve an accounting for MIA's. Effective efforts to locate additional information should continue to reflect a nonpartisan character.

I submit that if we really want to "close the final chapter" on the Vietnam war, and if we want to seriously discuss possible future relations and trade with Vietnam, we must be satisfied that we have received as full an accounting as possible for these missing servicemen. This would be the purpose of the task force.

TIMING IS IMPORTANT

The MIA task force should be established early to provide continuity with previous accounting efforts. Creation of the task force as soon as possible will add measurable authority to future diplomatic efforts to achieve an accounting. It would give Hanoi early notification of the new administration's intention to pursue an accounting. And this resolution will certainly put Congress on record as supporting the new administration in those efforts to obtain further MIA information.

HEALING THE WOUNDS

Only with an intensive investigation and coordinated policy guidance by a task force, supported by executive mandate, can we hope to account as fully as possible for the 2,500 Americans still officially classified as having "Not Returned" from Vietnam, Laos, and Cambodia. Only with a final accounting can we truly hope to fully "heal the wounds" of the Vietnam war. We know that information may never be forthcoming about some of these Americans. But we also know that there is considerable additional information which we do not have, which should have been provided to us years ago by Hanoi.

The Senator from Kansas concludes by repeating that this resolution asks for the Presidential creation of an MIA task force. The emphasis is on getting early Presidential attention to the MIA matter. All of my colleagues who are concerned about our MIA's should be able to support the resolution.

The PRESIDING OFFICER. The question is on agreeing to the amendment in the nature of a substitute.

The amendment in the nature of a substitute was agreed to.

The concurrent resolution (S. Con. Res. 3), as amended, was agreed to.

The preamble, as amended, was agreed to.

The title, as amended, was agreed to.

The concurrent resolution, as amended, with its preamble, reads as follows:

S. CON. RES. 3

Whereas, during the Vietnam War era, millions of Americans served their country honorably in military service in Southeast Asia;

Whereas, on January 21, 1977, a Presidential pardon was granted to draft resisters who refused to accept their military responsibility during the Vietnam War era, and who rejected an earlier opportunity to accept clemency and perform alternate service for this country;

Whereas the Department of Defense still lists approximately two thousand five hundred United States servicemen missing or not returned from Southeast Asia; and

Whereas the governments of Vietnam, Laos, and Cambodia have failed to abide by basic humanitarian principles to provide the fullest possible accounting for all Americans listed in a missing status in their respective territories: Now, therefore, be it

Resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress of the United States that the honor of those Americans who upheld the dignity of the law and who served in the Armed Forces of the United States in Southeast Asia should be reaffirmed, and that the United States Government should do everything possible to address the problems of those who served in the Armed Forces during the Vietnam War era.

SEC. 2. There should be established, in view of the recent issuance of a general pardon for United States draft evaders of the Vietnam War era, a Presidential Task Force on Prisoners of War and Missing in Action to propose courses of action to achieve the fullest possible accounting for all Americans listed in a missing status in Southeast Asia, including the return of remains, and to make recommendations concerning United States policies relating to prisoners of war and Americans missing in action.

The title was amended so as to read: "A concurrent resolution to reaffirm the honor of those who served in Southeast Asia and to urge establishment of a Presidential Task Force on MIA/POW's."

Mr. HELMS. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. ROBERT C. BYRD. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

THIRD CONCURRENT RESOLUTION ON THE BUDGET, 1977

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate proceed to the consideration of Calendar Order No. 17, Senate Concurrent Resolution 10.

The PRESIDING OFFICER. The concurrent resolution will be stated.

The legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 10) revising the Congressional budget for the United States Government for the fiscal year 1977.

The motion was agreed to and the Senate proceeded to consider the concurrent resolution.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the time for the quorum not be charged against the time on either side.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the following members of the staff of the Committee on the Budget be allowed to remain on the floor during consideration of and votes on Senate Concurrent Resolution 10:

John McEvoy, Sid Brown, Van Ooms, Jim Storey, Dan Twomey, Tom Dine, Karen Williams, Mary Jane Checchi, Faye Hewlett, Rodger Schlickeisen, Terry Finn, Tony Carnevale, George Merrill, Ira Tannenbaum, Chris Matthews, Bob Boyd, Charles Gentry, Ted Haggart, Letitia Chambers, Gary Kuzina and Hal Gross.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I also ask unanimous consent that the following members of the staff of the Committee on Governmental Affairs be allowed to remain on the floor during consideration of and votes on Senate Concurrent Resolution 10:

Alin From and David Johnson.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, in a few moments I will undertake to begin my opening statement on the third budget resolution.

I ask unanimous consent that a statement by my good friend and the ranking Republican member of the committee (Mr. BELLMON), be printed in the RECORD following my statement.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. MUSKIE. Mr. President, I ask unanimous consent that a statement of my good friend, Senator MAGNUSON, who is the ranking Democrat, be printed in the RECORD following that of Senator BELLMON.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

Mr. MUSKIE. Mr. President, at this point I am happy to yield to the distinguished Senator from Washington, who I know would like to make an important point which may bear on the budget down the road. I am delighted to yield at this point before I proceed with my opening statement.

The PRESIDING OFFICER. The Senator from Washington is recognized.

Mr. JACKSON. Mr. President, I appreciate the indulgence of the distinguished chairman of the Budget Committee.

I rise at this time to call attention to the fact that the drought conditions in the western part of the United States have indeed reached catastrophic proportions.

The facts are that the losses in terms of agricultural products will be far greater than one anticipated just a few days ago. I need not remind our colleagues and the Nation of what this may mean in terms of the economy of the United States. We could well find ourselves short of critical food at a time when the economy is emerging from the worst winter that we have had in the East, and in the West we have had the worst drought in recorded memory.

The records of previous droughts are no comparison. It is possible that the dust bowl of the 1930's has been exceeded already in terms of potential loss.

I call the attention of my colleagues to the fact that the President, working with the various agencies involved, will indeed be called upon to ask the Congress for substantial sums of money to deal with this emergency in all its forms. Some of it will be needed for relief from financial losses; other aspects may involve the construction of temporary facilities such as aqueducts to move water from one place to another in order to meet the agricultural needs of a given area and to avoid a catastrophe.

I would just give as one example the Yakima Valley in the State of Washington, where we have over 300,000 acres of land under irrigation. We produce in that valley a wide variety of agricultural products. We have some of the largest apple and cherry orchards in the Nation. If they do not get water into that area, we could lose orchards that would take 8 to 10 years to replace.

I mention all this, keeping in mind that we do not yet have specific data as to financial requirements. I would hope that there is enough flexibility in the pending resolution so that the contingencies I have mentioned could be included in the legislative history now being presented to the Senate and upon which we will be called to vote.

I know the Senator from Maine is understanding and sympathetic to this problem. The reason I bring it up today is because I have been in touch with the administration and they hope to have some estimates to present shortly.

Mr. MUSKIE. May I say to my good friend from Washington I have read, with considerable sympathy, the press reports of the drought conditions in the West and particularly in the Northwest, which is of special interest to him. We have the reverse condition in my State. We have more snow than we are accustomed to. In the city of Buffalo, from which my mother came, we probably have had enough snow to solve the problems of the Northwest if we could get it there.

The budget process is flexible enough, of course, to respond to emergencies. Mr. Lance, the Director of OMB, indicated in his testimony before the Budget Committee that the administration had made no effort in this third resolution to try to quantify the consequences of this winter's weather conditions, whether the excessive cold in some parts of the country, the excessive snow in other parts, or the drought in the West.

He felt that it would take more time before we could quantify the budgetary implications of those problems. Obviously, the Government should be, and I think is, flexible enough to respond when we know what we need to do and what it will cost to do it.

I think it is highly appropriate that we make this legislative record as a forewarning of what we might be asked to respond to some weeks or even months down the road.

Mr. JACKSON. Mr. President, I want to thank the distinguished chairman of the committee for that statement. I think it answers the immediate problem. It will take a few days to gather the necessary quantifiable data dealing with the entire country as it pertains to the drought in the West and maybe floods hitting us in the East, as well as other effects of this unusual weather problem that is impacting so devastatingly on our economy in terms of loss of jobs, inflation, and so on. I thank the Senator.

Mr. MUSKIE. I thank my good friend from Washington.

Mr. President, the Senate today begins debate on Senate Concurrent Resolution 10, the third concurrent resolution on the Federal budget for fiscal year 1977.

The purpose of this third budget resolution is to revise the congressional budget adopted on September 16, 1976. This revision is necessary if we are to sustain a vigorous economic recovery in light of current economic conditions.

The second budget resolution for fiscal year 1977, which set binding limits on Federal revenues and spending, was intended when it was adopted to promote a strong economic recovery and meet all foreseeable needs as of that time. When it adopted that resolution, however, Congress recognized that, if economic conditions seriously worsened, additional Federal action might be necessary to stimulate the economy. We are now aware that the economy did significantly worsen during the fall, with unemployment at the end of the year—even before the current winter fuel crisis—at a higher level than it was in the first quarter of the year.

Responding to this unacceptable slowdown in the recovery and the hardship for American workers this rate of job-

lessness imposes, President Carter has, as one of his first legislative initiatives, proposed a temporary program of additional fiscal stimulus. This program would require changes in the binding spending ceiling and revenue floor contained in the second budget resolution adopted last fall.

Even before receipt of the President's recommendations, the Budget Committee had begun hearings with prominent economists representing a broad range of views to determine the appropriateness of such additional stimulus. The committee heard from prominent economic advisers to Democratic Presidents and Republican Presidents as well. We heard from Walter Heller, who had been Chairman of the Council of Economic Advisers for Presidents Johnson and Kennedy, and we heard from Paul McCracken, who was Chairman of the Council of Economic Advisers to President Nixon. We also heard several others prominent in the economic and business fields, including Messrs. Reginald Jones, chairman and chief executive officer of the General Electric Corp., and Albert T. Sommers, chief economist of the Conference Board. Nearly all of our witnesses recommended additional Federal stimulus in excess of the amounts contained in the President's subsequent request or in this budget resolution to counter the economic slump.

Subsequent to the receipt of the President's special stimulus message on January 31, 1977, the Republican policy conference of the Senate also offered a plan for Federal fiscal action to deal with the present economic situation, a plan which, by itself, would have required a revision of the third concurrent resolution.

The Budget Committee recently met for 2 days of markup sessions to consider these recommendations as well as others it had solicited and received from the other committees of the Senate. On February 10, 1977, the committee reported a third concurrent resolution on the budget. The program recommended in this resolution falls midway between the various recommendations from the President and other sources. It represents an acceleration of certain of the President's proposals to get the maximum job-creating effect in 1977, with a minimal increase in the fiscal year 1977 deficit compared to the President's proposal. It proposes revenue and spending levels which are adequate to accommodate either the President's proposals or those alternatives which have been advanced by other congressional committees.

NEW GOALS AND FISCAL TARGETS

Because the 1977 goals established in the second budget resolution are now out of reach, we must now establish new goals and pursue them vigorously.

The stimulus provided by this new budget will make it possible for the economy to resume a vigorous recovery this year. Real GNP should expand at a rate of 5½ to 6 percent during 1977 and bring unemployment to 7 percent or less by the end of the year. If appropriate policies are adopted for fiscal year 1978, this growth should be sustainable next year and the unemployment rate should fall below 6 percent by the beginning of 1979. This steady progress over the next 2 years would make it possible to aim for unemployment below 5 percent in 1980.

To achieve these goals, Mr. President, the committee recommends adoption of the following overall fiscal targets for fiscal year 1977:

Revenues of $346.8 billion;

Outlays of $415 billion;

Deficit resulting from these figures of $68.2 billion;

Budget authority of $467 billion; and

Public debt resulting from these figures of $718.3 billion.

I ask unanimous consent that a table summarizing the congressional budget for fiscal year 1977 be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

FISCAL YEAR 1977 BUDGET SUMMARY

[In millions of dollars]

		2d budget resolution ceiling		3d budget resolution recommended ceiling	
		Budget authority	Outlays	Budget authority	Outlays
050	National defense	112.1	100.65	109.2	100.1
150	International affairs	8.9	6.9	7.9	6.8
250	General science, space and technology	4.6	4.5	4.5	4.4
300	Natural resources, environment, and energy	18.2	16.2	18.8	17.2
350	Agriculture	2.1	2.2	1.6	3.0
400	Commerce and transportation	17.2	17.4	17.3	16.0
450	Community and regional development	9.55	9.05	14.3	10.0
500	Education, training, employment, and social services	24.0	22.2	30.4	23.2
550	Health	40.5	38.9	40.6	39.5
600	Income security	155.9	137.2	166.3	139.3
700	Veterans benefits and services	20.3	19.5	18.9	18.1
750	Law enforcement and justice	3.5	3.6	3.5	3.6
800	General government	3.6	3.5	3.5	3.5
850	Revenue sharing and general purpose fiscal assistance	7.6	7.7	7.6	7.7
900	Interest	39.6	39.6	37.9	37.9
	Allowances	.7	.8	.8	.8
950	Undistributed offsetting receipts	−16.8	−16.8	−16.1	−16.1
	Total	451.55	413.1	467.0	415.0
	Revenues		362.5		346.8
	Deficit		50.6		68.2

Mr. MUSKIE. The Budget Committee is reporting this third budget resolution now because of the serious economic conditions facing the country. The possibility of such additional budget resolutions to meet changed conditions, demonstrates the flexibility of the budget process. But the committee wishes to emphasize that additional resolutions should be the exception and not the rule. The Budget Act provides for such additional resolutions to meet changed conditions, not simply to take account of matters which might have been considered in the first and second resolution.

RECOVERY AND JOBS

When the second budget resolution was adopted last fall, the Congress established a set of economic goals for 1976 and 1977. The budget adopted in September was calculated to produce real GNP growth of 6.6 percent in 1976 and 5.6 percent in 1977, thereby lowering unemployment to 7.2 percent at the end of 1976 and 6.2 percent at the end of 1977.

At the time that the budget was adopted, a slowdown in the economy had begun to appear, but its likely duration was a matter of debate. Recognizing the uncertainty of the economic outlook and the possibility that the slowdown would prove temporary, the Budget Committee reported that "it does not appear to be appropriate to make any major economic policy change at this time," but noted that more expansionary policy would be required to pursue our growth and employment goals if the economic recovery faltered. In its report on the second budget resolution, the committee stated that it would be "prepared to consider a subsequent concurrent resolution early next year if the economic data received by then do not indicate that the recovery is proceeding satisfactorily."

The recovery has, in fact, Mr. President, proceeded at a rate below that projected in the second budget resolution, and the economic outlook is not encouraging. Private sector demand, and, in particular, business investment and exports, has been weaker than anticipated. Real output grew at only a 3.2-percent rate in the last half of 1976.

This slow growth of output was insufficient to reduce unemployment significantly. As a result of this slowdown, the congressional output and unemployment goals for 1977, as embodied in the second budget resolution, are now beyond reach.

The already disappointing recovery recently has been further set back by the exceptionally cold winter. Industry has experienced lower output and higher unemployment resulting from energy shortages and the cold. Serious production losses are also occurring in the agriculture sector, due to both the cold winter and the drought in the Great Plains and the West—a subject which I discussed earlier with my good friend from Washington (Mr. JACKSON). In addition, higher fuel costs are a serious drain on consumers' income and savings, and this further weakens the economy.

STIMULUS PROPOSALS

These new fiscal targets primarily reflect changes necessary to accommodate an economic stimulus program aimed at continuing the recovery. The new functional totals also incorporate the latest reestimates by the Congressional Budget Office of current spending levels under existing programs which reflect savings that have been achieved and additional costs which have arisen under current programs. I ask unanimous consent to have printed in the RECORD a table that summarizes the stimulus proposals contained in the resolution.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 1.—3D BUDGET RESOLUTION STIMULUS PROPOSALS

[In millions of dollars]

	Fiscal year 1977	
	Budget authority	Revenues or outlays
Revenues: Tax cut		−12,000
Spending (function in parentheses):		
Countercyclical revenue sharing (450)	633	633
Local public works (450)	4,000	400
Public service employment (CETA, titles II and VI) (500)	4,400	740
Employment training and youth (CETA, titles III and IV or new title VII) (500)	1,522	622
Older Americans (500)	59	30
EPA construction grants (reimbursables) (300)	320	260
Railroad and highway construction (400)	400	200
Recreation proposal (300)	400	300
Emergency fuel bill assistance	300	300
Subtotal	12,034	3,485
$50 rebate to social security, SSI, and railroad retirement recipients or other stimulus program (600)	1,800	1,800
Total stimulus spending	13,834	5,285
Total gross stimulus (combined revenue cut and spending increase)	13,834	17,285
Reflows:		
Revenues		2,300
Spending (550 and 600)	95	−901
Net budgetary effect (gross stimulus combined with reflows)	13,929	14,084

REVENUES

Mr. MUSKIE. The resolution establishes a revenue floor for fiscal 1977 of $346.8 billion. This would permit enactment of up to $12 billion of tax relief as proposed by the Carter administration, or alternatively the enactment of permanent tax reduction or other forms of temporary tax relief of comparable amount. In arriving at this figure, the committee considered both the requirement for a prompt and adequate stimulus and the need to offset increased consumer fuel and food costs attributable to the exceptionally harsh winter.

This new revenue target for fiscal year 1977 rests upon a number of economic assumptions concerning growth in gross national product, profits, and personal income. I ask unanimous consent that a set of tables illustrating our revenue calculations, together with underlying assumptions, be printed in the RECORD at this point.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

The following table indicates the impact of the recommended level of reductions on reestimated revenue collections under current law for fiscal year 1977, and compares the recommended revenue floor to that established in the second budget resolution:

TABLE 2

[In billions of dollars]

Second budget resolution	[1] $362.5
Reestimates under tax law as of January 1, 1977	−6.0
Tax reduction stimulus	−12.0
Offsetting increased tax receipts from total stimulus package	+2.3
Total	[1] 346.8

[1] Consistent with past congressional practices, refunds in excess of tax liability are treated as reductions of revenues.

TABLE 3.—*Economic assumptions for calendar year 1977*

[In billions of dollars]

Gross national product:	
Current dollars	$1,864
Constant (1972) dollars	1,325
Incomes:	
Personal income	1,516
Wages and salaries	992
Corporate profits	163

SPENDING PROPOSALS

Mr. President, several of the new spending recommendations are intended to fund programs which will quickly produce jobs in areas of high unemployment. The proposals are aimed at those groups and sectors hardest hit by the continuing recession, especially youth and minorities, State and local governments, and the construction industry.

JOB PROGRAMS

The committee recommends that the spending ceiling be adjusted to permit a significant expansion of public service employment over the current level of 310,000 jobs to 600,000 jobs by the end of fiscal 1977 and to 725,000 jobs by the end of fiscal 1978. This adds $4.4 billion in budget authority and $0.7 billion in outlays for fiscal 1977 over what it would take to fund the existing level of jobs through fiscal 1978. The new ceiling, Mr. President, would accommodate the President's recommendation concerning the number of public service jobs to be funded under titles II and VI of CETA. The committee recommends the funding of 100,000 jobs under CETA title II and 500,000 jobs under CETA title VI in fiscal 1977 and the funding of an additional 25,000 jobs in title II and 100,000 jobs in title VI in fiscal 1978.

The committee recommends additional funds to permit expansion in job and training slots for programs directed at youth unemployment and older Americans. This adds $1.6 billion in budget authority and about $650 million in outlays.

The high unemployment rate and low earnings of youth continue to be of concern to the committee and the Nation. In 1976, Mr. President, youth represented 29 percent of the labor force, but 46 percent of the unemployed population. This recommendation provides for expansion of the number of jobs and training slots directed at the problem of youth unemployment through existing CETA title I, III, and IV programs, through a new CETA title that focuses on youth programs, or through other youth programs.

The unemployment problem among America's older workers is also severe. The resolution allows funding of an additional 15,000 public service jobs under title IX of the Older Americans Act.

PUBLIC WORKS

The resolution allows additional funding, Mr. President, for the local public works program. This adds $4 billion in budget authority and $0.4 billion in outlays.

This money will provide grants for public works projects that will produce jobs in areas of high unemployment and give assistance to workers in the construction industry, which has been hit especially hard by the recession.

We have also provided another $1.1 billion in budget authority and $0.8 billion in outlays for EPA construction grants, railroad and highway construction, and improvement in recreational facilities.

COUNTERCYLICAL REVENUE SHARING

The resolution allows an additional $633 million for countercyclical revenue sharing.

This recommendation provides full-year funding for a revised countercyclical revenue sharing program. The revised formula will be more resposive to changing levels of unemployment.

State and local governments, Mr. President, have been hard hit by the recession. This program replaces some of the revenues lost to the State and local governments because of the weak economy and helps prevent reductions in basic services and increases in State and local taxes.

In his stimulus message, the President proposed that funding for this program be increased, beginning with the July 1 payment period. The $633 million assumed in this budget resolution corresponds to the President's proposal.

The President is now considering an earlier implementation of the increased funding level, possibly beginning with the April 1 payment period. Such a change would require an additional $300 million not included in this resolution.

I add parenthetically that it is included in the President's proposed budget revisions which has been released as of today by the Executive Office of the President, the Office of Management and Budget, and this particular item is intended to help offset the increased fuel costs which are faced not only by State and local government, but by those of their citizens who are particularly hard hit by such costs.

Fortunately, the House resolution provided an additional increase in funding for the countercyclical program, so that should the Congress decide to accommodate this possibility, there will be sufficient flexibility in the House-Senate conference to accommodate the needed changes.

According to a report released this morning, Mr. President, by the Subcommittee on Intergovernmental Relations, which I chair, this money will be well spent.

The subcommittee report, which is based on the results of a survey conducted of approximately 400 State and local governments, found that this new program, enacted by Congress just last year, is working very well.

The study found that by far the greatest amount of assistance has gone to those places most in need. For example, 70 percent of all funds paid out during the third payment period under the countercyclical program went to jurisdictions with unemployment in excess of 8 percent. Among local governments, 75 percent of the funds went to jurisdictions with unemployment higher than 8 percent.

The study also found that the program can be expected to have a substantial jobs impact—somewhere in the neighborhood of 87,000 jobs per $1 billion allocated to local governments.

DIRECT RELIEF FOR INDIVIDUALS

Mr. President, the resolution also assumes special direct measures for relief of individuals and families hardest hit by the recession and the severe winter. These relief measures include direct payments to individuals who are recipients of social security, SSI, and railroad retirement benefits. In general, these are the people who are not covered in the tax relief proposals. The $1.8 billion in budget authority and outlays assumed for this purpose could be used for the President's proposal or any similar stimulus measure.

They also include an extension of the Federal supplemental benefits program for the unemployed which is scheduled to expire on March 31. This extension was considered necessary because economic conditions and unemployment remain significantly worse than projected when the measure was last extended in June 1975. This proposal adds $0.5 billion to budget authority and outlays on the assumption that the maximum benefit period will be reduced from 65 to 52 weeks.

The totals in the resolution assume about $300 million in budget authority and outlays for a program to provide emergency assistance to those low- and moderate-income families hardest hit by rising fuel bills this winter. Funds would be distributed through the Governors based upon the severity of the winter, the number of people in need of assistance, and the relative cost of fuel in each State. Funds might be paid directly to fuel supplier, with the applicant receiving a limit of $30 cash out of a maximum payment of $250.

The need for these funds is evident. This winter is the coldest in 60 years—40 percent colder than last. States in every region have felt its effects.

Subnormal temperatures have caused energy consumption to increase dramatically this winter. In New England, where conservation efforts have been widespread and effective over the past 3 years, consumption nevertheless is up 25 percent. Nationally, residential consumers are using 32 percent more energy to stay warm than they did last year.

And with the severe cold, prices for energy have skyrocketed. Fuel oil customers in New England have faced a 5 to 7 cents per gallon increase since last summer. Natural gas prices across the country have jumped more than 7 percent in the past 2 months. In fact, congressional estimates of the total residential heating bill for the Nation are that it will be between $5 billion and $8 billion this winter—up to a 49-percent increase nationwide over last year, equivalent to an average of more than $139 per housing unit.

These big heating bills hurt every consumer. But they hit hardest those least able to pay—the poor and the near poor. Every day, more and more low-income families must make the cruel choice between getting enough to eat or staying warm—paying the rent or paying the utility bill.

Energy costs have risen more than four times faster than average welfare payments since 1973. Even before this winter, elderly persons were paying 60–80 percent of their income for shelter and heat.

The need is clear. Using the best data available, Federal agencies have estimated that more than 2 million families must have financial assistance because of this winter's severe cold.

This proposal is not intended to be, nor can it be, the answer to all the problems of the poor this winter. But it does provide best coordinated Federal-State response to the financial crisis faced by many of the Nation's low-income citizens.

THE FEDERAL DEFICIT

The committee has recommended a revised Federal deficit target for fiscal year 1977 of $68.2 billion. This figure is $17.6 billion above the deficit target of $50.6 billion in the second budget resolution. $3 billion of this increase is related to reestimates of revenues and outlays under the second budget resolution. Revenues under current law are estimated to be $6 billion below those projected in September, principally because of the slowdown in the economy. Outlays for programs assumed in the second budget resolution are now estimated to be $3 billion lower than in September, reflecting the net of savings which have been achieved and unforeseen costs which have arisen under existing programs.

The remaining $14.6 billion of increased deficit reflects the net cost of revenue reductions and spending increases which the committee believes appropriate to meet the economic conditions which face us today. Our recommendation provides for a reduction in net revenue collections of $9.7 billion, after allowing for higher receipts from a stronger economy and outlays on programs not provided in the second budget resolution of $4.9 billion.

I wish to emphasize that the continuation of the large Federal budget deficit is due to the fact that the economy is operating far below capacity and only partial recovery has taken place from the worst recession in postwar history. The only acceptable path toward lower deficits in the future is the path of full economic recovery. If we maintain the recovery and promote health and vigorous growth in the private sector, we will be able to lower the deficit in future years and move toward budgetary balance.

INFLATION

We met our inflation goal last year. In the first budget resolution for fiscal 1977, we aimed for a 6-percent rate of increase in the consumer price index for 1976. The actual inflation rate was 5.7 percent, in line with the assumption made in the second budget resolution.

Inflation has been a critical problem for our society in recent years and it continues to be a very serious concern. Nevertheless, we have made substantial progress in squeezing inflation out of the economy, even though much more remains to be done.

In 1974, American consumers lived through double-digit inflation. When we drew up the first congressional budget in 1975, prices were still rising at over 9 percent annually, and food prices were going up at nearly 8 percent. By late 1976, consumer price inflation was down to about 5 percent.

I wish to emphasize that this does not mean that inflation is no longer a serious problem. The committee is acutely aware of the danger of overstimulating the economy and setting off another round of large price increases. The possibility of renewed inflation has been an important consideration in our deliberations over the appropriate size and type of stimulus package.

Inflation is always a potential danger when the economy is operating near full capacity and the demand for goods equals or exceeds our capacity to produce them. However, the inflation we are now experiencing is not the result of excess demand. Our present inflation results from the inflationary momentum built into the system, as each year's price increases are incorporated into the next year's wage and price decisions.

Considerable slack exists in the economy at present. Unemployment is still higher than at the bottom of other postwar recessions, and manufacturing industries are using only about 80 percent of their productive capacity. Judging from historical experience it should be possible for the economy to grow at a 5½- to 6-percent rate at present without adding to inflation, if an appropriate mix of policies is followed.

The consumer price index suddenly rose at a 10-percent annual rate in January, after 3- to 5-percent increases during the last few months. Price increases in the food and services components were much larger than in recent months, while prices of commodiites other than food rose at about the same rate as in December.

This large price increase was due primarily to the severe weather conditions, and we must expect a continuation of temporary price increases for some commodities in the next few months. The drought in the West has cut back on agricultural output. The natural gas shortage has closed plants in some parts of the country. The increased demand for heating fuel has led to further increases in energy prices.

It is important to recognize that this additional inflation is due to special

supply conditions and not to general excess demand. The temporary inflationary effects of these supply difficulties should not be allowed to impede the implementation of appropriate fiscal and monetary policies.

The Congress and the Nation must keep a watchful eye on inflation as we decide on fiscal policy for 1977 and 1978. Our policies of prudent expansion have allowed us to make continuing progress in reducing inflation. We must continue this progress in 1977.

Mr. President, although the Budget Committee's report has been produced in response to immediate economic conditions, we must view congressional fiscal policy in a long-term context. We must never lose sight of where we have been and where we want to go.

We have been through the most severe recession in post-war history, combined with unprecedented peacetime inflation. Only 2 years ago the unemployment rate was nearly 9 percent and inflation was over 10 percent. In part that was a result of forces outside our control. But it was also due to mistaken Government policies. We need not repeat that experience. If we choose our policies wisely, we will not do so.

The traumatic effects of that experience linger on in the economy. It takes time to reduce unemployment from those levels. It takes time to squeeze inflationary pressures out of the economy.

It will be 1980—a full Presidential term from now—before America can once again have full employment.

Even if the private sector of the economy proves exceptionally strong, we should not expect budgetary balance before 1981.

In the best of circumstances, the goals of full employment, lower inflation, and a balanced budget will prove difficult to reach. Attaining them will require not only wise policies from the Congress and administration, but much better luck than in the last few years.

The revised budget we put before you today for fiscal 1977 is directed at those goals. It represents a clear commitment to economic recovery. It continues the fiscal discipline maintained by second budget resolution. I urge my colleagues to support it.

Mr. President, at this point I would like to express my appreciation to the members of the Budget Committee, led on the Republican side by the distinguished gentleman from Oklahoma (Mr. BELLMON), and especially those members, including the distinguished Presiding Officer at the moment (Mr. NUNN), who served with the Budget Committee over the last 2 difficult years.

I welcome the addition of the new Members who are joining the committee this year. I trust they will find the experience as stimulating, interesting, and challenging as those of us have who served for the last 2 years.

I would like to make this point with respect to one of the challenges that faces us in the next 2 years. For the past 2 years the budget process has worked. I think that both outside and within this Chamber it is viewed as having worked successfully in a Congress with a majority of one party and a White House with an incumbent President of the other political persuasion.

The challenge now, which a President and a congressional majority of the same party, is to insure that the congressional process does work and continues to work as a separate, independent process, with an integrity of its own, a policymaking potential of its own, a data-accumulation base of its own, so that we will be in a position to assert our responsibilities under the Constitution over the power of the purse.

I am sure we will be watched by those who may be tempted cynically to believe that with both the White House and Congress controlled by the same party, the congressional budget process will tend to become a rubberstamp of the administration.

I want to assure my colleagues in the Senate and those Americans outside who may be watching us, that I, for one, am committed to the integrity of this congressional budget process as a separate budgetary force.

We will, of course, work with this President, and with every President, in an attempt to insure that the budgetary decisions serve the best interests of the country. At times we will agree with this President and other Presidents; at times we will disagree.

But I hope we will always follow the dictates of our own best judgment after full consideration of the options before us and the conditions and problems we are being asked to meet. Only in that way can we serve the purpose for which the congressional budget process was created. If we do not do that, we might just as well junk the whole thing.

I just wanted to make that point in this, my first, statement at this session of this Congress.

Mr. President, finally, before I yield to my good friend from New Mexico (Mr. DOMENICI), I want to take this opportunity to thank the employees of the Government Printing Office for the fine spirit of cooperation they have displayed in the printing of this resolution and report. It could not have been done anywhere else in the world in such a short time.

My one complaint about the printing process in Congress has not to do with production but with the fact that we cannot always get the colors we want. You will notice this report is printed in green ink. I would like to see it printed in red until such day as we achieve a balanced budget. But I have not been able to, you know, break through the controlling regulations. So it is printed in green. But I want to assure my colleagues that we are still in the red, and it might be a useful signal to the country if we could print it in red until we get the color as well as the contents corrected.

EXHIBIT 1

STATEMENT BY SENATOR BELLMON

I believe this is the fifth Budget Resolution presented to the Senate by the Budget Committee over the alst two years, but this is the first time Congress has been called upon to re-examine and change its budget after the Budget ceilings had been fixed just before the start of the fiscal year. This is an important occasion and as with the preceding budget resolutions, I rise to support this one although with less enthusiasm than the previous resolutions.

My desire today is not to restate the recommendations of the Committee, but rather to voice some perspectives which I believe are important in reviewing the recommendations. In particular I want to discuss—

(a) Should there even be a Third Concurrent Resolution;

(b) Which of the various economic stimulus packages can be accommodated by the Budget Committee recommendations;

(c) The very important fact that certain types of components of the stimulus package can be significantly more effective than others; and

(d) Some observations regarding the future impact of two programs discussed in the Committee's Report.

First, should there even be a Third Concurrent Resolution? We are not reconsidering the Budget decisions of last fall on the basis of some whim of spending or taxation—rather, this Resolution is in response to economic events of a serious nature. While there is little doubt that the economy is in a stage of recovery, through a series of hearings, the Budget Committee has developed the belief that some fiscal adjustment was necessary to sustain and accelerate the pace of that recovery, and that continued, unacceptably high levels of unemployment are a likely prospect unless action is taken.

I am acutely aware that there are a broad range of actions needed to help restore the vigor of the U.S. economy which do not involve immediate and direct budget impacts, such as regulatory reform and adjusting the structure and incentives of our tax system and income support programs. But these avenues of action would be delayed by debate and are thought to have relatively slow economic effects. In view of these limitations, it is incumbent upon us to use the Federal budget as an economic tool according to our best judgment. Further, if Government fiscal policy is to overcome the long established criticism that it is not sufficiently responsive to economic events, that there is too long a "lag" between the need for action and the appropriate fiscal policy response, then we must act now. It is more prudent to change the FY 1977 Budget Resolution now, rather than waiting until the FY 1978 Budget Resolution in April and May to set policies that cannot take effect until October of this year.

At the same time, however, I would make it clear that the Committee is not over-reacting to a mere wiggle or two in the economic statistics. There is considerable evidence that economic performance is below our expectations and below the economy's capability at this stage of the economic recovery.

Given the understanding that action was deemed necessary, it should be pointed out that this Third Budget Resolution demonstrates a strength, not a weakness, in the Budget process. The process is flexible enough to permit adjustment when economic or emergency conditions warrant; however, the process is not so flexible as to allow for changes whenever an economic statistic moves in an adverse direction. It is anticipated that this Resolution will prove to be a unique budgetary event, and that future years will require only the normal First and Second Budget Resolutions.

A second major point I would endeavor to leave with my colleagues concerns the general thrust of the recommendations in the Budget Resolution. In keeping with the Committee's tradition and mandate, specific legislative programs are not endorsed by this Resolution. Rather, we have attempted to set the right overall dimensions and general outline to an adjusted budget policy for the re-

mainder of this fiscal year. Specifically, it is my view that the Committee has essentially recommended that efforts to stimulate the economy at this time should be primarily through tax reductions—to encourage consumer purchases and sustain business confidence. At the same time, the Committee recognizes the need for some additional expenditure initiatives, primarily to target Federal efforts on sections of the economy or on individuals most acutely in need of employment assistance and capable of being effectively assisted through Government spending initiatives. In addition to the relative balance between these two thrusts, the total size of actions has been carefully weighed with regard both to realistically attainable and sustainable economy goals and the importance of limiting the size of Federal deficits, the weight of Federal borrowing on financial markets, and the burden of Federal debt in future budgets. We are shooting for 6 percent unemployment by the end of 1978, and hoping for better. While recognizing the uncertainties of weather and agricultural production, both in the US and around the world, and of other effects on prices, we foresee some inflationary pressures but seek to avoid acceleration of prices and wages. Finally, while the deficit for FY 1977 will be larger than if no action were taken, the Committee believes that this delay in reducting deficits will provide the economic thrust that will re-establish the trend of declining deficits and toward a balanced budget. That appears to be in jeopardy without these economic initiatives.

Beyond these general dimensions and goals, no specific policy package is endorsed by the Committee or mandated by this revised Resolution. In light of the wide-range of opinions and approaches represented by individual members of the Committee, and because further information and insights remain to be gained from the hearings and deliberations of the other Committees of the Senate, this Resolution should be viewed as accommodating a range of alternatives, although of course not the entire universe of possibilities. For instance, there is room for the proposals of the new Carter Administration. In spite of serious reservations being expressed throughout the Congress about several elements of that package, the Committee did not wish to foreclose those options. At the same time, the stimulus proposal of the Senate Republicans would fit easily within these revenue and outlay totals, and would, in my opinion, yield better economic gains, higher revenues, lower expenditures, in a smaller budget deficit than any alternative we have reviewed.

While the Budget Resolution recommended by the Committee does not endorse the Republican proposal, I would take this opportunity to express by continued support for those policies. Specifically, I favor a permanent personal tax reduction that would result in a smaller amount of revenue reduction in FY 1977, but would provide more continuing tax reductions in 1978 and beyond. This is the kind of steady and sure support to consumer spending and business confidence that is best for the continued and steady growth and employment increases. As opposed to the declining recession situation of early 1975, the economy now has an upward momentum. Growth of 4.3 percent or better is expected for 1977 and 1978 without any additional stimulus. I therefore question the need for a quick kick to the economy by means of a large one-time tax rebate. Rather, a firm but continuing nudge is needed to push the economy to a somewhat higher growth rate. Further, I question even the effectiveness of the rebate plan in providing the quick kick. The Committee heard and received evidence and analysis to suggest that most of the rebate will not be spent in the first three to six months, and that much of it will remain in savings or debt reduction after 9 months to a year.

Why should the Government borrow large sums of money and pay it out to individuals just so that they can put that money in the bank? This rebate plan will result in a bulge in the Federal deficit and Government borrowing which will bring extra pressure to bear on financial markets and Federal reserve monetary policy. In view of the speculative need for and effectiveness of the rebate plan, these pressures should and can be avoided.

On the spending side, our efforts should be directed exclusively at those who have particular and lasting difficulty finding jobs, even when the economy returns to more normal levels of performance. These are often referred to as the "structurally unemployed". At this time and in the foreseeable future, a large proportion of these individuals are young people and women. Many are relatively recent entrants to the labor market who have had little or no employment experience. The Republican stimulus proposals focus sharply on young people through training and employment programs, and on the long-term unemployed through an employment credit incentive to the private sector.

I would note that the Committee's recommendation includes a substantial increase in funds, both budget authority and outlays, for Function 450, which could be used for accelerated public works. I am in favor of a responsible level of public works, and I may support additional public works expenditures. However, it is a serious mistake to view public works initiatives as a part of an economic stimulus package, to be geared up and shut down in response to the economy's needs. In spite of the best of plans and intentions, public works just are not manageable in that way. In addition, they carry with them a legacy of maintenance that is required regardless of the state of the economy or of state and local budgets. Congress appropriated $2.0 billion last September for an "accelerated" public works program, but the Wall Street Journal last week said that even one construction person has not yet been hired some five months later. Such a program may have merit but not in a stimulus package.

A final word of caution. We will in the next three months be considered the Budget Resolution for Fiscal Year 1978. I would point out to my colleagues that in the revised FY 1977 Third Budget Resolution being considered here today, budget authority for FY 1978 in public employment and training under CETA is provided. This is done to enable 1978 program levels to be established at the same time the remaining program funds for FY 1977 are appropriated. This accommodation through a late appropriation should not be viewed as a general precedent or commitment to full advance funding for all parts of the public employment programs. Although a good part of such programs are designed as countercyclical policies and must be responsive to economic trends, advance funding may be a desirable management policy in certain circumstances. It is clearly the intent of these recommendations that this advance budget authority was being provided as a planning and management tool, to provide program sponsors with assurance that the program would be extended into 1978. This assurance would give sponsors the confidence to hire and train people as intended by the program. However, it was not intended that this budget authority would be available before FY 1978—it was not to be a "backdoor" way of getting extra 1977 funding. There should be no confusion of this point.

As said earlier, I support the Resolution, but I did want to be on record regarding the above issues.

EXHIBIT 2

STATEMENT BY SENATOR MAGNUSON

The Senate has before it S. Con. Res. 10, the third budget resolution for fiscal 1977. I support the resolution, and I urge all of my colleagues to do likewise. Its adoption is a necessary first step in the enactment of a stimulus package of tax reductions and increased spending that will provide an improved economic climate in which millions of unemployed Americans will at last be able to find productive jobs and reestabish for themseves the economic security they deserve.

The spending ceiling and revenue floor modifications that are proposed in the third budget resolution seem to me very well advised. When I first spoke in support of the fiscal 1977 budget resolution last spring, I indicated that my one major concern was that the resolution might be too cautious because it seemed to shy away from providing the extra stimulus required to assure a speedy economic recovery. I noted that "I would provide this extra stimulus . . . by spending to put people to work—directly through more public service jobs, and indirectly through accelerated investments in needed public works projects." During the early summer the recovery proceeded better than I had expected, and began to think that perhaps the extra stimulus I had sought in the first budget resolution wasn't really necessary. Now, however, it is clear that it is necessary.

In another area, I believe it is important for the Senate to be aware of the general approach taken by the Committee on the Budget in preparing this third budget resolution. Since this is the first time an "extra" budget resolution has been required in order to amend the budget ceilings established in the fall, the precedents established are important. It is significant, therefore, that the Budget Committee restricted itself to adjusting the spending ceilings and revenue floor only to respond to emergency conditions that were unforeseen at the time of enactment of the second budget resolution, and to account for certain technical budget re-estimates. Thus the committee consciously avoided opening the door to reconsideration of all of the controversial budget issues that were debated and resolved at the time of enactment of the second budget resolution.

I believe this was a wise decision. I feel it is important to the continued success of the congressional budget process that the basic dimensions of the budget be firmly established in the second budget resolution, and be adjusted thereafter only as may be required by unforeseen emergencies such as now confront us.

In conclusion, I recommend that the Senate approve the third budget resolution as reported by the Committee on the Budget It amends the previous resolution by providing room in the budget for the Congress to enact legislation providing for such stimulative measures as expanded public service jobs and other employment and employment security programs, accelerated public works, and tax reductions. The report accompanying S. Con. Res. 10 includes a number of suggestions which the Budget Committee believes the Senate should consider in enacting such legislation, and I am sure the authorizing and appropriating committees will give these the serious attention they deserve. The third resolution has been purposefully designed to allow consideration of a number of different strategies for economic recovery, and I encourage my colleagues to consider them fully before reaching a conclusion.

Mr. MUSKIE. Mr. President, I yield to my good friend from New Mexico, who

has made such a solid and always challenging contribution to the work of the Budget Committee. We are delighted to have him continue his service.

Mr. DOMENICI. I thank my good friend from Maine.

I was just wondering, on the red ink, Mr. President, perhaps our chairman would speculate with me: Does he really think we would only need the red ink until 1981 and then we can switch to green?

Mr. MUSKIE. I think if we print it in red we might achieve it in 1979 in order to avoid the embarrassment.

[Laughter.]

Mr. DOMENICI. I thank the chairman of the Budget Committee for his remarks today and, particularly, his closing remarks with reference to the independent nature of the Budget Committee and its fact-gathering and its thrusts. I think the Senator has said it exactly right. We tried to do that with President Ford in office, and we understand that our new President has some very definite approaches. Those approaches which indicate his commitment to a balanced budget as soon as possible will not find any trouble with the Budget Committee. Certainly this year, I think it is safe to say, in spite of some differences, it is virtually unanimous that we think we need a stimulus package. I do not think there is much argument on that score.

On the other hand, I think there is some genuine feeling that there are different ways to do it.

Mr. President, I do not intend to present extended remarks on this resolution since my position is reflected in the additional views and the minority views contained in Senate Report No. 95–9. I hope that my colleagues will carefully study those sections of the report and earnestly consider the points of concern and opposition expressed by minority members of the Senate Budget Committee.

My basic position is that the adjustments in revenue and spending for the remainder of this fiscal year which would be allowed by this third concurrent resolution are in excess of adjustments needed to sustain economic recovery and provide the foundation for orderly and stable growth without inflation. The aggregate of reductions in revenue and increases in spending is simply more than required to achieve our revised economic goals. Senator McCLURE and I describe an economic stimulus package in the minority views of the report which would accomplish our goals at a lower cost, both in fiscal year 1977 and in subsequent years. I strongly urge my colleagues to examine our alternative proposal, especially since we intend to join with other Senators in attempting to implement that proposal, or major parts of it, through individual revenue and spending legislation permissible under the revised budget numbers.

In that regard, Mr. President, I feel that recognition should be given to the fact that the resolution's revised figures for revenue, outlays, and new budget authority are limits, not targets. I hope we will be able to resist the tendency to reduce revenues all the way down to the level specified in the resolution. I hope we can reject the notion that we must spend and obligate to the full extent allowed under the resolution. The resolution simply sets the outside limits and if we can achieve our goals without reaching those limits, that is our duty as responsible legislators. Many of our colleagues agree with me that we can, and feeling that if we can, we must, I will actively seek an eventual combination of revenue reductions and spending increases substantially less than permitted under Senate Concurrent Resolution 10.

Mr. MUSKIE. May I say at this point that the distinguished Senator from New Mexico presented those alternatives very articulately and persuasively in the Budget Committee. I think that is one of the constructive attributes of the budget process, that whatever the source of an idea we discuss it constructively and positively and benefit from it, although we do not always agree as to it.

The second point I would make, as to which I think the Senator will be in agreement, is that some of the numbers we have put in will accommodate some of the alternatives that were debated, even though we did not nail down particular alternatives with respect to job-producing programs, for instance, or even the nature of a tax relief. So that we served our function of establishing overall ceilings but, at the same time, left some flexibility with respect to program content under it.

Mr. DOMENICI. I thank the chairman for those observations, and I wholeheartedly agree with him.

I just want to spend a few minutes addressing a couple of the issues as I see them. As our good chairman remembers, when the President's three representatives came before us to discuss their economic package—the Secretary of the Treasury, the Director of OMB, and Mr. Schultze, the chairman of the Council of Economic Advisors—I spent a great deal of time on this issue of the tax rebate, the $50 rebate.

My efforts had two or three reasons behind them: I am genuinely concerned that while we need a stimulus package that there may be a better way than the $50 rebate.

My questions basically focused around the question of why do we not have a tax cut right now for the average working man and woman in America and perhaps for a portion of America's private sector? From my standpoint I was trying to make the point that small business in America needed a permanent tax cut.

I think, in the final analysis, the position that representatives of the administration were giving on that particular point was that they wanted a tax reform package to come into being in the not too distant future and they needed to wait for that as they looked at the entire tax structure of this country.

I made the point, and I make it here for my fellow Senators that I do not believe any major reform package will not have in it a 6 to 8 percent tax cut for the average working man and woman in America and a substantially similar one, if not a little higher, for small business. The reason I make that point is that if we were to cut taxes permanently, say up to adjusted gross income of $20,000 and for small businesses $100,000 in taxable income and under, we would really not be cutting their taxes in the sense of cutting back or giving them substantially more to spend. Rather, we would just be keeping pace with what inflation has done to the average taxpayer and small businessman in America because as their incomes were increased they moved into other categories and paid more taxes and their real disposal income is really less because of inflation than it should be. Therefore, it seems to me that any reform package is going to try to adjust that either on a one shot basis or by the initiation of some kind of permanent indexing in the system.

I wanted very much to make the point in the Budget Committee and I want to make it now that I truly believe the best way to stimulate the American economy now is to build some confidence in average consumers and small business persons in America, not so they will go out and make a one-time investment but so that they will have more confidence in their position as consumers next month and the month after and so that they will see in their paychecks rather consistent new money flowing into their pockets as the result of their work. I think that will cause them to buy, plan, and spend, and I think that is the best stimulus we could put in effect.

I would say for those who are interested in the Budget Committee's report there is room. As my good friend has said, if that is what this body chooses in the revenue side, there is adequate room for us to debate and vote on that very distinct option: tax rebates versus a permanent tax cut.

It is for that reason that I am here saying to those who are concerned about whether or not this resolution provides only one avenue of approach. It does not. In other functions this particular third concurrent resolution addresses two other very important issues.

Mr. MUSKIE. Mr. President, could I make a point on the position the Senator has just discussed?

Mr. DOMENICI. Indeed.

Mr. MUSKIE. This is only for the purpose of maybe adding another dimension to the discussion of it.

First of all, with respect to the nature of the tax program that we ought to adopt, I think the Senator has described very clearly the advantages of a permanent tax cut in terms of consumer confidence and its practical economic effect down the road as an important result to achieve. I think we are in agreement on that.

I think the reasons that the administration preferred to go easy on permanent tax cuts include: First, the possibility of tying tax cuts to tax reform down the road; second, to give the administration time to consider the down-year impact on revenues as against the down-year requirement for revenues after the administration has had more time to contemplate both of those down-year effects.

The administration is committed to programs of national health insurance and welfare reform. There are other big problems staring us in the face with respect to development of alternative energy sources, mass transportation, and others that the Senator from New Mexico could add as well as I.

So, the administration chose to go somewhat slow on permanent tax reductions. It did provide for a permanent increase in the standard deduction, which is a permanent tax cut, as a partial payment on a permanent tax cut.

The Senator has made a very important point that I think is beginning to get increasing public awareness. The nature of the progressive income tax is that especially with inflation the effect of inflation is to put people in higher and higher tax brackets, thus in effect increasing taxes without legislation. Congress over the last 20 years has offset that effect by tax cuts from time to time which has managed to keep the Federal share of GNP to something like 21 or 22 percent, and I think that informally in the Budget Committee we have agreed that is the level at which the Federal share ought to be held. So that that is, I think, a strong argument for permanent tax cuts.

So the disagreement really is not as to the validity of the permanent tax cuts at some point between now and 1980 but precisely when that ought to take place with maximum benefit to our people without compromising the Government's options down the road.

There is one other factor that I wish to mention with respect to this. The President was looking for continuity in his stimulus program over a 2-year period.

It was very difficult to conceive of immediate stimulus of the size that he desired in fiscal year 1977 and which is included in this resolution and in his proposal, that is, stimulus on the order of about $11 billion which represents the tax rebate.

I think there was some discussion in the committee of other possible tax formulas that could inject that kind of money at about the time this rebate money would go into the economy, but they have not yet been developed as of the time we discussed it, so there may be some other formula that would do it. But a permanent tax cut would not do it standing by itself.

The permanent tax cut would take effect about April 1 presumably and would be reflected then in ongoing reduction in withholding rates which, of course, would add to consumer confidence, but it would not provide the stimulus of a tax rebate at this point in the economy.

With respect to continuity of the stimulus, the administration was sensitive to the need of continuity. So what it undertook to put together was a 2-year package of roughly $15 billion in each year..

The PRESIDING OFFICER. The 1 hour allotted to the resolution has expired.

Mr. MUSKIE. I do not know if anyone else wanted time. I ask unanimous consent we may have another 15 minutes.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. That was beginning with the tax rebate now continuing with the increase in the standard deduction, which is about $4 billion at annual rate, and then phasing in job creating programs which would begin to blossom into full size about 1978. So we would move from this tax rebate to more permanent spending programs and a permanent tax deduction the second year. The idea was that with the country assured that we have a 2-year program in place that would tend to give continuity of effort and hopefully a response of confidence and growing confidence on the part of the country.

It is not as conventional or as traditionally accepted a way of doing that as the permanent tax cut. But I think the administration is trying to put together a package that will work all around.

May I make one other point? I know the Senator will respond to this, but I have to make it. That is that beginning with 1975, we have been using temporary tax cuts to stimulate the economy. The act we enacted 2 years ago this March, I believe, was a temporary program, and indeed it included tax rebates. Then we extended the permanent part of that program, I think, at least twice since that time. It will expire at the end of this calendar year and will have to be reextended.

I know the Senator's argument to that is that the taxpayer, as he sees it in his withholding rate and as he expects it to continue, does not really know it will expire. His expectations, of course, will be reinforced by the fact that we have extended it twice. Nevertheless, it was a temporary tax cut. From the point of view of those in production, of those who make management decisions and employment decisions in this country, its temporary nature was certainly clear. They might have found a permanent tax cut preferable, but we retained the option or preserving our revenue base and our options down the road rather than enact the permanent tax cut. I guess there was also a political reason between the President and the Congress, that we wanted to maintain our options in our dialog, debate, and controversy with each other. That was another reason, I suppose, for the temporary nature of the tax cuts at that time.

Mr. DOMENICI. I thank the Senator for his observations. Let me just make three or four quick points. I do not intend to belabor the issue.

Did the chairman introduce the prepared remarks of the ranking Member, the Senator from Oklahoma?

Mr. MUSKIE. Yes, I did.

Mr. DOMENICI. Let me say first I do not disagree with the President's overall amounts by way of what stimulus might be needed for the rest of this year and next year. I do not want anyone to think that because I have what I consider to be constructive alternatives, I believe the President's proposals were outlandish. Quite to the contrary, I think there are many who will insist very strongly that the overall stimulus package is not big enough. I think it is adequate, and, as I've said, perhaps we can get by with somewhat less.

I do want to make these points, however: The deficit effect of tax rebates, in my opinion, is totally out of proportion to the stimulative effect. Once we put rebates into the system and the deficit is created, it just makes it more difficult for us to arrive at that point in time when we can have a balanced budget.

In a very real way, we are beginning to understand that we have to pay that deficit back some day. As the chairman knows, the interest on the national debt is quickly becoming one of the most significant singular items in the budget. It is over $34 billion. That is an estimate. I think we have to be concerned about that.

Second, in our particular work we are constantly looking for reflows back into the tax structure from activities that are stimulative so that we find reductions in other expenses that will thus cause us to gain substantially from stimulative efforts. I think it is obvious here, too, that tax rebates do not generate a significant amount, or might I say as significant an amount, as other kinds of stimulative expenditures.

I want to raise one other point. The chairman has discussed here the fact that we have to be concerned with commitments that are yet unfulfilled, programs that might have to come into existence because of commitments and thus we want to look at the tax revenues. We should leave them alone, so to speak, until we see those commitments. I want to address this issue.

In my opinion, after 2 years on the Budget Committee, a concept I do not think many people were talking about has become very, very paramount and significant to this Senator. That is the percentage of the gross national product that goes to government, whether it be the Federal Government alone or the Federal Government in combination with State and local governments. That is the real issue.

Will we get a balanced budget with the Federal Government taking 25 percent of the gross national product some years down the line, or will we get a balanced budget at 20 percent? We are now approaching 35 or maybe 37 percent of gross national product that is going to all government, Federal, State, and local. That is the highest ever, and it is growing rapidly. I will admit it is not growing any more rapidly at the Federal level than it is when you add up State and local governments. I believe the single most important fact about America's future is how much of the productivity of our people will go to government.

Mr. MUSKIE. Will the Senator yield?

Mr. DOMENICI. May I just finish this thought? Then I will be delighted to yield.

While I think we can cut taxes right now and worry about what fits into the tax revenue pictures of our country 2 or 3 years down the line, I would rather look at it from the standpoint of less

revenue today, percentagewise, of the GNP than keep it at its present level and then see what will fit.

I am not suggesting the chairman disagrees with that position; I am just saying that is one of the reasons that I do not think we ought to wait before we enact permanent tax cuts. I think the paramount economic facts in America in terms of our growth and the well-being of our people are two things: the bigness of Government and its inefficiency, which are directly related, in my opinion, to how much of the GNP we are going to assign by our actions, direct or indirect, to the Federal Government.

I am pleased to yield to the Senator.

Mr. MUSKIE. The records of the Federal Government's percentage of the GNP has been at about 20 percent or 21 percent since World War II. So as a percent of GNP it has been fairly steady. It is a little higher than that now because of the recession which throws percentages off. It is around 23 percent now. I think when we get back to full employment it will be at a steady base of about 20 or 21 percent.

As we said earlier, all of us would use that as a target for the size of the Federal Government for the foreseeable future. So there is no disagreement about that.

The second point I would make is that the President in his package has provided tax rebates. He has also provided some permanent tax reduction at an annual rate of $4 billion. So he is moving in the direction that the Senator from New Mexico suggests. There is also the direct job creating program. Again, it is a matter of how much you do and when. I believe the administration recognizes the importance of reducing the permanent tax take of the Federal Government at such time as it has had an opportunity to get all its ducks lined up.

The failure to move as far as the Senator would in permanent tax reductions right now does not reflect a disagreement on the part of the rest of the Budget Committee or of the President. All he is asking for is what we need.

Because of the state of the economy we need a certain amount of stimulus now. This looks like a sensible package to me now. We will look at it again as we go along, including the need for permanent tax cuts.

That, to me, is a prudent approach. That is not to say that the Senator's approach is not prudent.

It is a matter of honest differences of judgment about what to do right now. I think that is what it amounts to, and I think this dialog—hopefully—will identify some of the options which we debated in the Committee on the Budget.

I notice the Senator has another point he would like to make.

Mr. DOMENICI. I want just to say, with reference to the crisis that is upon many of our people because of increased energy costs, that it is a real one. For any Member of this body who went home to visit his people during this recess, if he did not meet with senior citizens on fixed incomes, predominantly our social security recipients, he should have. I met with a number and they are no longer reluctant to stand up and show you the condition of their expenses and the amount of money they get, and something has to be done.

I understand that our national energy policy is going to be a tough one, and I do not think we are going to have cheap energy next year for working Americans or for retired Americans or for anyone else. That is an absolute fantasy, that we are going to have cheaper energy.

On the other hand, when you have literally hundreds of thousands, if not a few million, Americans who get nothing more than a social security check—and for many of them, that check is based on incomes that are not even relevant to today's incomes, because they earned them in other economic times, some getting $189; and in my State, which is not as high as some others in terms of energy cost, many are paying $38, $40, $45, as high as $46 in energy bills. That is for simple little houses, in some instances for apartments that they rent. We just have to do something at the State level and national level to help with that.

I want to say, on that score, that while I might support the rebate for the social security people that is contained in the President's request and provided for in these recommendations, that was not its intent and that will not do the job, because that expense is not going to go away. That irrational relationship of $44 for energy to a $200 social security recipient, in our part of the country, did not come about because of severe weather. We did not have severe weather the 6 weeks that we had it back here. That is going to be an ongoing, serious problem that we must address and we must address it in a manageable manner, in an orderly manner—not with another program that is filled with regulations and they all have to go sign up for. That may help a few of our poor people, but we have to address the issue in a very broad way.

I do not have the answer. I do not know what it is. I hope the levels in the resolution will accommodate that if someone finds a manageable, orderly way to perhaps subsidize our States, perhaps subsidize ad valorem taxes, perhaps add on revenue sharing in some way to be used as an offset against property taxes. I do not know which approach to take, but it is serious and must be addressed.

In closing, on the rebates themselves for the working people of the country, as contrasted to the fixed income people, I am not opposed to that because I do not want to give the family $50 or $100 or $250. I am on record as wanting to give them a permanent tax cut, which, over the years, will give them more and give it to them consistently. But the principal reason for making these adjustments is that we need a stimulus. Our economy is not producing at as high a level as it should. There is not sufficient demand, so supply is not being generated, so people are not being put to work. But I do not think that there is good evidence that the tax rebate will be used to purchase the kinds of things that will cause that demand to increase substantially and do so with the consistency sufficient for the enterprise sector of America to respond and increase supply and hire people.

I am delighted to tell the Senate that the Committee on the Budget has done an excellent job of analyzing the makeup of unemplyoment in this country and there is a good, objective analysis now, clearly indicating that significant portions of the unemployment problem in our country are structural, not cyclical. There are various definitions of that, but let me give you mine in the context of my comment.

Cyclical is the kind of unemployment which comes about because the economy is down, and, therefore, there are not enough jobs for those who were previously employed and able and trained; whereas, structural is the kind that is going to be there substantially, even when the economy is moving ahead at satisfactory rates. Structural unemployment is the tough one. We do not know exactly how to cure it and, more importantly, it is predominantly comprised of young people.

We believe that 50 percent of the unemployed in this country are from 16 to 24 years of age. I submit that we have to find ways and means, even if it costs substantial amounts of money, to address that issue. Either we are not training them properly, or we are not matching their skills, or we are not giving them the kinds of opportunity, because of structures that are in their way—I do not know what they are, but people have said it is everything from minimum wage to the fact that they are not properly trained to the fact that it is hard to get part-time jobs for young people. We know the problems are there.

I am delighted that this particular resolution contains within its recommended figures, not by way of identifying the proposal I support specifically, but within function 500, which contains CETA and some other programs. The committee has obviously put sufficient latitude for a major American thrust at helping the unemployed youth of this country find work. I think that is absolutely mandatory.

It cannot be delayed if we figure out a program that will be cost-effective. It will be far more cost-effective than more macrostimulus as to those unemployed youth looking for work.

The facts are also very clear that macrostimulus does not respond very well in that arena, or shall I say that arena of unemployed does not respond very well to that macrostimulus. So those in the substantive committees of the Senate have some serious challenges here. I hope that we use the CETA umbrella, but that we seriously consider permitting CETA to have a principal charge for young people, a new thrust, and that they are given the latitude for the first time under the umbrella of CETA, the Comprehensive Employment Training Act, to address some effort at the private employment sector for young people under the auspices of local prime sponsors around the country, who know the dimension of the problem, know the nature of the problem, and will far better address it than for us to try to resolve that youth problem nationally as if it were homogeneous.

One last remark on that score. Much has been said in this country that youth unemployment is a problem of the big cities of America. Indeed, it is. But there is serious misunderstanding if people assume that it is exclusively or even predominantly the problem of major American metropolitan centers. It is not so, according to the best information we could find out. Heavy youth unemployment is kind of homogeneous across the country. It festers in rural America, smalltown America, medium-sized, and urban centers. And any program must be directed at all of them, in my opinion. We might have some specific help for our major cities, but there is no question that youth unemployment, the inability of young people to find something to bridge that gap between youth and adulthood and learn the system, and make something of themselves while they are in those years, is deficient across this country in urban, rural, and medium-sized towns. It is just everywhere in about the same proportion.

Mr. President, I yield the floor.

Mr. MUSKIE. Mr. President, just an additional response to the Senator.

Mr. President, the distinguished Senator has made the same eloquent plea on the floor that he did in committee in respect to youth unemployment.

As he indicated, I think the reaction of the committee was unanimously in support. Frankly, there is considerable frustration in the committee that we have really put together a program that targets that particular unemployment problem, as we hope we can find the wisdom to do before we get through the work of this session of the Congress.

So I associate myself with what the Senator said on that.

With respect to the problem of our senior citizens, I associate myself with that, also.

I make the point that that is still another addition to the agenda of items we will find ourselves dealing with which have serious budgetary implications. We have to keep our options open as much as we can while we move to deal with those immediate problems.

Mr. BIDEN. Mr. President, I am speaking today in support of the third concurrent resolution on the budget for fiscal year 1977. This resolution will provide help for those who are the innocent victims of our economic ills—both unemployment and inflation.

Quite candidly, I do not speak in favor of this resolution because I like the higher deficit numbers it proposes. I do not like them. They are not my kind of numbers.

However, I must support this resolution because responsible action to protect our Nation's economic health leaves me no alternative. Our continued sluggish economy leaves no alternative. Our continued high unemployment leaves no alternative. Our unstable inflation rate leaves no alternative.

And looking further to the future—say 5 years—the need for a healthy economy and a balanced budget leave no alternative.

There are at least two domestic policy goals for the next few years that we all share. What is more, these goals are interdependent—success in one depends on the accomplishment of the other. These major goals are the improved health of our economy—and a balanced budget. Long-term improvement and stability of the economy—including lower inflation—depend upon continued steady progress toward a balanced budget and fiscal integrity. Equally, a balanced budget depends upon an economy which thrives and provides additional revenues, and reduces unemployment and the need for many recession-created spending programs.

Accomplishing our goals of a balanced budget with low unemployment and low inflation, depend directly upon economic growth in the private sector. Ultimately, in all our economic considerations, it is private sector activity and employment that make the difference. However, although business activity in this recovery period is about average for such a period, the recession was much deeper than the others. Therefore, the private sector has been slow to pull out of the recent recession. This is evidenced by the wide agreement among business leaders that Government stimulus of the economy is essential.

A recent sobering report by the Congressional Budget Office shows that without unprecedented growth in our economy we may have to settle for only one of our two goals in the next 5 years—either high employment or a balanced budget—but not both. Right now the private sector shows no signs of being able to forge ahead on an unprecedented scale of activity. Quite the contrary; however, this does not mean we should despair of achieving our objectives. We must see what can be done.

Right now we are at a particularly delicate point. The economy has made some forward progress, but that has slacked off. Inflation is stable, but the rate is still high. Unemployment levels are unacceptable. We have a long way to go to bring the budget into balance.

However, the still ailing economy is retarding the budget's return to balance. A major question pressing us is how we should adjust our present fiscal policy to improve the economic outlook now, while moving toward a balanced budget in the next few years. We have come to a delicate turning point in the economy—with economic growth just coming out of a backslide; unemployment high; and the direction of inflation uncertain.

As we look at the needs of the economy, we must also look at the effect of various economic policies on the Federal budget and our need to bring it into balance. Will certain action—or lack of it—stimulate the economy and lead to the healthy economic climate that will help balance the budget in the years ahead? Or will what we do simply create greater deficits, unbalance the budget in the years ahead with resultant serious effects on the economy, particularly inflation?

The deficit we have now, and the further deficit that will be caused by this resolution, is primarily caused by the present unhealthly economic climate. Revenues are way down due to the recession. And many expenses, like unemployment compensation, are up due to the recession. What we need for a balanced budget is an improved economy that will increase revenues and decrease our temporary expenses. When economic progress sticks, sometimes an investment by the Federal Government—to help consumers get back in the marketplace or to encourage businessmen to move ahead—is just what is needed to get the economy rolling and balance the budget. So a relatively small investment by the Federal Government now can both help people who are hurt by the recession and provide the climate necessary to balance the budget. That is what is called for in this budget resolution.

Recent economic performance has been disappointing. After starting the year at a fast clip of 9.2 percent real growth in the first quarter, GNP growth slid to 3 percent in the last quarter.

Although economic growth for 1976 as a whole was just over 6 percent, the slide in growth during the second half of 1976 leads many economists to project GNP growth rates in 1977 as low as 4 percent. This level of real growth will not be enough to generate new jobs to make a significant dent in unemployment. Even assuming a stimulus similar to that in this resolution, the Congressional Budget Office forecasts that real GNP will grow only at a 4.7-percent rate and that unemployment may not get down to 7 percent in 1977. This is indeed a dismal outlook.

Equally dismal is the outlook for the behavior of the Consumer Price Index. The increase was around 5.7 percent in 1976. However, it may be expected to rise in 1977 and perhaps hit an annual rate of 6 percent toward the end of the year. The question is whether inflation is sufficiently calmed at this point to permit substantial economic growth without starting another inflationary spiral. Not only does inflation erode the earnings of the workingman, it also makes our efforts toward a balanced budget and a stable economy more difficult.

However, although we should welcome the slower growth in prices, should we be satisfied with it? I think not. While a rate of inflation between 5 and 6 percent is better, it is not good. It is helpful to place current figures in a historical perspective over the last 20 years. In the 10 years from 1956 through 1965, the CPI never rose more than 3 percent in any year. In the next 10 years, from 1966 through 1975, inflation rates were higher. However, even in this period of higher inflation—including the famous 12.2 percent in 1974—the rate was lower than the 5 to 6 percent range, now sometimes labeled as "tolerable," in 5 of the 10 years. So by any historic standard, our present rates of inflation are as intolerable as our unemployment rates.

One of the most difficult problems is knowing how to control inflation, short of such drastic and unacceptable means as wage and price controls. While I do not mean to propose a comprehensive

program here, one important measure deserves special mention: A balanced budget. Ironically, to achieve this may mean stimulating the economy more at this time through Federal spending or tax reduction, as is proposed in this resolution, to end a recession-induced deficit. However, once the economy starts to move ahead, it is essential that all spending be restrained and special antirecession programs be stopped. Running a Federal deficit with a full-steam economy is a sure invitation to inflationary disaster.

Fortunately, one prescription should help alleviate both of our present ills. The economic stimulus will help promptly to create more jobs and put people back to work in the private sector. In addition, the stimulus should give the economy the shove it needs to reach levels that put a balanced budget within reach. And if we can achieve the balanced budget we will remove a major inflationary pressure.

In a few months we will be back here on the Senate floor talking about a budget for fiscal year 1978. None of the problems we face today will have gone away in that short time. We will have difficult choices to make as we try to read the future. What level of economic recovery can be expect? How can we hold down the size of Federal spending in relation to the private sector? How are we going to balance the budget? These are going to be hard questions to answer and I do not profess to have the answers yet.

However, I think the path today is clear, if painful. We must proceed with this third resolution to move our country along the path to economic recovery.

Mr. MUSKIE. Mr. President, I express at this point my appreciation for Senator BIDEN's commitment to this process.

I say the same about the distinguished Presiding Officer (Mr. NUNN), who has chosen to leave us this year. In any case, we have appreciated the contribution he has made.

Mr. President, I yield the floor.

APPOINTMENTS TO SELECT COMMITTEE ON INTELLIGENCE

The PRESIDING OFFICER. The Chair, on behalf of the President pro tempore, in accordance with provisions of Senate Resolution 400, 94th Congress, and Senate Resolution 4, 95th Congress, appoints the following Senators to the Senate Select Committee on Intelligence: The Senator from Kansas (Mr. PEARSON) in lieu of the Senator from South Carolina (Mr. THURMOND) resigned, the Senator from Rhode Island (Mr. CHAFEE) in lieu of the Senator from Vermont (Mr. STAFFORD) resigned, and the Senator from Indiana (Mr. LUGAR) in lieu of the Senator from Oregon (Mr. HATFIELD) resigned.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene at 12 o'clock noon tomorrow.

At 12:15 p.m., Senators will gather in a body to proceed to the Hall of the House of Representatives for a joint meeting which will be addressed by Prime Minister Trudeau of Canada.

Upon the completion of the address, Senators will return to the Senate Chamber, at which time the Senate will resume consideration of the third concurrent resolution on the budget for fiscal year 1977. There is a time limit of 4 hours on the resolution. There will be a rollcall vote on the adoption of the resolution.

So there will be at least one rollcall vote tomorrow.

RECESS

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the previous order, that the Senate stand in recess until the hour of 12 o'clock noon tomorrow.

The motion was agreed to; and at 4:04 p.m., the Senate recessed until tomorrow, Tuesday, February 22, 1977, at 12 noon.

NOMINATIONS

Executive nominations received by the Senate on February 14, 1977, under the order of February 11:

DEPARTMENT OF JUSTICE

Daniel J. Meador, of Virginia, to be an Assistant Attorney General, vice A. William Olson, Jr., resigned.

DEPARTMENT OF STATE

The following-named person for reappointment in the Foreign Service as a Foreign Service officer of class 3, a Consular Officer, and a Secretary in the Diplomatic Service of the United States of America:

Jane Abell Coon, of the District of Columbia.

For appointment as a Foreign Service officer of class 3, a Consular Officer, and a Secretary in the Diplomatic Service of the United States of America:

Francis Anthony Forgione, of Massachusetts.

For appointment as a Foreign Service information officer of class 3, a Consular Officer, and a Secretary in the Diplomatic Service of the United States of America:

Frank H. Phillips, of New York.

For appointment as a Foreign Service information officer of class 4, a Consular Officer, and a Secretary in the Diplomatic Service of the United States of America:

James J. Hogan, Jr., of New York.

For reappointment in the Foreign Service as a Foreign Service officer of class 5, a Consular Officer, and a Secretary in the Diplomatic Service of the United States of America:

Ernest D. Oates, of Utah.

For appointment as Foreign Service officers of class 5, Consular Officers, and Secretaries in the Diplomatic Service of the United States of America:

Justice Bowers Stevens, of California.
Mary Elizabeth Swope, of Virginia.
John A. Vieira, of Florida.

For appointment as Foreign Service information officers of class 5, Consular Officers, and Secretaries in the Diplomatic Service of the United States of America:

Tyrone William Kemp, of New York.
Craig Butler Springer, of Connecticut.

For promotion from a Foreign Service officer of class 7 to class 6:

Douglas V. Ellice, Jr., of Connecticut.

For appointment as a Foreign Service officer of class 6, a Consular Officer, and a Secretary in the Diplomatic Service of the United States of America:

Kirk-Patrick Kotula, of New Jersey.

For appointment as a Foreign Service information officer of class 6, a Consular Officer, and a Secretary in the Diplomatic Service of the United States of America:

David L. Evans, of Colorado.

For appointment as Foreign Service officers of class 7, Consular Officers, and Secretaries in the Diplomatic Service of the United States of America:

John H. Bargeron, Jr., of Pennsylvania.
Vincent M. Battle, of New York.
Harold C. M. Baum, of New York.
Linda Adriene Baumann, of the District of Columbia.
William M. Bellamy, of California.
Anthony Benesch, of Maryland.
Robert O. Benson, of Maryland.
Brian J. Blood, of Virginia.
Ralph L. Boyce, Jr., of Virginia.
Paul Michael Bunge, of the District of Columbia.
Thomas A. Cadogan, of Maryland.
Stuart Z. Chiron, of the District of Columbia.
Charles Irvin Cohen, of Maryland.
Lawrence Witten Coor, of Arizona.
Matthew Patrick Daley, of the District of Columbia.
Mary Marchany Daniel, of Puerto Rico.
Francis Marion Davenport III, of New Hampshire.
Mark Gregory Davison, of Texas.
Sandra Addie Dembski, of Connecticut.
Joseph R. Donovan, Jr., of New York.
Carl E. Dorris, of Oklahoma.
Robert S. Faron, of the District of Columbia.
Brian M. Flora, of Florida.
C. Lawrence Greenwood, Jr., of Florida.
Douglas Alan Hartwick, of Washington.
John Martin Hoover, of Virginia.
Arnold Horowitz, of Virginia.
Vicki J. Huddleston, of Arizona.
Mark L. Jacobs, of New York.
Patricia A. Kim, of California.
Stephanie Smith Kinney, of Florida.
John Louis Klekas, of Utah.
Louis J. Kochanek, of Missouri.
Jimmy J. Kolker, of South Dakota.
Donald Roy Lyman, of Florida.
Steven R. Mann, of Pennsylvania.
Stephen George McFarland, of Texas.
Nancy M. Mason, of the District of Columbia.
Martha McLogan, of Michigan.
John Medeiros, of Massachusetts.
Wayne Edward Miele, of Florida.
James Brent Miller, of Utah.
Bruce F. Morrison, of New York.
Roger Christopher Nottingham, of Indiana.
John O'Leary, of Illinois.
David A. Olive, of Illinois.
T. Dennis Reece, of Indiana.
James Montgomery Roberts, of Texas.
Vladimir Peter Sambaiew, of New Jersey.
Edward Bryan Samuel, of Delaware.

Roger Everett Sawyer, of Indiana.
Robert J. Smolik, of California.

Richard J. J. Sullivan, Jr., of the District of Columbia.

Thomas David Sutton, of Pennsylvania.
Barbara J. Tobias, of New Jersey.
Donald Paul Trader, of Georgia.
Douglas G. Van Treeck, of Wisconsin.
Joseph Lacy Warner, of Florida.
Daniel P. Weber, of Illinois.
David Thomas Wolfson, of Maryland.
James Howard Yellin, of Pennsylvania.

For appointment as Foreign Service information officers of class 7, Consular Officers, and Secretaries in the Diplomatic Service of the United States of America:

Kathleen A. Brion, of Virginia.
Mark E. Dillen, of the District of Columbia.
Cindy J. Fox, of New York.
Judith L. Greenberg, of New York.
Thomas G. Hart, of Connecticut.
John F. Mizroch, of Virginia.
Marvin D. Pinkert, of Virginia.
Nancy LeRoy Rosenblum, of Michigan.
Arthur Zegelbone, of Illinois.

For appointment as Foreign Service officers of class 8, Consular Officers, and Secretaries in the Diplomatic Service of the United States of America:

Richard Warren Behrend, of Pennsylvania.
Donald E. Booth, of Massachusetts.
Raymond E. Clore, of California.
Stephen J. Gallogly, of Rhode Island.
Richard A. Garrison, of Colorado.
Marc I. Grossman, of California.
Dennis K. Hays, of Virginia.
Frank Arthur Hofmann, of Oregon.
Patrick David Husar, of Ohio.
Michael Allen Jacobs, of California.
Frances F. Kjelleren, of New York.
Paul Conley Kline, of California.
Eric A. Kunsman, of Pennsylvania.
Joan Clare Martin, of West Virginia.
Sharon K. Mercurio, of Virginia.
Nancy J. Powell, of Iowa.
Steven A. Saboe, of Minnesota.
James Curtis Struble, of California.

Elena Michele Thoren, of the District of Columbia.

Mark A. Tokola, of Washington.
Peter B. Vaden, of Virginia.
Larry L. Woodruff, of Iowa.

For appointment as Foreign Service information officers of class 8, Consular Affairs, and Secretaries in the Diplomatic Service of the United States of America:

Diane Debuck, of Virginia.
Frederick M. Knapp, of New Jersey.

Foreign Service reserve officer to be a Consular Officer of the United States of America:

Francis J. Caffrey, of California.

Foreign Service reserve officers to be Consular Officers and Secretaries in the Diplomatic Service of the United States of America:

Gwendolyn Y. Alexis, of New York.
Edward John Bash, Jr., of Florida.
Taylor Belcher III, of Virginia.
Barbara E. Belsito, of Florida.
Patricia A. Billson, or Florida.
Paul F. Bradley, of Virginia.
Elizabeth I. Burke, of the District of Columbia.

Guy Burton, of New Jersey.
Richard F. Chiarantona, of Virginia.
Harold E. Culbertson, of California.
Marvin L. Garrett, Jr., of Texas.
Comer Wiley Gilstrap, Jr., of Maryland.
John I. Guilsher, of Connecticut.
Gardner R. Hathaway, of Virginia.
Thomas J. Hawley, of Ohio.
Joseph A. Kiehl, of Virginia.
Joseph J. Kozlowski, of New York.
Alan Bryan Cedrick Latimer, of Georgia.
M. Diane Le Zotte, of California.
John H. Lopez, of Virginia.
Richard F. Mahoney, of California.
Louis A. McCall, of Ohio.
James L. McCarthy, of Pennsylvania.
Ferenc Molnar, of Virginia.
Rosil A. Nesberg, of Washington.
Steve A. Nielsen, of Iowa.
James G. Norman, of Virginia.
Martha Ellen O'Keefe, of Colorado.
Richard W. Osborne, of Maryland.
Robert P. Richardson, of California.
John W. Sears, of Virginia.
Edward J. Smith, of Virginia.

William E. Teepe	Kerney W. Bolton
Edward M. Redman, Jr.	Roger L. Oberndorf
Donald C. W. Dumlao	Nathaniel P. Neblett
John R. Quinn	Garr W. Smith
Robert J. Finan	Jerome W. Hogge, Jr.
Eugene M. Kelly	Jackson R. Iblings
Gerard A. Santerre	Dennis M. Verdow
Patrick M. Dibello	Spyridon A. Aspiotis
Charles H. Long, Jr.	Richard E. Wheeler
Paul K. Hinkley	Andrew B. Godfrey
George H. Peck III	George M. Pettyjohn
Gregory L. Crane	James P. Keating
Jerome J. Salomone	William W. Boorman, Jr.
Ronald S. St. Jean	Frederick J. Turner
Max J. Forbes	James G. Moore
Gerald B. Smith	Jay H. Barkdull
Henry H. Odom	Richard H. Crawford
Orell V. Rowe, Jr.	Leonard A. Koeth
Edwin M. Corbett	Richard L. Jaeger
Richard Gamble	John M. Bohunsky, Jr.
David J. Remondini	Ora F. Fraze III
John E. Donovan	Harold S. Goldstein
Jay H. Pearson	Robert E. Parrow
William M. Abernethy	Thomas G. Volz
Clarence F. Smith, Jr.	Marcus J. Wallace, Jr.
Robert S. Abramson	
Daniel E. Williams	

CONFIRMATION

Executive nomination confirmed by the Senate, February 21, 1977:

DEPARTMENT OF THE TREASURY

Laurence N. Woodworth, of Maryland, to be an Assistant Secretary of the Treasury.

The above nomination was approved subject to the nominee's commitment to respond to requests to appear and testify before any duly constituted committee of the Senate.

HOUSE OF REPRESENTATIVES—*Monday, February 21, 1977*

The House met at 11:55 o'clock a.m.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Unto Thee, O Lord, do I lift up my soul.—Psalms 25: 1.

In the words of George Washington let us offer our prayer this morning.

"Almighty God, we make our earnest prayer that Thou wilt keep the United States in Thy holy protection, that Thou wilt incline the hearts of the citizens to cultivate a spirit of subordination and obedience to government, and entertain a brotherly affection and love for one another and for their fellow citizens of the United States at large.

"And finally that Thou wilt most graciously be pleased to dispose us all to do justice, to love mercy and to demean ourselves with that charity, humility, and pacific temper of mind which were the characteristics of the Divine Author of our blessed religion, and without a humble imitation of whose example in these things, we can never hope to be a happy nation. Grant our supplications, we beseech Thee, through Jesus Christ our Lord." Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Marks, one of his secretaries, who also informed the House that on the following date the President approved and signed a joint resolution of the House of the following title:

H.J. Res. 227. Joint resolution making urgent power supplemental appropriations for the Department of the Interior, Southwestern Power Administration for the fiscal year ending September 30, 1977, and for other purposes.

GEORGE WASHINGTON'S FAREWELL ADDRESS

The SPEAKER. Pursuant to the order of the House on February 7, 1977, the Chair recognizes the gentleman from Pennsylvania (Mr. WALKER) to read George Washington's Farewell Address.

Mr. WALKER read the Farewell Address as follows:

To the people of the United States.

FRIENDS AND FELLOW CITIZENS: The period for a new election of a citizen to administer the executive government of the United States being not far distant, and the time actually arrived when your thoughts must be employed in designating the person who is to be clothed with that important trust, it appears to me proper, especially as it may conduce to a more distinct expression of the public voice, that I should now apprise you of the resolution I have formed, to decline being considered among the number of those, out of whom a choice is to be made.

I beg you, at the same time, to do me the justice to be assured, that this resolution has not been taken, without a strict regard to all the considerations appertaining to the relation which binds a duti ul citizen to his country; and that, in withdrawing the tender of service which silence in my situation might imply, I am influenced by no diminution of zeal for your future interest; no deficiency of grateful respect for your past kindness; but am supported by a full conviction that the step is compatible with both.

The acceptance of, and continuance hitherto in the office to which your suffrages have twice called me, have been a uniform sacrifice of inclination to the opinion of duty, and to a deference for what appeared to be your desire. I constantly hoped that it would have been much earlier in my power, consistently with motives which I was not at liberty to disregard, to return to that retirement from which I had been reluctantly drawn. The strength of my inclination to do this, previous to the last election, had even led to the preparation of an address to declare it to you; but mature reflection on the then perplexed and critical posture of our affairs with foreign nations, and the unanimous advice of persons entitled to my confidence, impelled me to abandon the idea.

I rejoice that the state of your concerns external as well as internal, no longer renders the pursuit of inclination incompatible with the sentiment of duty or propriety; and am persuaded, whatever partiality may be retained for my services, that in the present circumstances of our country, you will not disapprove my determination to retire.

The impressions with which I first undertook the arduous trust, were explained on the proper occasion. In the discharge of this trust, I will only say that I have, with good intentions, contributed towards the organization and administration of the government, the best exertions of which a very fallible judgment was capable. Not unconscious in the outset, of the inferiority of my qualifications, experience, in my own eyes, perhaps still more in the eyes of others, has strengthened the motives to diffidence of myself; and, every day, the increasing weight of years admonishes me more and more, that the shade of retirement is as necessary to me as it will be welcome. Satisfied that if any circumstances have given peculiar value to my services they were temporary, I have the consolation to believe that, while choice and prudence invite me to quit the political scene, patriotism does not forbid it.

In looking forward to the moment which is to terminate the career of my political life, my feelings do not permit me to suspend the deep acknowledgment of that debt of gratitude which I owe to my beloved country, for the many honors it has conferred upon me; still more for the steadfast confidence with which it has supported me; and for the opportunities I have thence enjoyed of manifesting my inviolable attachment, by services faithful and persevering, though in usefulness unequal to my zeal. If benefits have resulted to our country from these services, let it always be remembered to your praise, and as an instructive example in our annals, that under circumstances in which the passions, agitated in every direction, were liable to mislead amidst appearances sometimes dubious, vicissitudes of fortune often discouraging—in situations in which not unfrequently, want of success has countenanced the spirit of criticism—the constancy of your support was the essential prop of the efforts, and a guarantee of the plans, by which they were effected. Profoundly penetrated with this idea, I shall carry it with me to my grave, as a strong incitement to unceasing vows that heaven may continue to you the choicest tokens of its beneficence—that your union and brotherly affection may be perpetual—that the free constitution, which is the work of your hands, may be sacredly maintained—that its administration in every department may be stamped with wisdom and virtue—that, in fine, the happiness of the people of these states, under the auspices of liberty, may be made complete by so careful a preservation, and so prudent a use of this blessing, as will acquire to them the glory of recommending it to the applause, the affection and adoption of every nation which is yet a stranger to it.

Here, perhaps, I ought to stop. But a solicitude for your welfare, which cannot end but with my life, and the apprehension of danger, natural to that solicitude, urge me, on an occasion like the present, to offer to your solemn contemplation, and to recommend to your frequent review, some sentiments which are the result of much reflection, of no inconsiderable observation, and which appear to me all important to the permanency of your felicity as a people. These will be offered to you with the more freedom, as you can only see in them the disinterested warnings of a parting friend, who can possibly have no personal motive to bias his counsel. Nor can I forget, as an encouragement to it, your indulgent reception of my sentiments on a former and not dissimilar occasion.

Interwoven as is the love of liberty with every ligament of your hearts, no recommendation of mine is necessary to fortify or confirm the attachment.

The unity of government which constitutes you one people, is also now dear to you. It is justly so; for it is a main pillar in the edifice of your real independence; the support of your tranquility at home: your peace abroad; of your safety; of your prosperity; of that very liberty which you so highly prize. But, as it is easy to foresee that, from different causes and from different quarters much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth; as this is the point in your political fortress against which the bat-

teries of internal and external enemies will be most constantly and actively (though often covertly and insidiously) directed; it is of infinite movement, that you should properly estimate the immense value of your national union to your collective and individual happiness; that you should cherish a cordial, habitual, and immovable attachment to it; accustoming yourselves to think and speak of it as of the palladium of your political safety and prosperity; watching for its preservation with jealous anxiety; discountenancing whatever may suggest even a suspicion that it can, in any event, be abandoned; and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts.

For this you have every inducement of sympathy and interest. Citizens by birth, or choice, of a common country, that country has a right to concentrate your affections. The name of American, which belongs to you in your national capacity, must always exalt the just pride of patriotism, more than any appellation derived from local discriminations. With slight shades of difference, you have the same religion, manners, habits, and political principles. You have, in a common cause, fought and triumphed together; the independence and liberty you possess, are the work of joint counsels, and joint efforts, of common dangers, sufferings and successes.

But these considerations, however powerfully they address themselves to your sensibility, are greatly outweighed by those which apply more immediately to your interest.—Here, every portion of our country finds the most commanding motives for carefully guarding and preserving the union of the whole.

The *north*, in an unrestrained intercourse with the *south*, protected by the equal laws of a common government, finds in the productions of the latter, great additional resources of maritime and commercial enterprise, and precious materials of manufacturing industry.—The *south*, in the same intercourse, benefitting by the same agency of the *north*, sees its agriculture grow and its commerce expand. Turning partly into its own channels the seamen of the *north*, it finds its particular navigation invigorated; and while it contributes, in different ways, to nourish and increase the general mass of the national navigation, it looks forward to the protection of a maritime strength, to which itself is unequally adapted. The *east*, in a like intercourse with the *west*, already finds, and in the progressive improvement of interior communications by land and water, will more and more find a valuable vent for the commodities which it brings from abroad, or manufactures at home. The *west* derives from the *east* supplies requisite to its growth and comfort—and what is perhaps of still greater consequence, it must of necessity owe the *secure* enjoyment of indispensable *outlets* for its own productions, to the weight, influence, and the future maritime strength of the Atlantic side of the Union, directed by an indissoluble community of interest as *one nation*. Any other tenure by which the *west* can hold this essential advantage, whether derived from its own separate strength; or from an apostate and unnatural connection with any foreign power, must be intrinsically precarious.

While then every part of our country thus feels an immediate and particular interest in union, all the parts combined cannot fail to find in the united mass of means and efforts, greater strength, greater resource proportionably greater security from external danger, a less frequent interruption of their peace by foreign nations; and, what is of inestimable value, they must derive from union, an exemption from those broils and wars between themselves, which so frequently afflict neighboring countries not tied together by the same government; which their own rivalship alone would be sufficient to produce, but which opposite foreign alliances, attachments, and intrigues, would stimulate and embitter.—Hence likewise, they will avoid the necessity of those overgrown military establishments, which under any form of government are inauspicious to liberty, and which are to be regarded as particularly hostile to republican liberty. In this sense it is, that your union ought to be considered as a main prop of your liberty, and that the love of the one ought to endear to you the preservation of the other.

These considerations speak a persuasive language to every reflecting and virtuous mind, and exhibit the continuance of the union as a primary object of patriotic desire. Is there a doubt whether a common government can embrace so large a sphere? let experience solve it. To listen to mere speculation in such a case were criminal. We are authorized to hope that a proper organization of the whole, with the auxiliary agency of governments for the respective subdivisions, will afford a happy issue to the experiment. It is well worth a fair and full experiment. With such powerful and obvious motives to union, affecting all parts of our country, while experience shall not have demonstrated its impracticability, there will always be reason to distrust the patriotism of those who, in any quarter, may endeavor to weaken its hands.

In contemplating the causes which may disturb our Union, it occurs as matter of serious concern, that any ground should have been furnished for characterizing parties by *geographical* discriminations,—*northern* and *southern*—*Atlantic* and *western;* whence designing men may endeavor to excite a belief that there is a real difference of local interests and views. One of the expedients of party to acquire influence within particular districts, is to misrepresent the opinions and aims of other districts. You cannot shield yourselves too much against the jealousies and heart burnings which spring from these misrepresentations: they tend to render alien to each other those who ought to be bound together by fraternal affection. The inhabitants of our western country have lately had a useful lesson on this head: they have seen, in the negotiation by the executive, and in the unanimous ratification by the senate of the treaty with Spain, and in the universal satisfaction at the event throughout the United States, a decisive proof how unfounded were the suspicions propagated among them of a policy in the general government and in the Atlantic states, unfriendly to their interests in regard to the Mississippi. They have been witnesses to the formation of two treaties, that with Great Britain and that with Spain, which secure to them everything they could desire, in respect to our foreign relations, towards confirming their prosperity. Will it not be their wisdom to rely for the preservation of these advantages on the union by which they were procured? will they not henceforth be deaf to those advisers, if such they are, who would sever them from their brethren and connect them with aliens?

To the efficacy and permanency of your Union, a government for the whole is indispensable. No alliances, however strict, between the parts can be an adequate substitute; they must inevitably experience the infractions and interruptions which all alliances, in all times, have experienced. Sensible of this momentous truth, you have improved upon your first essay, by the adoption of a constitution of government, better calculated than your former, for an intimate union, and for the efficacious management of your common concerns. This government, the offspring of our own choice, uninfluenced and unawed, adopted upon full investigation and mature deliberation, completely free in its principles, in the distribution of its powers, uniting security with energy, and containing within itself a provision for its own amendment, has a just claim to your confidence and your support. Respect for its authority, compliance with its laws, acquiescence in its measures, are duties enjoined by the fundamental maxims of true liberty. The basis of our political systems is the right of the people to make and to alter their constitutions of government.—But the constitution which at any time exists, until changed by an explicit and authentic act of the whole people, is sacredly obligatory upon all. The very idea of the power, and the right of the people to establish government, presupposes the duty of every individual to obey the established government.

All obstructions to the execution of the laws, all combinations and associations under whatever plausible character, with the real design to direct, control, counteract, or awe the regular deliberations and action of the constituted authorities, are destructive of this fundamental principle, and of fatal tendency.—They serve to organize faction, to give it an artificial and extraordinary force, to put in the place of the delegated will of the nation the will of party, often a small but artful and enterprising minority of the community; and, according to the alternate triumphs of different parties, to make the public administration the mirror of the ill concerted and incongruous projects of faction, rather than the organ of consistent and wholesome plans digested by common councils, and modified by mutual interests.

However combinations or associations of the above description may now and then answer popular ends, they are likely, in the course of time and things, to become potent engines, by which cun-

ning, ambitious, and unprincipled men, will be enable to subvert the power of the people, and to usurp for themselves the reigns of government; destroying afterwards the very engines which have lifted them to unjust dominion.

Towards the preservation of your government and the permanency of your present happy state, it is requisite, not only that you steadily discountenance irregular opposition to its acknowledged authority, but also that you resist with care the spirit of innovation upon its principles, however specious the pretext. One method of assault may be to effect, in the forms of the constitution, alterations which will impair the energy of the system; and thus to undermine what cannot be directly overthrown. In all the changes to which you may be invited, remember that time and habit are at least as necessary to fix the true character of governments, as of other human institutions:—that experience is the surest standard by which to test the real tendency of the existing constitution of a country:—that facility in changes, upon the credit of mere hypothesis and opinion, exposes to perpetual change from the endless variety of hypothesis and opinion: and remember, especially, that for the efficient management of your common interests in a country so extensive as ours, a government of as much vigor as is consistent with the perfect security of liberty is indispensable. Liberty itself will find in such a government, with powers properly distributed and adjusted, its surest guardian. It is, indeed, little else than a name, where the government is too feeble to withstand the enterprises of fraction, to confine each member of the society within the limits prescribed by the laws, and to maintain all in the secure and tranquil enjoyment of the rights of person and property.

I have already intimated to you the danger of parties in the state, with particular references to the founding them on geographical discrimination. Let me now take a more comprehensive view, and warn you in the most solemn manner against the baneful effects of the spirit of party generally.

This spirit, unfortunately, is inseparable from our nature, having its root in the strongest passions of the human mind.—It exists under different shapes in all governments, more or less stifled, controlled, or repressed; but in those of the popular form it is seen in its greatest rankness, and is truly their worst enemy.

The alternate domination of one faction over another, sharpened by the spirit of revenge natural to party dissension, which in different ages and countries has perpetrated the most horrid enormities, is itself a frightful despotism.—But this leads at length to a more formal and permanent despotism. The disorders and miseries which result, gradually incline the minds of men to seek security and repose in the absolute power of an individual; and, sooner or later, the chief of some prevailing faction, more able or more fortunate than his competitors, turns this disposition to the purpose of his own elevation on the ruins of public liberty.

Without looking forward to an extremity of this kind, (which nevertheless ought not to be entirely out of sight) the common and continual mischiefs of the spirit of party are sufficient to make it the interest and duty of a wise people to discourage and restrain it.

It serves always to distract the public councils, and enfeeble the public administration. It agitates the community with ill founded jealousies and false alarms; kindles the animosity of one part against another; forments occasional riot and insurrection. It opens the door to foreign influence and corruption, which finds a facilitated access to the government itself through the channels of party passions. Thus the policy and the will of one country are subjected to the policy and will of another.

There is an opinion that parties in free countries are useful checks upon the administration of the government, and serve to keep alive the spirit of liberty. This within certain limits is probably true; and in governments of a monarchial cast, patriotism may look with indulgence, if not with favor, upon the spirit of party. But in those of the popular character, in governments purely elective, it is a spirit not to be encouraged. From their natural tendency, it is certain there will always be enough of that spirit for every salutary purpose. And there being constant danger of excess, the effort ought to be, by force of public opinion, to mitigate and assuage it. A fire not to be quenched, it demands a uniform vigilance to prevent it bursting into a flame, lest instead of warming, it should consume.

It is important likewise, that the habits of thinking in a free country should inspire caution in those intrusted with its administration, to confine themselves within their respective constitutional spheres, avoiding in the exercise of the powers of one department, to encroach upon another. The spirit of encroachment tends to consolidate the powers of all the departments in one, and thus to create, whatever the form of government, a real despotism. A just estimate of that love of power and proneness to abuse it which predominate in the human heart, is sufficient to satisfy us of the truth of this position. The necessity of reciprocal checks in the exercise of political power, by dividing and distributing it into different depositories, and constituting each the guardian of the public weal against invasions of the others, has been evinced by experiments ancient and modern: some of them in our country and under our own eyes.—To preserve them must be as necessary as to institute them. If, in the opinion of the people, the distribution or modification of the constitutional powers be in any particular wrong, let it be corrected by an amendment in the way which the constitution designates.—But let there be no change by usurpation; for through this, in one instance, may be the instrument of good, it is the customary weapon by which free governments are destroyed. The precedent must always greatly overbalance in permanent evil, any partial or transient benefit which the use can at any time yield.

Of all the dispositions and habits which lead to political prosperity, religion and morality are indispensable supports. In vain would that man claim the tribute of patriotism, who should labor to subvert these great pillars of human happiness, these firmest props of the duties of men and citizens. The mere politician, equally with the pious man, ought to respect and to cherish them. A volume could not trace all their connections with private and public felicity. Let it simply be asked, where is the security for property, for reputation, for life, if the sense of religious obligation *desert* the oaths which are the instruments of investigation in courts of justice? and let us with caution indulge the supposition that morality can be maintained without religion. Whatever may be conceded to the influence of refined education on minds of peculiar structure, reason and experience both forbid us to expect, that national morality can prevail in exclusion of religious principle.

It is substantially true, that virtue or morality is a necessary spring of popular government. The rule, indeed, extends with more or less force to every species of free government. Who that is a sincere friend to it can look with indifference upon attempts to shake the foundation of the fabric?

Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it should be enlightened.

As a very important source of strength and security, cherish public credit. One method of preserving it is to use it as sparingly as possible, avoiding occasions of expense by cultivating peace, but remembering, also, that timely disbursements, to prepare for danger, frequently prevent much greater disbursements to repel it; avoiding likewise the accumulation of debt, not only by shunning occasions of expense, but by vigorous exertions, in time of peace, to discharge the debts which unavoidable wars may have occasioned, not ungenerously throwing upon posterity the burden which we ourselves ought to bear. The execution of these maxims belongs to your representatives, but it is necessary that public opinion should co-operate. To facilitate to them the performance of their duty, it is essential that you should practically bear in mind, that towards the payment of debts there must be revenue; that to have revenue there must be taxes; that no taxes can be devised which are not more or less inconvenient and unpleasant; that the intrinsic embarrassment inseparable from the selection of the proper object (which is always a choice of difficulties,) ought to be a decisive motive for a candid construction of the conduct of the government in making it, and for a spirit of acquiescence in the measures for obtaining revenue, which the public exigencies may at any time dictate.

Observe good faith and justice towards all nations; cultivate peace and harmony with all. Religion and morality enjoin this conduct, and can it be that good policy does not equally enjoin it? It will be worthy of a free, enlightened, and, at

no distant period, a great nation, to give to mankind the magnanimous and too novel example of a people always guided by an exalted justice and benevolence. Who can doubt but, in the course of time and things, the fruits of such a plan would richly repay any temporary advantages which might be lost by a steady adherence to it; can it be that Providence has not connected the permanent felicity of a nation with its virtue? The experiment, at least, is recommended by every sentiment which ennobles human nature. Alas! is it rendered impossible by its vices?

In the execution of such a plan, nothing is more essential than that permanent, inveterate antipathies against particular nations and passionate attachment for others, should be excluded; and that, in place of them, just and amicable feelings towards all should be cultivated. The nation which indulges towards another an habitual hatred, or an habitual fondness, is in some degree a slave. It is a slave to its animosity or to its affection, either of which is sufficient to lead it astray from its duty and its interest. Antipathy in one nation against another, disposes each more readily to offer insult and injury, to lay hold of slight causes of umbrage, and to be haughty and intractable when accidental or trifling occasions or dispute occur. Hence, frequent collisions, obstinate, envenomed, and bloody contests. The nation, prompted by ill will and resentment, sometimes impels to war the government, contrary to the best calculations of policy. The government sometimes participates in the national propensity, and adopts through passion what reason would reject; at other times, it makes the animosity of the nation subservient to projects of hostility, instigated by pride, ambition, and other sinister and pernicious motives. The peace often, sometimes perhaps the liberty of nations, has been the victim.

So likewise, a passionate attachment of one nation for another produces a variety of evils. Sympathy for the favorite nation, facilitating the illusion of an imaginary common interest, in cases where no real common interest exists, and infusing into one the enmities of the other, betrays the former into a participation in the quarrels and wars of the latter, without adequate inducements or justifications. It leads also to concessions, to the favorite nation, of privileges denied to others, which is apt doubly to injure the nation making the concessions, by unnecessarily parting with what ought to have been retained, and by exciting jealousy, ill will, and a disposition to retaliate in the parties from whom equal privileges are withheld; and it gives to ambitious, corrupted or deluded citizens who devote themselves to the favorite nation, facility to betray or sacrifice the interests of their own country, without odium, sometimes even with popularity; gliding with the appearances of a virtuous sense of obligation, a commendable deference for public opinion, or a laudable zeal for public good, the base or foolish compliances of ambition, corruption, or infatuation.

As avenues to foreign influence in innumerable ways, such attachments are particularly alarming to the truly enlightened and independent patriot. How many opportunities do they afford to tamper with domestic factions, to practice the arts of seduction, to mislead public opinion, to influence or awe the public councils!—Such an attachment of a small or weak, towards a great and powerful nation, dooms the former to be the satellite of the latter.

Against the insidious wiles of foreign influence, (I conjure you to believe me fellow citizens,) the jealousy of a free people ought to be *constantly* awake; since history and experience prove, that foreign influence is one of the most baneful foes of republican government. But that jealousy, to be useful, must be impartial, else it becomes the instrument of the very influence to be avoided, instead of a defense against it. Excessive partiality for one foreign nation and excessive dislike for another, cause those whom they actuate to see danger only on one side, and serve to veil and even second the arts of influence on the other. Real patriots, who may resist the intrigues of the favorite, are liable to become suspected and odious; while its tools and dupes usurp the applause and confidence of the people, to surrender their interests.

The great rule of conduct for us, in regard to foreign nations, is, in extending our commercial relations, to have with them as little *political* connection as possible. So far as we have already formed engagements, let them be fulfilled with perfect good faith:—Here let us stop.

Europe has a set of primary interests, which to us have none, or a very remote relation. Hence, she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves, by artificial ties, in the ordinary vicissitudes of her politics, or the ordinary combinations and collisions of her friendships or enmities.

Our detached and distant situation invites and enables us to pursue a different course. If we remain one people, under an efficient government, the period is not far off when we may defy material injury from external annoyance; when we may take such an attitude as will cause the neutrality we may at any time resolve upon, to be scrupulously respected; when belligerent nations, under the impossibility of making acquisitions upon us, will not lightly hazard the giving us provocation, when we may choose peace or war, as our interest, guided by justice, shall counsel.

Why forego the advantages of so peculiar a situation? Why quit our own to stand upon foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice?

It is our true policy to steer clear of permanent alliance with any portion of the foreign world; so far, I mean, as we are now at liberty to do it; for let me not be understood as capable of patronizing infidelity to existing engagements. I hold the maxim no less applicable to public than private affairs, that honesty is always the best policy. I repeat it, therefore, let those engagements be observed in their genuine sense. But in my opinion, it is unnecessary, and would be unwise to extend them.

Taking care always to keep ourselves by suitable establishments, on a respectable defensive posture, we may safely trust to temporary alliances for extraordinary emergencies.

Harmony, and a liberal intercourse with all nations, are recommended by policy, humanity, and interest. But even our commercial policy should hold an equal and impartial hand; neither seeking nor granting exclusive favors or preferences; consulting the natural course of things; diffusing and diversifying by gentle means the streams of commerce, but forcing nothing; establishing with powers so disposed, in order to give trade a stable course, to define the rights of our merchants, and to enable the government to support them, conventional rules of intercourse, the best that present circumstances and mutual opinion will permit, but temporary, and liable to be from time to time abandoned or varied as experience and circumstances shall dictate; constantly keeping in view, that it is folly in one nation to look for disinterested favors from another; that it must pay with a portion of its independence for whatever it may accept under that character; that by such acceptance, it may place itself in the condition of having given equivalents for nominal favors, and yet of being reproached with ingratitude for not giving more. There can be no greater error than to expect, or calculate upon real favors from nation to nation. It is an illusion which experience must cure, which a just pride ought to discard.

In offering to you, my countrymen, these counsels of an old and affectionate friend, I dare not hope they will make the strong and lasting impression I could wish; that they will control the usual current of the passions, or prevent our nation from running the course which has hitherto marked the destiny of nations, but if I may even flatter myself that they may be productive of some partial benefit, some occasional good; that they may now and then recur to moderate the fury of party spirit, to warn against the mischiefs of foreign intrigue, to guard against the impostures of pretended patriotism; this hope will be a full recompense for the solicitude for your welfare by which they have been dictated.

How far, in the discharge of my official duties, I have been guided by the principles which have been delineated, the public records and other evidences of my conduct must witness to you and to the world. To myself, the assurance of my own conscience is, that I have, at least, believed myself to be guided by them.

In relation to the still subsisting war in Europe, my proclamation of the 22d of April, 1793, is the index to my plan. Sanctioned by your approving voice, and by that of your representatives in both houses of congress, the spirit of that measure has continually governed me,

uninfluenced by any attempts to deter or divert me from it.

After deliberate examination, with the aid of the best lights I could obtain, I was well satisfied that our country, under all the circumstances of the case, had a right to take, and was bound, in duty and interest, to take a neutral position. Having taken it, I determined, as far as should depend upon me, to maintain it with moderation, perseverance and firmness.

The considerations which respect the right to hold this conduct, it is not necessary on this occasion to detail. I will only observe that, according to my understanding of the matter, that right, so far from being denied by any of the belligerent powers, has been virtually admitted by all.

The duty of holding a neutral conduct may be inferred, without any thing more, from the obligation which justice and humanity impose on every nation, in cases in which it is free to act, to maintain inviolate the relations of peace and amity towards other nations.

The inducements of interest for observing that conduct will best be referred to your own reflections and experience. With me, a predominant motive has been to endeavor to gain time to our country to settle and mature its yet recent institutions, and to progress, without interruption, to that degree of strength, and consistency which is necessary to give it, humanly speaking, the command of its own fortunes.

Though in reviewing the incidents of my administration, I am unconscious of intentional error, I am nevertheless too sensible of my defects not to think it probable that I may have committed many errors. Whatever they may be, I fervently beseech the Almighty to avert or mitigate the evils to which they may tend. I shall also carry with me the hope that my country will never cease to view them with indulgence; and that, after forty-five years of my life dedicated to its service, with an upright zeal, the faults of incompetent abilities will be consigned to oblivion, as myself must soon be to the mansions of rest.

Relying on its kindness in this as in other things, and actuated by that fervent love towards it, which is so natural to a man who views in it the native soil of himself and his progenitors for several generations; I anticipate with pleasing expectation that retreat in which I promise myself to realize, without alloy, the sweet enjoyment of partaking, in the midst of my fellow citizens, the benign influence of good laws under a free government—the ever favorite object of my heart, and the happy reward, as I trust, of our mutual cares, labors and dangers.

GEO. WASHINGTON.

UNITED STATES, *17th September, 1796.*

THE DEATHLESSNESS OF WASHINGTON'S FAREWELL ADDRESS

(Mr. RHODES asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. RHODES. Mr. Speaker, I wish to compliment the distinguished gentleman from Pennsylvania (Mr. WALKER) on the fine manner in which he has just read the deathless words of our first President. These words contains advice which is good for all seasons and for all years.

I think it is in the best keeping of the traditions of the House and of the Republic that a distinguished Member of the House, such as the gentleman from Pennsylvania, should be designated each year to read Washington's Farewell Address.

Mr. Speaker, I compliment the gentleman and I thank him for his fine presentation.

WASHINGTON'S FAREWELL ADDRESS—AN EXPRESSION OF THE AMERICAN IDEAL THAT HUMAN PROGRESS CAN BEST BE ACHIEVED THROUGH INDIVIDUAL FREEDOM

(Mr. KEMP asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KEMP. Mr. Speaker, what a great speech and what a tremendous lesson in the role of government in our lives. I, too, would like to join the gentleman from Arizona (Mr. RHODES) in complimenting our friend, the gentleman from Pennsylvania (Mr. WALKER), for his able reading of Washington's Farewell Address. It was certainly inspiring to me, and my guests, today, from Orchard Park Middle School, to hear once again about the principles, ideals, and values upon which our country was founded. Indeed, Mr. Speaker, President Washington recognized that the most revolutionary idea in history is the American ideal that human progress can best be attained through individual freedom. Not only is it the most revolutionary idea in history, but it is the only one that has ever really worked. No government in history has ever managed to do as much for individuals as individual people have been able to accomplish for themselves when left free of government oppression.

Mr. Speaker, I think that message is as important today, in 1977, as it was when George Washington sent his farewell message to the Congress in 1796.

Mr. Speaker, the farewell words of George Washington remind us not only of our freedoms which we take too much for granted, but of our responsibilities as well. One of our most important responsibilities is to keep government in check, spend taxpayers' dollars wisely, and leave as much of the people's earnings in their own hands as possible so as to maximize not only individual freedom but economic prosperity as well.

I cannot think of a better way to celebrate George Washington's memory than to reduce the tax burden now on the backs of American people thereby stimulating our economy and preserving freedom.

TANKER SAFETY LEGISLATION

(Mr. DICKS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. DICKS. Mr. Speaker, the recent unfortunate rash of tanker accidents has heightened congressional and public interest in meaningful tanker safety legislation; it has also widened congressional and public recognition of the inadequate safeguards that presently exist.

Today, Mr. STUDDS. Mr. BONKER, Mr. PRITCHARD, and I are introducing legislation to remedy this situation. In doing so, we are building on the very firm foundation established by the chairman of the Commerce Committee in the other body. I was fortunate enough to work in the other body when the chairman initiated action on what eventually became the Ports and Waterways Safety Act of 1972. This legislation empowers the Coast Guard to take effective action in protecting the marine environment. But in the 5 years since the passage of this legislation, the Coast Guard has proven to be less than vigilant in its regulatory role. As a result, we are introducing the Tanker Safety Act of 1977 today.

The proposed legislation has a number of important provisions. It creates a 200-mile maritime safety zone for the purposes of protecting the marine environment from the pollution of harzardous cargos carried in bulk; it establishes a comprehensive regulatory and enforcement program within that maritime safety zone; it establishes design, construction, equipment, maintenance, operation, and manning standards to promote tanker safety; it establishes a program to effectively prohibit substandard vessels from operating within the maritime zone, and it provides for a system of improved vessel inspection and enforcement. In essence, this bill sets unilateral standards which we expect ourselves and others to follow. In the past, we have relied on international standards agreed upon at IMCO—the International Marine Consultative Organization. While progress has taken place on this front, such progress has been painfully slow and incomplete.

The Canadian Government has already taken steps to unilaterally raise these standards; as long as our unilateral actions impose reasonable burdens on incoming tankships, I believe we, too, should do so. Fair-minded observers may differ on what constitutes reasonable burdens, given the clear and present danger that exists to the marine and coastal environment as a result of oil pollution. I believe it is important to note in this regard that our legislation imposes no requirement for double bottoms on either new or existing oil tankers. I think this demonstrates the cosponsors' resolve to put together a reasonable, and yet affordable reform package.

One of the reasons why double bottoms may not be necessary is that this legislation establishes a nationwide vessel traffic control system: Every port, harbor, or inland waterway through which passes an average of 100,000 barrels per day of hazardous cargo in bulk must have a VTS established.

At least 11 such areas are covered by this provision: New York Harbor, the Delaware River Ports, Portland, Maine, Boston/Fall River, Long Beach, Galveston, Rhode Island/Connecticut Ports,

Los Angeles, Norfolk/Hampton Roads, Houston, and Baltimore. The Coast Guard has already established VTS programs in San Francisco, Puget Sound, and Houston/Galveston. New Orleans and Valdez, Alaska will have a VTS in place by the end of 1977, and in 1978, a VTS will be working to protect New York Harbor. Thus this requirement will impose a significant burden on the Coast Guard, but one, as is explained below, that will not result in significant dollar outlays.

The VTS systems required by this act must include computerized tracking and data retrieval systems. Here is how the system works: An incoming ship is spotted on shore-based radar or by some other means of surveillance. The Vessel Traffic System Command Center charts the ship's course and speed via computer to determine if any congestion or collision problems are imminent. Then the computer performs a second task: It delves into its data bank to retrieve information on the incoming ship's history, safety record and certificates. Coast Guard personnel may then ask pertinent questions concerning the ship's current status. If the Coast Guard has reasonable cause to presume that the incoming ship poses serious potential hazards to the marine environment, the Coast Guard is empowered by this legislation to take any number of actions, including boarding the vessel, requiring tug escorts, or restricting passage. If the vessel is determined to be a serious threat to the coastline and marine environment, the Coast Guard can order the ship in question out of U.S. waters, unless such action would endanger the life of the crew, or provide an even greater hazard to the marine environment.

In directing the Secretary of Transportation to enforce this kind of VTS system, we will in effect be duplicating the Canadian VTS system around Vancouver. Some U.S. VTS systems utilize computers for vessel tracking, but none of them utilize the data retrieval component. In our view, it is extremely important to impose a computer tracking and data retrieval requirement nationwide, particularly in view of its low cost. The Canadian VTS system, complete with 6 radars, will cost on the order of $8 million. Of this, the computer itself costs only $100,000–$150,000; most of the expense comes from computer software. In sum, a nationwide VTS program appears to be the way to provide this country with a cost-effective means of protection against tanker accidents.

Other provisions of this comprehensive bill deserve my colleagues' attention. I think it is significant, for example, that the proposed legislation imposes certain minimum standards for all tank vessels coming into U.S. ports. In this respect, this legislation builds on the wise decision of Secretary Brock Adams to require short- and long-range radars, fathometers, and up-to-date nautical charts for all such vessels. This bill would also require loran-C receivers and transponders which will assist in locating tankers offshore, segregated ballast systems for all ships greater than 20,000 deadweight ton, and inert gas systems for all vessels greater than 50,000 deadweight tons. These retrofits must be made within 2 years.

It is my hope that a great many of my colleagues will join with us in cosponsoring this proposed legislation. It seems to me that the public is waiting for the Congress to enact tough standards for tanker safety—but standards that will not wind up costing the consumer an arm and a leg. The proposed legislation we have introduced today serves this purpose.

THE LATE HONORABLE RALPH BEERMANN

(Mr. THONE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. THONE. Mr. Speaker, it is with deep regret that I inform Members of the House of Representatives that their former colleague, the Honorable Ralph Beermann, was killed last Thursday in a plane crash.

Representative Beermann served in the 87th Congress and the 88th, from 1961 through 1964. As a member of the House Committee on Agriculture, he worked vigorously to maintain the independence of the family farmer. Throughout his service in Congress, he was a relentless foe against big government.

A native of Dakota County, Nebr., Ralph Beermann attended Morningside College in Sioux City, Iowa. After much-decorated service in World War II, Ralph built at Dakota City, Nebr., a very successful alfalfa processing and cattle feeding operation with his brothers. Ralph served as national president of the alfalfa dehydrators association.

Ralph Beermann throughout his life maintained a keen interest in good government. At the time of his death, he was serving his second consecutive term as a director of the Nebraska Public Power District. He was returning from testifying before the Nebraska Legislature Thursday when he crashed in his private plane.

Ralph Beerman's wonderful wife, Marjorie, was a full partner with him in all his activities of agriculture, business, and government. I am certain my colleagues join me in offering her sympathy and encouragement to continue her efforts to better her community, State, and Nation.

GENERAL LEAVE

Mr. THONE. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks in paying tribute to the late Honorable Ralph Beermann.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska?

There was no objection.

GOVERNING INTERNATIONAL FISHERY AGREEMENT BETWEEN THE UNITED STATES AND SPAIN—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–81)

The SPEAKER pro tempore (Mr. LLOYD of California) laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Merchant Marine and Fisheries and ordered to be printed:

To the Congress of the United States:

In accordance with the Fishery Conservation and Management Act of 1976 (P.L. 94–265; 16 U.S.C. 1801), I transmit herewith a governing international fishery agreement between the United States and Spain, signed at Washington on February 16, 1977.

This Agreement is significant because it is one of a series to be negotiated in accordance with that legislation. I urge that the Congress give favorable consideration to this Agreement at an early date. Since 60 calendar days of continuous session as required by the legislation are not available before March 1, 1977, I strongly recommend that the Congress consider amendment of the "Fishery Conservation Zone Transition Act" in order to incorporate this Agreement within its overall provisions.

JIMMY CARTER.

THE WHITE HOUSE, *February 21, 1977.*

GOVERNING INTERNATIONAL FISHERY AGREEMENT BETWEEN THE UNITED STATES AND EUROPEAN ECONOMIC COMMUNITY — MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–80)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Merchant Marine and Fisheries and ordered to be printed:

To the Congress of the United States:

In accordance with the Fishery Conservation and Management Act of 1976 (P.L. 94–265; 16 U.S.C. 1801), I transmit herewith a governing international fishery agreement between the United States and the European Economic Community, signed at Washington on February 15, 1977.

This Agreement is significant because it is one of a series to be negotiated in accordance with that legislation. I urge that the Congress give favorable consideration to this Agreement at an early date. Since 60 calendar days of continuous session as required by the legislation are not available before March 1, 1977, I strongly recommend that the Congress consider amendment of the "Fishery Conservation Zone Transition Act" in order to incorporate this Agreement within its overall provisions.

JIMMY CARTER.

THE WHITE HOUSE, *February 21, 1977.*

GOVERNING INTERNATIONAL FISHERY AGREEMENT BETWEEN THE UNITED STATES AND THE REPUBLIC OF KOREA—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–78)

The SPEAKER pro tempore laid before the House the following message

from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Merchant Marine and Fisheries and ordered to be printed:

To the Congress of the United States:

In accordance with the Fishery Conservation and Management Act of 1976 (P.L. 94–265; 16 U.S.C. 1801), I transmit herewith a governing international fishery agreement between the United States and the Republic of Korea, signed at Washington on January 4, 1977.

This agreement is significant because it is one of a series to be negotiated in accordance with that legislation. I urge that the Congress give favorable consideration to this agreement at an early date. Since 60 calendar days of continuous session as required by the legislation are not available before March 1, 1977, I strongly recommend that the Congress consider issuance of a joint resolution in order to bring this agreement into force by that date.

JIMMY CARTER.

THE WHITE HOUSE, *February 21, 1977.*

GOVERNING INTERNATIONAL FISHERY AGREEMENT BETWEEN THE UNITED STATES AND JAPAN—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–79)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Merchant Marine and Fisheries and ordered to be printed:

To the Congress of the United States:

In accordance with the Fishery Conservation and Management Act of 1976 (P.L. 94–265; 16 U.S.C. 1801), I transmit herewith a governing international fishery agreement for 1977 between the United States and Japan, signed at Washington on February 10, 1977.

This Agreement is significant because it is one of a series to be negotiated in accordance with that legislation. I urge that the Congress give favorable consideration to this Agreement at an early date. Since 60 calendar days of continuous session as required by the legislation are not available before March 1, 1977, I strongly recommend that the Congress consider amendment of the "Fishery Conservation Zone Transition Act" in order to incorporate this Agreement within its overall provisions.

Also transmitted for the information of the Congress is a governing international fishery agreement between the United States and Japan for 1978–1982 initialled at Washington on February 10, 1977. This Agreement will be resubmitted for favorable consideration following its signature by the United States and Japan later this year.

JIMMY CARTER.

THE WHITE HOUSE, *February 21, 1977.*

LET'S REDUCE THE TAX RATES IN ORDER TO FIGHT BOTH UNEMPLOYMENT AND INFLATION

(Mr. KEMP asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. KEMP. Mr. Speaker, the highest priority of the third concurrent budget resolution this week must be amendment to reduce tax rates across the board on all incomes in order to stimulate production and create jobs.

These reductions should not be temporary one-shot rebates but rather of a permanent nature that will assure more jobs and greater productivity in the private sector.

Reducing tax rates would be the most immediate and effective boost to economic recovery of all the options open to us. It would stimulate output, the purchase of additional equipment, the construction of homes and the creation of more jobs at higher real wages. In short, reduced rates will combat both inflation and unemployment.

The choice before us is so simple that it is hard to imagine anyone's not being able to see it. There are two ways to try to gain additional tax revenues: Higher tax rates with less economic activity, on the one hand, or lower tax rates with greater economic activity on the other. Obviously stimulating greater economic activity will increase tax revenues.

Deficits created by excessive spending, and rebate-type tax cuts inevitably lead to some form of tax increase, either through the tax of inflation or higher taxes to pay interest on the expanding public debt. This deficit spending adds nothing to the supply of food, clothing, housing, or other goods, and does nothing to help lower prices. It reduces the reward to labor and investment, shrinks the productive private sector, and leads to recession and layoffs.

Sound tax policy however must be considered from the standpoint of its effects on the incentives of people to work and produce, to save and invest, to build and employ. When tax rates go up and investment and employment opportunities in the private sector go down, it is not the rich who have been soaked, but the unfortunate workers who either become unemployed or must work with less productive tools and machinery. In other words, the real way to help the poor and the middle-income people of America is to create incentives once again for investment, saving, work, and production.

Attempts to benefit the less fortunate and fight poverty by trying to distribute income through the high tax rates ultimately are counterproductive. The only real way to raise the standard of living is to increase the amount of capital investment per capita by reducing the tax barriers to investment and employment.

PROF. PAUL McCRACKEN CALLS FOR PERMANENT TAX CUT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 15 minutes.

Mr. KEMP. Mr. Speaker, Prof. Paul McCracken of the University of Michigan is one of America's most respected economists. Recently he gave a speech before the Economic Club of Detroit in which he analyzed the present economic situation and the President's program for dealing with it. I believe that Professor McCracken's views on this subject are extremely important because the Congress will begin consideration tomorrow of the third concurrent resolution on the budget for fiscal year 1977, which contains President Carter's economic stimulus program.

It is Professor McCracken's view that President Carter's program is essentially a "Rube Goldberg contrivance." He argues instead that permanent tax cuts would do far more to help the economy, both immediately and in the long run. As he put it:

> The higher level of economic activity produced by tax reduction is a far more effective job creation program than public spending. It is more effective because it is faster and because the employment opportunities are less apt to be dead-end jobs. We tried tax reduction in 1954 and it worked. We tried it in 1964 and it worked. We tried it in 1975, and the fact that 4.2 million more people are now employed (88 percent of them in the private sector) strongly suggests that it worked once again. Because history is so clear about this, one has to suspect that those who stubbornly try to maintain this distinction between tax reduction and job creation have as their major objective simply a further expansion of political empires where both the newly created bureaucracy and the holders of public service jobs will be more explicitly beholden to government.

I believe that this analysis is absolutely correct. Many of those who so strongly support expansion of public service jobs know very well that tax cuts would do a better job of relieving unemployment. But they support public service programs nevertheless, essentially for two reasons: First, because they do not wish to sacrifice any of the Government's hold on our pocketbooks since they are afraid they may not get it back in order to pay for new programs later; and second, because they want people to be consciously beholden to Government for relieving the current economic stagnation. This is quite clear from statements by prominent Democratic economists. When asked why we should not cut taxes again before the Joint Economic Committee, one answered that it was purely a value judgment and that he simply preferred to keep the Government's taxing power intact in order to be able to pay for such things as national health insurance later on. Charles Schultze of the Council of Economic Advisers has said much the same thing.

The fact is that there is not only an important economic reason for cutting taxes now—in order to stimulate investment and job creation in the private sector—but a moral reason as well. To the extent that we are taxed, we are denied a certain amount of our liberty. Obviously, if 100 percent of our income were taxed, we would be nothing more than slaves. Therefore, it is also important from the standpoint of individual liberty to reduce the heavy burden of taxes in

America. Professor McCracken also makes this important observation. I hope that my colleagues will read his remarks in the context of Professor McCracken's devotion to a truly liberal society, one in which progress is a result of individual initiative and freedom:

"WHAT MAKES AMERICA?"

(By Paul W. McCracken) *

"What Makes America?"

This question, with which the *London Economist* began its lead article in the January 15 issue, would have been the title of these remarks today if the postal service had performed out of character and delivered this journal on time. It is, we would certainly agree, a profoundly Olympian query. Perhaps it even sounds a bit like those bicentennial questions which, after last year's rhetoric and retrospection, we would just as soon not try once again to explore. Yet it may not be amiss for us to remind ourselves of a few things here because, as people from Victor Hugo to Keynes have reminded us, ideas do influence the real world of policies and decisions.

I

In a quite unusual way the new American government, now in its third week of responsibility for the country's governance, is at a great divide as its strategy for economic policy begins to take shape. It has now within its grasp the possibility of energizing those forces and processes in the nation with a demonstrated capability for lifting material levels of living and diffusing the fruits of this progress widely to all people. It was the strategy that in a brief span of time brought this nation from an empty land to the world's most productive economy. Alternatively, through a succession of steps each of which could have powerful interest group support and a certain plausibility, the new government can take us along a road which leads to an arthritic economy, disappointed expectations of people about their material well-being, and diminished scope for a life of individual self-fulfillment—a feeling on the part of the individual, in short, that he is a statistic in the faceless masses. In which direction we finally move will be determined not only by the preferences of those in government but also by the state of the public debate outside. That is, of course, the basic *raison d'etre* of this Economic Club itself. There is some reason for optimism here because the President has given early evidence that his leadership will be aimed in the right direction. If so, he may realize his hope of being a good, and possibly even a great, American president.

The new government shapes its strategy in an environment that has its favorable auguries. For one thing it inherits an economy which after a pause is once again moving upward (though January figures are going to show some severe frostbite). Indeed, in retrospect it seems clear that by about October the economy was emerging from the lull or air pocket—with, it no doubt seems to some of you, the Fates decreeing that the renewed expansion be carefully timed to remain invisible until after November 2! Retail sales during the fourth quarter, for example, rose on a seasonally adjusted basis at the rate of 26 percent per year, and the corresponding figure for civilian employment was 2.4 percent—substantially above the 1.9 percent per year basic rate of growth of the labor force.

NOTE. Presented to the Economic Club of Detroit, February 7, 1977.

*Edmund Ezra Day University Professor of Business Administration, The University of Michigan.

Monthly increases in employment and retail sales, 1976 (seasonally adjusted)

Period	Civilian employment [1]	Retail sales [2]
January–June Av.	351	$375
July	407	−229
August	74	889
September	−162	−543
October	−46	569
November	357	991
December	222	1,690

Moreover, the economy is in a better state of fundamental balance than we have seen for at least six years, and this offers the opportunity for a more orderly and sustained expansion. For a variety of reasons one of the unstable forces during recent years has been the large gyrations in business inventories. The violent shift from inventory accumulation in the third quarter of 1974 to sharp liquidation in the first quarter of 1975 accounted for half of the decline in output during that sharp recession. And the 50 percent decline in the rate of inventory accumulation was a major factor in the economy's sluggishness during the latter part of last year.

Inventories are now coming into a more balanced relationship with sales. Purchasing executives report that targets for inventory reductions have now been substantially achieved. And the actual decline in the ratio of nonfarm inventories to sales since early 1975 has been substantially greater than during comparable periods after 1971 or 1961. Overly heavy inventories generally are no longer looming like an ominous cloud on the horizon of the economic outlook.

Moreover, the basic financial position and structure of businesses have been fundamentally strengthened. The earlier years of this decade gave us a painful lesson in the financial distortions that inflation will impose. As higher expected rates of inflation were added to interest rates already rising from normal market pressures, the resulting lower capitalization ratios disorganized the equity markets. The net amount of new equity money raised declined 30 percent from 1972 to 1973, with another 53 percent decline the following year.

The burden of financing then shifted to the bond market. The congestion thereby produced in the bond markets inevitably threw financing requirements into short-term borrowing. This produced a doubly dangerous situation. Businesses were, in effect financing brick and mortar with commercial paper and bank borrowing. And commercial banks found themselves with a weakening capital structure as their borrowings and deposit liabilities were increasing more rapidly than their own capital funds. It is not being overly dramatic to suggest that we had here the raw material for a major financial collapse, a situation which was handled with considerable skill both by the Administration and the Federal Reserve System.

Financial structures now have been substantially strengthened. During the last three years businesses have raised more than $100 billion of long-term money (including the equity market), and during the last two years short-term borrowing has actually declined by about $6 billion. Businesses are now in a fundamentally stronger position to finance a sustained and balanced expansion than at any time since mid-1971. And it can be assumed that corporate financial officers, after observing how three years ago some in their fraternity were doing a toe dance on the edge of the cliff, will have little inclination to take on the risks of financing longer-term projects with short-term borrowing.

Finally, that more stable price level which is so essential for more orderly planning is now within our grasp, and it will be one of the tragedies of this century if we let this opportunity slip away from us. The peak rate of inflation was actually reached in the third quarter of 1974 when our price level was rising at the rate of 13–14 percent per year.

Annual rate of increase in price indexes (seasonally adjusted annual rates)

[In percent]

Year-Qtr.	CPI	CPI-Non-Food Com.	GNP Prices
1974–3	13.4	14.6	12.4
–4	10.7	9.4	12.4
1975–4	7.3	4.3	7.1
1976–1	2.9	3.2	3.2
–2	6.1	5.7	5.2
–3	5.8	6.6	4.4
–4	3.2	5.3	6.2

Source: Basic data from Department of Labor.

While different indexes give somewhat different results, we closed out 1976 with the price level rising at about a 5 percent rate. That would still cut the purchasing power of a dollar by 50 percent in 14 years, but 14 years is considerably better than for money to lose half its real value in 5½ years, which was the rate prevailing in the June-September period of 1974. It is not being wildly optimistic to suggest that an era may be emerging during which fears about the future purchasing power of money can be less dominant in the planning of families and businesses.

II

Whether this hope is finally realized will depend on the policies that one pursues. What can be said about what they should be?

The basic requirement is that our policies encourage a persisting and steady expansion, but that we resist the temptation to try for dramatic near-term gains. A clear lesson of history is that even an economy with substantial unemployment will generate inflation if it is pushed hard. The 8.7 percent rise in consumer prices during 1973, even though the unemployment rate had declined only one percentage point below its high in the 1970 recession, serves as a reminder of this—or the sharp jump in prices from 1963 to 1973 in the face of an unemployment rate of 17 percent!

Clearly monetary policy, as calibrated by the rate of increase in the money stock, should not be made more expansive. The ratio derived by dividing GNP into the broadly defined money stock (M_2) two quarters earlier, in order to allow time for monetary changes to affect the economy, has been fairly stable historically. During the last decade this ratio has averaged 40.4 percent, and if we allow a half a percentage point on either side of this average, we would bracket 80 percent of the individual quarters. (The fourth quarter 1976 ratio was 39.7 percent.) This suggests that the path along which the money stock moves tends to be the path that the economy will tend to follow along later. The broadly-defined money stock has been rising at a 12-13 percent annual rate, and a 12–13 percent per year rate of expansion for the economy (which is the basic trail monetary policy is blazing) is at the outer limit of what is possible without unacceptably high risks of setting off a new inflation.

The President is on sound ground in his judgment that there is also a need for some

fiscal actions. While the economy is again rising, and monetary policy is adequately expansive, it would be imprudent to place the whole burden for the course of the economy on one instrument of policy. What this fiscal package should be obviously depends on what the economy needs. Even a cursory analysis is sufficient to point us in the right direction here if we will simply look at the evidence. Clearly, we have a particular problem because of a deficiency of investment. Since the low point of the recession in early 1975, nonresidential fixed investment in real terms should on the basis of historical experience have increased about 12 percent; the actual rise has been 2.7 percent. The still relatively low operating rates are part of the problem. Yet consumers in 1976 were already spending 93.2 percent of their after-tax incomes, just about in line with the historical average of 93.1 percent. How do we escape from this circle of inadequate investment because operating rates are low because consumers are not buying enough because the economy's operating rate does not generate more income because. . . .

The answer is clearly a permanent tax reduction that will lift the after-tax incomes of consumers. While there is no magic "right" magnitude, the tax reduction should produce a significant rise in take-home pay, and something like a 1 percent increase would commend itself as reasonable. In an economy already generating after-tax consumer incomes at the rate of $1200 billion per year, that would be $12 billion.

A vigorous investment revival requires not only the demand for output from increased capacity but also the means for sound financing. The sharply increased percentage of corporate profits paid in taxes must therefore also be reduced. The problem arises from inflation itself as book depreciation has fallen far behind the current economic value of capital expiring during the accounting period, and the resulting understatement of costs has produced an overstatement of profits and therefore profit taxes. The magnitudes are large. Profits taxes in 1976 were about 54 percent of profits thus more accurately measured, compared with 41 percent in 1966. And real retained earnings of corporations in 1976 were as a result 60 percent below those of 1966 (compared with a 40 percent rise in real compensation of employees).

The time has come to face this problem head-on. We should define corporate profits properly and then decide what proportion of these profits should go to the Treasury. A good beginning would be to keep actual rates where they now are but to account more fully for current costs, which apparently would reduce taxes on corporate profits by roughly $6 billion.

It is to be hoped that this issue can be examined with the candor it deserves and without any demagoguery about "taxes on people vs. taxes on businesses." Only people pay taxes. The people who have the greatest stake here are certainly not the already affluent, who will live well enough in any case, but people generally who aspire to those higher levels of real income which only more vigorous capital formation can validate, and those now unemployed who would greatly benefit if there were even now more new plants coming on stream and opening up new job opportunities.

Such an $18 billion program would not be out-sized by historical standards. It would be equal to just over 1 percent of GNP, compared with a 1.3 percent figure for the 1975 and 1954 tax cuts or 2 percent for the tax cut of 1964.

The President's fiscal proposals are not subject to criticism because of their size since in any case the second year's installment could be de-activated, but the pattern of the proposals does deserve criticism. It is too cluttered, too much of a Rube Goldberg contrivance. Allowing businesses to offset a percentage of their payroll taxes against corporate income taxes is arithmetically in the right direction, but it reflects excessive indirection and additional complexity. The tax rebate is understandably being greeted by people with decidedly more restrained enthusiasm than by politicians. The proposal is, in fact, another indication of why government has its problems of credibility. The tax rebate is offered as a seemingly major benefit, but people rightly see a massive difference between a rebate and a permanent tax reduction that would permit them to adjust their longer-run spending commitments. It is a tax reduction this year to be followed by a tax increase next year.

A particularly disappointing characteristic of the current debate has been the attempts to draw distinctions between "job creation" vs. tax reduction. The higher level of economic activity produced by tax reduction is a far more effective job creation program than public spending. It is more effective because it is faster and because the employment opportunities are less apt to be dead-end jobs. We tried tax reduction in 1954 and it worked. We tried it in 1964 and it worked. We tried it in 1975, and the fact that 4.2 million more people are now employed (88 percent of them in the private sector) strongly suggests that it worked once again. Because the evidence of history is so clear about this, one has to suspect that those who stubbornly try to maintain this distinction between tax reduction and job creation have as their major objective simply a further expansion of political empires where both the newly created bureaucracy and the holders of public service jobs will be more explicitly beholden to government.

One other quick point here. The President is to be commended for recognizing that this expansion can be managed effectively only with close coordination among the three economies that have some room for maneuver—namely, Germany, Japan, and the United States. We do not manage our own affairs intelligently unless we take into account what others are doing, but the days are also gone when other governments could ride passively up an export-led boom with the U.S. assuming the full burden of the initiative.

With something like this alternative program of permanent tax reductions, which is fully in the spirit of the President's general concerns, it is reasonable to expect that when the books are closed on this year's fourth quarter the dollar volume of business activity will be seen to have increased about 11 percent with the price level rising at about 5 percent, real output up 6 percent, and upwards of 3 million more people at work.

LEGISLATION TO AMEND THE INTERNAL REVENUE CODE OF 1954

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. BRODHEAD) is recognized for 5 minutes.

Mr. BRODHEAD. Mr. Speaker, today I am introducing legislation to provide incentives for manufacturing industries to remain in their present community rather than relocate. Specifically, my bill provides a double investment tax credit for modernizing plants which are more than 25 years old and located in areas of high unemployment.

The economic decline which is due to industrial plant relocation has produced tragic results in my own city of Detroit, and in other urban areas in the Northeast and Middle West. In these cities, elimination of jobs has caused soaring increases in unemployment compensation and welfare payments, rising vandalism and crime, and urban blight. I believe it is in the national interest, as well as in these regions' interest, to encourage the single most important factor which is needed to halt this decline: this factor is jobs.

Mr. Speaker, by creating a strong incentive for industries to modernize rather than relocate, my legislation provides one vital step toward halting the drain of jobs from the Northeast and Middle West. And it is only after this trend is stopped that other measures can be effective in returning vitality to these economically troubled areas.

The text of the bill follows:

H.R. 3713

A bill to amend the Internal Revenue Code of 1954 to encourage employment and the modernization of manufacturing plants by providing an additional investment credit for machinery placed in service in existing manufacturing plants or in nearby plants

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Investment Tax Credit Act of 1977".

SEC. 2. (a) Subsection (c) of section 46 of the Internal Revenue Code of 1954 (relating to qualified investment) is amended by adding at the end thereof the following new paragraph:

"(6) Machinery and equipment placed in service in existing manufacturing plants or in nearby plants.—

"(A) In the case of section 38 property which is qualified machinery and equipment, the amount of the qualified investment shall be 200 percent of the amount determined under paragraph (1).

"(B) For purposes of this paragraph, the term 'qualified machinery and equipment' means any machinery or equipment which is placed in service by the taxpayer on or in connection with a qualified manufacturing facility to the extent that such machinery or equipment is required to enable such facility to compete effectively with other plants or facilities.

"(C) For purposes of this paragraph, the term 'qualified manufacturing facility' means any plant or facility which is used by the taxpayer in a trade or business of manufacturing or producing goods—

"(i) if—

"(I) such plant or facility is, on the date of the enactment of the Investment Tax Credit Act of 1977, owned by the taxpayer and used by him in such a trade or business,

"(II) such plant or facility has been so owned and used by the taxpayer for 25 or more calendar years,

"(III) without new machinery and equipment, such plant or facility will have sufficiently higher production costs so that it will be unable to compete effectively with other plants or facilities producing such goods, and

"(IV) such plant or facility is, at the beginning of the taxable year, located in a local area in which the rate of unemployment exceeds 4½ percent, as determined under regulations prescribed by the Secretary; or

"(ii) if such plant or facility is located within 10 miles of a plant or facility described in clause (i).

Such term does not include any plant or facility used predominantly in a trade or business described in paragraph (3)(B).

"(D) For purposes of this paragraph—

"(i) members of the same affiliated group of corporations (as defined in section 1504

(a)) which file a consolidated return for the first taxable year ending after the date of the enactment of the Investment Tax Credit Act of 1977 and for each taxable year thereafter shall be treated as one taxpayer, and

"(ii) assets acquired by the taxpayer after the date of the enactment of the Investment Tax Credit Act of 1977 in a transaction to which section 381(a) applies shall be treated as not owned by the taxpayer on such date.".

(b)(1) Subsection (a) of section 47 of such Code (relating to certain dispositions, etc., of section 38 property) is amended by redesignating paragraph (4) as paragraph (5) and by inserting after paragraph (3) the following new paragraph:

"(4) PROPERTY CEASES TO BE QUALIFIED MACHINERY AND EQUIPMENT.—If during any taxable year any section 38 property taken into account as qualified machinery and equipment (as defined in section 46(c)(6)(B)) in determining qualified investment ceases to be used on or in connection with a qualified manufacturing facility (as defined in section 46(c)(6)(C)), then the tax under this chapter for such taxable year shall be increased by an amount equal to the aggregate decrease in the credits allowed under section 38 for all prior taxable years which would have resulted solely from not treating such property, for purposes of determining qualified investment, as qualified machinery and equipment (after giving due regard to the period before such change in use). If the application of this paragraph to any property is followed by the application of paragraph (1) to such property, proper adjustment shall be made in applying paragraph (1).".

(2) Paragraph (5) of such subsection (a) (as redesignated by paragraph (1)) is amended by striking out "paragraph (1) or (3)" and inserting in lieu thereof "paragraph (1), (3), or (4)".

(3) Paragraph (6) (B) of such subsection (a) is amended by striking out "paragraph (4)" and inserting in lieu thereof "paragraph (5)".

SEC. 3. (a) The amendments made by section 2(a) of this Act shall apply to property—

(1) which is acquired by the taxpayer on or after the date of enactment of this Act; or

(2) the construction, reconstruction, or erection of which is completed by the taxpayer on or after such date, except that there shall be taken into account only the portion of the basis which is properly attributable to construction, reconstruction, or erection on or after such date.

(b) The amendments made by section 2(b) of this Act shall apply to taxable years ending after the date of the enactment of this Act.

EDUCATIONAL ASSISTANCE TO INDIVIDUALS FROM DISADVANTAGED BACKGROUNDS

The SPEAKER pro tempore. Under a previous order of the House the gentleman from Ohio (Mr. STOKES) is recognized for 10 minutes.

Mr. STOKES. Mr. Speaker, to a large degree, affirmative action programs were responsible for the rise in the minority enrollments in medical schools during the last 7 years. In 1970, 697 minority students were registered in the first-year class of American medical schools; in 1971, 882; in 1972, 957; 1973, 1,023; in 1974, 1,106. In 1975, minority enrollment dropped to 1,036. Why did this happen?

Certainly, one can point to the decreasing national interest in affirmative action guidelines and the difficulty that the executive agencies had in getting compliance with these guidelines as factors impeding minority enrollments. In addition, these affirmative action guidelines engendered a great deal of resentment because of the extra effort and expense required to recruit and retain students not in the usual middle-class track. Of late, legal reprisals have developed because of so-called incidents of reverse discrimination.

But one also has to look at the rising costs of a medical education and the inflationary trend of the Nation which affect not only minorities, but all students from disadvantaged backgrounds. Thus, my concern has been increased, and the Nation is faced with a much broader problem in the area of health manpower.

Until a few years ago—before our national economic crisis—few students had to leave medical schools because of a lack of funds. However, many medical colleges seem to believe that accepting students during difficult economic times who do not have the resources to pay their own way puts too great a stress on both students and medical school budgets. With the total cost of a year in medical school averaging well over $7,000, students are being forced to withdraw in increasing numbers. Unless someone can point to factors indicating that the cost of a medical education will decrease, this dropout trend will continue.

Much more money must be made available to help our disadvantaged youth. I feel this way not only out of concern for the poor and near poor in this country, but also for the improvement of the medical professions as well.

Increasing the enrollment of students from disadvantaged backgrounds will lend balance and sensitivity to the traditional mode of medical education. In addition, communities in rural regions and inner city ghettos can best be served when the health professionals in that area are an integral part of the community.

If the Federal Government permits medical schools to be the domain of students from very privileged backgrounds then the Nation will suffer a tremendous loss.

CURIOUSER AND CURIOUSER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 10 minutes.

Mr. KOCH. Mr. Speaker, oftentimes, a public official feels as though he has been thrown into a role in the theater of the absurd. This happened to me recently when I made some inquiries into the operation of the Hispanic Association for a Drug Free Society, otherwise known as SERA. Act I of this mockery of commonsense revolved around the director of SERA, Robert Munoz, an individual convicted on December 5, 1975, in the U.S. District Court, Southern District of New York for conspiracy to "use explosives and to extort." On February 27, 1976, Mr. Munoz was sentenced to 18 months imprisonment. This was suspended and he was placed on 2 years' parole. Thirty-one other counts against Mr. Munoz were dropped.

Despite his conviction, Mr. Munoz continues as executive director of SERA, a program whose purpose is to rehabilitate drug addicts.

Last July, J. Henry Smith, administrator of the Human Resources Administration, advised the chairman of SERA, Mr. Victor Risso, by letter that—

In view of these convictions we find it highly inappropriate and improper for him (Mr. Munoz) to serve as Executive Director or in any official capacity in any organizations with which the City of New York contracts for services.

Mr. Smith warned that unless Mr. Munoz were replaced, he would not consider any new funding for SERA.

Mr. Munoz remained, and as of November 18, Mr. Smith terminated all contracts with SERA over which he had jurisdiction. This is now the subject of litigation.

Ironically, scene 2 of this comedy started on the same day: November 18 when the board of estimate was scheduled to act on a request by another city agency, addiction services agency, for $604,129 in new funds for SERA to bring its total ongoing contract to $1,893,671. I queried, "is it possible that on the one hand one city commissioner taketh away while another giveth?"

In Congress I have been a proponent of prison reform, and I believe that those who have committed crimes and been subjected to punishment should not be subjected to further job discrimination as a result of the criminal record unless the crime and the job are related. And even then, when there has been a reasonable period of time in which rehabilitation has been demonstrated and tested there should not be discrimination. But, it makes no sense to have Mr. Munoz as director of a therapy program for individuals, some of whom have committed crimes of violence, and he himself found guilty of a serious felony.

The contract between ASA and SERA stipulates that the city may require that the contractor terminate any employee who "is convicted of any criminal charge which relates to his employment with the contractor, or which affects his ability to properly carry out his assigned functions."

As a result of my statements supporting Commissioner Smith's position that Mr. Munoz should be removed as director, I was denounced by Mr. Munoz who charged that I was being discriminatory, because he had only one felony conviction and his predecessors a minimum of four.

We went on to Act II shortly after this exchange. The papers reported that two directors of SERA had been apprehended in the dead of night by several police officers while allegedly throwing a fire bomb into an empty bus owned by SERA. Mr. Munoz reportedly refused to be a complainant on behalf of SERA against the alleged firebombers and for awhile stalled the legal process. But, the Bronx district attorney has advised me that the matter can proceed even without the cooperation of Mr. Munoz. To date, this scenario is still unresolved.

Act III began on January 6 when Brig. Gen. Eric Jackson of the Salvation Army came to see me about his problems with

SERA. The Salvation Army owns the building in which SERA's headquarters are located, 1771 Andrews Ave. in the Bronx, under a $25,000 a month lease. Since October 1975, SERA has not paid its rent. The $25,000 a month rental, however, has been specifically approved and paid to SERA by ASA. In November and December 1975, General Jackson and his general counsel appealed to city, State, and Federal funding agencies for help. The agencies replied that they had no authority to get involved even though the final disposition of their funds was in question. In response to a letter by the Salvation Army's general counsel to SERA, a check for $32,000 was rendered on January 26, 1976, leaving a balance at that time of $67,970. The current amount due the Salvation Army is $333,119.

In a tour de force, the next communication received from Mr. Munoz by the Salvation Army, dated March 16, 1976, ominously stated:

> This is to strongly request the Salvation Army to donate to the Hispanic Association for a Drug Free Society, Inc. the premises . . .

When I asked why the Salvation Army permitted SERA to remain in occupancy without paying rent, I was told that it was feared that if SERA were compelled to vacate under court order, the building would be left vacant and ultimately vandalized and destroyed. The Salvation Army would rather have no rent than no building. An interesting aside is that when the Salvation Army did receive rental payments—the lease commenced September 1973—the checks were drawn on 22 different banks. Curious?

Act IV opened with the suspense of an Orwellian drama. On February 1, Brig. Eric Jackson, property secretary of the Salvation Army, again contacted me to advise that he had just learned from an anonymous caller that SERA had suddenly vacated its headquarters at 1771 Andrews Avenue. SERA's new home was reported to be a facility formally owned by the Hebrew Home for the Chronic Sick at 1776 Clay Avenue in the Bronx.

Salvation Army officials had been denied entry to the building at 1771 Andrews Avenue for over a year and had little knowledge of its condition. At their invitation I joined them on a tour of the former SERA facility on February 4. The building had widespread damage because its boiler had been turned off during the recent extraordinary cold spell and pipes throughout the sprawling facility had frozen and cracked. A contractor who accompanied us on the the tour estimated the cost of repairs would exceed $200,000.

As I toured 1771 Andrews Avenue, members of my staff were investigating the circumstances surrounding SERA's relocation to 1776 Clay Avenue. Through calls to Federal, State, and local drug abuse agencies who funded SERA, we learned that none of the agencies had authorized such a move and that in fact, relocation of the program would be contrary to agency regulations.

The plot of Act V thickened considerably following an examination of the records of the Bronx Registrar of Deeds. Papers on file show that on January 18, title to 1776 Clay Avenue, SERA's new headquarters, were transferred, not once, but twice. First, to the 1776 Clay Avenue Corp., for the price of $75,000 in cash. And then later that very same day to SERA for the price of $325,000—$275,000 in cash and the balance in a mortgage with the Dime Savings Bank of Brooklyn according to the office of the New York City Comptroller.

Further investigation by WNEW–TV reporter Steve Bauman yielded the name of one of the principals of the 1776 Clay Avenue Corp. It is none other than the attorney who represented Robert Munoz at his 1975 felony trial.

The exact sale price of the building seems to be in question. Soon after my return to the office on the day I toured the former SERA headquarters, Mr. Munoz telephoned me. He said:

> I understand you are interested in our programs and want to know if I can provide any of the facts.

And went on to explain that SERA has paid $350,000 not $325,000 for the building through a lease-purchase agreement. Such an agreement, Mr. Munoz insisted, "will save the taxpayers hundreds of thousands of dollars." Mr. Munoz also stated that the National Institute of Drug Abuse had approved the purchase of 1776 Clay Avenue. I am unable to substantiate any of these assertions.

I have forwarded all of this information to U.S. attorney, Robert B. Fiske, who advises me his office is investigating Mr. Munoz' drug program and his recent real estate transactions.

Following my reported urging that all city funding of SERA be terminated, New York City Comptroller Harrison J. Goldin last Thursday, February 17, finally suspended funding of the program.

The U.S. attorney and his staff will have their jobs cut out for them as there are many loose ends. During the past 4 years, SERA has received at least $3.5 million annually from Federal, State, and local sources, of which approximately $339,000 was earmarked for rent each year. Where did the money go? The transaction between 1776 Clay Avenue Corp. and SERA may provide some of the answers. From all appearances, it was certainly not an arm's length transaction.

The Board of Estimates has yet to act on the ASA contract, as well as another Department of Employment contract for SERA. The patients of SERA are left in a state of limbo, uncertain about the future of their treatment program. On the sidelines, commissioners and Federal, State, and local agency officials argue whether an individual convicted of a serious felony involving violence while on the job, should head a rehabilitation program, and whether sufficient grounds exist to warrant an investigation of SERA's financial dealings. The taxpayers viewing this incredible sequence of events must be left feeling bewildered, like Alice in Wonderland watching her feet disappear in the pond below and muttering, "Curiouser and curiouser."

Mr. Speaker, for the benefit of my colleagues, I include for the RECORD copies of my correspondence with Federal, State, and local officials who share responsibility for SERA's activities as well as the New York Daily News article of February 17 concerning the termination of SERA funding by New York City Comproller Goldin:

WASHINGTON, D.C.,
November 24, 1976.

HON. DANIEL KLEPAR,
Commissioner, NYS Office of Drug Abuse Services.
HON. JEROME HORNBLASS,
Commissioner,
NYC Addiction Service Agency.

GENTLEMEN: A most bizarre situation has been brought to my attention with respect to the public funding of a narcotics program headed by an individual, Robert Munoz, who was sentenced in February of this year in the U.S. District Court for the crimes of conspiracy to extort and bomb, both of which are felonies. Despite City regulations prohibiting continued employment of convicted felons, Mr. Munoz continues to be the Executive Director of the Hispanic Association for a Drug Free Society, otherwise known as SERA. On July 28, 1976, J. Henry Smith, Administrator of the Human Resources Administration by letter advised Victor Risso, Chairman of SERA that "unless immediate arrangements are made for the resignation or removal of Robert Munoz from an official capacity, we will be unable to consider funding any new contracts with your organization and will be forced to terminate the existing contracts." By letter of November 3, Mr. Smith advised Mr. Risso that the Department of Social Services' agreement with the Hispanic Association for a Drug Free Society to provide residential treatment would be terminated as of November 18, 1976. Similarly the Department of Employment's CETA contract with SERA would be terminated on November 18th. And, it is my understanding that this termination did go into effect on November 18th.

Ironically, on the very day the Department of Social Services' agreement was to end—November 18th—there appeared on the Board of Estimate calendar an item to fund SERA to the extent of an additional amount of $604,129 to provide a total contract of $1,893,671. The funds—state funds—were to be granted by the Addiction Services Agency. As I understand it, the matter was put over by the Board and there is still an opportunity to end this outrageous situation.

Clearly, you gentleman are in a position to take the appropriate action to rescind this funding before the matter is to be brought up at the Board of Estimate again on December 2.

It is important that during the time that SERA is not funded (because of its retention of Mr. Munoz) that every person in SERA's program be given an opportunity to continue treatment in a responsible professional drug treatment program of a comparable modality but not comparable leadership.

Taxpayers are incensed with rip-offs occurring in so many of our social programs. I would appreciate having your immediate response on what measures, if any, you intend to take in this matter before December 2.

Is it possible that on the one hand J. Henry Smith taketh away and on the other, Jerome Hornblass giveth? Am I not correct, Mr. Hornblass, that you were alerted to this situation by your own staff months ago?

Sincerely,

EDWARD I. KOCH.

NOVEMBER 30, 1976.

HON. EDWARD I. KOCH,
Congressman,
New York, N.Y.

DEAR CONGRESSMAN KOCH: This is in response to you letter dated November 24th, which you released to the press.

Your letter draws erroneous conclusions and contains errors in fact. I would like to explain to you my reasoning for rejecting your emotional plea to insist on Mr. Munoz'

termination and close the program if his termination cannot be accomplished.

1. You are wrong that "City regulations prohibit continued employment of convicted felons". There are scores of City employees with criminal records who perform their job functions adequately. The whole humanistic concept of rehabilitation demands that people be given an opportunity to improve their conditions and their behavior. Indeed, I am proud that on ASA's staff as well as on the staffs of our contracting agencies, dozens of men and women convicted of crimes were given the opportunity to work and have performed faithfully and admirably.

2. The case at hand, however, does not involve a City employee. Mr. Robert Munoz is employed by a Not for Profit Corporation known as Hispanic Association For a Drug Free Society, Inc. (SERA). Therefore, the legal relationship between SERA and ASA is controlled by a contract. The contract states that ASA may require that the Contractor terminate any employee who "is convicted of any criminal charge which relates to his employment with the Contractor, or which affects his ability to properly carry out his assigned functions."

Based on the contractual interpretation, I may reasonably conclude that Mr. Munoz' conviction does not affect his ability to carry out his assigned functions and not require that he be removed from his position as Executive Director by the Contractor. Clearly, all of the interests and circumstances were weighed before we decided not to seek his removal. The decision was based on the following:

A. The Honorable Constance Baker Motley, who was the Judge at Mr. Munoz' trial and heard all of the arguments and facts as presented by the prosecution and defense did not commit the defendant to prison. Indeed, there were no instructions from the Judge to limit his employment although his position at SERA was known to the Court.

I will not attempt to be a better judge than the judge who heard the case by imposing further civil sanctions.

B. ASA and its network of programs is nurtured on the concept of hiring the ex-addict and those with criminal records. Many of these individuals have improved their own lives as well as helping others. I personally subscribe to the idea of reform and rehabilitation. Contrary to what you may think the "Once an addict—always an addict; once a criminal—always a criminal" mentality which you appear to believe in—has been disproved. The fact is that scores of people are successfully working in programs throughout the City who were arrested and often convicted for misdemeanors and felonies. They are now making significant contributions to society.

C. The Board of Directors of SERA supports Mr. Munoz in his current position. The community appears to be supportive of him too.

D. To the best of our knowledge the SERA program is delivering a needed service in an adequate manner.

E. SERA is the only Hispanic drug treatment program in the City. To close it, as you propose, would seriously disrupt our efforts in the City to curb drug abuse and addiction and would be irresponsible.

Least you draw non-logical conclusions, I want you to understand that I believe that people should be punished for violating our criminal laws. But, I also believe in safeguarding an individual's civil rights and I, moreover, subscribe to the rules of justice and fairness. The judgment I have made in this case was not an easy one but unlike you, I have a direct responsibility to treat addicts and do my best to insure that opportunities for rehabilitation and positive change by individuals are not thwarted.

An Article 78 Proceeding has been brought against the Human Resources Administration by SERA. A hearing on the matter will take place in the Supreme Court, Bronx County on December 3rd. The decision by the Court on the Petition will help me determine what further action we will take. Moreover, the disposition of the proceeding will undoubtedly cause the various city, state and federal agencies involved to agree on a mutually desirable goal.

I hope the foregoing gives you a better understanding of the situation and permits you to evaluate this matter more objectively. I am under separate cover writing to you a private letter relating to your actions.

Sincerely,

JEROME HORNBLASS,
Commissioner.

NOVEMBER 30, 1976.

Hon. EDWARD I. KOCH,
Congress of the United States, House of Representatives, Longworth Office Building, Washington, D.C.

DEAR CONGRESSMAN: This is in reply to your letter of November 24 regarding the financing of the Hispanic Association for a Drug Free Society (S.E.R.A.) while Robert Munoz is the Executive Director. Although I cannot give you a complete report now, I have asked my staff to look into the laws and regulations regarding the issues you raise involving Mr. Munoz' conviction, and also to discuss this situation with the New York City Addiction Services Agency.

Your letter raises serious questions which we will pursue fully. I promise to report back to you as soon as I can.

Sincerely,

DANIEL KLEPAK.

WASHINGTON, D.C.,
January 7, 1977.

ROBERT L. DUPONT,
Director, National Institute on Drug Abuse, Rockville, Md.

Hon. DANIEL KLEPAK,
Commissioner, N.Y.S. Office of Drug Abuse Service, Albany, N.Y.

Hon. JEROME HORNBLASS,
Commissioner, Addiction Services Agency, New York, N.Y.

GENTLEMEN: A bizzare and horrendous situation has been brought to my attention relating to the fiscal affairs of the Hispanic Association for a Drug Free Society, Inc. (S.E.R.A.)

We have been advised by the Salvation Army which owns 1771 Andrews Avenue in the Bronx that its tenant, S.E.R.A., is currently in arrears in rent payment for the period October 1975 to date, for the sum of $339,119. And that is not all. We have been furnished correspondence and memoranda which indicate that S.E.R.A.'s rental arrearage of $25,000 a month was brought to the attention of each of your respective agencies: James Brenner, former General Counsel of N.Y.C.A.S.A. was advised in November, 1975; John M. Proctor, Executive Officer of N.I.D.A. was advised in December, 1975; Commissioner Hornblass was advised in May, 1976; and Commissioner Klepak in November, 1976.

Requests for the payment of outstanding rent were made by the Salvation Army through its counsel, Donald G. Glascoff, Jr. to Victor Rizzo, Chairman of the Board of S.E.R.A. by letter of December 23, 1975. Mr. Rizzo failed to respond and instead the Salvation Army received a letter from Robert Munoz, Executive Director of S.E.R.A., dated January 26, 1976 with checks totaling only $32,000. This left a balance at the time of $67,970. The current amount due the Salvation Army is $333,119.

An even more droll aspect is a letter from Mr. Munoz dated March 16, 1976 to the Salvation Army which states, "This is to strongly request the Salvation Army to donate to the Hispanic Association for a Drug Free Society, Inc. the premises located at 1771 Andrews Avenue, Bronx, N.Y.

We are told by Brigadier General Eric Jackson, Property Secretary of the Salvation Army and counsel that they have repeatedly requested federal, state and local agencies to make provision for direct payments of rent out of the multi-million dollar publicly funded budget of S.E.R.A., and that on each occasion they were told that such an arrangement was not possible. An additional striking aspect is that on those occasions when rent was paid, the checks received came from 22 different bank accounts. Moreover, the contract signed by S.E.R.A. required the premises to be insured. To date, S.E.R.A. has failed to secure such insurance and the Salvation Army has been forced to itself insure the building at a cost of $10,000 annually over the past four years. This expenditure has not been reimbursed by S.E.R.A.

We are also informed by counsel to the Salvation Army that S.E.R.A. has received in excess of $1,300,000 during each of the past four years. The Salvation Army sought, in an effort to obtain direct rent payments, to obtain copies of various federal contracts under the Freedom of Information Act. While it eventually received the federal contracts, it has consistently been refused access to any other S.E.R.A. contracts.

Since all of these budgets included and approved rent at the rate of $25,000 a month beginning with September 1, 1973 to date, the money apparently has been diverted to other uses. Inasmuch as each of your agencies has had knowledge of this situation, we are shocked that there has not been an exhaustive examination into this matter to ascertain what happened to these monies. We are informed that a meeting was held on October 7, 1976 which was attended by Tom Sevy, David Fenimore, Noble Jones and Frances Johnson representing N.I.D.A.; Robert Munoz and an assistant for S.E.R.A.; and Brigadier Jackson and the Salvation Army counsel. We are advised by counsel that at that meeting, the N.I.D.A. officials told him that an audit report of S.E.R.A. by H.E.W. showed a clean bill of health. We find this difficult to believe and want to know why obvious diversions of public funds were not cited in the report.

We would appreciate receiving a copy of this H.E.W. audit. Counsel also advises us that he believes there was a GAO audit of S.E.R.A. If so, we would appreciate having a copy of that report.

At the present time, the Salvation Army has a judgment pending against S.E.R.A. in the amount of approximately $217,000 for rent due until June 1, 1976. Additional rent payments of $25,000 per month are still owed through January 31, 1977 making the total arrears the previously mentioned figure: $333,119.

Finally, we would appreciate knowing of the status of Commissioner Hornblass' request for an additional $604,000 contract with S.E.R.A. that was deferred by the Board of Estimate on November 18, 1976 for further consideration.

All of the information stated above was provided at a meeting held in the office of Congressman Edward I. Koch, on January 6, 1977 at which were present Congress Koch, his Executive Assistant, Jim Capalino, Brigadier General Eric Jackson and James Deering from the Salvation Army, and Donald G. Glascoff, Jr. The undersigned have no personal knowledge concerning this matter, but believe the situation requires an immediate and exhaustive inquiry by your respective offices.

We look forward to hearing from you at your earliest convenience.

Sincerely,

HERMAN BADILLO.
EDWARD I. KOCH,

JANUARY 26, 1977.

Hon. EDWARD I. KOCH,
Member of Congress,
New York, N.Y.

DEAR CONGRESSMAN KOCH: This is in response to your most recent letter and subsequent conversations between your office and Mr. Irwin Davison of mine. Please be advised that for fiscal year 1975–1976 the Addition Services Agency provided the Hispanic Association for a Drug Free Society, Inc. with $13,653 for rental of the premises at 1771 Andrews Avenue in the Bronx. In the proposed 1976–1977 contract ABA provides no funds at all for S.E.R.A. facilities.

On January 20th, the Board of Estimate, at the request of the Deputy Mayor's Office, adjourned consideration of the S.E.R.A. contract until February 3rd, 1977. The purpose of the adjournment was to await a determination of an Article 78 proceeding brought by Mr. Munoz against the Human Resources Administration.

If I can be of further assistance, please contact me.

Sincerely,

JEROME HORNBLASS,
Commissioner.

JANUARY 28, 1977.

Hon. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR MR. KOCH: Thank you for your letter of January 7 regarding the Hispanic Association for Drug Free Society, Inc. (S.E.R.A.) and its difficulty in resolving its rental indebtedness to the Salvation Army. This letter will confirm the information which was conveyed to you during the recent telephone conversation with Mr. Karst Besteman.

The National Institute on Drug Abuse (NIDA) has been providing Federal assistance to S.E.R.A. for drug abuse treatment and rehabilitation efforts since September 1972. We first became aware of the difficulty that the Salvation Army was having with S.E.R.A. in February 1976. At that time we communicated to the Salvation Army that S.E.R.A. had requested only $17,223 of Federal funds in support of their rental budget of $157,430. The difference between the total rental budget and the Federal contribution, which amounted to $140,207, was to be obtained from non-Federal sources.

The drug abuse treatment and rehabilitation program which we support requires the grantee (S.E.R.A.) to match the Federal contribution with non-Federal sources. S.E.R.A. planned to use $140,207 of the total rental budget to satisfy its share of the matching requirement. S.E.R.A. has been apparently using the rental facility to satisfy its matching requirement and has deferred payments on the rental costs. The effect is that the Salvation Army property has been used as "in-kind" match rather than cash expenditure match, which is an acceptable method for satisfying the matching requirement. The Salvation Army, however, did not "donate" the use of the facility to S.E.R.A.

As we view the situation, the Salvation Army has taken proper and effective legal action to recover the indebtedness through the courts. Although this Institute has provided only a total of $34,446 for rental costs during the last two funding periods ($17,223 each for the periods of September 1975 to August 1976, and September 1976 to August 1977), we certainly can condition any future grants awarded to S.E.R.A. that Federal funding is subject to the settlement by S.E.R.A. of its indebtedness to the Salvation Army.

Our monitoring of the S.E.R.A. drug abuse treatment and rehabilitation grant project has consisted of 13 on-site visits during the last 4½ years to evaluate the drug abuse program and/or provide technical assistance. In addition, we have had a national accounting firm perform a comprehensive evaluation of the S.E.R.A. operations. A copy of that report is enclosed for your information. Deficiencies that were noted at that time have been corrected to the satisfaction of the Institute. We also have been monitoring on a monthly basis the level of Federal cash drawn by S.E.R.A. and the rate of Federal expenditures to assure that the Federal cash advanced is directed to grant related purposes.

The HEW Audit Agency recently completed its on-site audit review of S.E.R.A. as recommended by NIDA. A final report is expected to be issued by the New York Regional Audit Office within a month. We have been informed by that office that there are no significant audit findings to report. Additional information about the HEW Audit of S.E.R.A. may be obtained from Mr. Bernard Lugar, Audit Director, HEW Region II, 26 Federal Plaza, New York, New York 10007. He may be reached by telephone on area code 212, 264–4620. We are not aware of a G.A.O. audit report mentioned in your letter.

If I can be of any further assistance, or if there are any questions that I can answer, please feel free to contact me.

Sincerely yours,

ROBERT L. DUPONT, M.D.,
Director.

NOTE

Commissioner Daniel Klepak did not respond.

WASHINGTON, D.C., *February 8, 1977.*

ROBERT B. FISKE,
U.S. Attorney, U.S. Court House,
New York, N.Y.

DEAR MR. FISKE: I am writing to you to bring a very serious matter to your attention. It concerns a drug treatment program known as S.E.R.A. (Hispanic Association for a Drug Free Society) which is federally funded. The matter is outlined below and additional details are furnished in the enclosed correspondence I have had with various officials.

S.E.R.A. is under the direction of Robert Munoz, who was convicted in December of 1975 of one felony count involving conspiracy to bomb and extort money, as a result of a case brought by your office (Affirmed United States of America vs. Robert Munoz, James Sims and Carlos Cuadrado—Docket No. 76—1076). According to the office of the NYC Comptroller, Harrison J. Goldin, S.E.R.A. has received approximately $3.5 million annually in federal, state and local grants over the past four years. I have urged federal, state and local officials having jurisdiction over this program's funding to terminate all payments so long as Mr. Munoz, a convicted felon, continues to serve in any capacity. I have stressed that his criminal activity took place while he was either Chairman of the Board of S.E.R.A. or its Director, and therefore these criminal acts were job related. Notwithstanding my protestations, Mr. Munoz continues in that position.

Recently developments have occurred which also bear upon federal funding and I believe merit thorough investigation by your office. One relates to the fact that S.E.R.A. owes the owner of the building it occupied since September 1, 1973 until last week, the Salvation Army, some $339,000 in back rent. Federal, state, and local funding contracts entered into by S.E.R.A. provided $25,000 a month for a rental of the building at 1771 Andrews Avenue in the Bronx and it would appear that rent monies received by S.E.R.A. have been diverted to other uses.

Secondly, the Salvation Army advises us that the premises at 1771 Andrews Avenue vacated by S.E.R.A. last week has over $200,000 in damages. Apparently, the building's boiler was turned off during the cold weather causing all the pipes to freeze.

Thirdly, and most important from the perspective of your office, are the circumstances surrounding S.E.R.A.'s relocation to a new location at 1776 Clay Avenue in the Bronx. I have ascertained that on January 18, 1977 a corporation known as the 1776 Clay Avenue Corp. Inc. purchased from the Hebrew Home for the Chronic Sick the building at 1776 Clay Avenue for the sum of $75,000 (Title #707,4178) and on the same day transferred title to the same premises to S.E.R.A. for approximately $325,000. The office of the NYC Comptroller advises me that they understand that the sale price was $325,000 of which $50,000 was a mortgage with the Dime Savings Bank of Brooklyn and the balance was cash. This past Friday, Feb. 4, 1977, Mr. Munoz, who had heard of my interest in the matter, telephoned me. He said the purchase price was $350,000 through a lease purchase agreement but with no cash. Hence, at this moment I am uncertain of the exact details of the transaction. Furthermore, Mr. Steven Bauman, is a reporter of WNEW (Channel 5) advises me he has ascertained that one of the principals of 1776 Clay Avenue Corp. Inc. is the attorney who represented Mr. Munoz in several of his trials.

It is apparent to me that federal funds are being used for purposes that were not intended pursuant to the contract under which they were provided S.E.R.A. Moreover, on the face of it, the transaction between 1776 Clay Avenue Corp. Inc. and S.E.R.A. raises a question as to the propriety of the sale in view of the large resale profit.

The matters raised in this letter have been brought to the attention of federal, state and local authorities in the executive agencies on a number of occasions without result. I turn to you with confidence that you will launch an immediate investigation into these matters and see that violations of the law, if any, are vigorously prosecuted.

I urge that this matter be expedited and receive your immediate attention.

Sincerely,

EDWARD I. KOCH.

[From the New York Daily News, Feb. 17, 1977]

GOLDIN CITES FUND ABUSE, HALTS AID TO DRUG CLINIC

(By Claire Speigel)

City Controller Harrison J. Goldin has stopped payment of funds to a drug treatment clinic in the Bronx because an audit of the program released yesterday uncovered gross abuse of public funds.

Goldin announced that the program, the Hispanic Association for a Drug Free Society, has forged payroll checks to fictitious people and made loans to private ventures.

Furthermore, Goldin said, "there is a strange relationship in the purchase last month of a building through a corporation in which one of the principals was SERA's own attorney—hardly an arm's length arrangement."

The clinic has been drawing advances on a $604,000 contract with the Addiction Services Agency which has not yet been approved by the Board of Estimate. The contract expires next month and most of the money already has been doled out, according to Charles Blisberg, Goldin's representative on the Board of Estimate. The clinic also receives funds from another dozen city, state and federal agencies, Goldin said.

DIRECTOR WAS CONVICTED

Human Resources Administrator J. Henry Smith terminated the agencies contracts with the clinic last year on the grounds that its director, Robert Munoz, is a convicted felon. He was given a suspended 18-month sentence last year for conspiracy to bomb construction sites and extort money from contractors.

CLAIM RENT UNPAID

Munoz challenged Smith's move in Bronx Supreme Court. The Board of Estimate has delayed voting on contracts between other city agencies and the clinic pending a court decision.

Goldin said he was "deeply troubled by the facts so far uncovered by my auditors." U.S. Attorney Robert Fiske also is investigating the program.

The clinic left its old quarters at 1771 Andrews Ave. suddenly in mid-January, leaving behind an unpaid rent bill of $339,000 and great property damage, Rep. Edward Koch has charged. The Salvation Army, which owns the property, confirmed the charge. The clinic recently purchased another building at 1776 Clay Ave. at a cost of $250,000, according to Goldin.

Munoz said the clinic bought the building with federal money, supplied through the Department of Health, Education, and Welfare's National Institute of Drug Abuse, whose spokesman could not be reached for comment. Munoz denied owing the Salvation Army back rent, and said he decided to move the program because the boiler at 1771 Andrews Ave. was broken and could not be fixed.

RESEARCH IN ENVIRONMENTAL PROTECTION AGENCY IS DECLINING DANGEROUSLY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oregon (Mr. AuCoin) is recognized for 60 minutes.

Mr. AuCOIN. Mr. Speaker, as Congress approaches the March appropriations hearings for the Environmental Protection Agency, it is crucial to call to the attention of my colleagues the dangerous decline of this important Agency's research program.

The subject of research may be a bore to some people, but I want to say to my colleagues that our Nation's future depends in no small measure on the quality of America's research.

More precisely, the quality of the American environment, the purity of our air, our water, and the use of our land resources depend in large part on a strong research program within this Nation's No. 1 environmental protection office, the EPA.

Today, man and his industrialized machinery are dumping agents into the environment that have had a staggering effect. And yet, we still lack answers in trying to deal with them. We simply do not know how to deal confidently with Kepone poisoning, industrial chemicals, many forms of pesticides, their net effect on our world, and how to push forward to find safer alternatives.

Someday we might.

But that "someday," Mr. Speaker, may never arrive if Congress continues to allow the steady erosion of sound research within the Environmental Protrotection Agency. Basic research into the causes and effects of pollution is the wellspring of knowledge on which sound environmental policy and effective administration is based.

Yet, in the face of this reality, I point out to my colleagues that research in EPA is seriously suffering and can only be corrected through the congressional appropriations process and determined congressional oversight.

The First Congressional District of Oregon is fortunate to have one of the EPA research facilities. Other congressional districts have similar facilities. What happens to the EPA's research budget is important to each of these districts, without question. But, in a larger sense, this also is profoundly important to the health and safety of each American citizen as well as to the environmental future of the Nation.

With appropriations hearings scheduled for early March, I hope my colleagues and the new administration will take careful note of the following information, which I am compelled to bring before them. It is an alarming story.

BACKGROUND

The Environmental Protection Agency was formed in December 1970, to carry out existing environmental laws of the Nation. The following new legislation has since been passed by the Congress and assigned to EPA for implementation:

Federal Water Pollution Control Act Amendments, 1972,

Marine Protection, Research and Sanctuaries Act, 1972,

Federal Insecticide Fungicide Rodenticide Act Amendments, 1972,

Noise Control Act, 1972,

Safe Drinking Water Act, 1974,

Energy Reorganization Act, 1974,

Resource Conservation and Recovery Act, 1976,

Toxic Substances Control Act, 1976.

Each of these pieces of legislation is complex and requires a large body of new knowledge for implementation.

The research program of EPA has shown only modest growth from the time EPA was formed until 1974. Since 1974, even with the passage of several new pieces of legislation, the base research budget of EPA has remained relatively constant at between $155 to $168 million. This base budget has been augmented with approximately $100 million for energy research each year since 1975 but no new positions were provided to carry out the research authorized and funded. The permanent positions assigned to EPA's research program have shown a steady decline since 1974 as follows:

	Cumulative decrease in positions	Remaining permanent positions
1974	-----	1989
1975	−63	1926
1976	−137	1852
1977	−191	1798
1978	−325	1664

The 1978 figure is based on the budget proposed by President Ford. If the Ford budget is approved, EPA's research program will have suffered a total loss of 325 positions since 1974 or a 17 percent loss in total strength.

IMPACT OF REDUCTION IN RESEARCH

The reduction in personnel together with relatively constant dollars, which have steadily decreased in buying power due to inflation, has resulted in significant curtailment—I repeat, curtailment—of environmental research.

This reduction in resources follows a trend in reverse of the ever increasing demands for new knowledge and data to support EPA's regulatory responsibilities. Environmental standards and regulations cannot be based on presumptions and inferences of risk. EPA must have scientific facts to support its standards and researchers must be prepared to defend these standards in the courts. Scientific evidence removes uncertainties and provides a sound basis for new regulations. Unfortunately, the dwindling research resources have made it virtualy impossible to provide the Agency with anything but superficial and brushfire support. Is it any wonder that the EPA is frequently under attack for its regulations and policies?

The lack of sound scientific evidence has limited the Agency's ability to act effectively on a number of environmental fronts. For example, regulations on ocean disposal of wastes have faced severe setbacks because of the lack of sound scientific information.

Our domestic drinking water standards for organic pollutants, many of which are known carcinogens, are lacking because of the dearth of scientific facts upon which to base such standards.

The setting of effluent guidelines for the discharge of many industrial wastes has been severely hampered and publicly criticised because sound research information was lacking.

The assessment of environmental hazards and establishment of adequate regulations for over 50,000 pesticides and other hazardous substances has been seriously hampered and publicly criticised because sound scientific information is lacking.

Many of our most eminent medical researchers are now concluding that more than 50 percent of the new cancers in the United States are environmentally caused and expect the figure to rise.

With this background it seems inconceivable that environmental research programs are being cut back or terminated.

EPA POLICY RELATIVE TO RESEARCH

Although faced with growing needs to implement complex legislation, the Administrator of EPA has been relatively unsuccessful in obtaining additional positions and dollar resources. As a result he has had to resort to shifting resources where possible within the Agency in order to cover all bases. Federal agencies are little different from industries when it comes to priorities. Research programs are the first to be cut in order to support high priority short-term problems. But without an adequate research program which can sustain sound regulatory decisions, the Agency's credibility becomes subject to question which, in turn, increases resistance to necessary regulations and ultimately leads to the downfall of a viable national environmental program.

The adverse effects of cutting research is often not seen for several years. When the problem is finally recognized there is an additional lag period before the research effort can be built up to the point where results can be produced. While the Agency's current policy of shifting resources to meet immediate demands may seem to make sense today, in the long run it can only lead to diminishing environmental protection or to regulatory decisions that may be uneconomic, inefficient or ineffective.

IMPACT OF FORD BUDGET ON RESEARCH

The fiscal year 1978 budget, as proposed by the previous administration, calls for a total reduction in research positions of 134. This would be in addition to the 191 previously lost since 1974. The impact of this position cut is as follows:

Air quality research: The proposed 60 position reduction in this program reduces total permanent strength from 460 to 400—a 13-percent reduction. The air health effects research program will receive a 25-position cut. The program has been criticized for not adequately monitoring contracts and grants, and the proposed cut will increase the load on the already short supply of human experts in EPA. The cut will also make it virtually impossible to operate a new clinical laboratory facility designed to develop critically needed dose-response data on sulfates. The air ecology program will be reduced 10 positions. This work protects and defends our secondary air standards which have a major impact on wildlife, plantlife, and soil fertility.

Water quality research: The proposed 34 position reduction in this program reduces total permanent strength from 546 to 512—6 percent reduction. Ecological effects research would be reduced 15 positions. This will result in further delays in establishing scientifically sound criteria required by the Agency to meet court-ordered data on pollutants named in a consent decree and would further reduce research on oil pollution and ocean disposal. Monitoring and technical support research programs would be reduced by 14 positions. This would significantly reduce research on the development of analytical methods standardization and effluent guidelines support. Research on land disposal of wastes would be reduced by five positions thus eliminating virtually all research in this area.

Interdisciplinary research: The proposed 40 position reduction in this program reduces total permanent strength from 228 to 188—an 18-percent reduction. The primary research programs affected by this reduction are the agricultural—nonpoint—research program and the environmental management research program both of which would be virtually eliminated. In spite of new 1976 legislation, that is, Toxic Substances Control Act and Resources Conservation and Recovery Act—solid wastes—there is no proposed change in research positions assigned to these programs nor has there been any change since 1975. Rather, there has been a recommendation by OMB to rename interdisciplinary research to toxic substances research.

The impact of the above losses will be felt primarily in field research laboratories where research is actually performed rather than Agency headquarters. Some of the Agency's 15 field research laboratories have been unable to hire any permanent employees for over 2 years and have been unable to replace those that leave due to position ceilings which are below on-board strength. This loss by attrition has resulted in serious losses of certain essential disciplines and needed research.

WHAT IS NEEDED

While the money problem is significant, it is not as acute or dangerous as is the people problem.

New programs cannot be added to old ones by simply adding dollars. New programs require additional personnel, new disciplines, different skill mixes, new ideas. Current policies of shifting dollars and assigning increasing work loads have reached their limits. The quality of performance already reflects this. What is needed is a careful assessment of the Agency's people needs in the area of research and support from the Congress and OMB to meet those needs.

The Ford budget for fiscal year 1978 should be amended to include a minimum 100-position increase rather than the 134-position cut. This increase of 234 positions over the proposed budget should be supported with an additional $25 million to cover not only increased in-house costs but an additional $10 to $15 million to support extramural research. In subsequent fiscal years, positions and adequate dollar resources should be gradually added to reach a base level of 2,500 research positions by fiscal year 1982.

SUMMARY

I hope my colleagues will see that now is the time to act. I hope my colleagues will fully appreciate the magnitude of the proposed cutbacks in the Ford budget. I hope my colleagues and the new administration will equate these effects in human terms and in terms of the toll they will take within our natural environment.

Indicative of my strong concern is the following letter I have written to the EPA Administrator-designate, and reprints of articles from publications knowledgeable about this subject.

Mr. Speaker, I insert my letter, two articles from "Air and Water Pollution Report," of January 26, 1977, and February 7, 1977, and one article from "Chemical and Engineering News," of January 17, 1977, at this point in the RECORD:

HOUSE OF REPRESENTATIVES,
Washington, D.C., February 16, 1977.

Mr. DOUG COSTLE,
Administrator-designate, Environmental Protection Agency, Old Executive Office Building, Washington, D.C.

DEAR MR. COSTLE: Before I lay my heavy burden at your feet, let me offer my most hearty congratulations on your appointment. You come from a state that I believe has made significant strides in the environmental field in the last several years. This is in part due to the effort of a sometimes Oregonian, Dan Lufkin, and of course in large part due to your work. I trust your confirmation will be swift, and unanimous.

The "burden" I mention has to do with the agency you inherit, one beset with monetary and administrative problems. I don't know for sure which is the more serious, but I suspect it is adminstrative.

The top-level administrators who will be on the job when you check in seem to be intent on a very fast reorganization and shift-in-spending program that they hope will make sense to you: They are, I believe, hoping to present you with a near fait accompli. They will defend all their actions on grounds such as "congressional pressure," and lack of funds.

The reasons for change are well taken. But the speed with which they are acting, and the decisions they are making, suggest to me other motivations. They have given us negative reaction, no leadership, and little truth.

Please consider the following personally. Seek outside advice. Let me suggest that this not be responded to by some "faithful" bureaucrat in the Environmental Protection Agency because most of the top management there needs to find work elsewhere.

Before giving you a litany of complaints, I want to state that the EPA has two laboratories in my Congressional District, and I believe they ought to stay, at least until a fair judgment can be rendered. But I am more concerned about consumers generally, and so I protest equally the actions proposed by the presently rudderless EPA to drastically cut back on research programs in Chapel Hill, North Carolina, and Ada, Oklahoma; and I object to the proposed closure of pesticide testing laboratories in Beltsville, Maryland. Let me note that the EPA may be terminating 55 positions from the laboratory at Research Triangle Park, near Chapel Hill, and 15 others at Ada, Oklahoma. Fifteen more would be taken out of Corvallis, Oregon, and 10 out of Duluth.

Mr. Costle, I propose that you immediately send a signal to the EPA administrators still on board that no further steps be taken toward reducing staff sizes, transferring staff, or eliminating programs, until you have had a chance to evaluate the situation. Let me suggest that you request, immediately, briefing papers outlining all the steps that have been taken, or that are contemplated. The urgency is underlined in the following points I bring to your attention.

1. The EPA is under pressure by Senator Kennedy to beef up the chemical registration division. Senator Kennedy has made the point that consumers are not being well-served by present EPA testing and monitoring practices.

2. In response to this pressure, the EPA apparently is robbing other divisions to find sufficient personnel for the registration division. This I find to be a classic case of robbing Peter to pay Paul—of taking away from consumers on one hand, and giving to them on another. The consumers will not benefit, and actually may well be harmed.

3. Dr. Ron Davis, EPA Office of Pesticides Programs branch supervisor at Beltsville, Maryland, has been told to provide, by February 21, a list of 21 persons who can be transferred to the Washington pesticides registration division. Dr. Davis says a few of these cannot be used in registration, and may actually lose their jobs.

4. This directive is the result of an EPA decision to close the Beltsville entomology and plant biology laboratories, and to downgrade the animal biology, pharmacology, and microbiology laboratories.

5. This decision essentially eliminates the EPA pesticides surveillance program. This is one in which enforcement officers collect pesticides "off the shelf," and determine their efficacy, and the truth of label safety warnings.

6. Dr. Davis advises me that many pesticides are being sold today that do not perform the job they are said to perform. Dr. Jack Culver, head of the Corvallis, Oregon, pesticides laboratory, can provide me—and you—with at least 25 reports disproving or strongly questioning the efficacy of pesticides being sold to consumers. As far as he is aware, no action ever has been taken on any of these reports. Consequently, the consumer can go on buying these pesticides, and get no results for his money.

7. An EPA spokesman called my office two weeks ago to give my legislative assistant preliminary information about a proposal to re-direct the Corvallis laboratory operation. At that time, he made a date for lunch. The lunch was cancelled, but he promised

a briefing in my office a week ago. Since then he has called twice to advise that things weren't all in place yet, and he would be getting back to us.

I suggest that the administrators in question are quite aware of my continuing interest, and appear to be trying to keep me at bay. I consider it a personal insult. What is more, the re-direction of the Corvallis laboratory is nothing other than a downgrading, and an effort to take positions from the Corvallis operation and transfer them to Washington.

8. This is in the face of a personal promise made to me last year that the Corvallis laboratory would be upgraded, and that vacant positions would be filled. Those vacancies have not been filled, and now we learn of the "re-direction".

9. The story with respect to the research program of the EPA is equally grim. Since 1974, even with the passage of several new pieces of legislation, the base research budget of EPA has remained relatively constant at between $155 million and $168 million. This base budget has been augmented each year since 1975, but no new positions were provided to carry out the research authorized and funded. The permanent positions assigned to EPA's research program have shown a steady decline since 1974, when there were 1,989 permanent positions. There has been a cumulative decrease since then of 191 positions—and in fiscal 1978 the EPA may lose another 134 positions.

The reduction in personnel, together with relatively constant dollars which have steadily decreased in buying power due to inflation, has resulted in significant curtailment of environmental research. This is a reverse of the trend toward acquiring more knowledge upon which to base our decisions.

As a result of all this, the following has occurred:

Regulations on ocean disposal of wastes have been set back because of the lack of sound scientific information.

Our domestic drinking water standards for organic pollutants, many of which are known carcinogens, are lacking because of the dearth of scientific facts upon which to base such standards.

The setting of effluent guidelines for the discharge of many industrial wastes has been severely hampered and justly criticized because sound research information was lacking.

The assessment of environmental hazards and establishment of adequate regulations for more than 50,000 pesticides and other hazardous substances is not really possible.

All of this is, to me, reprehensible, I suggest it illustrates a state of mind at the EPA that is more in tune with the purveyors than the consumers, more in tune with the land—and water-gobblers than with the needs of the environment.

Always there will be controversy about how much any single agency should be doing. Money is as limited a resource as any other we might name. Let me say, though, that if there is not enough money to determine the efficacy and safety of chemicals introduced into the environment, then we have to think about prohibiting the introduction into the environment—and thus the manufacture—of questionable chemicals. This would be a backward step, of course, but so would it be backward to deny consumers assurance that what they buy will do the job, and backward to protect consumers from a carcinogenic slow death.

At an "EPA research posture" hearing conducted by the House Science and Technology Committee, Congressman George Brown of California complained about the Office of Management and Budget directives under which EPA claims to be operating. He said: "OMB has selected with satanic skill those areas (research) in which I am vitally interested. Would it seem logical to you (Mr. Quarles) that I am extremely angry?"

Having expressed myself so strongly, I want to assure you that I will have no quarrel with proof that some program revisions are mandatory, and I have no quarrel with the truth that we don't have money enough to do everything. This leads me, then, to my final and most important point.

Sweeping decisions designed to cope with these problems ought to be freely considered by you—not holdovers of the previous Administration who, in my experience, have shown themselves to be less than forthcoming and less than competent.

Forgive the length of this letter. Usually I express myself in a few paragraphs. But the matter of what the previous Administration is doing to your agency needs urgent attention, and I didn't dare take the risk of being too brief.

Gratefully,

LES AUCOIN,
Member of Congress.

[From Air/Water Pollution Report, Jan. 24 1977]

FORD PROPOSES OVERALL $10.7 BILLION BUDGET FOR ALL FEDERAL ENVIRONMENTAL ACTIVITIES

Budget authority totaling $10.7-billion for all Federal environmental programs in fiscal 1978 was proposed by former President Ford in his last budget message to Congress last week (A/WPR, Jan. 17, 1977, p. 21). Up 33% over fiscal 1977 levels, the $10.7-billion figure represents environmental spending by all Federal agencies, including clean up at Federal facilities and preparation of environmental impact statesments.

At Environment Protection Agency, where the overall budget would increase $28.5-million to just over $800-million, most major increases are earmarked for implementing new toxic substances control and solid waste legislation. According to Rep. George Brown, Jr. (D.-Calif.), Chairman of House Science Subcommittee on Environment and Atmosphere, both of those laws are underfunded.

"This is a classic example of how Federal laws become meaningless, and new programs fail," Brown charged. "The Congress by overwhelming majorities, passed these major laws, with the reasonable expectation that the President would faithfully administer and execute the law. President Ford's FY '78 budget is inadequate for this purpose." Especially critical of the reduction of 134 positions in research and development, Brown said the EPA personnel cuts, combined with a research budget freeze, amount to "Presidential sabotage of the Federal environmental program. I can only hope that the new President and the Congress will reverse this foolish action."

[From Air/Water Pollution Report, Feb. 7, 1977]

BROWN SEEKS ADDITIONAL EPA MANPOWER, FUNDING, IN LETTER TO CARTER, OMB DIRECTOR LANCE

Calling the Ford Administration's fiscal 1978 Environmental Protection Agency budget "simply unworkable," Rep. George E. Brown, Jr. (D.-Calif.) last week told President Carter that EPA needs "hundreds of additional personnel" and "over $200-million in additional authorization for all of the EPA's programs." In a Feb. 1 letter to Carter and to Office of Management and Budget Director Bert Lance, Brown, Chairman of House Science and Technology's Subcommittee on Environment and Atmosphere, said EPA needs not only the restoration of the personnel cuts proposed in the Ford budget (A/WPR, Jan. 24, 1977, p. 33), but a money increase "to carry out the basic requirements of the law," increased by enactment of the new Toxic Substances Control and Resource Conservation and Recovery Acts.

"My prospective is not that of a defender of the EPA or its programs," Brown said, "but rather that of a critic who is attempting to be constructive." Noting that Ford proposed eliminating 134 positions in EPA's Office of Research and Development and a re-programming of air and water research money to implement the new laws, Brown said EPA's R&D programs "were understaffed and hampered by unstable funding even before the new laws," adding that his subcommittee has "continually identified the staffing problem as a key reason for the inadequacies of the EPA's research program."

Brown re-iterated his concern over the personnel cuts at a Science and Technology hearing last week, asking Acting EPA Administrator John R. Quarles, Jr., "Would you be surprised if I were extremely unhappy about this and do everything I can to reverse it?" Quarles, called to brief the committee on the current status of EPA's research program, had his own fears about the proposed budget cuts. Noting EPA requires continued research to deal with increasingly complex pollution discoveries, Quarles said reduced manpower would make the scientific foundation for EPA regulations "shakier and shakier," and added he was "concerned over the possible necessity to close some" of EPA's 15 laboratories. "I have no basis for encouragement that the situation may be improved at all" under the new Carter Administration, Quarles added.

A similar theme was sounded almost simultaneously by former EPA Administrator Russell E. Train, who told a conference of environmental leaders that the EPA budget submitted by Ford was "totally inadequate" to carry out legislative requirements. "The agency is spread so thin," Train added, "it is almost impossible to live up to public expectations."

Train said it appeared the Carter Administration has approved the Ford EPA budget, but Carter's chief assistant for domestic affairs Stuart Eizenstat said the "appeals process" to the new OMB has "not even begun, so it is extremely premature to talk about it." Eizenstat told the environmentalists their task force report, *The Unfinished Agenda*, would serve as a "benchmark" against which to measure the administration's environmental record (A/WPR, Jan. 31, 1977, p. 46). Eizenstat said solutions to environmental problems "will not come overnight," but said the environment "will be in the forefront of our agenda for the next four years."

[From Chemical & Engineering News, Jan. 17, 1977]

EPA CHARGED WITH POOR HANDLING OF PESTICIDES

The Environmental Protection Agency's pesticide program has been taken to task again. The Senate Subcommittee on Administrative Practice & Procedure, chaired by Sen. Edward M. Kennedy (D.-Mass.), has accused the agency of poor planning and management, among other things. Calling it a classic example of poor governmental regulation, the subcommittee further charged in a report that EPA's pesticide program has "struck an incorrect and dangerous balance between the sometimes conflicting demands of limited resources, bureaucratic efficiency, and public health."

For six years, the report says, EPA has paid little attention to warnings of government investigators, Congressional reviews, and even some of its own officials. As a result, the agency's efforts in the pesticide area will have to be completely re-examined, substantially redone, and fundamentally redirected, the report concludes. EPA administrator Russell E. Train, though "vigorously" disagreeing with certain of the report's conclusions, admits that the report does make some good points.

Under the 1972 amendments to the Federal Insecticide, Fungicide & Rodenticide Act, EPA was directed to reregister some 50,000 products in interstate and intrastate commerce. The agency was to classify these products into general or restricted use categories by Oct. 21, 1976. It was not until fall 1975 that EPA finally began the formal phase of reregistration, which involved the drafting of guidance packages for pesticide companies that wished to reregister their products. With only a year remaining from the October 1976 deadline, Congress extended the deadline to October 1977. Even so, the report charges, it will take EPA three more years to complete its task.

One of the deficiencies in the agency's management of the reregistration process, the report points out, is its decision to take shortcuts because of manpower and other shortages. These shortcuts included the review of products by batches instead of product by product, and the assumption, without real analysis, that the pesticides under review were indeed effective in controlling pests. Staff members at the agency's office of pesticide programs (OPP) were asked to merely confirm the presence of test data that had been submitted with the original registration. They were not asked to validate the adequacy or accuracy of the data.

Further, to modernize its filing system, OPP contracted with a private firm in 1974 to develop a computerized data retrieval system. However, staff members found that the printouts were often inaccurate, in that data were misfiled or missing completely. In addition, members assigned to review test data generally were lacking in scientific expertise, with only four toxicologists included in the review team. Says one of the toxicologists, "You can't expect our reviewers who have a fish and wildlife background to evaluate a two-year animal feeding study to determine if the results showed cancer."

Specifically, the report points out that EPA's decision to check for the presence and not the adequacy of test data backfired. In the course of the agency's cancellation and suspension proceedings against pesticides aldrin, dieldrin, heptachlor, and chlordane, the report claims that OPP discovered that many of the laboratories that had performed the chronic toxicity studies performed extremely "conservative" histologic examinations. In virtually every instance, independent pathologists called in by EPA diagnosed many more cancerous and precancerous tumors in test animals than did the original pathologists. And yet when top-level agency personnel were informed of this finding, they dragged their feet in responding, the report charges.

In subsequent Congressional hearings, EPA deputy administrator John R. Quarles Jr. was directed to undertake a "crash effort" to re-examine the adequacy and accuracy of the test data. In essence, the report explains, the reregistration guidance packages sent out by spring 1976, covering some 2500 products, contained inaccurate statements that test data were sufficient for reregistration. By April 1976, only one scientist was assigned on a part-time basis to reveiw correspondence files that contained the prior reviews of data by EPA scientists. Soon thereafter, the scientists found that three compounds—methoxychlor, captan, and febram—lacked adequate test data.

The subcommittee report recommends, among other things, that EPA make public test data submitted by pesticide manufacturers. In this manner, it says, the data can be evaluated by public groups, other government agencies, independent scientists, and perhaps scientists of competing pesticide companies. Such scrutiny can sharpen and improve EPA's efforts, the report maintains, and will bring to surface falsification or withholding of safety data.

EPA, the report further recommends, should consider the establishment of a health-risk office independent of any particular regulatory program. This office would, in addition to review of submitted data, have the capability to develop data on its own. It should be able to attract top-level scientific talent. To this end, the report believes that Congress should be receptive to changes in civil service rules to make government pay scales competitive with the private sector.

Administrator Train agrees that the report makes some valid criticisms and very good suggestions. But he defends his agency's pesticide program. "Our approach," he says, "is to screen out the bad actors to which our resources could be immediately devoted." To date, about 140 compounds have been ferreted out for the "rebuttable presumption against registration" process. Had not this approach been taken, Train explains, a basic de novo review of data on hand for one chemical would take two man-years, and the reregistration process would take between 10 and 20 years to complete.

EPA, Train says, is taking several steps consistent with the report's recommendations. Among other things, it has reorganized OPP to include a new hazard evaluation division for validating data and estimates of risk from a scientific point of view. It also has initiated a program to audit animal test results.

LEGISLATION TO INSURE VETERANS' PENSIONS ARE NOT REDUCED BECAUSE OF INCREASES IN SOCIAL SECURITY PAYMENTS TO RECIPIENTS OF PENSIONS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Indiana (Mr. HAMILTON) is recognized for 15 minutes.

Mr. HAMILTON. Mr. Speaker, for some years now I have been concerned with the ways in which we reward our veterans for their dedicated service to the Nation. There is one problem that is particularly distressing: as things stand, an increase in monthly social security payments results in a decrease in veterans' pensions or compensation for persons who receive both sorts of benefit. In the past two Congresses I cosponsored legislation that would have solved this problem, but unfortuately neither measure was enacted. Therefore, I wish to introduce today a bill to insure that recipients of veterans' pensions or compensation will not have the amount of such pensions or compensations reduced on account of increases in social security payments.

At the root of the problem is the definition of countable income currently in use at the Veterans' Administration. Countable income, which includes such things as wages and social security payments, determines the amount of veterans' pension or compensation that a person may receive. Thus, when the cost of living rises and social security beneficiaries are given larger payments, or when Congress mandates an increase in such payments across the board, the Veterans' Administration lowers proportionately the amount of pension or compensation provided to a veteran who is also a social security beneficiary. In effect, the Government takes away with one hand what it gives with the other.

The bill that I am introducing would offer relief to veterans in a very simple way. It would direct the Administrator of Veterans' Affairs to disregard any general increase in social security payments when computing the countable income of a veteran. Hence, the bill would strike at the root of the problem by changing the definition of countable income. It would pass through increases in social security payments to the veteran and would not permit such payments to be deducted backhandedly from the veterans' pension or compensation. Relief would be effective retroactively as of January 1, 1973.

As I see it, the bill would be helpful to veterans in two ways. First, and more obviously, it would provide higher levels of income to approximately 4.4 million veterans who are also social security beneficiaries. Higher levels of income would bring a more comfortable life to those veterans whose meager means of support are being eroded by inflation. Second, and less obviously, it would require the Government to treat veterans' pensions and compensation as the well deserved benefits they are, not as some form of welfare or public assistance to be cut or eliminated as "earned" income rises. It must not be forgotten that many veterans paid a dear price in service to their country. Their just reward is not a handout.

It is clear to me, as it is to most Americans, that the passage of time will never diminish the debt of gratitude we owe to our veterans. Their selfless sacrifices have made the Nation proud, free and unafraid. We have an obligation to them, an obligation recognized by Teddy Roosevelt when he said:

> No other citizen deserves so well of the Republic as the veteran. They did the one deed which, if left undone, would have meant all else in our history went for nothing. But for their steadfast promise, all of our annals would be meaningless, and our great experience in popular freedom and self-government would be a gloomy failure.

We should also be aware of our veterans' contribution to the Nation in times of peace. The evidence of their leadership and contributions are all about us, in business, in public life and in the professions. Many of our most illustrious citizens are veterans. The part they have played in building a better and stronger America in nearly every area of human endeavor cannot be ignored.

Mr. Speaker, on a granite plaque at the Veterans' Administration in Washington, D.C. are etched the words: "To care for him who shall have borne the battle, and for his widow and his ophan."

The bill that I am introducing today gives us the opportunity to rededicate ourselves ever more strongly to the pursuit of this noble goal.

LEGISLATION REGARDING SECURITIES AND EXCHANGE COMMISSION'S BUDGET AUTHORIZATIONS FOR FISCAL YEARS 1977, 1978, 1979, AND 1980

The SPEAKER pro tempore. Under a previous order of the House, the gentle-

man from West Virginia (Mr. STAGGERS) is recognized for 5 minutes.

Mr. STAGGERS. Mr. Speaker, I am introducing two bills today at the request of the chairman of the Securities and Exchange Commission. These bills deal with the Commission's budget authorizations for fiscal years 1977, 1978, 1979, and 1980. I enclose a copy of the letter from Chairman Roderick M. Hills to myself as explanation of these bills.

SECURITIES AND EXCHANGE COMMISSION,
Washington, D.C., February 18, 1977.

Hon. HARLEY O. STAGGERS,
Chairman, Committee on Interstate and Foreign Commerce, U.S. House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: Please find enclosed two proposed draft bills relating to the Commission's budget authorizations for fiscal years 1977, 1978, 1979, and 1980, which the Commission wishes me to commend to your attention and ask that you introduce.

These proposed bills are intended to take the place of draft legislation previously transmitted to you, and to the Speaker of the House of Representatives and the President of the Senate, on January 18, 1977 and on February 2, 1977. We are transmitting these revised drafts because of a change in the amount of increase the Commission is seeking in our fiscal 1977 budget authorization.

As you know, the Commission's authorized budget ceiling for the current fiscal year (fiscal 1977) is $55 million. However, requests for supplemental appropriations made necessary by mandatory pay increases and other urgent, unforeseen costs, would bring our total appropriations for fiscal 1977 to a level greater than our currently authorized ceiling. Therefore, we are seeking an increase in that authorization.

The bill transmitted on January 18, 1977 would have increased our fiscal 1977 authorization to $58 million. However, after consultation with the staff of our authorizing committees, we have determined to reduce that request to $56.5 million. One of the enclosed draft bills is designed to reflect that reduced request and to be substituted for the January 18 draft bill.

The proposed bill transmitted to you with my letter of February 2, 1977 would provide budget authorizations for the Commission for fiscal years 1978, 1979, and 1980. Because of the revision outlined above as to our request for fiscal 1977, certain technical changes are necessary in the text of the second bill, and I am accordingly enclosing a substitute draft of our fiscal 1978, 1979, 1980 authorization which encompasses those changes.

Thank you very much for your consideration and assistance in this matter.

With kind regards,
Sincerely,

RODERICK M. HILLS,
Chairman.

ENERGY CONSERVATION DAY

(Mr. THONE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. THONE. Mr. Speaker, within Congress there is much disagreement concerning many phases of energy policy. There is one energy area, however, where I believe we are in unanimous agreement: America is fast depleting its nonrenewable sources of energy, and conservation offers the best short term means for easing our energy plight.

All forms of fossil fuel have been so abundant and cheap in the United States that we need a dramatic impact to persuade a majority of Americans to practice conservation.

With "Earth Day" in 1971, we achieved a high level of recognition that our planet is fragile and must be protected against pollution. Therefore, I am proposing that all segments of American society similarly join in observing "Energy Conservation Day" in 1977.

Today, I am introducing a House Joint Resolution to designate October 10, 1977, as "Energy Conservation Day." We will need a few months to prepare properly for observance of such a day, yet it should be held before the winter of 1977 is upon us. The exact date of October 10 was chosen because it is a Federal holiday—the 1977 celebration of Columbus Day—and thus many citizens will have time on that day for activities outside their normal routine.

It is my hope that "Energy Conservation Day" will be a day of action, a day of learning and a day of planning. Most of all, it should be a day of impact—with all segments of American society uniting to stress the importance of wise stewardship of the Earth's nonrenewable resources.

Mr. Speaker, I urge all Members to support passage of this resolution to observe "Energy Conservation Day."

WHY BO AND MARK WON'T WORK

(Mr. ROUSSELOT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROUSSELOT. Mr. Speaker, Congress is presently considering several proposals to stimulate the economy through so-called jobs programs. Virtually all of these proposals provide for a sizable increase in the Federal deficit, which will deprive the private sector of capital which is needed to create lasting, productive employment opportunities.

To put this debate in perspective, we should bear in mind that actions of the Federal Government itself have reduced the incentives for people to work and have contributed to the widespread belief that something must be done to create more jobs. Wall Street Journal writers Douglas R. Sease and William M. Bulkeley have provided us with two case studies of young men who are capable of working but who have lost their incentive to work "Bo Grier, Aristocrat of the Streets" is living with his sister and receiving disability benefits. "Mark Rinaldi: Jobless by Choice" is living with his parents and drawing unemployment compensation.

The full texts of the articles, which appeared in the Wall Street Journal on January 31 and February 1, 1977, respectively, follow:

[From the Wall Street Journal, Jan. 31, 1977]

BO GRIER, ARISTOCRAT OF THE STREETS

(By Douglas R. Sease)

ATLANTA.—Raymond "Bo Grier, 24, spends most of his afternoons and evenings shooting baskets at the Peoplestown gym in a declined inner-city neighborhood here. These are the good times, with his buddies, working off the tensions that build during the long, idle days.

The bad times are the mornings, smoking the endless chain of cigarets and watching, empty-eyed, indistinguishable television game shows at the apartment where he lives with his sister. Since it is winter, the weather is usually too bad to get out and attack the powerless power steering on his faded gold 1968 Buick Wildcat parked outside. The Buick functioning would mean a vast uplift in status—wheels instead of riding the bus.

It has been two years since Bo had any kind of steady work, and by now his ways of existing on the streets without a job may be so deeply ingrained that he may never change. Whether he does or doesn't is important to the social and economic well-being of this country, because Bo Grier is a long way from alone out there. The unemployment rate for young blacks like Bo runs stubbornly at a rate twice that of whites. And the young blacks on the streets are important contributors to crime and related problems of the ghettos.

Bo has been out of a job so long he is not even counted among the unemployed any more. Instead, he and at last count 817,000 other Americans, 27 percent of them black like him, were dumped into a separate category consisting of the jobless who said they would look for a job if they thought anybody would give them one. They are, of course, the hardest core of the hard core jobless and most share with Bo Grier a poor education, no skills and a deepening conviction that the American dream wasn't meant for them. Around government labor offices they are referred to as "the discouraged."

ASTUTE BETTOR

Categorizing Bo Grier is simple, but analyzing why he doesn't work is not. One thing that has to be considered is a slight physical handicap resulting from a landmine injury in Vietnam. It doesn't interfere with his ability to swivel and drive down the court past his opponents at the gym. But it is a definite factor in his not having a job, because the government considers him 30% disabled and sends him a $149 check every month, making his quest for a job that much less pressing.

Living with his sister is another factor. She has a job on a production line making plastic drinking cups and pays the $140 rent and $30 or so monthly utility bill.

He also does a little gambling on the side, things like making side bets at crap games and the pool hall. He considers himself an astute bettor: "I don't bet on myself, I find somebody who's hot and bet on him. That way I can make my money and leave any time I'm ready."

Like many others without jobs, and particularly those with dim prospects of getting one, Mr. Grier also supplements his income with occasional ventures to the far side of the law. It is a career at which, like all others, he is unskilled, and he loses more than he wins. He is currently on probation for a conviction on three counts of check forging and has since been arrested and charged with receiving stolen property. He says that is all a mix-up, that he is innocent.

His probation officer is supposed to be interested in helping him get a job, but he's been of little help, probably because he and Bo have never met. "If you see him, tell him to get in to see me," the probation officer, Oliver Puckett, says. Bo has been supposed to report monthly for the past six months but hasn't bothered, and nobody has bothered to find out why.

Bo's money goes out like it comes in, with little thought being given to it, to support the Buick, tickets for an occasional rock concert, clothes, food, drink, whatever.

The thing is that Bo, and many others in his situation, have enough going for them that economic survival is not the question, only the style in which one survives. And the truth is that Bo, by freeloading on his sister, stretching his government check and hustling on the side, has made such an admirable adjustment to not having a job that it is not hard to see why he is not out pounding the pavements.

He says he used to spend most of his time looking for jobs, reading the classifieds, making the rounds, filling out applications and then never hearing anything. He feels he has every right to be discouraged, and his conviction that he can't get work has turned him into an aristocrat of the streets, who now wouldn't take some jobs if they were offered to him.

He's not interested in anything paying the $2.30 minimum wage, and even $2.50 he considers borderline. "Even that's not worth it," he says. "But it's something." There are also some lines of endeavor he's just not interested in: "I'll never wash dishes," he says disgustedly. "I tried that once for Howard Johnson's. I never got tireder of anything than seeing those dishes. I quit the second night."

He also has no interest in using his GI bill to go to school to acquire a marketable skill, because it doesn't seem feasible to him. "They only give you $258 a month, and after tuition and books and clothes and getting there and back, it's just not worth it."

One expert feels that talking to Bo about his problems with work is no way to a solution, because he may not be leveling: "He is b.s.'ing you, telling you what he believes a white man wants to hear," says George Harris, a teacher at Atlanta University's School of Social Work and a veteran of street culture himself.

To "street people" a job is money and nothing more, Mr. Harris says. And if the money isn't good enough, there is no point in working. "For Bo, there's nothing about personal satisfaction in doing a job," Mr. Harris says.

Another expert, Harvard economist Martin Feldstein, feels that having a minimum wage might be a deterrent to men like Bo even looking for a job: "When you're being paid the minimum wage, you know you're the worst there is," he says. "If we didn't have a minimum wage, then an unskilled worker could take a job while thinking there's someone somewhere being paid less, who's worth less than he is."

But others take a more pragmatic approach and conclude that any problems that Bo has are of his own making. "It's a matter of initiative," says a Georgia Employment Service official. For proof, he cites the Vietnamese refugees who have settled here. "They couldn't speak English so they couldn't get jobs here like they had in Vietnam. But that didn't stop them from begging us to get them any kind of work, just so they could make some money while they went to school to learn English. Some of them got menial jobs; they're trying to better themselves. That's initiative."

He agrees it can take time for an unskilled worker to find a job but insists that anyone who hasn't landed one in three or four months isn't trying very hard. "If he's sitting out more than a year, then he's really not looking for work."

JOBS AVAILABLE

Don Winnie, owner of a temporary help agency called Action Labor Services Inc., buys that. "It's not true that blacks can't get jobs in Atlanta," he says. "About 60% of the men we hire are black. We pay mostly minimum wage, but we supply transportation to the job site. The work's a little on the menial side, but if a guy's got anything at all on the ball, he'll be looking for something better. In fact, we lose a lot of our better workers to client companies."

But the view that Bo simply lacks initiative seems simplistic to Benjamin Hooks, who will be taking over as director of the National Association for the Advancement of Colored People in March. There's much more to it, he says, including racism which is compounded by the media image whites have of unemployed young blacks. "It has to do with marketing, with selling one's self," says Mr. Hooks. Part of it is that a product of a black ghetto hasn't learned the social niceties that are an asset to whites when they apply for a job.

Bo Grier insists that he has looked long and hard during most of the two years that he's only had a couple of short-term jobs. But for whatever reasons, it is inescapably true that he's barely looking, if at all, any more.

Even when the odds look good and his self-composed criteria are met, it is difficult to stir him into the action it would take to land the job. Recently, for example, he turned down an offer for a free ride to the downtown offices of Allright Parking of Georgia, Inc., to apply for work driving shuttle buses between Atlanta Airport and a soon-to-be-opened parking facility.

The job pays $3 an hour, and Will Wood, general manager of Allright, said Mr. Grier sounded qualified. A week later, after being further encouraged to ask for the job, Mr. Grier hadn't. "That tells me he doesn't want to work," Mr. Wood says. "He's got that benefit check and that's all he wants.

EMPLOYERS SUSPICIOUS

All of which leaves Bo Grier sitting in a haze of cigaret smoke in front of the TV until it is late enough to go down to the gym and shoot baskets. He's also caught in a sort of Catch 22 of the job market—the longer he's out of work, the more suspicious employers are of his earnestness in pursuing a job. One of the questions that has become standard in job interviews is why has he been out of work so long?

The longer he is out of work, the more he molds himself into the image whites have of young blacks they don't want to risk hiring.

It's rather ironic that Mr. Grier, who is a somewhat articulate young man, understands perfectly what he must do, but seems powerless to do it: "You've got to convince people who are doing the hiring that you're willing to work. If you can do that, chances are you'll get hired."

But the chances of Bo Grier doing that are slim, and getting slimmer. Finding employment for Bo and others like him is going to be the toughest challenge the Carter administration faces in its attempts to bring the U.S. employment rate down. But as long as they are left on the streets, the Bo Griers are going to continue to be a drag on their families and on society at large, regular contributors to the crime statistics and, perhaps most meaningful, dismal failures at climbing to the levels of decency and self-respect that most Americans take for granted.

[From The Wall Street Journal, Feb. 1, 1977]

MARK RINALDI: JOBLESS BY CHOICE

By William M. Bulkeley

WEST HARTFORD, CONN.—Last March the Konover Investment Co. decided to lease its parking lot in downtown Hartford rather than continuing to operate it itself. In the resulting management change, Mark Rinaldi, who had been an attendant at the lot for two years, was laid off.

After two months without a job, Mr. Rinaldi applied for unemployment compensation. Ever since then he has received a $54 check from the state of Connecticut every two weeks. He could go on receiving it another 39 weeks.

For the spare, bearded 23-year-old who lives with his parents in this upper-middle class suburb, the unemployment checks spell the difference between the need to keep working "at some crummy job" and his present leisurely lifestyle. Mr. Rinaldi is contemptuous of the system which allows him to collect unemployment and says he thinks he, and many of the others who receive checks, "are just ripping off the government."

If the unemployment compensation weren't available, Mr. Rinaldi concedes, he is confident he could get some sort of job. But, since it's there, "I'm not going to work my head off."

Mr. Rinaldi represents one aspect of the nation's unemployment statistics that doesn't appear in most discussions of "the unemployment problem." Young people under 24, like Mr. Rinaldi, account for about half the nation's unemployed, according to a study by the Congressional Budget Office. As a result, any federal programs to ease unemployment are expected to focus on employing youth. However, for some unemployed youth such as Mr. Rinaldi, obtaining a job simply isn't urgent. Between government checks and parental support, unemployment is an acceptable life style. And it's doubtful that any federal program would touch someone like Mr. Rinaldi who is out of work by choice.

It's impossible to know how many of the people receiving unemployment compensation would be working if the money weren't available. Critics have charged that unemployment compensation, rather than merely tiding people over while they are unavoidably between jobs, has become a way of life for some. Instead of being a charitable temporary aid for a worker thrown out on the street by the vicissitudes of the economy, payments by the state last so long they serve as a disincentive to find new work, critics argue.

Many government unemployment compensation officials and legislators counter that Mr. Rinaldi's situation is the exception rather than the norm. "I think basically 95% of the unemployed population really wants to work," asserts Alfred Horowitz, director of research for the Connecticut State Department of Labor. He notes that during the 1960s unemployment was far lower than now. "It's due to our frustrations with being unable to get people back to work that we turn around and blame the people who are unemployed for being out of work," he contends.

David Pinsky, professor of labor, education and economics at the University of Connecticut and a long-time student of unemployment, agrees "there may be a few who abuse the system" who should be punished. But he says, "Just because you have embezzlers in banks, you don't close the banks."

Mr. Rinaldi apparently isn't abusing the system in any legal sense. But he is collecting unemployment compensation from the state despite expressing confidence that he could get some sort of job without any trouble.

Mr. Rinaldi doesn't fit most of the stereotypes of youth unemployment. He isn't desperately banging his head against walls trying to break into the job market. He isn't untrained and unskilled He's already held half a dozen jobs. He has training which could get him more jobs. A bright and articulate man with a quick wit, he can deal with customers and is responsible enough to work without supervision.

Yet he doesn't work and he doesn't particularly want to. Part of the problem is that none of the jobs in his past or foreseeable future offer much challenge or much money. Although he has been trained as a surveyor, he claims he couldn't get a job paying much more than $3.50 an hour—an amount, he says sardonically, which "isn't enough to induce me to go to work." If paid that amount, which is equal to about

$7,280 a year, before taxes, he says he could barely afford to rent an apartment, and by paying for food and a car he would end up with little more available money than he has now without working.

TRAUMATIC FOR SOME, BUT . . .

Contrary to much conventional wisdom about unemployment, Mr. Rinaldi demonstrates that being out of work doesn't automatically mean painful suffering. Certainly job losses are traumatic for most people, and unemployment pay, which is normally far below working wages, rarely relieves genuine hardship for some people who are laid off. But Mr. Rinaldi didn't mind being laid off, and he enjoys his current situation. In fact, a look at his situation prompts some reconsideration of just what "unemployment" really means in some instances.

Mr. Rinaldi hasn't been ambitious in the conventional sense in his working life. He took the job at the parking lot while he was training to be a surveyor at Hartford State Technical College. When he completed the course he decided he'd rather continue working 25 or 30 hours a week at the lot than take one of the three jobs he was offered as a map maker. Being a parking attendant "was relaxing," he recalls. "I didn't have to work up a sweat. I could do what I wanted."

That isn't to say the parking lot was without drawbacks. It did make some demands on his time. It wasn't terribly stimulating. And take home pay, averaging $41 a week, wasn't very lucrative. The biggest worry, however, was crime. Mr. Rinaldi was held up twice during his last few months at the lot, even though he was located a mere two blocks from police headquarters in Hartford. At that he considered himself lucky. An attendant in the lot across the street was knifed one night.

So when the management changed, Mr. Rinaldi, who had worked fairly steadily at a variety of part-time, unskilled jobs since he turned 16 years old, wasn't upset by the layoff. Living with his parents and drawing on some $1,000 he had in savings, he figured he could easily survive until he decided what he wanted to do next. Collecting unemployment pay was an afterthought suggested by friends, who at various times had, as he puts it, "been on Ella's payroll." (Ella Grasso is Connecticut's governor.)

But when he began collecting the unemployment check, any sense of urgency about finding another job disappeared. Connecticut, like most other states, requires that people receiving unemployment compensation be "actively looking" for jobs. But in practice that's nearly unenforceable. Mr. Rinaldi told the service that he was looking for a job as a carpenter's apprentice—a rare job opening in a state like Connecticut where the construction industry is severely depressed. Mr. Rinaldi concedes he hasn't any experience as a carpenter but says he'd be happy to get such a job. However, his real interest was in remaining on unemployment. "If I said I wanted to be a parking lot attendant, they'd tell me to get a job," he asserts.

So, once every six weeks, Mr. Rinaldi goes to the unemployment compensation office in a depressed section of North Hartford and checks job openings as required by the state labor department before picking up his check. The rest of his checks are mailed to him and the remainder of his time is his own.

A spokesman for the Connecticut labor department, which administers the state's unemployment compensation, says that people collecting unemployment compensation are regularly informed of job openings and told to get job interviews. He asserts, "You can't sit for 65 weeks and wait for a job." He adds that applicants are thoroughly investigated. But sources familiar with the department admit that the system isn't equipped to deal with the huge number of clients it handles when unemployment is over 9%, as it has been in Connecticut.

Mr. Rinaldi says he has never been told of a job opening by the service or even asked whether he is actually looking.

On a typical winter day, Mr. Rinaldi says he gets up at 8 a.m., "So my parents won't think I'm a bum." On cold days he goes out and warms up his mother's car because her place in the garage has been supplanted by a battered 1951 Chevy panel truck which Mr. Rinaldi is sporadically restoring. Some mornings he goes into the garage and fiddles with the vehicle but when his parents leave for work, he often returns to bed.

When he gets up again he eats and reads The Hartford Courant from cover to cover including obituaries, box scores and all the classified ads. "It's all right to be physically lazy. But I have to read something," he says. By the time he's through with the paper it's late afternoon and he can go out with some friends and have a few drinks. Evenings he often goes to various friends' homes or stays at his own home, a comfortable split-level on a side street and watches television. Some evenings he goes to Hartford's jai alai fronton, pays $1.25 for general admission standing room and slips blithely into the plush seats in the uncrowded $5 seat section right in front of the court.

PRESSURE FROM PARENTS

Although his lifestyle isn't exciting, it's certainly comfortable. He's able to indulge his penchant for imported German Hofbrau beer. And he has enough friends with cars and places to go that he isn't trapped in one place. He says the most unpleasant element of unemployment is being nagged by his parents. "They say 'go to work, everybody works'. I say 'everybody's miserable.'"

Mr. Rinaldi's lifestyle may soon change. His parents have begun actively pressuring him to start doing something, and recently they began charging him $20 a week for room and board. Mark now intends to take some electronics courses, and he also talks of getting at least a part-time job, which would put an end to his unemployment compensation.

Mrs. Rinaldi who works for the state as a purchasing agent, thinks Mark's lack of enthusiasm for work stems from the nature of the jobs he has held. "With better jobs he might have gotten a better impression" of the job market, she says. Her husband declined to be interviewed.

For his part, Mark says bluntly that if his parents ease up he'd gladly continue drawing unemployment until his benefits run out next summer. He also says that if he saw a good chance to make a lot of money, he'd jump at it. "I've learned the trail of the green is elusive," and a shot at riches would be worth some work, he says. But even then the job wouldn't be an end in itself. "I'm only interested in making a quick million and retiring," he wisecracks.

WHY JOHNNY WON'T WORK

(Mr. ROUSSELOT asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ROUSSELOT. Mr. Speaker, Congress is presently considering several proposals to stimulate the economy through so-called jobs programs. Virtually all of these proposals provide for a sizable increase in the Federal deficit, which will deprive the private sector of capital which is needed to create lasting, productive employment opportunities.

To put this debate in perspective, we should bear in mind that actions of the Federal Government itself have reduced the incentives for people to work and have contributed to the widespread belief that something must be done to create more jobs. The author of the attached article, Charlton Ogburn, argues very eloquently that "our situation today is not one of a shortage of jobs, but of a shortage of labor." The Federal Government, according to Ogburn, is a "prime promoter of unemployment."

Mr. Ogburn's column, entitled "Why Johnny Won't Work," appeared in the Washington Post on Sunday, February 20, 1977. The full text follows:

[From the Washington Post, Feb. 20, 1977]

WHY JOHNNY WON'T WORK

(By Charlton Ogburn)

In the rivers of words poured out on the problem of unemployment, virtually no mention is made of the two elements of the problem that to me, as a consumer and self-employee, are its most striking features. One is that our situation today is one not of a shortage of jobs but of a shortage of labor. The other is that the federal government is a prime promoter of unemployment.

I feel a particular concern for these features because implicit in them is the extinction of persons like me who must meet the conditions of the marketplace unprotected by special privileges and immunities. The free society is already finished. In its place we are getting the staked-out society in which various interests, institutionally protected from competition, levy tribute on all who come their way, as medieval barons did on shipping.

In support of my thesis that we have a labor shortage, let me recall some experiences of the kind the reader can readily match with his own. Last year our 1959 dishwasher broke down and the sensible thing seemed to be to buy a new one—until we learned that installation would cost $125. That meant we'd be paying the plumber more than $35 an hour. Even an unlicensed plumber, the dealer said, would charge $75.

If I was shocked, I was even more so last fall when three men in a pickup truck asked $150 just to help me fell four trees so they would not fall on the power line. This would require putting a ladder up the tree, tying a rope around it, sawing through the butt and pulling hard on the rope. It is work I habitually do myself, so my estimate that the men were asking about $40 an hour each is probably sound.

A bill of $17.04 from a Ford dealer for repairs seems little enough, but all it paid for was the replacement of the socket of a license-plate light. The washing machine we bought in 1959 started acting up and the mechanic who previously had repaired it sent his son, who may have graduated from high school, but if so, only barely. It cost us $13 to have the lad put in an appearance and $3 for every 10 minutes of his time thereafter.

That is a good deal more than any of my friends make after 30 years or more of hard intellectual application. It is a good deal more than I make with diplomas from Harvard and the National War College, 11 years experience in the State Department, dozens of articles in leading magazines and 13 books to my credit. Consequently, it was more than I could afford.

Such gouging of the customer would have been inconceivable in the Depression of the 1930s. Nearly everyone was desperately glad of the chance to do a day's work for a day's pay. Businesses profiteering in repairs would have found their shops emptied by mechanics

working in their back yards. Today, if there is any competition to render the services so outrageously priced, it is not in evidence.

It would be difficult to convince me that unemployment statistics mean what they meant in the 1930s. Then there was no paid work for about a quarter of the labor force apart from federal programs. Today there is plenty of work at pay commensurate with its demands, at least outside areas of peculiar industrial depression.

Why, then, is it so difficult to get manual work done without having to pay disproportionately for it? My guess is that the able-bodied unemployed lack the skills in demand, even skills that can be acquired in two or three months, or lack enterprise and initiative or would rather not do work they find uncongenial even if it means living on the labors of others.

Vacuum cleaning, mopping, dusting, washing woodwork take little skill, but seven or eight years ago we gave up trying to get anyone to do them for us once a week. What such work does require is conscientiousness, and everyone we tried—I should say who condescended to try us—proved undependable and slapdash.

Despite women's liberation, educated women are apt to be less liberated now than they were 50 years ago when they had servants. Men and women of talent today are forced to take time from the improvement of that talent, from which society would gain, for tasks around the house that could as well be performed by others whose own maximum contribution to society, and to their own satisfaction in life, would come from the superior performance of those tasks to which they are fitted.

There are, no doubt, those who contend that working in another person's household is degrading where living in idleness at the expense of those whom one is too good to work for is not. This is a point of view the founders of our democracy and those who made it successful through the years would surely find incomprehensible.

Conspiring to the elimination of domestic help is the minimum wage law. There are, granted, strong reasons for the law. But whatever else it may achieve, the law ensures that men and women—and young people—whose abilities command less than the minimum rate will be denied employment, pride in working their way and the chance to improve their skills on the job and their earning ability. If the AFL–CIO has its way, the minimum wage will be $3 an hour. It is anyone's guess how many thousands that would render unemployable.

Another way by which government promotes unemployment is by providing a widely acceptable alternative to employment—and with welfare payments now coming to $36 billion a year and talk heard of a guaranteed minimum income, it is easy to see us achieving the distinction of Britain, where, as Chancellor of the Exchequer Dennis Healey observes, one can do almost as well on the dole as in a job.

A third is in exempting labor unions from legislation forbidding combinations in restraint of trade and granting them monopolies. Labor unions can and do set up barriers to employment that exclude many willing hands and, by forcing wages to artificial heights, prevent businesses from hiring as many workers as they could if wages were set by competition for jobs, as they are among non-unionized workers.

The time was when unions were labor's defense against brutal exploitation. Today they are the exploiters and their prey is the consumer. When Chrysler sits down with the UAW, the question is how big an increase in wages the poor dumb public can be made to pay for. The decision last month, according to the CBS Evening News, was a new hourly rate equivalent to $15—well over the hourly earnings of the governors of some states—and an average boost of $500 in car prices.

Unions insist that increases in the productivity of labor call for proportionate increases in wages. Though the nation seems to have swallowed it, the principle is without warrant. Labor itself is seldom responsible for its increased productivity. That comes about ordinarily from improved management, more efficient technology and larger-scale operations.

I doubt that a society can long survive when the ultimate power and the ultimate responsibility are divorced. Increasingly in ours, the one is exercised by heavy-handed interest groups while the latter devolves upon a government that is more and more their adjunct.

My anticipation is not that our society will expire but that, as government is immobilized by its inability to challenge the domineering, mutually hostile interest groups, society's frustrations will become intolerable and that this will lead to the reunion of power and responsibility under authoritarian rule.

We shall turn to a charismatic leader to make us whole again, with a national voice, and he will do so—at a price. If we are lucky we shall all be brought to heel impartially. One thing at least we can count on: Our new master will not treat manual labor as a pampered aristocracy. Even the Soviet Union, proclaiming the dictatorship of the proletariat, knows there is no future in doing that.

COAL AS ENERGY SOURCES

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, with my remarks, I am quoting a news story relative to the natural gas shortage and the need to utilize our vast supply of coal notwithstanding environmental concerns. The unique aspect of the news story is the fact that it was written May 5, 1969, nearly 8 years ago, and if we had paid heed to Mr. Boardman's comments at that time, we would not be in a crisis we face today.

[From the Columbus (Ohio) Citizen-Journal, May 5, 1969]

EXECUTIVE WARNS OF GAS SHORTAGE

"Since they decided to switch, some gas users may have to fight for heat next winter," warned an official of the state's retail coal association.

Charles H. Boardman of Columbus, a past president and current treasurer of the Ohio Coal Conference, Inc., said indications are that many schools, factories, business firms and even homes may not have enough natural gas for their heating plants.

"The gas people admit their supplies are going down, but they don't shout it from the rooftops," Boardman stated.

"The American Gas Association recently disclosed proved reserves of natural gas in the U.S. declined last year for the first time since they started keeping records in 1946. They blamed it on the steady drop in oil and gas drilling activity in the United States."

Boardman pointed out that John F. O'Leary, director of the U.S. Bureau of Mines in Washington, D.C., recently testified before the House Committee on Interior and Insular Affairs that the outlines of a major shortage of natural gas are already discernible and some gas users could be denied service next winter.

"We are already at the point where, unless there is a basic change in our underlying resource situation, we will need synthetic gas to supplement our natural supplies," O'Leary former chief of the Federal Power Commission's Natural Gas Bureau, told the congressmen.

However, O'Leary said, the nation is five to seven years away "at the most optimistic" from having a viable gas synthesis technology in place and capable of supplementing natural supplies of gas.

Since synthetic gas will "almost certainly" he needed before then, O'Leary said, "We should attack this problem as a matter of high national priority."

O'Leary said it appeared "we are on the threshold of a new era in which synthetic fuels will be manufactured in the U.S. from coal on enormous scale."

"In the meantime," Ohio Coal Conference official Boardman said, "we retail coal merchants stand ready to do what we can to keep people warm in the face of a potential gas shortage."

But, Boardman pointed out, if coal furnaces and boilers are pulled out of schools, businesses and homes there will be no equipment to burn the nation's huge proved reserves of coal.

He said it was literally "playing with fire" not to leave at least some coal equipment in buildings where changeover to another fuel was being considered.

He urged citizens to ask their public officials what coal-burning equipment they have ready—not merely as standby—but for full service.

Expressing fear that a summer lull may set in, Boardman declared:

"Ohio's retail coal merchants can supply the needed fuel this summer but would face delivery problems if everyone waited until cold, snowy weather. There are fewer retail coal dealers now than 20 years ago and they would have to schedule their deliveries.

"Now is the time for action," said the Ohio Coal Conference official "not when it's too late."

Boardman is president of the Murray City Coal & Ice Co., 1334 Edgehill rd, Columbus.

TAX REBATE? OR HANDOUT?

(Mr. DEVINE asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. DEVINE. Mr. Speaker, the much heralded "tax rebate" of President Carter has now been exposed in its true light as a "handout" or "giveaway."

The Columbus Citizen-Journal lead editorial today properly gives the story to the American people about giving away money the Government does not have, thus contributing to inflation that hurts everyone.

The article follows:

[From the Columbus (Ohio) Citizen-Journal, Feb. 21, 1977]

TAX REBATE? OR HANDOUT?

When President Carter unveiled his plan to stimulate the economy largely by mailing $50 checks to almost everybody, this newspaper had a number of reservations, which can be summarized as follows:

First, the $50 rebates to taxpayers and their dependents are likely to cause only a temporary burst of consumption, with no lasting benefit to the economy.

Second, the $11.4 billion in rebates will be injected into the spending stream while business is expanding without any special stimulus. The result could be economic overheating and upward pressure on prices.

Third, the current federal budget is $47 billion in deficit even before the Carter program. Increasing the shortfall by more than 20 per cent would be inflationary. And since

consumer prices in January rose at an annual rate of 9.6 per cent—almost back in double digits—inflationary threats should not be ignored.

Now Carter's plan has moved from the White House through the powerful House Ways and Means Committee, where it was changed into a scheme to redistribute wealth and boost welfare payments.

Though Carter wanted the rebates to go to taxpayers across the board, the committee promptly decided to reduce the rebates for families earning between $25,000 and $30,000 and to eliminate them entirely for families with incomes of $30,000 or more.

By cutting or denying rebates to some 8 million upper-income families, the committee figures it had "saved" $1 billion. Then it accepted a proposal by Rep. Charles Rangel, a New Yorker whose district includes Harlem, to "spend" $600 million by sending $50 to everybody covered by Aid to Families with Dependent Children, the leading welfare category.

People who earn more than $30,000 a year are among the nation's most energetic and resourceful, and they will survive the loss of $50 per family member. But they most likely will resent the treatment they got.

In effect, the committee told them: we really don't care about you, except as a source of taxes to be spent on more deserving people, such as welfare families. When there is talk about tax relief and rebates, it doesn't mean you.

There may in fact be a better way of alienating a productive group of people, of making them feel unappreciated and unrepresented and of encouraging them to claim a dubious $50 deduction on their next tax return, but we can't think of it.

Until the committee can think up better ways of fostering divisive class feelings, its present move will have to do. However, since the money will not go to those who pay the highest taxes and will go to many millions who pay no income taxes at all, in decency the words "tax rebate" cannot be used.

A better description would be "handout" or "giveaway"—of money the Government does not have and will have to borrow. Inflation, anyone?

LEAVE OF ABSENCE

By unanimous consent, leave of absence was granted as follows to:

Mr. CARTER (at the request of Mr. RHODES), for an indefinite period, on account of a death in the family.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

(The following Members (at the request of Mr. CORCORAN of Illinois) and to revise and extend their remarks and include extraneous matter:)

Mr. COHEN, for 5 minutes, on February 23.

Mr. KEMP, for 15 minutes, today.

(The following Members (at the request of Mr. BENJAMIN) and to revise and extend their remarks and include extraneous matter:)

Mr. BRODHEAD, for 5 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. STOKES, for 10 minutes, today.

Mr. KOCH, for 10 minutes, today.

Mr. AUCOIN, for 60 minutes, today.

Mr. HAMILTON, for 15 minutes, today.

Mr. STAGGERS, for 5 minutes, today.

Mr. KOCH, for 10 minutes, on February 22.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. MICHEL and to include extraneous material in five instances.

(The following Members (at the request of Mr. CORCORAN of Illinois) and to include extraneous matter:)

Mr. KEMP in two instances.

Mr. MILLER of Ohio in four instances.

(The following Members (at the request of Mr. BENJAMIN) and to include extraneous matter:)

Mr. ROSENTHAL in 10 instances.

Mr. ANNUNZIO in six instances.

Mr. ANDERSON of California in three instances.

Mr. GONZALEZ in three instances.

Mr. BROWN of California in 10 instances.

Mr. KOSTMAYER.

Mr. WALGREN in five instances.

Mr. BRODHEAD.

Mr. KOCH in three instances.

Mr. LLOYD of California.

Mr. GIBBONS.

ADJOURNMENT

Mr. BENJAMIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 50 minutes p.m.), the House adjourned until tomorrow, Tuesday, February 22, 1977, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

768. A letter from the President of the United States transmitting a proposed supplemental appropriation for fiscal year 1977 for Disaster Relief (H. Doc. No. 95–82); to the Committee on Appropriations and ordered to be printed.

769. A letter from the Acting Comptroller General of the United States, transmitting his review of the proposed rescissions and deferrals and revised deferrals of budget authority contained in the message from the President dated January 17, 1977 (House Document No. 95–48), pursuant to section 1014(b) and (c) of Public Law 93–344 (H. Doc. No. 95–83); to the Committee on Appropriations and ordered to be printed.

770. A letter from the Under Secretary of the Air Force, transmitting a report covering the period July–December 1976 on Air Force experimental, developmental and research contracts of $50,000 or more, pursuant to 10 U.S.C. 2357; to the Committee on Armed Services.

771. A letter from the Chairman, Federal Deposit Insurance Corporation; transmitting a draft of proposed legislation to amend the Federal Deposit Insurance Act (12 U.S.C. 1811–31b), and for other purposes; to the Committee on Banking, Finance and Urban Affairs.

772. A letter from the Chairman, Council of the District of Columbia, transmitting a copy of Council Act No. 1–230, "To amend the Motor Vehicle Safety Responsibility Act of the District of Columbia and the District of Columbia Traffic Act, 1925, and for other purposes," pursuant to section 602(c) of Public Law 93–198; to the Committee on the District of Columbia.

773. A letter from the Chairman, District of Columbia Armory Board, transmitting the annual reports and financial statements for fiscal year 1976 of the D.C. National Guard Armory and the Robert F. Kennedy Memorial Stadium, pursuant to section 10 of Public Law 80–605 and section 10 of Public Law 85–300; to the Committee on the District of Columbia.

774. A letter from the Acting Chairman, Federal Council on the Arts and the Humanities, transmitting the Council's first annual report on its activities under the Arts and Artifacts Indemnity Act, pursuant to section 8 of the act; to the Committee on Education and Labor.

775. A letter from the Chairman, Federal Home Loan Bank Board, transmitting a report on the Board's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

776. A letter from the Acting Secretary, Federal Trade Commission, transmitting a report on the Commission's activities under the Freedom of Information Act during calendar year 1976, pursuant to 5 U.S.C. 552(d); to the Committee on Government Operations.

777. A letter from the Acting Assistant Secretary of Health, Education, and Welfare for Administration and Management, transmitting notice of various proposed new or altered records systems for the Department, pursuant to 5 U.S.C. 552a(o); to the Committee on Government Operations.

778. A letter from the Acting Assistant Secretary of State for Congressional Relations, transmitting a draft of proposed legislation to authorize supplemental military assistance to Portugal for the fiscal year 1977, and for other purposes; to the Committee on International Relations.

779. A letter from the Director, Defense Security Assistance Agency, transmitting supplementary information to accompany the quarterly report on foreign military sales letter of offer covering the transition quarter (Executive Communication No. 182), pursuant to section 36(a)(2) of the Arms Export Control Act (90 Stat. 740); to the Committee on International Relations.

780. A letter from the Acting General Counsel, United States Arms Control and Disarmament Agency, transmitting a supplemental report on political contributions made by a member of the family of Paul C. Warnke, Director-designate of the U.S. Arms Control and Disarmament Agency with the rank of Ambassador, pursuant to section 6 of Public Law 93–126; to the Committee on International Relations.

781. A letter from the Acting Assistant Legal Adviser for Treaty Affairs, Department of State, transmitting copies of international agreements, other than treaties, entered into by the United States, pursuant to 1 U.S.C. 112b; to the Committee on International Relations.

782. A letter from the Secretary of Commerce, transmitting the Department's annual report covering fiscal year 1976 on its implementation of the Fair Packaging and Labeling Act, pursuant to section 8 of the act; to the Committee on Interstate and Foreign Commerce.

783. A letter from the Secretary of Transportation, transmitting a report covering fiscal year 1976 and the transition quarter on the financial condition and operations of the Railroad Revitalization and Improvement Fund and the Obligation Guarantee Fund, pursuant to section 515 of the Railroad Revitalization and Regulatory Reform Act of 1976, as amended; to the Committee on Interstate and Foreign Commerce.

784. A letter from the Staff Director, U.S. Commission on Civil Rights, transmitting a

draft of proposed legislation to raise the limitation on appropriations for the U.S. Commission on Civil Rights; to the Committee on the Judiciary.

785. A letter from the Secretary of Transportation, transmitting the annual report for calendar year 1976 on special pay to Coast Guard officers holding positions of unusual responsibility and of critical nature, pursuant to 37 U.S.C. 306(f); to the Committee on Merchant Marine and Fisheries.

786. A letter from the Deputy Comptroller General of the United States, transmitting a report covering calendar year 1976 on position in the General Accounting Office in grades GS–16, GS–17, and GS–18, pursuant to 5 U.S.C. 5114; to the Committee on Post Office and Civil Service.

787. A letter from the Comptroller General of the United States, transmitting a report that improved management is needed in the Defense Department's information handling of contract administration (LCD–75–115, February 17, 1977); jointly, to the Committees on Government Operations, and Armed Services.

788. A letter from the Comptroller General of the United States, transmitting a report on the status of the remotely piloted aircraft programs of the Departments of the Air Force and Army (PSAD–77–30, February 18, 1977); jointly, to the Committees on Government Operations, and Armed Services.

789. A letter from the Comptroller General of the United States, transmitting a report on improvements needed in the Health Services Administration's recording and reporting of appropriation data at the end of the fiscal year (FGMSD–76–63, February 17, 1977); jointly, to the Committees on Government Operations, Interstate and Foreign Commerce, and Appropriations.

790. A letter from the Secretary of Agriculture, transmitting the annual report for fiscal year 1976 on the Food for Peace Program, pursuant to section 408(a) of the Agricultural Trade Development and Assistance Act of 1954; jointly, to the Committees on International Relations and Agriculture.

791. A letter from the Secretary of Agriculture, transmitting a report on the global assessment of food production and needs as of the end of April 1976, pursuant to section 408(b) of the Agricultural Trade Development and Assistance Act of 1954, as amended (89 Stat. 854); to the Committee on International Relations.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. MURPHY of New York (for himself, Mr. BIAGGI, Mr. TREEN, Mr. JONES of North Carolina, Mr. LEGGETT, Mr. SNYDER, Mr. GINN, Mr. BOWEN, Mr. FORSYTHE, Mr. DE LUGO, Mr. HUBBARD, Mr. LENT, Mr. ZEFERETTI, Mr. OBERSTAR, Mr. HUGHES, Ms. MIKULSKI, and Mr. AKAKA):

H.R. 3711. A bill to provide a comprehensive system of liability and compensation for oil-spill damage and removal costs, and for other purposes; jointly, to the Committees on Merchant Marine and Fisheries and Public Works and Transportation.

By Mr. BRADEMAS (for himself, Mr. PERKINS, Mr. QUIE, Mr. BEARD of Rhode Island, Mr. JEFFORDS, Mr. MILLER of California, Mr. PRESSLER, Mr. KILDEE, Mr. HEFTEL, Mr. HAWKINS, and Mr. BIAGGI):

H.R. 3712. A bill to amend the Library Services and Construction Act to extend the authorizations of appropriations contained in such act; to the Committee on Education and Labor.

By Mr. BRODHEAD:

H.R. 3713. A bill to amend the Internal Revenue Code of 1954 to encourage employment and the modernization of manufacturing plants by providing an additional investment credit for machinery placed in service in existing manufacturing plants or in nearby plants; to the Committee on Ways and Means.

By Mr. EDWARDS of California:

H.R. 3714. A bill to provide for the appointment of additional judgeships for the U.S. district courts and courts of appeals, and for other purposes; to the Committee on the Judiciary.

By Mr. ENGLISH:

H.R. 3715. A bill to provide economic safeguards to American farmers when the movement of certain agricultural commodities in export markets are affected by Federal Government interference; to the Committee on Agriculture.

By Mr. FRENZEL:

H.R. 3716. A bill to require that salaries of Members of Congress cannot be increased administratively under other provisions of law unless such increases are approved by both Houses of such Congress and then only if such increases first take effect in the following Congress, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. HAMILTON:

H.R. 3717. A bill to insure that recipients of veterans' pension and compensation will not have the amount of such pension or compensation reduced, or entitlement thereto discontinued, because of increases in monthly social security benefits; to the Committee on Veterans' Affairs.

By Mr. HAWKINS (for himself, Mr. ANDERSON of California, Mr. BROWN of California, Mrs. BURKE of California, Mr. JOHN L. BURTON, Mr. PHILLIP BURTON, Mr. CONYERS, Mr. CORMAN, Mr. DANIELSON, Mr. DELLUMS, Mr. DIGGS, Mr. DRINAN, Mr. EDWARDS of California, Mr. FORD of Michigan, Mr. FRASER, Mr. HARRINGTON, Mr. MCFALL, Mr. MOAKLEY, Mr. MOSS, Mr. PATTERSON of California, Mr. PEPPER, Mr. ROYBAL, Mr. STARK, Mr. UDALL, and Mr. VAN DEERLIN):

H.R. 3718. A bill to establish and translate into practical reality the right of all adult Americans able, willing, and seeking to work to full opportunity for useful paid employment at fair rates of compensation; to combine full employment, production, and purchasing power goals with proper attention to balanced growth and national priorities; to mandate such national economic policies and programs as are necessary to achieve full employment, production and purchasing power; to restrain inflation; and to provide explicit machinery for the development and implementation of such economic policies and programs; to the Committee on Education and Labor.

By Mr. KASTENMEIER:

H.R. 3719. A bill to amend the Legal Services Corporation Act to provide authorization of appropriations for additional fiscal years, and for other purposes; to the Committee on the Judiciary.

By Mr. ROSENTHAL (for himself, Mr. BONIOR, Mr. DUNCAN of Tennessee, Mr. EDWARDS of California, Mr. O'BRIEN, Mr. PATTERSON of California, Ms. SPELLMAN, Mr. STOKES, and Mr. WEISS):

H.R. 3720. A bill to amend the Federal Aviation Act of 1958 in order to authorize free or reduced rate transportation to handicapped persons and persons who are 65 years of age or older, to amend the Interstate Commerce Act to authorize free or reduced rate transportation for persons who are 65 years of age or older, and to provide new and improved transportation programs for the handicapped and the elderly; to the Committee on Public Works and Transportation.

By Mr. STAGGERS (for himself and Mr. DEVINE):

H.R. 3721. A bill to amend the Securities Exchange Act of 1934 to increase the amount authorized to be appropriated for the Securities and Exchange Commission for fiscal 1977; to the Committee on Interstate and Foreign Commerce.

H.R. 3722. A bill to amend the Securities Exchange Act of 1934 to authorize specified amounts to be appropriated for the Securities and Exchange Commission for fiscal years 1978–80; to the Committee on Interstate and Foreign Commerce.

By Mr. THONE:

H.J. Res. 266. Joint resolution to designate October 10, 1977, as Energy Conservation Day, and to direct the Federal Energy Administration to prepare a report containing estimates of the amounts of fuel which could be saved through voluntary energy conservation measures; jointly, to the Committees on Post Office and Civil Service and Interstate and Foreign Commerce.

MEMORIALS

Under clause 4 of rule XXII, memorials were presented and referred as follows:

15. By the SPEAKER: Memorial of the House of Representatives of the State of Hawaii, relative to expansion of the Comprehensive Employment and Training Act; to the Committee on Education and Labor.

16. Also, memorial of the Legislature of the Territory of Guam, relative to the service of the Hon. Hiram L. Fong; to the Committee on Interior and Insular Affairs.

17. Also, memorial of the Senate of the State of Indiana, relative to a joint resolution of the Indiana Legislature adopted in 1973 requesting that Congress call a convention for the purpose of proposing an amendment to the Constitution of the United States relative to the protection of the right to live; to the Committee on the Judiciary.

18. Also, memorial of the Legislature of the Territory of Guam, relative to access to Guam by foreign airlines; to the Committee on Public Works and Transportation.

19. Also, memorial of the House of Representatives of the State of Hawaii, relative to extension of the Federal supplemental unemployment benefits program; to the Committee on Ways and Means.

PETITIONS, ETC.

Under clause 1, of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

46. By the SPEAKER: Petition of R. G. Vandenhende, Ghent, Belgium, relative to foreign policy; to the Committee on International Relations.

47. Also, petition of the Illinois Association of Chiefs of Police, La Grange, Ill., relative to the retention of Clarence M. Kelley as Director of the Federal Bureau of Investigation; to the Committee on the Judiciary.

48. Also, petition of Paul R. Ruddock, Salisbury, Rhodesia, relative to his efforts to visit the United States; to the Committee on the Judiciary.

49. Also, petition of the Chautauqua County Legislature, Mayville, N.Y., relative to Federal flood control projects; to the Committee on Public Works and Transportation.

50. Also, petition of Atanacio A. Cabus, Sr., Iligan City, The Philippines, relative to allowing his children to stay in the United States; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

PRESIDENT CARTER DESIGNATED "A GREAT AMERICAN"

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Monday, February 21, 1977

Mr. TALMADGE. Mr. President, Dixie Business magazine, which is published in Decatur, Ga., has designated President Carter as "A Great American" for 1976.

I ask that there be printed in the Extension of Remarks an article on President Carter by Hubert F. Lee, editor of Dixie Business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JIMMY CARTER, "A GREAT AMERICAN"

(By Hubert F. Lee)

President-elect Jimmy Carter has been named the "A Great American" for 1976 by the editors of Dixie Business.

He was nominated by Tresia Ivey, my 11-year-old granddaughter, who termed him "a good man, a Christian, a winner, a Southerner and a statesman."

While Jimmy Carter was Governor, my phone rang early one morning. Treasia, in a thrilling tone of voice, exclaimed:

"Pa Pa, Guess what?

"I saw the Governor last night.

"And he kissed me. . ."

Our first impulse was to endorse Jimmy Carter when he announced for President in 1974.

Pencil notes dates December 10, 1974:

Colonel John Crown, . . ." it is too early to endorse. . . ."

Sam Hopkins . . ." Carter to surprise many . . . going about it in the right way."

Steve Ball . . . good idea to endorse. . ."

Past Great Americans include:

Dr. Charles F. Kettering	1955
Cecille B. DeMille	1956
Helen Keller	1957
Tom D. Spies, M.D	1958
Sen. Lister Hill	1959
Oveta Culp Hobby	1960
R. Manton Wilson, M.D	1961
Sen. John H. Glenn, Jr	1962
Bernard M. Baruch	1963
Rep. Carl Vinson	1964
American Fighting Men	1965
E. K. Gaylord	1966
Donald Douglas, Sr	1967
Eddie Rickenbacker	1968
J. C. Penney	1969
Walter R. McDonald	1970
W. O. DuVall	1971
DeWitt and Lila Acheson Wallace	1972
Sen. Herman & Betty Talmadge	1973
Robert W. Woodruff	1974
Dr. Billy Graham	1975

I recall how excited I was when I received a letter dated December 4, 1974, from Governor Carter, saying:

"Before the official announcement is made on December 12 (1974), I would like you to know that I intend to seek the Democratic nomination and election as President of the United States in 1976.

"I could not enter this formidable race if I did not believe that I could win; but, neither would I run for President without a deep conviction that I can make an essential contribution to the U.S. Government and the people it serves. I believe that the problems which plague our people can be solved with bold, competent, honest leadership. Some people may say we face an impossible task. They have overlooked several important facts.

"First, the voters want a President who will address the issues with truth, openness and common sense. I will never disappoint them. Secondly, people are disillusioned with the officials in Washington.

"They are looking for a new face, a new leader whose ideas work. People are eager to see a candidate who will talk with them—not to them—at the factory, the supermarket, the service station. I plan to take my campaign to the people, just as I did in Georgia, and with as much success. With your help, I'd like to see this country return to the high standards and ideals on which it was founded."

And so Jimmy Carter went on to win in an incredible two year odyssey.

I wrote in my Editor's Whirligig in the Winter 1974 issue, in part:

PRESIDENT—Georgia's Governor Jimmy Carter, has entered the 1976 race for President of the United States.

I was a delegate to the Georgia Democratic Convention in Macon 1966 when Lester Maddox was ratified.

Jimmy Carter was there, smiling in defeat.

I didn't think he had a chance of being elected Governor, but he did.

Now Governor Jimmy Carter plunges ahead to the President.

He made a believer out of me four years ago.

Senator Herman Talmadge, who with his wife Betty, was named the Great Americans for 1973 said Governor Carter is a 'A Great American' for any year.

Colonel W. O. DuVall, the 'A Great American' for 1971 and a supporter of Jimmy Carter as far back as 1966 and before said 'you can't say too much about Jimmy Carter as A Great American.

Dick Kattel, president of C&S and the Atlanta Chamber of Commerce says 'Jimmy Carter will make an alltime Great President.'

A. H. Sterne, Jr., famous banker who heads the Trust Company of Georgia, and a Ford supporter, said we should all close ranks and rally around the new President, who is A Great American and deserves our support.

Rosalynn Carter, and their family, will grace the White House with a manner to make the nation proud.

What a fine example for America.

PERSONAL EXPLANATION

HON. JIM LLOYD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1977

Mr. LLOYD of California, Mr. Speaker, I was necessarily absent for the rollcall vote on adjournment which took place last Thursday, February 17. The vote was on a 1-day recess, a recess that would take Congress beyond the deadline for disapproving congressional pay raises. I have cosponsored legislation to prohibit this raise and was very much in favor of a vote on the question.

I regret that, because of a recent illness, a medical appointment at Bethesda Naval Hospital made it necessary for me to miss the rollcall vote on the recess.

THE NEW YORK DAILY NEWS EDITORIALIZES ABOUT A BETTER WAY TO CREATE JOBS

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1977

Mr. KEMP. Mr. Speaker, the New York Daily News recently analyzed President Carter's economic stimulus program and concluded that it is totally misdirected and, therefore, unlikely to produce any of the benefits it is designed to provide. The fundamental problem with President Carter's program is that it does not recognize the destructive effects that high tax rates have had on the economy. They are prohibiting the formation of capital, inhibiting new investment, and destroying the incentive to work and produce. It is no wonder that so many people are on unemployment when they cannot make enough aftertax income to be as well off as they are on transfer payments and unemployment compensation which, of course, are tax free.

A significant reduction in the tax rates across the board would not only create the capital that American industry needs to expand, but would reduce the cost of hiring new workers and create a greater incentive to work harder and get off unemployment. We need jobs, jobs that produce wealth and tax revenues not more Government jobs that consume tax revenues.

The News says that a reduction in taxes is the best way to create private enterprise jobs and I totally agree with this reasoning. I offer it to my colleagues in the hope that they will support efforts this week to reduce tax rates on a permanent basis as the fastest and most efficient way to help create jobs and combat inflation.

[From the New York News, Feb. 20, 1977]

ON THE WRONG TRACK

President Carter's program for stimulating the economy offers only the most dubious prospects for short-term relief, and poses serious dangers of renewed inflation.

A relatively modest, general tax cut would be the safest, soundest remedy for our economic blues. It would increase individual purchasing power and spur demand on a healthy, sustained basis.

But Mr. Carter and the Democratic Congress have opted for one-shot gimmicks—tax rebates, adjustment of tax rates, public-works projects and federally financed jobs in local government.

The objective is to achieve a dramatic reduction in unemployment which can be merchandised for political gain two or four years hence.

There are good reasons to doubt whether this costly effort—all to be carried out with borrowed money—will accomplish even that. And Americans should be gravely concerned that the long-term effects of this quick-fix approach will be another round of runaway inflation, followed by an even more severe recession than the one from which we are emerging.

The jobless rate has remained stubbornly high, and Americans should be concerned

about it. But the general state of the economy is such that—

Drastic injections of artificial stimulants are not needed. With inflation cooled off and recovery resuming its normal pattern after a lull, the picture is basically good.

The improvement hasn't registered in the unemployment figures for two reasons.

An unusually large number of people—women and youths from the postwar baby boom—have entered the labor market in recent years.

At the same time, industrial growth has been stunted by enormous federal deficits and the drain on resources created by a rash of government income-transfer and social-welfare programs.

A change in Washington's destructive taxing and spending policies would enable private industry to create real, productive work for most of those seeking it, and do so in a way which promote solid, continuing prosperity.

Unfortunately, Mr. Carter's program is so tailored that it is more likely to retard than advance that natural process.

We can't see how it will greatly benefit even the—

Hard-core unemployed—whose lack of experience and skills makes them well nigh unplaceable in the best of times.

A depressingly high percentage of minority youngsters fall into this category. Few are apt to land jobs on public-works projects, which will go mainly to trained construction workers.

Some may make their way on to city and state payrolls via the public-employment scheme, but those will likely be temporary, dead-end positions.

Private employers may also hire youths to qualify for the President's tax-credit bribe, but we doubt that the number will be large.

Many more might be aided by the expanded job-training program President Carter has proposed. But previous efforts along the same line have not been too successful because of bad planning, poor instruction or failure to develop real motivation in the youths.

We hope the new administration has learned something from past mistakes and will try new approaches. That is, in fact, the one part of the President's plan that makes sense, and could yield high dividends.

The rest of it is only a discouraging confirmation of what we had feared—that Mr. Carter, despite his talk about fresh ideas and innovative methods, is spellbound by the illusion that government can create jobs and generate wealth by spending money it hasn't got.

It never worked before, and won't now. Private enterprise is still the most effective engine for producing jobs—and the goods and services that genuinely increase the national wealth. Why doesn't Washington understand that?

THE CONSUMER AND THE DEPARTMENT OF AGRICULTURE

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1977

Mr. MICHEL. Mr. Speaker, we see and hear very much these days about the necessity of Government to communicate with the public, to explain its action and to let the public know what it intends to do. Nancy Harvey Steorts, former Special Assistant to the Secretary of Agriculture for Consumer Affairs recently reported on her own admirable efforts in this area. Her report, entitled "How Responsive Is the United States Department of Agriculture to the American Consumer?" deserves wide attention. It gives not only the results but the philosophy behind the Department of Agriculture's attempts to become more responsive to the American consumer. I am happy, therefore, to have this opportunity to introduce this splendid report into the RECORD:

HOW RESPONSIVE IS THE UNITED STATES DEPARTMENT OF AGRICULTURE TO THE AMERICAN CONSUMER?

(By Nancy Harvey Steorts)

When I initiated actions to make the Department of Agriculture responsive to the American consumer, I did so with the knowledge that consumer representation would exist only when consumers had full access to the decision making process at all levels of the Department and full use of the Department's information materials and data. The information materials help the consumer to be better educated, and access to the Department's data allows the consumer to make an independent analysis of proposals under consideration.

Additionally, I wanted to raise the consciousness of the Department of Agriculture to the American consumer by having agency heads consider the impact and benefits of their final decisions on consumers before the decisions were made. I have attempted to make the consumer part of the primary focus and constituency of USDA instead of an afterthought to be handled once decisions were reached.

CONSUMER INVOLVEMENT

To bring about consumer involvement at USDA, I was appointed Special Assistant to the Secretary of Agriculture for Consumer Affairs in July 1973. This was a first. Not only for the Department of Agriculture, but also it was the first time any Federal Agency established such a position—a full-time consumer affairs specialist reporting directly to the Secretary.

Our first experience with consumer involvement in decision making came when three proposals—net weight, nutritional labeling, and changing the beef grading standards—were being considered.

A press conference was held to announce each of these proposals, at which time the Administrators and Program Directors were present to explain the proposals to the assembled audience which included representatives from consumer organizations and industry, as well as, the media. These press conferences were followed by indepth briefings in several cities across the country. In addition, the period for commenting on the proposals was extended from the normal 30 days to 60 days so that consumers would have sufficient time for comments.

OUTREACH

As a result of this new outreach and improved communication to consumers, there were many more comments on the proposals from consumers than we experienced previosuly. Although this new method of announcing and explaining proposals helped in getting consumers better informed and more involved in agricultural issues, consumers should be given the opportunity to have input in the earliest stage of the development of a proposal.

This is the trend I see in analyzing each USDA Agency's year-end report. With the help of a blue print for consumer development in the form of the Consumer Representation Plan, the agencies are becoming more aware of the consumer. The plan was designed to insure that each USDA Agency proceed in an organized and systematic manner to meet consumers' desires to be better informed about and more involved in the agency's decision making process. Although this plan was not as comprehensive as I would have liked, it is a start in the right direction.

This final report is an analysis of our successes and failures in bringing about consumer involvement and includes specific recommendations for improvement within USDA.

AGENCY DECISION MAKING

Eight USDA Agencies have specifically stated goals of bringing consumers or their representatives into direct decision making capacities within their agency. Those agencies are Food and Nutrition Service, Animal and Plant Health Inspection Service, Agricultural Marketing Service, Extension Service, Forest Service, Agricultural Stabilization and Conservation Service, Soil Conservation Service, and Cooperative State Research Service.

Each of the eight agencies has selected difference wording to state this consumer decision making policy. Agricultural Marketing Service, for instance, included the following statements in its Consumer Activities 1976 Report:

"Through action by its Consumer Responsiveness Panel, AMS has formulated a Consumer Representation Plan, calling for several departures from established agency policy—including the issuance of a notice of intent prior to more formal actions, to allow more consumer participation in decision making."

Many of the very controversial issues relating to consumers, such as the beef grading issue, have in the past come under the purview of the Agricultural Marketing Service. It is, therefore, gratifying to see that this agency leads the others in increasing consumer input and is taking positive steps, such as the notices of intent, to involve the consumer in policy decisions.

Agricultural Marketing Service has implemented a consumer involvement policy by adopting its own Consumer Representation Plan and by having begun sincere efforts to implement its plan. Agricultural Marketing Service holds public meetings and briefings, sponsors public hearings, responds to all inquiries and complaints, and issues news releases concurrently with many Federal Register Notices.

Agricultural Marketing Service prepares facts sheets for distribution to consumer groups, holds press briefings and new conferences, prepares agency publications to explain services, and uses exhibits, visual aids and demonstrations in an effort to increase consumer awareness of the agency.

AGENCIES AND THE CONSUMER

Ten USDA agencies have specifically defined objectives of increasing information in consumers on agriculture in general, and services their agency provide in particular. These ten agencies are the Economic Research Service, Agricultural Marketing Service, Agricultural Research Service, Cooperative State Research Service, Extension Service, Soil Conservation Service, Agricultural Stabilization and Conservation Service, Foreign Agricultural Service, Animal and Plant Health Inspection Service, and Forest Service.

In its January 7, 1977 statement of Consumer Involvement, the Cooperative State Research Service provided this declaration of intent:

"CSRS is concerned that consumers do have a voice in and are informed about agricultural research activities relevant to them. Most of the research in the states is directly or indirectly of importance to consumers. CSRS strongly supports and encourages the diffusion to consumers of information coming from this research."

From my evaluation of the year-end agency reports regarding consumer plans, I con-

clude that the agencies referred to have taken the first step of implementing the Department's recent consumer representation policy by clearly and concisely stating objectives of bringing consumers into direct decision making capacities and of increasing information to consumers.

We see that agencies are issuing notices of intent prior to more formal actions, to allow more consumer participation in decision making. We see that consumer representatives were appointed to the agencies existing advisory committees and task forces in an effort to increase consumer input. We see agencies reassessing public involvement programs with specific recommendations on strengthening public involvement.

Some agencies have chosen to establish consumer affairs coordinating councils within agencies to help evaluate and exchange information regarding consumer involvement. Some agencies have established their own consumer advisory committees. Most of the agencies enumerated have made specific efforts to upgrade the clarity, completeness and conciseness of *Federal Register* Notices and Environmental Impact Statements to foster consumer understanding and encourage their participation in rule making.

Agencies which are research related have specific plans for involving consumers in the evaluation of current research and establishing projections and priorities for future research. Involving consumers in program planning and in the development of programs at the local, state, and national levels is becoming policy in USDA's agencies.

We see nationwide public participation on pre-draft, draft, and final proposals, calls for comments and public meetings throughout the country to discuss issues with the public.

INFORMATION AND DISSEMINATION

We have undertaken a number of efforts to reach more and more consumers and consumer communicators. We are helping them become aware of the vast expertise available in the Department, and we are bringing them together with knowledgeable Department personnel who are working on solutions to the issues we all face.

The ten agencies who had specifically defined objectives of providing consumers with greater information concerning agriculture furnished a record of their work in this area. Most of the ten were also concerned with providing consumers with greater information regarding the services their agency provides the public or on the actual functioning of the agency.

Reported accomplishments in the information areas include dissemination of results of a survey on consumer's behavior and attitudes and consumer briefings throughout the country to explain details on the proposals to establish regulations. We see brochures to tell consumers about various rules and regulations and leaflets distributed to consumers about rules and regulations.

We see leaflets distributed to consumers on keeping food safe and agencies reaching consumers through media interviews, consumer articles, press releases, information material, and radio and television public service spots.

We see a consumer/government/industry conference on marketing orders and public hearings on marketing orders and research and promotional orders.

USDA issued fact sheets aimed at explaining some of the more technical programs of the agencies to consumers and produced news features with facts consumers should know. We see better distribution of major press releases to consumer groups and efforts to disseminate information to consumers through professional journals and other publications.

We see the development and distribution of materials on various consumer issues in an effort to educate the public. We see in-agency programs on increasing expertise in public participation among staff.

CHANGE IN ATTITUDE

The specifics of the accomplishments of the various agencies in attempting to reach the consumer with information regarding agriculture and services of the agencies results in pages of disclosures and this is in no way a full or complete summary of them. I have chosen to generalize the accomplishment of the agencies in order to demonstrate the direction and scope of the implementation of the consumer representation policy. The Foreign Agriculture Service described its information accomplishments with the following paragraphs and I think that they are representative of the other agencies concerned with improving the consumer's right to be informed:

"In the process of improving our information services, FAS is making a conscious effort to emphasize topics of current interest and convey them with timeliness and readability. We have noted substantial pickup in press utilization of FAS material. Within the past year, FAS has initiated a radio tape service in which interviews, primarily with our attaches overseas, on timely topics are made available to several radio networks. This new service has proven very popular. Another very popular, and consumer-oriented, feature is our bi-monthly survey of retail food prices in selected foreign capitals. This feature is published regularly in *Foreign Agriculture* magazine, and we plan to improve it in 1977.

"These issuances, along with a weekly press release surveying current developments in world production and trade, go immediately and directly to reporters and wire services which serve urban people primarily. Thus, we have improved and accelerated consumer access to FAS information and the response from consumer and other urban media and interest groups bears out this fact."

More than giving us specifics of accomplishments, these paragraphs from the Foreign Agricultural Service gives us an attitude—an attitude of concern for the consumer and the understanding of the consumer's right to be informed.

If we computed the number of press releases written and distributed throughout the country this past year which informed the consumer about agriculture and the Department's services, it would undoubtedly be in the hundreds-of-thousands. But, it is more meaningful to look at the accomplishments of the agencies in both the decision making areas and information areas with a discriminating eye and be able to say that within these agencies the policies of consumer representation are definitely beginning to show through.

GREATER AWARENESS

Most of the agencies which submitted year-end report on consumer related activities offered suggestions and recommendations for improving consumer representation within their particular field, but of greater interest were the recommendations from six agencies regarding improving consumer representation throughout the entire Department. Although some are general in nature, they all reflect a sensitivity to and willingness to improve consumer representation at USDA.

Realizing that in any organization, new policy directives take time to reach full implementation, it is therefore necessary to review our consumer involvement policy by looking at attitude and awareness as the key criteria at this point.

From the Soil Conservation Service, "SCS recommends that the Secretary of Agriculture articulate the need for the public to become involved in the decision making process of government. This statement could intensify participation because citizens would feel that their views are wanted and because SCS personnel would feel that their extra effort supports Departmental objectives."

From the Forest Service comes this recommendation, "Commitment to citizen/consumer participation should be expressed in each USDA Agency's annual plan of work and budget to OMB."

From Extension Service, "The Consumer Representation Plan should be implemented as planned with every encouragement given to all USDA agencies to further involve consumers." And, the Consumer Representation Plan for USDA ". . . needs to increase visibility and accountability for assisting all consumers—rural, suburban, and urban—to better understand production, marketing and consumption of food and fiber; food policy; international trade and assistance programs, etc."

From Animal and Plant Health Inspection Service, "We should try to reach the urban consumer by mounting a detailed educational-informational program for consumer leaders through personal contact, seminars, printed materials, fact sheets, copies of proposals and legislative documents. APHIS should move promptly to finalize a consumer representation plan to give direction to consumer activities and to finalize and announce the consumer advisory committee. A formalized system of reporting our major consumer activities should be adopted and implemented."

And from Agricultural Stabilization and Conservation Service, "At the Departmental level, ASCS recommends a uniform reporting system that would assure that each USDA agency is conforming to the Departmental Consumer Representation Plan. Such a system would call for each agency consumer coordinator to compile data and forward it at regular, specified intervals to the Special Assistant to the Secretary for Consumer Affairs."

Most glaring in this report is the exclusion of several USDA agencies. These agencies neglected to articulate goals for involving the consumer in decision making capacities. This lack of direction points out profoundly that the consumer representation policy at USDA has not yet been implemented throughout the entire Department.

CONCLUSION

In final evaluation, I can say that there has truly been progress made at the Department of Agriculture in opening the doors to the consumer voice. It has been a strong team effort that has brought about a real turn-around in attitudes toward consumer representation. This could not have happened without the help and support of the many dedicated people at USDA who are sincerely conscious of meeting the needs of today's consumers.

A foundation has been laid—but the frame is still being built. As I leave the Department, I wish the new administration great success in building and cementing the relationship between the farmer and the consumer. One cannot function without the other.

RECOMMENDATIONS TO SECRETARY OF AGRICULTURE FROM SPECIAL ASSISTANT TO THE SECRETARY OF AGRICULTURE FOR CONSUMER AFFAIRS

Secretary of Agriculture.—The Consumer Advocate for the Department of Agriculture must be the Secretary of Agriculture. The Secretary is the only person who can raise the consciousness of the Department to the needs of the consumer and who can clearly demonstrate by his actions and policies that the consumer is a vital part of USDA's constituency.

Two-way Discusisons.—The Secretary of Agriculture should make each policy level official aware that his/her constituency includes the consumer. Each policy maker should demonstrate that his/her subordinates are aware of this and will reflect this in their actions. Each policymaker should

participate in two-way discussions with consumers, so that consumer input really will have an effect on decisionmaking.

Consumer Ombudsperson.—There should be a Consumer Ombudsperson at the Department of Agriculture who is a member of the policy staff and who should have available adequate resources and budget to effectively represent the consumer. The Office of the Consumer Advocate should be well staffed and should include economists, lawyers, and others so that they may effectively meet the needs of the consumer.

Consumer Advisory Committee.—USDA's National Consumer Advisory Committee should be convened as soon as possible and should meet at least four times a year. Members of this Committee, who are all qualified representatives of the consumer, should be paid for their time and reimbursed for their time and reimbursed for their expenses, as would be customary for a consultant. The chairperson of the Committee should be selected by the Committee and not be an employee of USDA.

Consumer Responsiveness Committee.—USDA's Consumer Responsiveness Committee should include representatives of consumers or members of the National Consumer Advisory Committee. The Consumer Responsiveness Committee's agenda should be made public prior to the meetings and the public should be encouraged to attend.

Special Interest Groups.—Meetings with USDA and special interest groups should be open and announced publicly prior to convening them.

Communications Strategy.—USDA should have a communications strategy to better inform the consumer about agricultural policies and issues important to them. New techniques and outreach programs are needed. Better coordination is necessary. Therefore, USDA should establish a Consumer Information Center and all consumer education activities should be coordinated on a Department-wide basis.

Tracking System.—Many consumers write and/or call the USDA. There should be a system developed to track these calls and letters, so that the policy staff is aware of what the consumer interests and needs are.

Consumer Grades.—Consumers, industry spokespersons, and agriculture officials should develop a new system of Consumer grades. A task force should be established to develop guidelines for the grades with industry, government and consumers participating.

Human Nutrition.—High priority should be placed on Human Nutrition at the Department of Agriculture. The nutrition programs should be better coordinated and under the guidance of one assistant secretary whose goal should be to bring high-level support and visibility to the programs. There is a vast amount of information available, but it needs to be better coordinated so that all of it is available to the public.

Field Offices.—Greater use should be made of USDA's regional offices and Extension Service personnel at the state and local levels. They should be USDA's outreach instruments for better informing consumers and for gathering consumer views on agricultural issues.

Philosophy of Education.—The Department of Agriculture needs to develop and implement a stronger philosophy of education for the urban consumer, as well as the rural consumer, and to fund education programs appropriate to that philosophy. The Extension Service should better utilize the services of its Home Economics staff. More funding should go to develop consumer education programs so that they are better able to serve the urban communities.

National Food Policy.—A National Food Policy should be instituted. To be meaningful, the policy must include production and consumption, since one is totally dependent on the other.

The above recommendations are made to the Secretary of Agriculture in hopes that he can make the consumer involvement at USDA 100%.

TAX REDUCTIONS VERSUS PUBLIC WORKS SPENDING: WHICH CREATES MORE JOBS?

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 21, 1977

Mr. KEMP. Mr. Speaker, one of the reasons most often cited as a justification for increased public works spending versus tax reductions to create jobs is that public works spending is supposed to work more quickly, because the jobs are created directly through Government spending rather than indirectly through the expansion of private industry.

I would argue, on the other hand, that the exact opposite is true. The effect of an across-the-board tax rate reduction would be immediate and substantial, while the evidence suggests that public works spending mostly just creates instant jobs for bureaucrats here in Washington. By way of illustration, the following editorial from the Washington Star last Thursday reports that the total number of people hired as a result of the $2 billion public works bill passed 7 months ago is exactly 250 bureaucrats at the Department of Commerce to administer the program. The editorial further suggests that even when the money is finally distributed a large part of it will be going to areas that do not really have an unemployment problem.

Mr. Speaker, unemployment is intolerable and a better way to create jobs is to cut tax rates. If tax rates were reduced it would immediately lower the cost of hiring new workers by increasing take-home pay. This means that a company would be able to pay less to hire new workers without reducing their take-home pay. Furthermore, this would create billons of dollars of capital with which to expand productive capacity, which will not only create jobs but will increase the total supply of goods and services at the same time, which in turn will fight inflation.

By contrast, public works jobs are created very slowly, due to massive amounts of redtape, indeed, there are about $19 billion of projects right now in the paperwork process, and they must be supported by taxation on the productive element of society, or by borrowing which reduces the amount of private capital available for investment. Consequently, many people are now seriously questioning the assumption that public works programs are good ways to stimulate the economy, as the following editorial demonstrates:

[From the Washington Star, February 17, 1977]

WORKINGS OF PUBLIC WORKS

Who says public works programs don't work?

Seven months ago Congress passed a $2 billion public works bill over President Ford's veto, with the aim of putting some of the nation's unemployed to work. Nearly five months ago it appropriated the money for the program.

The scorecard so far: some 250 people hired—by the Commerce Department to help figure out how to distribute the money.

More people will be put to work eventually—probably considerably fewer than the sponsors of the legislation claimed, but some.

There's a question, though, whether the money will be put where it will do the most good. One would assume that places like Pittsburgh, which has thousands of people out of work, would get some of the money. But no. Those 250 people put to work by the Commerce Department, with the help of a battery of computers, rejected Pittsburgh's application as well as those from 45 of the nation's 100 largest cities.

The hassle over who gets the $2 billion may become bigger than the argument between the Ford administration and Congress over whether public works spending is worthwhile in the first place as a means of combating unemployment.

As John Fialka pointed out in *The Star* the other day, Mound Bayou, Miss. was selected to get $4.9 million for paving the streets and constructing a new municipal building and a storage facility, which is nice for Mound Bayou—a community of 2,134 people, of which approximately 217 are out of work—but which outraged Sen. James Eastland because that was nearly half the total funds allotted to the state.

Even more startling in a long string of startling examples was Port Graham, Alaska, a hamlet of 122, which was alloted $882,997 (or $80,000 for each of the town's 11 unemployed) to build a community service center while Fairbanks, the state's second largest city, got nothing.

It's not all the fault of the Commerce Department and the computers. Part of it can be laid to Congress for trying to keep everyone happy. While 70 per cent of the $2 billion was earmarked for hard-pressed areas, Congress mandated that 30 per cent go to areas with unemployment less than the national average. Spread the goodies as far as possible is the congressional motto.

The formula concocted from congressional guidelines and Commerce Department regulations, including something called "logarithmic transformation," resulted in the bizarre pattern of allocation outlined in *The Star* articles.

But don't despair. If your community wasn't among the selected, there may still be hope. Congress is getting ready to put another $4 billion into the public works pipeline. The AFL–CIO's George Meany wants $10 billion put into it, plus another $20 billion for public service employment and anti-recession grants to states and localities, and Mr. Meany can be persuasive sometimes. If the taxpayers' money holds out and the government's printing presses don't break down, the computers down at Commerce may get around to all the applications eventually.

There's the danger, of course, that by the time the projects get going—even those under the first $12 billion installment—the federal spending may fuel the inflation rate more than it reduces the unemployment rate.

SENATE COMMITTEE MEETINGS SCHEDULED

Title IV of Senate Resolution 4, agreed to by the Senate on February 11, 1977, calls for establishment of a system for a computerized schedule of all meetings and hearings of the Senate Committees, Subcommittees, Joint Committees, and Committees of Conference. This title re-

quires all such committees to notify the Office of the Daily Digest (designated by the Rules Committee) of the time, place and purpose of all meetings when scheduled, and any cancellations or changes in meetings as they occur.

As an interim procedure beginning today, and until the computerization of this information becomes operational, the Daily Digest will prepare such information daily for printing in the Extensions of Remarks section of the CONGRESSIONAL RECORD:

SCHEDULED MEETINGS
FEBRUARY 22

9 a.m.
Agriculture, Nutrition, and Forestry
To hold hearings on proposed legislation to amend and extend the Agriculture and Consumer Protection Act.
Until: Noon 322 Russell Office Building
Appropriations
Subcommittee on Agriculture
To hold hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture.
1318 Dirksen Office Building
Environment and Public Works
To consider S. 427, authorizing funds to extend the public works employment program and to establish a youth community improvement project program.
4200 Dirksen Office Building

10 a.m.
Appropriations
Subcommittee on Military Construction
To hold hearings on proposed budget estimates for fiscal year 1978 for military construction.
S-146, Capitol
Armed Services
To hear Paul C. Warnke, of the District of Columbia, testify and answer questions in behalf of his nomination to serve with the rank of Ambassador during his tenure of service as Director of the Arms Control and Disarmament Agency.
1114 Dirksen Office Building
Judiciary
To continue hearings on S. 11, and printed amendment No. 40 thereto, providing for the appointment of additional district court judges.
2228 Dirksen Office Building
Select Intelligence
To hold hearings on the nomination of Admiral Stansfield Turner, to be Director of Central Intelligence
235 Russell Office Building
Select Small Business
To hold hearings to consider the impact of the 1977 economic stimulus package on small businesses.
5110 Dirksen Office Building
Special Official Conduct
Business meeting, to markup proposals for developing a code of conduct for Members and employees of the Senate.
6226 Dirksen Office Building.

10:30 a.m.
Environment and Public Works
To consider further bills proposing amendments to the Clean Air Act (S. 251, 252, and 253).
4200 Dirksen Office Building
Foreign Relations
Business meeting, to consider (1) the nomination of Paul C. Warnke, to be Director of ACDA; (2) S. 174, to amend the U.N. Participation Act of 1945 so as to halt the importation of Rhodesian chrome; (3) pending foreign service nominations; and (4) discuss committee organizatin and operating budget.
4221 Dirksen Office Building

11 a.m.
Banking, Housing, and Urban Affairs
Subcommittee on International Finance
To continue hearings on S. 69 and 92, to amend and to extend the Export Administration Act.
5302 Dirksen Office Building

11:30 a.m.
Veterans' Affairs
To hold hearings to receive legislative recommendations for 1977 from officials of the American Legion.
4232 Dirksen Office Building

2 p.m.
Appropriations
Subcommittee on Labor-HEW
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of Labor.
S-126, Capitol
Appropriations
Subcommittee on Public Works
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear officials of the South Pacific Division and Pacific Ocean Division, Army Corps of Engineers.
S-128, Capitol

2:30 p.m.
Human Resources
Business meeting on committee organization.
4232 Dirksen Office Building

FEBRUARY 23

9 a. m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed legislation to amend and extend the Agriculture and Consumer Protection Act of 1973.
Until noon 322 Russell Office Building
Appropriations
Subcommittee on Agriculture
To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture.
1318 Dirksen Office Building

10 a.m.
Banking, Housing, and Urban Affairs
Subcommittee on Housing and Urban Affairs.
To hold hearings on S. 208, the proposed National Mass Transportation Assistance Act.
5302 Dirksen Office Building
Environment and Public Works
To continue consideration of bills proposing amendments to the Clean Air Act (S. 251, 252, and 253).
4200 Dirksen Office Building
Finance
Business meeting, on committee rules and staff budget.
2221 Dirksen Office Building
Human Resources
Health Subcommittee
To hold hearings on proposed legislation to extend programs of the Public Health Service.
4232 Dirksen Office Building
Rules and Administration
Business meeting, to discuss committee organization and rules of procedure.
301 Russell Office Building
Select Intelligence
Subcommittee on Budget Authorization
To resume closed hearings on proposed fiscal year 1978 authorizations for Government intelligence activities.
S-407, Capitol
Joint Economic
To resume hearings on former President Ford's economic report to the Congress.
1202 Dirksen Office Building

10:30 a.m.
Appropriations
Business meeting, to discuss committee organization.
S-128, Capitol

1 p.m.
Appropriations
Subcommittee on Agriculture
To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture.
1318 Dirksen Office Building

2 p.m.
Appropriations
Subcommittee on Public Works
To continue hearings on proposed budget estimates for fiscal year 1978 for public works projects, to hear officials of the South Western Division and Missouri River Division, Army Corps of Engineers.
S-126, Capitol

2:30 p.m.
Banking, Housing, and Uuran Affairs
Business meeting, to discuss committee organizations and operating budget.
5302 Dirksen Office Building

FEBRUARY 24

9 a.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed legislation to amend and extend the Agriculture and Consumer Protection Act of 1973.
Until noon 322 Russell Office Building
Appropriations
Subcommittee on Agriculture
To hold hearings on proposed budget estimates for fiscal year 1978 for the Department of Agriculture.
S-128, Capitol
Temporary Select Committee to Study Senate Committees
Business meeting, to consider final recommendations of the committee.
S-146, Capitol

9:30 a.m.
Appropriations
Interior Subcommittee
To resume hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior and related activities, to hear officials of the Office of Water Research and Technology.
1114 Dirksen Office Building
Human Resources
Subcommittee on the Handicapped
To resume hearings to review programs for handicapped persons.
4200 Dirksen Office Building
Joint Economic Committee
To continue hearings on former President Ford's economic report to the Congress.
345 Cannon Office Building

10 a.m.
Appropriations
Subcommittee on Foreign Operations
To resume hearings on proposed budget estimates for fiscal year 1978 for foreign aid programs, to hear Secretary of State Vance.
1224 Dirksen Office Building
Appropriations
Subcommittee on HUD-Independent Agencies
To resume hearings on proposed budget estimates for fiscal year 1978, to hear officials of the National Science Foundation.
1318 Dirksen Office Building

Appropriations
Subcommittee on Defense
To resume hearings on proposed budget estimates for fiscal year 1978 for the Defense Establishment.
1223 Dirksen Office Building
Banking, Housing, and Urban Affairs
Subcommittee on Housing and Urban Affairs
To continue hearings on S. 208, the proposed National Mass Transportation Assistance Act, 10 a.m., 5302 Dirksen Office Building.
5302 Dirksen Office Building
Foreign Relations
To consider pending nominations.
4221 Dirksen Office Building
Governmental Affairs
To consider S. 626, to reestablish the period within which the President may transmit to the Congress plans for the reorganization of agencies of the executive branch of the Government, and S. 213, to provide for GAO audit of the Internal Revenue Service and of the Bureau of Alcohol, Tobacco, and Firearms.
3302 Dirksen Office Building
Select Intelligence
Subcommittee on Budget Authorization
To continue closed hearings on proposed fiscal year 1978 authorizations for Government intelligence activities.
S-407, Capitol
Select Small Business
To resume hearings on problems of U.S. supplemental air carriers including charter regulations, applications for low-cost scheduled service, discriminatory enforcement of CAB rules, and military airlift contract procedures.
6202 Dirksen Office Building

2 p.m.
Appropriations
Subcommittee on Transportation
To hold hearings on proposed budget estimates for fiscal year 1978 for the USRA and the Panama Canal Company and the Panama Canal Zone Government; and to hold hearings on supplemental appropriations for fiscal year 1977 and fiscal year 1978 needs of the National Transportation Policy Study Commission.
1224 Dirksen Office Building
Select Committee on Intelligence
Subcommittee on Budget Authorization
To continue closed hearings on proposed fiscal year 1978 authorizations for Government intelligence activities.
S-407, Capitol

FEBRUARY 25

9 a.m.
Agriculture, Nutrition, and Forestry
To continue hearings on proposed legislation to amend the Agriculture and Consumer Protection Act of 1973.
Until: Noon 322 Russell Office Building

9:30 a.m.
Appropriations
Interior Subcommittee
To continue hearings on proposed budget estimates for fiscal year 1978 for the Department of the Interior and related activities, to hear Secretary of the Interior Andrus.
1114 Dirksen Office Building
Commerce, Science, and Transportation
To hold hearings on S. 365, authorizing funds for fiscal year 1978 for the National Aeronautics and Space Administration.
235 Russell Office Building
Human Resources
Subcommittee on the Handicapped
To continue hearings to review programs for handicapped persons.
4232 Dirksen Office Building

10 a.m.
Appropriations
Subcommittee on HUD-Independent Agencies
To continue hearings on proposed budget estimates for fiscal year 1978, to hear officials of the National Science Foundation and Office of Science and Technology Policy.
1318 Dirksen Office Building
Banking, Housing, and Urban Affairs
Subcommittee on Housing and Urban Affairs.
To continue hearings on S. 208, the proposed National Mass Transportation Assistance Act.
5302 Dirksen Office Building

11 a.m.
Foreign Relations
Subcommittee on Foreign Assistance
To hold hearings to receive testimony concerning military and economic assistance to Portugal.
4221 Dirksen Office Building

FEBRUARY 28

9 a.m.
Agriculture, Nutrition, and Forestry

SENATE—*Tuesday, February 22, 1977*

(Legislative day of Monday, February 21, 1977)

The Senate met at 12 meridian, on the expiration of the recess, and was called to order by the Vice President.

The VICE PRESIDENT. We are privileged this morning to have the Most Reverend Thomas W. Lyons, Auxiliary Bishop of the Roman Catholic archdiocese of Washington, lead us in prayer.

PRAYER

The Most Reverend Thomas W. Lyons, D.D., Auxiliary Bishop of the Roman Catholic Archdiocese of Washington, Washington, D.C., offered the following prayer:

Almighty Father, as we begin the work of another day, we turn our thoughts again to You.

We thank You for the gift of life, for the gift of time, and for the opportunity to be of service to others.

Help us to be conscious always of Your presence among us. Guide us in our deliberations. Give us wisdom and understanding, concern and compassion. Assist us in our efforts to be faithful to the trust that has been placed in us and deserving of the rewards promised to those who seek peace, to those who are merciful, to those who hunger and thirst for justice, and to those who are pure of heart.

May our work which we begin with this prayer give glory to Your name and be of benefit to the people of these United States and to our brothers and sisters in every land. Amen.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Journal of the proceedings of yesterday, Monday, February 21, 1977, be approved.

The VICE PRESIDENT. Without objection, it is so ordered.

COMMITTEE MEETINGS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that all committees may be authorized to meet during the session of the Senate today.

The VICE PRESIDENT. Without objection, it is so ordered.

BIPARTISAN LEADERSHIP MEETING AT THE WHITE HOUSE

Mr. BAKER. Mr. President, I note for our colleagues that today the President of the United States conducted his first bipartisan leadership meeting at the White House. I was privileged to attend that meeting in the Cabinet Room with my distinguished colleague, the majority leader, and with our colleagues from the House. The distinguished occupant of the chair was there.

I take this opportunity to thank the President and the President of the Senate for reinitiating the concept of the joint leadership meeting. I think it does much good for our relations.

ORDER OF BUSINESS

Mr. BAKER. Mr. President, I yield 5 minutes of my time under the standing order to the distinguished senior Senator from North Carolina.

Mr. HELMS. I thank my friend from Tennessee for his courtesy.

SOL LINOWITZ: BANKER AND TREATY NEGOTIATOR—A CONFLICT?

Mr. HELMS. Mr. President, I am greatly concerned that Mr. Sol Linowitz, who is presently in Panama as a chief conegotiator of the proposed new Panama Canal treaty, is, at the same time, a director of Marine Midland Banks, Inc., and Pan American Airways, Inc. Both of these institutions have a direct financial interest in the support of the Torrijos dictatorship in Panama because of their activities there and their need to curry favor with the Panamanian Government. Indeed, Marine Midland has made risky loans directly to the Republic of Panama.

The proposed treaty, a treaty which Mr. Linowitz has long advocated, would give away billions of dollars of the American taxpayers' investment in the Canal Zone, vastly increase payments to the Republic of Panama, and strengthen the Torrijos regime, which is tottering both financially and politically.

There is no indication that Mr. Linowitz, who was not confirmed by the Senate, has taken steps to avoid the appearance of conflict of interest by resigning his directorships or private business associations. Until this matter is clarified, Mr. Linowitz should step aside; he may already have irrevocably tainted any treaty which is the product of his negotiations.

Mr. President, allow me to go into detail on these issues.

For the past week, a U.S. negotiating team has been in the Republic of Panama for the purpose of negotiating a new treaty regarding the Panama Canal. The conegotiators at the head of that team are Ambassador-at-Large Ellsworth Bunker, a career ambassador, and Ambassador Sol Linowitz, a businessman and lawyer sworn in on February 9 as special representative of the President, with the personal rank of ambassador.

The nomination of Mr. Linowitz was not presented to the Senate for advise and consent. I am informed by the Department of State that it is not the custom to seek advise and consent on appointments which are expected to be of less than 6 months' duration. The administration is of the opinion that the new treaty will be completed in less than 6 months.

Thus the Senate has not had the opportunity to investigate Mr. Linowitz' suitability for the post, nor to inquire into what many would judge to be, on the face of it, a gross impropriety and conflict of interest. It is a case which hardly seems suited to our post-Watergate morality.

According to the best information which I have been able to find, Mr. Linowitz sits on the board of directors of two large corporations which have a compelling financial interest in the outcome of events in Panama. There is no indication that he has resigned from these boards.

Indeed, press accounts from the period before he was sworn in quote Mr. Linowitz as saying that he would not take the job if he had to give up his private business associations. Biographic data furnished last week by the Department of State indicates that he is presently a member of both these boards. And both institutions have informed me that he is presently a member of their boards.

Mr. President, I ask unanimous consent that the biographic data furnished by the State Department be printed in the RECORD at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HELMS. Mr. President, the two corporations are Pan American World Airways, and Marine Midland Banks, Inc.

Pan American, of course, has an office in Panama, and uses Panama City as a convenient midway stop on its Carribean and South American flights. It is of both logistical and financial interest to Pan American to maintain landing rights in Panama, which is seeking to develop its tourist business further.

The Marine Midland connection, however, is far more immediate. Mr. Linowitz serves not only on the board of directors of Marine Midland Banks, but also on its executive committee. And Marine Midland has, over the past few years, participated in a number of loans to the Government of Panama's dictator, Omar Torrijos. Because commercial banks regard such information as proprietary information, I have been unable to document completely the extent of Marine Midland's participation and financial exposure in Panama. But I have found an advertisement from the Wall Street Journal of November 20, 1973, announcing a loan of $115,000,000 to the Republic of Panama consummated on October 19, 1973. I am told that there are other such loans. Perhaps Mr. Linowitz could give the details.

In the usual format of such advertisements, the amount of exposure of each participating bank is not listed. However, Marine Midland is listed as a participant, along with Chase Manhattan, Bankers Trust, First National City Bank, First National Bank of Chicago, and others.

Mr. President, I ask unanimous consent that the advertisement from the Wall Street Journal of November 20, 1973, be printed in the RECORD at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

(See exhibit 2.)

Mr. HELMS. Mr. President, the mere fact of the existence of Marine Midland's financial commitment to the Government Panama would be sufficient to question the propriety of a man who sits on Marine Midland's executive committee participating in the negotiations. It is unfortunate that the Senate had no opportunity to question Mr. Linowitz. But when one inquires into the actual situation in Panama, far deeper questions arise.

For the fact is that the Panamanian Government is presently in a deep financial crisis as a result of its own mismanagement, and the international banking community has grave doubts whether the outstanding indebtedness incurred by Torrijos can be paid. Moreover, if the Torrijos government falls because of its financial crisis, it could well mean the end of the bankers' paradise created by Torrijos which provides the United States and other banks with a haven for international financial transactions outside the United States.

To be brief, Mr. President, when Omar Torrijos took over Panama in a military coup, he reorganized the banking laws of the country in 1970, following the advice of the New York banking community. The new laws were so favorable that the banking industry in Panama went through a startling expansion from what was then a few banks with assets of a few millions of dollars, serving only Panama's small economy. Today, only 6 years later, there are 73 banks in Panama, with assets of $8.6 billion, involved in transactions throughout the world. In Panama, such transactions are free of taxation and enjoy other advantages. A banking office in Panama is like the flag of convenience which Panama offers to the world merchant marine.

Needless to say, Mr. President, Marine Midland is among those banks which take advantage of those transactions with an office in Panama.

Is it inconceivable, Mr. President, that the longevity of the regime of the dictator who set up this bankers' paradise is a matter of some concern to the executive committee of Marine Midland Banks, and to their colleagues in associated banking institutions?

Of course, even in a paradise, there have been some drawbacks. The principal drawback has been the insatiable appetite of the Torrijos regime for money. The indebtedness of the Republic of Panama has risen from some $167 million when Torrijos took over to an estimated $1.5 billion today. Not all of that is from commercial banks, of course. A great deal is from bilateral and multilateral lending institutions. Again it is difficult to obtain accurate figures for the current year. But the most recently available statistics from the World Bank show that at the beginning of 1975, commercial banks provided half the lending.

Moreover, a document leaked recently from Panama's Department of Planning, states that debt service alone will take 39 percent of Panama's budget in 1977—versus 7 percent in the United States—that the deficit alone may be as high as $139 million and that to refinance loans falling due, combined with the deficit, will require $324 million this year. The key paragraph in the memorandum states, in translation:

> We feel it will be extremely difficult to syndicate loans with the commercial banks in the amounts previously mentioned, taking into account that during the present fiscal period we must contract for a total of B/ 323.6 million ($323.6 million) with those sources, who in turn have become more demanding each time that an accord has to be finalized. Besides the relation between servicing the debt and current revenues of between 38.9% and 39% suggest a deteriorated capacity to service this debt and thus will increase the risk as realized by the lending institutions.

The financial crisis in Panama has been aggravated by governmental intervention into the economy with counterproductive measures, such as minimum wages, rent control, and price supports, all of which have priced Panama's exports out of the world market. A confidential memorandum sent to the Department of State by the U.S. Embassy in Panama last October had this to say:

> Economic conditions in Panama worsened steadily during the 1976 first half. There were decreases from a year ago in key indicators . . . overall growth is likely to be near zero for 1976.

Moreover, even the extraordinary upsurge of Panama's worldwide indebtedness has failed to prop up a sagging and mismanaged economy. The confidential State Department memo points out that the increase in foreign loans has made matters worse, not better:

> Increased external financial flows per se, regardless of concessionality, permit Panama to defer grappling with the core problem of low productivity until a later date when the problem will probably have worsened, unless such financing bears specifically on some aspect of costs. Indeed, much of the capital inflow of the past three years has aggravated Panama's economic malaise by exacerbating its debt service burden without enhancing overall productivity.

Mr. President, I ask unanimous consent that a translation of the memorandum from the Ministry of Planning of Panama and a copy of the State Department memorandum of October 26, 1976, be printed in the RECORD at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

(See exhibits 3 and 4.)

Mr. HELMS. Mr. President, the interest of Marine Midland goes beyond the normal proprietary interest which a lending institution has in a loan it has extended. The series of loans from private banks has been used to prop up an incompetent dictatorial regime; the regime for its part has returned the favor by providing a haven for the banks to expand their international operations. But the whole mutual arrangement depends upon the personal favor of the dictator who has complete control, General Torrijos. If Torrijos falls, no one can tell what kind of a government will follow.

But the banks have just about reached the limit in the amount of credit they can extend. New sources of funding the Torrijos government must be found if the present beneficial environment for the bank is to continue. The treaty negotiations have been talking about a $40 million annual payment from the United States to Panama under the new treaty.

Mr. President, is it beyond reason that the members of the banking fraternity involved in Panama are looking to the proposed surrender of U.S. sovereignty and territory in the Canal Zone as a way of propping up the Torrijos regime and providing increased revenues to his government? Is it not fair to ask whether the short range interests of those financial institutions might not be subordinated to the long-term interests of the United States?

I have many friends in the banking industry, and was closely associated for a time with the industry in my State, and I am not trying to impugn their motives. But in international situations, it is no easy matter to separate personal interests and national interests, and to make objective judgments.

For example, I think that anyone who thinks that the best way to assure stability in Panama is to give away the Panama Canal is making a disastrous mistake. Similarly, anyone who thinks we can defend the Panama Canal if we only have a status-of-forces treaty with Panama is making a big mistake. Moreover, anyone who thinks that appeasement of a left-wing dictator will provide a base for enduring relations with Panama is making a terrible mistake.

But these are judgments that will ultimately come to the Congress of the United States for debate. Meanwhile, it seems to me that it is a grave error to have a banker who is in bed with Torrijos negotiate the proposed treaty. I regret that Mr. Linowitz' nomination bypassed the usual path of advise and consent in the Senate.

Had Mr. Linowitz' nomination come before the Senate, there would have been the opportunity to question Mr. Linowitz about 18 U.S.C. 208, which says in part:

> Whoever, being an officer or employee of the executive branch of the United States Government, of any independent agency of the United States, or of the District of Columbia, including a special government employee, participates personally and substantially as a government officer or employee, through decision, approval, disapproval, recommendations, the rendering of advice, investigation, or otherwise, in a judicial or other proceeding, application, request for a ruling or other determination, contract, claim, controversy, charge, accusation, arrest, or other particular matter in which, to his knowledge, he, his spouse, minor child, partner, organization in which he is serving as officer, director, trustee, partner, or employee, or any person, or organization with whom he is negotiating or has any arrangement concerning prospective employment, has a financial interest—
>
> Shall be fined not more than $10,000 or imprisoned not more than two years, or both.

Had such questioning been possible, perhaps the Nation would have learned what steps Mr. Linowitz intended to take to avoid a conflict of interest, or the appearance of conflict of interest, as the case may be. He certainly is an employee, or a special employee; he is participating personally and substantially; he is making decisions and recommendations and rendering advice; it is a particular matter in which an organization of which he is a director has a financial interest—in fact two organizations of which he is a director. The American people deserve to know how he will avoid a conflict.

It is worth pointing out that only a week ago, U.S. Attorney General Griffin B. Bell quite properly informed Mr. Charles Kirbo, the close friend and confidant of the President, that he would be classified as a "special employee" of the government whenever he gave advice to the President—even though he was receiving no compensation from the Government. General Bell's opinion was that the conflict-of-interest statutes prohibited Mr. Kirbo, as a "special employee", from giving advice to the President on any matter in which he had a financial interest.

If this is true of Mr. Kirbo, who is not even officially employed by the Government, is it not proper to ask whether it applies to Mr. Linowitz, who has been sworn in as an ambassador and "special representative" of the President?

Mr. President, until these matters are resolved, it is inappropriate for Mr. Linowitz to participate in the negotiations. Indeed, because of press reports that substantive progress has been made during the past week toward a treaty draft, it could well be that any treaty draft ultimately produced, even if Mr. Linowitz resigns, will be fatally flawed. A controversial treaty that has the appearance of being tainted by special interests does not deserve the consideration of the Senate. Mr. Linowitz should voluntarily stand aside, and offer an explanation to the American people and the Congress.

Mr. President, I ask unanimous consent that an article from the Washington Post, "Carter Confidant Is Ruled Subject to Conflict Curbs," of February 15, 1977, be printed in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

(See exhibit 5.)

MEMORANDUM

TO Eng. Demetrio B. Lakas, President of the Republic, Presidency of the Republic.
From Nicolas Arditto Barleta, Planification Minister.
Matter Financial perspectives for 1977.

The purpose of this Memorandum is to call attention to the financial basis upon which will be defined the budget policy of 1977 thus permitting to show the pertinent limitations that are being detected in this year's budget.

(a) The current revenues should increase between B/ 43.6 million and B/ 44.2 million with respect to this year's revised income figures thus reaching totals of B/ 339.7 million or B/ 333.3 million; dependent on whether or not there is a recuperation in the economic activity during the last six months of this year.

(b) The increase in current revenues assumes an economic upturn of 3% and an inflation rate of 5% throughout 1976.

(c) It also assumes a B/ 21.0 million package increase of taxes which should not interfere significantly in the desired economic recuperation process.

(d) The technical group involved in this evalution has concluded that the following are the tributary measures that would fill the above requirements:

A consumer tax designed in such a manner as to minimize its effect on prices and on lower income groups. This type of taxation tends to divert private expenditure towards investments, thus stimulating economic development.

Reform import duties in order to replace specific value taxes by value added duties. This measure will adjust the increase of tax income to the increased cost of imported goods, and will thus help to stimulate internal production.

Limit the tax deduction permitted on interest paid for mortgage loans used to buy homes for one's personal use.

Consolidate the progressive tax structure for corporations into one tax rate in order to avoid the use of numerous companies to lower the effective tax rate.

(e) At the same time, operational expenses are estimated to increase from between B/ 50.3 million and B/ 50.7 million and will reach totals of B/ 340.6 million or B/ 341.0 million, depending on how the economy is reactivated during the second semester of this year.

(f) The fact that the increase in revenues will be inferior to the increase in expenses suggest that there will virtually be no new recourses to augment the coverage of public services.

(g) The significance of the rigidity to which the new budget elaboration will be subjected will be understood when one observes that only B/ 3.1 million will correspond to net reincorporations of previously frozen expenditures, while the remaining B/ 47.2 million correspond to commitments of an obligatory nature.

(h) These commitments of an obligatory nature can be broken down in the following manner:

(1) From between B/ 42.3 million to B/ 42.7 million for servicing the foreign debt which will increase from between B/ 87.5 million to B/ 129.8 million or B/ 130.2 million in 1977, depending on whether or not the economy recuperates during the last semester. Interest will increase from between B/ 24.8 million or B/ 25.2 million, depending on the above observation, while the

amortizations will be increased by B/ 17.5 million. Due to the tendency required to service the foreign debt, its ratio in respect to current revenue increases from 29.6% to between 38.2% and 39.0% which significantly deteriorates our capacity for further endebtedness.

(2) B/ 2.3 million of the amortization of salaries are for:

Education—B/ 1.4 million.
Health—0.4 million.
Housing—0.1 million.
Other institutions—0.4 million.

(3) B/ 1.3 million of current transferences which reflex the increase in subsidy to the National University, the payment of Balboa notes subscribed to BID and the increased consumption of water.

(4) E/ 0.4 million in salary increases to:
Health—0.3 million.
Government and Justice, Labor ——.
Presidency—0.1 million.

(5) B/ 0.3 million for the XIII the month of public functionaries.

(6) B/ 0.2 million for inclusion in the MIDA budget for personnel frozen in its investment portion of said budget and for the hiring of new auditors for the Finance Ministry.

(7) B/ 0.4 million in order to bolster the supply budget of the Health Ministry and other compulsory expenditures.

(i) Since, for the above reasons, all other expenses must be maintained at the budgeted fiscal 1976 level, it is convenient to eliminate from the budgeting process all programmed budgeting meetings in order that the respective institutions and our analyst can dedicate the most amount of their time possible to formulate, evaluate and turn in punctually their budget by program.

(j) As to the Central Government contribution towards the public investment program, we calculate that it will be B/ 78.0 million which represents an increase of B/ 18.0 million over the B/ 60.0 million that is estimated will have been contributed this year.

(k) As a result, the global deficit will be between B/ 131.9 million and B/ 138.7 million, depending on how well the economy recuperates during the second semester.

(l) To finance this deficit we will require B/ 15.6 million from the Venezuelan Investment Fund, B/ 5.0 million in Internal Bonds, and from B/ 111.3 million to B/ 118.7 million from the private banks.

(m) Thus, the amounts that must be financed as well as the amounts that must be obtained, create very concrete problems which in turn reiterate the need to increase expenses and investments only in those areas of an obligatory nature and to dedicate the most of time possible to the conscientious elaboration of a budget by programs in order to execute the largest possible amount of services required by our society with the scarce resources that are available.

(n) On the one side, the required new financing of between B/ 131.9 million and B/ 138.7 million implies that there will be pressure on the liquidity and solvency of the National Bank which must provide the Central Government the monetary resources while the 3 previously mentioned financial operations can be formalized, all of which should take at least four months. During this period, the National Bank will have to recur to its lines of credit as well as to its internal reserves which have been practically saturated during the present year by having to finance the global deficit of B/ 99.3 million which in turn is between B/ 32.6 million and B/ 39.4 million less than what has been estimated for 1977.

(n) On the other hand, we feel it will be extremely difficult to syndicate loans with the commercial banks in the amounts previously mentioned, taking into account that during the present fiscal period we must contract for a total of B/323.6 million with those sources, who in turn have become more demanding each time that an accord has to be finalized. Besides, the relation between servicing the debt and current revenues of between 38.9% and 39% suggest a deteriorated capacity to service this debt and thus will increase the risk as realized by the lending institutions.

(o) In short, 1977 lines up as extremely delicate due as much to current expenses increasing more than current revenues, as well as to the amount and structure of the new financing that must be contracted which reaches the limits available to the Nation as such.

(p) As a result of the above, I respectfully request your backing in eliminating the budgeting meetings and in demanding from the institutions that they pay the most attention to formulating and elaborating a budget by program. Also, I ratify the need for you to back the approval and execution of the taxing measures that we have presented for your consideration, once that we have finalized the pertinent studies.

With by highest consideration and appreciation.

Subject: Panama's Recession Is Structural—A Result of Low Productivity.

1. This message is part of a continuing series of mission economic studies of the State of the Panamanian economy and projections for its future.

2. Summary: Panama's recession, which deepened during the first half of 1976, is neither cyclical nor primarily a product of economic conditions outside Panama. In our view the economy is floundering mainly because its high cost output is not competitive in the world market and few opportunities exist for available private investment. To establish a basis for renewed subtainable growth will require actions that lead to lower costs and improved productivity. These could include easing the labor code, reducing subsidies, boosting domestic savings, and directing resource flows more toward the international service sector where Panama has natural advantages, however, most such actions would cut back social benefits granted to the working classes under the "revolution", and might not be politically acceptable under the present government, inflows of foreign capital have not been getting at the core problem of high costs (low productivity). Lack of access to relevant Canal Zone sites is delaying GOP development of infrastructure which is prerequisite to the growth of various commercial services industries by the Panamanian private sector. End summary.

3. Economic conditions in Panama worsened steadily during the 1976 first half. There were decreases from a year ago in key indicators—manufacturing, construction, external trade, unemployment, (increase), and sales to the Canal Zone (see reftel), overall growth is likely to be near zero for 1976.

4. Failure of the economy to respond to a variety of stimulants indicates that the recession is more than a cyclical maladjustment. Credit has remained relatively plentiful, with preferential rates available from the government for both agricultural and industrial projects. There are tax subsidies for new exports, and tax benefits for reinvested profits. No basic changes have been made in the "rules of the game" under which business operates, such as the labor code or tax laws, since before the onset of recession. In fact, the GOP in recent months has actively sought by various direct means to improve the business climate. A large boost in 1975 public sector spending had little effect on either private investment or aggregate demand.

5. Also, Panamanian economic problems do not seem to be caused primarily by worldwide economic trends or world trade. In contrast to Panama's continuing decline, other developing countries (LDC's) have been experiencing a quickening economic tempo so far this year in response to rapid recovery by the industrialized countries, plus some correction of structural maladjustments, LDC exports have been generally increasing as a part of the marked improvement in 1976 first half world trade (plus 10 percent) while the value of Panamanian exports remained at its 1975 level (excluding an abnormal decline in petroleum products exports), changes in Panama's economy also differed from the worldwide pattern both during the 1974–75 world recession and the years immediately preceding it. Despite sharp 1974–75 recession among the industrialized countries (zero growth), LDCs' gross domestic product (GDP) increased 5.5 percent in 1974 and 1.7 percent in 1975. Growth had begun tapering off in 1971 whereas during 1971–73 the rest of the world including Latin America experienced unprecedented boom.

6. Private investment in Panama reached a peak in 1971. Growth in manufacturing began to fall off in 1971 with a decline in the number of attractive import substitution possibilities, little increase has subsequently taken place in the volume of manufactured exports, output of both construction materials and intermediate goods stopped expending in 1973. Expansion of construction activity began slowing in 1972 and has actually been declining since 1974. Imposition of rent controls in 1973 brought private investment in low cost housing to a standstill. On the other hand, growth of the important services sector remained near 8 percent annually through 1974 (plus 3 percent in 1975) due in part to the major expansion of the foreign banking sector since 1971, growth in agricultural output has remained sluggish since 1970 at about 3 percent annually, much slower than during the 1960's.

7. Panama's basic economic weakness in our view and the reason behind current stagnation is its non-competitiveness in the world market—a structural problem involving primarily high cost production (coupled with a lack of resources) in both agriculture and industry. The export potential for Panamanian agriculture is extremely limited at present, the main exports, bananas, is in the hands of foreign plantation operators, and has probably reached its peak in an increasingly competitive world market. In general, land is of poor quality and farm labor costs are high—the $3 per day minimum wage is estimated to be at least double the rate anywhere else in Central America. The government encourages high cost production, including rice, the principal crop, by subsidizing producers through support prices typically set above the world market. Thus, Panama cannot profitably export major crops such as rice and corn and is further precluded from developing any profitable export potential for various lesser crops by the small domestic market base in Panama. Accessible forests have been cut over and there is little potential for meat exports while access to the U.S. market is restricted. Panama's sugar industry is likewise non-competitive due to high costs of both cane production and refining operations.

8. As with agriculture, Panama's manufacturing industry currently has little export or overall growth potential because of high production costs coupled with a dearth of natural resources (copper deposits have not yet been determined to be economically exploitable). Minimum wages and the general wage and benefit structure in Panama are estimated to be the highest in Central

America and among the highest in all Latin America. Higher wages and benefits in the Canal Zone exert upward pressure on wages in the republic as employers compete for the generally better qualified workers attracted by Zone wages. The dominance of the service sector in Panama's central urban areas with its higher skill levels also creates upward pressure on the entire wage and benefit structure. Employee benefits under Panama's labor code add to direct employment costs. The code exerts indirect pressures on costs through subsidies such as firing restrictions imposed on employers and, by strengthening the trade union movement, bolsters the trend toward costlier contract settlements. High labor costs encourage the substitution of capital for labor, thus boosting structural unemployment throughout the economy. Also, relative capital costs—mostly foreign sourced—are likely to rise as Panama's already high debt service burden worsens and the economic outlook for other LDCs improves relative to Panama.

9. Establishing the basis for renewed growth and improved economic well being that can be sustained will require actions that lead to a lower cost structure. One widely discussed possibility is an easing of the labor code, although its real impact on costs remains uncertain (it did not bring on recession although it may have stood in the way of needed private sector adjustments). Changes probably would not induce an immediate surge of private investment, however, the business community has made clear its conviction that changes are essential, giving them an additional psychological importance that bears importantly on the general investment climate. Changes might be a convincing sign of GOP concern over the private sector's economic plight.

10. Appropriate belt tightening also could include lowering subsidies as well as the wage/benefit structure to reduce relative production costs, and increasing personal taxes to curb consumption (particularly imports) and expand domestic savings. These effects are usually achieved indirectly by currency devaluation. Since Panama's currency is the U.S. dollar, such actions must be taken directly, in addition, resources may need to be more heavily concentrated in the internationally-based services sector where Panama has more natural advantages, with proportionately less in agriculture and the non-productive social sectors.

11. Comments:

(A) Panama's high wages, subsidies, and consumer imports—together with a moderate tax burden and little public saving—permit a standard of living which no longer appears to be supportable by Panama's inefficient domestic production.

(B) Increased external financial flows per se, regardless of concessionality, permit Panama to defer grappling with the core problem of low productivity until a later date when the problem will probably have worsened, unless such financing bears specifically on some aspect of costs. Indeed, much of the capital inflow of the past three years has aggravated Panama's economic malaise by exacerbating its debt service burden without enhancing overall productivity. Moreover, total inflows greatly exceeded the current account deficity of Panama's balance of payments, resulting in large negative "errors and omissions" (around $100 million annually) most of which probably represented outflows of domestically-owned capital.

(C) The types of actions mentioned above for addressing Panama's high cost structure run headlong into the "revolution"—the social and economic benefits granted to the urban and rural working classes over the past eight years which would need to be reversed in party in short, the "revolution" has collided with growth and one or the other must yield, whether or not actions of sufficient scope to be economically meaningful along the above lines are politically possible for the present government is questionable.

(D) Panama's best economic prospects lie in the development of its potential as a sub for servicing international commerce, various aspects of cargo handling are an essential part of the picture. Thus, the GOP has a valid case in urging early access to relevant canal zone sites needed to develop the infrastructure on which growth of various transport, storage and other commercial services. . . .

[From the Washington Post]

CARTER CONFIDANT IS RULED SUBJECT TO CONFLICT CURBS

(By Morton Mintz)

SEATTLE, February 14.—Attorney General Griffin B. Bell said today that presidential confidant Charles Kirbo is subject to federal conflict-of-interest laws because under a strict, 14-year old statute, he is a "special employee" of the government.

Kirbo "is a special employee every time he advises the President," Bell told a news conference here, where he is attending the American Bar Association's winter meeting. No one can give the government advice "as a friend," Bell said; in this context, "there's no such thing as a friend."

Bell also said it makes no difference under the statute that Kirbo, a partner in King and Spalding, the Atlanta law firm Bell left to become Attorney General, is not paid for advising President Carter.

Bell said he told Kirbo last November that he is in special-employee status, which prevents him from advising Carter or anyone else in government about any matter in which he or the law firm has a financial interest.

So far as is known, no friend of a past President who has provided unpaid advice in the White House has been formally classified as a special employee. The statute making such an employee subject to the conflict-of-interest laws took effect in January, 1963, during the Kennedy administration.

Charles G. (Bebe) Rebozo, for example, was a close confidant of President Nixon, but was not known to have been classified as a special employee.

In Atlanta, Kirbo confirmed to reporters that he is in special-employee status, although he collects neither a possible $100-a-day consultant's fee nor expenses when he comes to Washington.

When he comes to the White House, he said, he tries to help Carter carry out his campaign commitments and proposals, although at times he simply listens to the President.

The primary restraint of his special-employee status, he said, is that "you can't give any advice on any matter you have an interest in."

Bell, responding to reporters' questions, said that to avoid any possible conflict from arising out of his former partnership in King and Spalding he will, within a few days, provide Justice Department officials with a list of all of the law firm's clients. He said reporters will be able to see the list, which includes numerous large corporations.

Bell, who met with reporters after speaking briefly to the ABA's House of Delegates, said that Carter soon will issue an executive order creating commissions to propose candidates, on the basis of merit, for vacancies on U.S. courts of appeals.

Bell said the order will allow the commissions to propose their own candidates, rather than be bound to names submitted by senators from affected states.

The number of vacancies shortly will reach six. For each one, a commission will propose five names to the President, who will choose one for final nomination to the Senate. Each affected state will be represented on the commissions, each of which will have 11 members.

Some members will be laymen. Bell said that the draft White House order does not prohibit judges from being members, but that he doesn't know if Carter will agree with a suggestion for inclusion of judges that was made to the ABA Sunday by Chief Justice Warren E. Burger.

All told, there will be 13 commissions—one for each of nine circuits, and two each for the huge fifth and ninth circuits in the South and Far West.

In his talk to the House of Delegates, Bell pleaded for a delay until the August meeting of the ABA's policy-making body on pending resolution to overhaul the federal grand jury system.

By August, Bell said, he will have completed a review of the proposals. One of them would allow counsel to accompany witnesses in the grand jury room. At least tentatively, Bell said, he feels that this proposal would convert grand jury proceedings into secret trials, with the result that prosecutors would try to bypass grand juries and file charges by themselves.

QUORUM CALL

Mr. HELMS. Mr. President, I yield back such time as I may have remaining, and I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business, for not to exceed 10 minutes, for the purpose only of the entry of statements, bills, resolutions, petitions, and memorials into the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

Is there morning business?

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The VICE PRESIDENT. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF MR. PERCY TOMORROW

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on tomorrow, after the orders previously entered for the recognition of Senators have been consummated, Mr. PERCY be recognized for not to exceed 15 minutes.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGES FROM THE PRESIDENT

Messages from the President of the United States were communicated to the

Senate by Mr. Marks, one of his secretaries.

EXECUTIVE MESSAGES REFERRED

As in executive session, the Vice President laid before the Senate messages from the President of the United States submitting sundry nominations which were referred to the Committee on Foreign Relations.

(The nominations received today are printed at the end of the Senate proceedings.)

MAJOR REVIEW OF WATER RESOURCE PROJECTS—MESSAGE FROM THE PRESIDENT—PM 40

The Vice President laid before the Senate the following message from the President of the United States, which was referred to the Committee on Environment and Public Works:

To the Congress of the United States:

During the campaign I committed myself to a prudent and responsible use of the taxpayers' money and to protection of the environment. Today I am announcing a major review of water resource projects which will further both commitments.

Water development projects have played a critical role in developing the economy of this Nation. But many of the 320 current projects approved in the past under different economic circumstances and at times of lower interest rates are of doubtful necessity now, in light of new economic conditions and environmental policies. At this point, based upon information thus far developed by the Council on Environmental Quality, the Office of Management and Budget and the Interior Department, I have identified 19 projects which now appear unsupportable on economic, environmental, and/or safety grounds. I have attached a list of these projects. I am recommending at this time that no funds be provided for these projects in FY 1978.

I am instructing Secretary of the Interior Andrus and Secretary of the Army Alexander, working together with the Office of Management and Budget and the Council on Environmental Quality, to carry out a complete evaluation of these 19 projects and of all other water resource projects and to develop comprehensive policy reforms in this critical area. They will report back to me and to the Congress by April 15.

This review will give us the necessary facts upon which to make certain that only projects which are economically and environmentally sound will receive final approval. The FY 1978 budget reductions for the deleted projects amount to $289 million. Total potential savings from these deleted projects would amount to $5.1 billion.

I look forward to working closely with Congress to develop a coherent water resource policy.

We must work together to achieve our national goals of adequate water supplies, a sound transportation system and needed flood protection. In doing so, we must make certain that our investments are cost-effective, that the cost burdens are equitably borne, and that the environment is protected.

JIMMY CARTER.

THE WHITE HOUSE, *February 21, 1977.*

WATER PROJECTS DELETED FROM FISCAL YEAR 1978 BUDGET

(Alphabetical by State)

CORPS OF ENGINEERS

Cache Basin (Arkansas).
Richard B. Russell Project (Georgia).
Freeport (Illinois).
Grove Lake (Kansas).
Dayton (Kentucky).
Paintsville Lake (Kentucky).
Yatesville Lake (Kentucky).
Atchafalaya River & Bayous Chene, Boeuf & Black (Louisiana).
Dickey-Lincoln School Lakes (Maine).
Meramec Park Lake (Missouri).
Lukfata Lake (Oklahoma).

BUREAU OF RECLAMATION

Central Arizona Project (Arizona).
Auburn-Folsom South, Central Valley Project (California).
Dolores (Colorado).
Fruitland Mesa (Colorado).
Savery-Pot Hook (Colorado, Wyoming).
Garrison Diversion Unit (North Dakota, South Dakota).
Oahe Unit (South Dakota).
Central Utah Project, Bonneville Unit (Utah).

REVISIONS TO THE 1978 BUDGET—MESSAGE FROM THE PRESIDENT—PM 41

The Vice President laid before the Senate the following message from the President of the United States:

To the Congress of the United States:

I am presenting today proposed changes in the 1978 budget.

Although I have not been able to analyze this budget in depth, these proposals do differ significantly from those of the previous administration.

Proposals have been rejected that would have needlessly added to the burden on the elderly and those who depend upon medicare, medicaid, and food programs.

I have withdrawn proposals that would have placed further financial strain on State and local governments.

Changes are included that will help us move more quickly to meet our commitments in such vital areas as the environment, education, and housing; and I am introducing measures that will help us control unacceptable inflation in medical costs.

The planned increase in defense spending, has been reduced while our real military strength is enhanced.

Revisions have been made that reflect new priorities for water resources development and also for energy, placing greater emphasis on conservation, development of nonnuclear power sources, and expanding our petroleum storage program. Later in the spring, work with the Congress will be completed on a comprehensive, long-range national energy policy.

This budget includes the economic stimulus package, which will reduce unemployment and promote steady, balanced economic growth. The package, which has been slightly changed since it was first presented to the Congress last month, provides for $15.7 billion in tax reductions and increased outlays in 1977 and $15.9 billion in 1978. It includes a $50 per capita rebate on personal income taxes; an increase in the standard deduction; reduction in business taxes to stimulate employment and provide incentives for investment; expansion in training and employment programs; increases in public works funding; and additional money for countercyclical revenue sharing grants to State and local governments.

I am also asking the Congress to extend the supplemental payments program, which is now expiring, so that unemployed workers will be able to to qualify through the end of this year for up to 52 weeks of unemployment benefits.

There are several important goals which these revisions do not reflect, because my administration has not yet had time to review all current tax and spending programs or fully prepare our own proposals. The 1978 budget is essentially still President Ford's budget, with only such limited revisions as my administration has had time to make. But these revisions do reflect our careful choices among many possible options; they are important first steps toward a Federal Government that is more effective and responsive to our people's needs.

Last year, spending estimates were too high, and economic policymaking was adversely affected. Because time did not permit detailed review of the current estimates, I have instructed the Office of Management and Budget to make a thorough review of these estimates. The Congress will be informed of any resulting revisions.

The revised budget outlined in this document continues to reflect the current overlapping and unwieldy structure of the Federal Government—a structure I intend, with the help of the Congress, to simplify and improve.

Although it has not been possible in these revisions to the 1978 budget, future budgets will reflect detailed, zero-based reviews of Federal spending programs, comprehensive reform of the tax system, and fundamental reorganization of the Government.

JIMMY CARTER.

FEBRUARY 22, 1977.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the message from the President of the United States on budget revisions be referred jointly to the Committees on Budget and Appropriations.

The VICE PRESIDENT. Without objection, it is so ordered.

MESSAGE FROM THE HOUSE

At 2:12 p.m., a message from the House of Representatives delivered by Mr. Hackney, one of its clerks, announced that the Speaker has made the following appointments:

Mr. STARK as a member of the Federal Council on the Arts and the Humanities; and

Mr. BURLISON of Missouri and Mr. FRENZEL as members of the Federal Records Council.

COMMUNICATIONS FROM EXECUTIVE DEPARTMENTS, ETC.

The PRESIDING OFFICER laid before the Senate the following communications which were referred as indicated:

EC–672. A letter from the Acting Comptroller General of the United States transmitting, pursuant to law, comments on nine new proposed rescissions and eight new deferrals, and five supplementary reports to previously proposed deferrals contained in the President's seventh special message for fiscal year 1977 (with accompanying papers); jointly, pursuant to the order of January 30, 1975, to the Committees on Appropriations, the Budget, Energy and Natural Resources, Foreign Relations, Armed Services, Banking, Housing and Urban Affairs, Small Business, Commerce, Science and Transportation, Finance, and Agriculture and Forestry, and ordered to be printed.

EC–673. A letter from the Chairman of the Indian Claims Commission transmitting, pursuant to law, a report of the final determination in respect to Docket No. 134, "The S'Klallam Tribe of Indians, Plaintiff, against the United States of America, Defendant" (with an accompanying report); to the Committee on Appropriations.

EC–674. A letter from the Assistant Secretary of Defense transmitting, pursuant to law, a report of the value of property, supplies, and commodities provided by the Berlin Magistrate, and under the German Offset Agreement, for the quarter October 1, 1976, through December 31, 1976 (with an accompanying report); to the Committee on Appropriations.

EC–675. A secret communication from the Assistant Secretary of Defense transmitting 45 selected acquisition reports (SAR's) and SAR summary tables for the quarter ending December 31, 1976 (with accompanying reports); to the Committee on Armed Services.

EC–676. A letter from the Under Secretary of the Air Force transmitting, pursuant to law, a copy of the Air Force report on experimental, developmental and research contracts of $50,000 or more, by company for the period July 1, 1976 through December 31, 1976 (with an accompanying report); to the Committee on Armed Services.

EC–677. A letter from the Director, Legislation, JAGC, U.S. Navy, Department of the Navy transmitting, pursuant to law, notice of the intention of the Department of the Navy to donate certain surplus property to the MIL–AERO Historical Library and Museum Association, 331 Seventh Street, Newport, Minn.; to the Committee on Armed Services.

EC–678. A letter from the Acting Assistant Secretary of Defense, Manpower and Reserve Affairs, reporting that the Defense Manpower Requirements Report for fiscal year 1978 will not be submitted on February 15, 1977 as required by law; to the Committee on Armed Services.

EC–679. A letter from the Chairman of the Federal Deposit Insurance Corporation transmitting a draft of proposed legislation to amend the Federal Deposit Insurance Act (12 U.S.C. 1811–31b), and for other purposes (with accompanying papers); to the Committee on Banking, Housing and Urban Affairs.

EC–680. A letter from the Chairman of the Securities and Exchange Commission transmitting, pursuant to law, the 42d annual report of the Securities and Exchange Commission covering the fiscal year July 1, 1975 to June 30, 1976 (with an accompanying report); to the Committee on Banking, Housing and Urban Affairs.

EC–681. A letter from the Secretary of Commerce transmitting, pursuant to law, the annual report of the activities of the Department of Commerce during fiscal year 1976 (with an accompanying report); to the Committee on Commerce, Science and Transportation.

EC–682. A letter from the Secretary of Transportation transmitting, pursuant to law, the annual report on the Railroad Rehabilitation and Improvement Fund and the Obligation Guarantee Fund for fiscal year 1976 and the transition quarter (with an accompanying report); to the Committee on Commerce, Science and Transportation.

EC–683. A letter from the Vice President of Government Affairs for the National Railroad Passenger Corporation (AMTRAK) transmitting, pursuant to law, the average daily number of passengers and the ontime performance of each train for the month of December, 1976 (with an accompanying report); to the Committee on Commerce, Science and Transporation.

EC–684. A letter from the Secretary of Transportation transmitting, pursuant to law, a report on the utilization of the authority to pay special pay to officers holding positions of unusual responsibility and of critical nature; to the Committee on Commerce, Science and Transportation.

EC–685. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, the Strategic Petroleum Reserve Plan of the Federal Energy Administration—Energy Action No. 10 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–686. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, a report monitoring changes in the refiner distribution and market shares of the statutory categories of refined petroleum products for the month of October, 1976 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–687. A letter from the Administrator of the Federal Energy Administration transmitting, pursuant to law, a report monitoring the changes in market shares of the statutory categories of retail gasoline marketers for October 1976—preliminary estimates, and September 1976—final (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–688. A letter from the Acting Assistant Secretary of the Interior transmitting, pursuant to law, a copy of an application by the Hildalgo County Water Control and Improvement District No. 1 of Edinburg, Tex., for a loan under the Small Reclamation Projects Act (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–689. A letter from the Acting Assistant Secretary of the Interior transmitting, pursuant to law, financial statements of the Colorado River storage project and participating projects for the fiscal year ended June 30, 1976 (with an accompanying report); to the Committee on Energy and Natural Resources.

EC–690. A letter from the Administrator of the General Services Administration transmitting, pursuant to law, a prospectus for alterations at the Washington, D.C., Federal Building 6, in the amount of $1,340,000 (with an accompanying report); to the Committee on Environment and Public Works.

EC–691. A letter from the Administrator of the General Services Administration transmitting, pursuant to law, a prospectus for alterations at the Hartford, Connecticut, Federal Building—U.S. Courthouse, in the amount of $1,450,000 (with an accompanying report); to the Committee on Environment and Public Works.

EC–692. A letter from the Administrator of the General Services Administration transmitting, pursuant to law, a prospectus for alterations at the Providence, R.I., Federal Building—U.S. Courthouse, in the amount of $1,665,000 (with an accompanying report); to the Committee on Environment and Public Works.

EC–693. A letter from the Secretary of the Treasury affirming his support of Treasury-proposed legislation which would provide the Treasury the authority to invest its excess operating cash in earning assets on a short-term basis for cash management purposes; to the Committee on Finance.

EC–694. A letter from the Secretary of the Treasury transmitting a draft of proposed legislation to authorize additional appropriations under title II of the Public Works Employment Act of 1976 (with accompanying papers); to the Committee on Finance.

EC–695. A letter from the Secretary of the Treasury transmitting a draft of proposed legislation to provide for a refund of 1976 individual income taxes and other payments, to reduce individual and business income taxes, and to provide tax simplification and reform (with accompanying papers); to the Committee on Finance.

EC–696. A secret communication from the Acting Staff Secretary of the National Security Council transmitting declassified versions of the arms control impact analyses on fiscal year 1978 Defense and ERDA programs which were submitted on January 18, 1977 (with accompanying papers); to the Committee on Foreign Relations.

EC–697. A letter from the Acting Assistant Secretary for Congressional Relations transmitting a draft of proposed legislation to authorize supplemental military assistance to Protugal for the fiscal year 1977, and for other purposes, and a report on the observance of human rights standards in Portugal (with accompanying papers); to the Committee on Foreign Relations.

EC–698. A letter from the Acting Assistant Legal Adviser for Treaty Affairs transmitting, pursuant to law, international agreements other than treaties entered into by the United States within the past 60 days—dated February 17, 1977 (with accompanying papers); to the Committee on Foreign Relations.

EC–699. A letter from the Deputy Comptroller General of the United States transmitting, pursuant to law, a report containing information for the calendar year 1976 concerning positions in the U.S. General Accounting Office in grades GS–16, 17, and 18 and their incumbents (with an accompanying report); to the Committee on Governmental Affairs.

EC–700. A letter from the Chairman of the District of Columbia Armory Board transmitting, pursuant to law, the 29th annual report and financial statements of the Board's operation of the District of Columbia National Guard Armory, and the 19th annual report and financial statements of the Board's operation of the Robert F. Kennedy Memorial Stadium for the fiscal year which ended June 30, 1976 (with accompanying report); to the Committee on Governmental Affairs.

EC–701. A letter from the Acting Assistant Secretary for Administration and Management for the Department of Health, Education, and Welfare transmitting, pursuant to law, copies of four reports on new systems of records, in accordance with the Privacy Act (with accompanying reports); to the Committee on Governmental Affairs.

EC–702. A letter from the Chairman of the District of Columbia Council transmitting, pursuant to law, a copy of Council Act 1–230, "An act to amend the Motor Vehicle Safety Responsibility Act of the District of Columbia and the District of Columbia Traffic Act, 1925, and for other purposes" (with accompanying papers); to the Committee on Governmental Affairs.

EC–703. A letter from the Chairman of the

Federal Deposit Insurance Corporation transmitting, pursuant to law, the Privacy Act System Inventory and Exemption Information report of the Federal Deposit Insurance Corporation on its implementation of the Privacy Act of 1974 for the year 1976 (with an accompanying report); to the Committee on Governmental Affairs.

EC–704. A letter from the Acting Assistant Secretary for Administration and Management for the Department of the Interior transmitting, pursuant to law, a report of a personal record system change, in accordance with the Privacy Act (with an accompanying report); to the Committee on Governmental Affairs.

EC–705. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, two copies of a Department of the Navy proposal on a new system of records entitled "Child Advocacy Program File" (with an accompanying report); to the Committee on Governmental Affairs.

EC–706. A letter from the Administrator of the General Services Administration transmitting, pursuant to law, two copies of a report describing a new system of records, in accordance with the Privacy Act (with an accompanying report); to the Committee on Governmental Affairs.

EC–707. A letter from the Comptroller General of the United States transmitting, pursuant to law, a report entitled "Issues Needing Attention in Developing the Strategic Petroleum Reserve" (with an accompanying report); to the Committee on Governmental Affairs.

EC–708. A letter from the Assistant Attorney General for Administration for the U.S. Department of Justice transmitting, pursuant to law, a report containing the statutory authority for the position, the name and date of appointment of the incumbent, and the title and grade of the position for the grades GS–16, 17 and 18 (with an accompanying report); to the Committee on Governmental Affairs.

EC–709. A letter from the Deputy Assistant Secretary of Defense transmitting, pursuant to law, two proposed new record systems reports submitted by the Department of the Air Force, in accordance with the Privacy Act (with an accompanying report); to the Committee on Governmental Affairs.

EC–710. A letter from the Administrator of the National Credit Union Administration transmitting, pursuant to law, a report on certain new and existing systems of records, in accordance with the Privacy Act (with an accompanying report); to the Committee on Governmenal Affairs.

EC–711. A letter from the Chairman of the Council of the District of Columbia transmitting, pursuant to law, a copy of Council Act 1–228, "An act to provide certain exhaust emission standards and equipment requirement for motor vehicles operated in the District of Columbia" (with accompanying papers); to the Committee on Governmental Affairs.

EC–712. A letter from the Chairman of the Railroad Retirement Board transmitting, pursuant to law, a copy of the annual report of the Railroad Retirement Board for the fiscal year ended June 30, 1976 (with an accompanying report); to the Committee on Human Resources.

EC–713. A letter from the Acting Chairman of the Federal Council on the Arts and the Humanities transmitting, pursuant to law, the Federal Council on the Arts and the Humanities first annual report for 1976 on the Arts and Artifacts Indemnity Act (with an accompanying report); to the Committee on Human Resources.

EC–714. A letter from the President of the Legal Services Corporation transmitting, pursuant to law, a copy of the Legal Services Corporation's first annual report (with an accompanying report); to the Committee on Human Resources.

EC–715. A letter from the Chairman of the Federal Home Loan Bank Board transmitting, pursuant to law, the Board's report for the calendar year 1976 (with an accompanying report); to the Committee on the Judiciary.

EC–716. A letter from the Acting Secretary of the Federal Trade Commission transmitting, pursuant to law, a report describing the Commission's Freedom of Information Act activities for calendar year 1976 (with an accompanying report); to the Committee on the Judiciary.

EC–717. A letter from the Administrator of the Law Enforcement Assistance Administration, Department of Justice, transmitting, pursuant to law, the second analysis and evaluation of Federal juvenile delinquency programs (with an accompanying report); to the Committee on the Judiciary.

EC–718. A letter from the Commissioner of the Immigration and Naturalization Service transmitting, pursuant to law, 1829 reports, covering the period of November 15 through December 30, 1976, concerning visa petitions which the Service has approved according the beneficiaries of such petitions third and sixth preference classification (with accompanying papers); to the Committee on the Judiciary.

EC–719. A letter from the Chairman of the Federal Election Commission transmitting, pursuant to law, the Federal Election Commission's fiscal year 1978 authorization request (with accompanying papers); to the Committee on Rules and Administration.

SEPARATION OF POWERS ANNUAL REPORT—REPT. NO. 95–24

Mr. ABOUREZK, from the Committee on the Judiciary, submitted the annual report of the Subcommittee on Separation of Powers, which was ordered to be printed.

ADMINISTRATIVE PRACTICE AND PROCEDURE—REPT. NO. 95–25

Mr. KENNEDY, from the Committee on the Judiciary, submitted a report entitled "Administrative Practice and Procedure," which was ordered to be printed.

ANNUAL REPORT OF THE SUBCOMMITTEE ON CONSTITUTIONAL RIGHTS—REPT. NO. 95–26

Mr. KENNEDY, from the Committee on the Judiciary, submitted the annual report of the Subcommittee on Constitutional Rights, which was ordered to be printed.

ANNUAL REPORT OF THE SUBCOMMITTEE ON REFUGEES—REPT. NO. 95–27

Mr. KENNEDY, from the Committee on the Judiciary, submitted the annual report of the Subcommittee on Refugees, which was ordered to be printed.

ANNUAL REPORT OF THE SUBCOMMITTEE ON ANTITRUST AND MONOPOLIES—REPORT NO. 95–28

Mr. KENNEDY, from the Committee on the Judiciary, submitted the annual report of the Subcommittee on Antitrust and Monopolies, which was ordered to be printed.

EXECUTIVE REPORT OF THE COMMITTEE ON FOREIGN RELATIONS

Mr. SPARKMAN. Mr. President, as in executive session, I report favorably from the Committee on Foreign Relations sundry nominations in the Foreign Service which have previously appeared in the CONGRESSIONAL RECORD and, to save the expense of printing them on the Executive Calendar, I ask unanimous consent that they lie on the Secretary's desk for the information of Senators.

The VICE PRESIDENT. Without objection, it is so ordered.

(The nominations ordered to lie on the Secretary's desk were printed in the RECORD of January 10, 1977, at the end of the Senate proceedings.)

INTRODUCTION OF BILLS AND JOINT RESOLUTIONS

The following bills and joint resolutions were introduced, read the first time and, by unanimous consent, the second time, and referred as indicated.

By Mr. McGOVERN (for himself, Mr. ABOUREZK, Mr. BROOKE, Mr. CLARK, Mr. HATFIELD, Mr. HUMPHREY, Mr. LEAHY, Mr. MELCHER, Mr. METCALF, and Mr. NELSON):

S. 752. A bill to foster and continue the family farm in the United States by providing young farmers with the necessary assistance to purchase family farm units, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. HUMPHREY (for himself and Mr. BAYH):

S. 753. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Finance.

By Mr. KENNEDY (for himself, Mr. SCHWEIKER, Mr. WILLIAMS, Mr. RANDOLPH, Mr. PELL, Mr. HATHAWAY, Mr. RIEGLE, and Mr. STAFFORD):

S. 754. A bill to amend the Public Health Service Act to extend through the fiscal year ending September 30, 1978, the assistance programs for health services research; health statistics; medical libraries; cancer control programs; the National Cancer Institute; heart, blood vessel, lung, and blood disease prevention and control programs; the National Heart, Lung, and Blood Institute; and National Research Service Awards; and for other purposes; to the Committee on Human Resources.

By Mr. KENNEDY (for himself, Mr. SCHWEIKER, Mr. WILLIAMS, Mr. JAVITS, Mr. RANDOLPH, Mr. PELL, Mr. NELSON, Mr. HATHAWAY, Mr. RIEGLE, and Mr. STAFFORD):

S. 755. A bill to amend the Public Health Service Act to extend through the fiscal year ending September 30, 1978, the assistance programs for comprehensive public health services, migrant health, community health centers, hemophilia programs, national health planning and development and health resources development; to amend the Community Mental Health Centers Act to extend it through the fiscal year ending September 30, 1978; and for other purposes; to the Committee on Human Resources.

By Mr. McINTYRE (for himself, Mr. PROXMIRE, and Mr. BROOKE):

S. 756. A bill to extend the authority for the flexible regulation of interest rates on deposits and accounts in depository institutions; to the Committee on Banking, Housing and Urban Affairs.

By Mr. GRAVEL:

S. 757. A bill to terminate the airlines mutual aid agreement; to the Committee on Commerce, Science, and Transportation.

By Mr. STONE (for himself and Mr. CHILES):

S. 758. A bill to amend the Immigration and Nationality Act of 1952; to the Committee on the Judiciary.

By Mr. ABOUREZK:

S. 759. A bill for the relief of Badr Ahmed Awadh; and

S. 760. A bill for the relief of Duane G. Wegner; to the Committee on the Judiciary.

By Mr. JOHNSTON (for himself and Mr. LONG):

S. 761. A bill to extend for 1 year the Rice Production Act of 1975; to the Committee on Agriculture, Nutrition, and Forestry.

By Mr. MATHIAS:

S. 762. A bill entitled "The Congressional Ethics Act of 1977"; to the Committee on Rules and Administration.

By Mr. ALLEN:

S.J. Res. 25. Joint resolution proposing an amendment to the Constitution of the United States with respect to the terms of office and method of selection of judges of the Federal courts; to the Committee on the Judiciary.

STATEMENTS ON INTRODUCED BILLS AND JOINT RESOLUTIONS

By Mr. McGOVERN (for himself, Mr. ABOUREZK, Mr. BROOKE, Mr. CLARK, Mr. HATFIELD, Mr. HUMPHREY, Mr. LEAHY, Mr. MELCHER, Mr. METCALF, and Mr. NELSON):

S. 752. A bill to foster and continue the family farm in the United States by providing young farmers with the necessary assistance to purchase family farm units, and for other purposes; to the Committee on Agriculture, Nutrition, and Forestry.

YOUNG FARMERS HOMESTEAD ACT AND THE AG-LAND TRUST

Mr. McGOVERN. I send to the desk for appropriate reference the Young Farmers Homestead Act—1977.

Mr. President, last year I introduced this same measure. It did not receive congressional action but hearings were held and the bill was clearly established by level of interest alone as a major innovation in the concept of land tenure. Various groups and individuals made unprecedented numbers of requests for copies of the bill and the explanatory remarks that I as well as other Senators made at the time it was introduced. In all, my office processed over 7,000 reprints from the CONGRESSIONAL RECORD. Letters alone from all over the country numbered more than 3,000. During the course of last year, Parade magazine, the Sunday supplement, carried an explanation of the legislation and over the course of the next 3 weeks, I had over 700 requests for details.

Mr. President, one might justly ask why I am making the above recitation. The simple answer is that the concepts contained in the Young Farmers Homestead Act are concepts whose time has arrived. If this Congress is going to make a commitment in support of rural life, then it is going to have to depart from conventional schemes of land purchasing. Though the Farm Credit Administration, the Federal Land Banks, the Farmers Home Administration, as well as the commercial banks and insurance companies deserve the full measure of social debt we owe them for past performance, it simply is not possible to enter farming today using the time honored credit tools of the past. Farming has never been an exclusive club for the landed gentry and it should not be.

If we do not move, however, the day will come in our own lifetime when only the sons or sons-in-law of rich farmers can perpetuate the breed. I, for one, view this as a highly undesirable social goal. Large problems can only be solved by bold and innovative initiatives. The Young Farmers Homestead Act is both bold and innovative. It is an idea whose time has arrived.

Mr. President, at hearings on this act held last year some segments of the banking community were critical because they viewed it as creeping socialism since it contains the provision for the Government to hold temporary title to land through a quasi-governmental corporation.

I should point out that many of the bankers serving the direct credit needs of farmers in my State and others recognize the need to expand the opportunities to get young people started in farming. They know the need for operating and expansion capital will bring this country's homesteaders through their doors just as homesteaders of the last century did to provide the basis for the formation of viable rural communities. They also know that the trend toward increasingly larger farms tends to cause search for capital to move away from the local hometown bank to large institutions in the financial centers of the Nation.

In contrast to the positive attitude displayed by our smaller banking establishments we should take note here of the response of some of the largest. They also recognize that this bill is an idea whose time has come. The Wall Street farmers represented by the eighth largest bank and the Nation's biggest brokerage house are attempting to foist off their Ag-Land I plan under the guise of a plan to help young farmers get started. But the corporate homesteaders left out the essential element. They neglected, not through oversight, but by design to provide for the eventual ownership of a piece of land. Ag-Land I and its successors will provide, not a stake in the future, but a throwback to a darker past.

The differences in the plan offered by the giants of the financial world and the plan outlined in this bill can best be illustrated by a close examination of who receives whatever benefits can be derived from the increases in land values. We know that prices for farmland increased last year an average of 33 percent in central Corn Belt States. In my own State, in spite of serious problems with drought, they jumped 17 percent. Under the modest proposal we are offering here today those increases would go toward helping the beginning farmer build an equity. On the other hand, the Wall Street farmers readily admit that their "game" is to use the sweat of the tenant farmer to line their own pockets.

Mr. President, let me suggest that the Ag-Land trust people are really making the case for the passage of the Young Farmers Homestead Act. If the Congress does not act now, the corporate homesteaders will succeed in their goal of creating not a new generation of independent farmers contributing to a healthy rural environment, but a new generation of sharecroppers dependent on the benevolence of absentee landlords.

Mr. President, last year I inserted in the RECORD dozens of editorials, letters, and news stories supporting this proposal. I shall refrain from doing the same this year. I ask unanimous consent that the text of the legislation I propose be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 752

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Young Farmers' Homestead Act of 1975".

FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds that the escalating cost of land, farm equipment and supplies, and operating capital has made it virtually impossible in most cases for young people to enter into farming as a career; that neither the Government nor the private sector is able to meet the financial requirements necessary to permit young people of ordinary means to engage in farming on a career basis; and that it is essential for the Federal Government to provide a new program of assistance if the family farm system is to be perpetuated in the United States.

(b) It is therefore the purpose of this Act to provide the assistance necessary to permit and encourage young people to engage in farming as a career.

ESTABLISHMENT OF FEDERAL FARM ASSISTANCE CORPORATION

SEC. 3. In order to carry out the purposes of this Act, there is established as an agency within the Department of Agriculture a body corporate to be known as the Federal Farm Assistance Corporation (hereinafter called the Corporation). The principal office of the Corporation shall be located in the District of Columbia, but there may be branch offices elsewhere in the United States as authorized in this Act.

MANAGEMENT OF CORPORATION

SEC. 4. (a) The management of the Corporation shall be vested in a Board of Directors (hereinafter called the Board). The Board shall be composed of five members who subscribe to the objectives of the Act, appointed by the President by and with the advice and consent of the Senate. No more than three members of the Board shall be members of one political party.

(b) The term of office of members of the Corporation shall be four years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term, and (2) the terms of office of members first taking office shall expire, as designated by the President at the time of appointment, one at the end of two years, two at the end of three years, and two at the end of four years.

(c) Vacancies in the Board so long as there are three members in office shall not impair the powers of the Board to execute the func-

tions of the Corporation, and three members of the Board shall constitute a quorum for the transaction of the business of the Board.

(d) With the exception of the Administrator of the Farmers Home Administration, no officer or employee of the United States shall be eligible for appointment as a member of the Board. Members of the Board shall be paid such compensation for their services as directors as the Secretary of Agriculture shall determine, but such compensation shall not exceed $150 per day each when actually engaged in the business of the Board plus travel expenses, including per diem in lieu of subsistence, as authorized by section 5703 of title 5, United States Code, for persons in the Government employed intermittently.

(e) There shall be a manager of the Corporation who shall be its chief executive officer, with such power and authority as may be conferred upon him by the Board. The manager shall be appointed by, and hold office at the pelasure of, the Board, and shall be compensated annually at rates equal to those paid assistant secretaries.

GENERAL POWERS

SEC. 5. The Corporation—

(1) shall have succession in its corporate name;

(2) may adopt, alter, and use a corporate seal, which shall be judicially noticed;

(3) may sue and be sued in its corporate name in any court of record of a State having general jurisdiction, or in any United States district court, and jurisdiction is hereby conferred upon such district court to determine such controversies without regard to the amount in controversy, but no attachment, injunction, garnishment, or other similar process, mesne or final, shall be issued against the Corporation or its property;

(4) may adopt, amend, and repeal bylaws, rules, and regulations governing the manner in which its business may be conducted and the powers granted to it by law may be exercised and enjoyed;

(5) shall be entitled to the free use of the United States mails in the same manner as the other executive agencies of the Government;

(6) with the consent of any board, commission, independent establishment, or executive department of the Government, including any field service thereof, may avail itself of the use of information, services, facilities, officials, and employees thereof, in carrying out the provisions of this Act;

(7) shall determine the character of and the necessity for its obligations and expenditures under this Act and the manner in which they shall be incurred, allowed, and paid;

(8) shall have authority to make final and conclusive settlement and adjustment of any claims by or against the Corporation or the accounts of its fiscal officers;

(9) may, without regard to any other provision of law, negotiate for, purchase, and sell real property as authorized by this Act; and

(10) shall have such powers as may be necessary or appropriate for the exercise of the powers herein specifically conferred upon the Corporation and all such incidental powers as are customary in corporations generally.

PERSONNEL

SEC. 6. (a) The Board shall appoint such officers and employees as may be necessary for the transaction of the business of the Corporation in accordance with the provisions of title 5, United States Code, define their authority and duties, and delegate to them such of the powers vested in the Corporation as it may determine.

(b) In carrying out the provisions of this Act, the Secretary of Agriculture and the Board shall utilize to the maximum extent practicable, the personnel, services, and facilities of the Farmers Home Administration, the Agricultural Conservation and Stabilization Service, the Soil Conservation Service, and the Federal Crop Insurance Corporation of the Department of Agriculture, but may, whenever essential to the efficient operation of the program provided for in this Act, establish one or more branch offices throughout the United States.

LAND PURCHASE AND LEASE PROGRAM

SEC. 7. (a) The Corporation is authorized to negotiate for and purchase farmland or units which may come on the market from time to time. In no case may the Corporation purchase any farm unit (meaning land and buildings) which cost in excess of $200,000: *Provided*, That the Corporation may purchase farms or ranches of any size for subdivision into units of no more than $200,000 in value.

(b) Any farm unit acquired by the Corporation shall be made available for lease, and subsequently for sale, as herein provided.

(c) A farm unit may be leased to an eligible applicant for a period of not less than two nor more than seven years.

(d) The amount of rent charged for the rental of any farm unit shall be determined by the Corporation so as to cover the cost of all real estate or other taxes levied against such farm unit during the term of the lease by Federal or State taxing authorities plus an amount sufficient to reimburse the Corporation (on a pro rata basis) for debt service expenses incurred in acquiring such farm unit and shall be charged and collected on an annual basis as determined by the Corporation. Authority is granted to the Corporaiton to adopt variable rental schemes to take into account both bountiful and natural disaster conditions.

(e) During the term of the lease the lessee may be permitted to make real estate improvements on the farm within a five-acre area desginated by the Board. Such improvements may be made in accordance with such regulations as the Board shall prescribe and may be financed through private commercial sources, through other Federal programs, or by the Corporation and shall be deemed to be the property of the lessee in any dispute between the Corporation and the lessee.

(f) The lessee of a farm unit may not sublease the farm unit except in extraordinary cases approved by the Board.

(g) The Corporation may terminate the lease of a farm unit for any substantial violation of the lease agreement, including, but not limited to, a failure to pay the rent or other charges required under the lease agreement. The procedures for terminating a lease shall be prescribed in regulations issued by the Board.

(h) One of the terms of the lease agreement shall provide that the Corporation shall have a lien on all unharvested crops on the farm unit for all moneys owed the Corporation by the lessee.

(i) A lease initially entered into for a period of less than seven years may be extended by the lessee with the consent of the Board so long as the total term of the lease does not exceed seven years.

SALE OF FARM UNITS

SEC. 8. (a) The lessee of a farm unit may, at any time within six months prior to the expiration of his lease, make application to the Board for the purchase of such unit upon the expiration of such lease.

(b) The Board shall approve such application for purchase if it determines, on the basis of the lessee's operation of the farm unit during the period of the lease and on the basis of such other factors as the Board shall prescribe by regulation, that the lessee can successfully manage and operate such farm unit.

(c) The selling price of a farm unit owned by the Corporation shall be determined at 75 per centum of the appraised fair market value at the time of sale or the purchase cost to the Corporation whichever is larger. In addition, capital gains realized in the five years subsequent to sale shall be vested at the rate of 20 per centum per year to the purchaser.

(d) A lessee may obtain financing through any available source, but in the event that private financing is not available, then and in that event the Farmers Home Administration shall furnish the financing. In the event the Farmers Home Administration furnishes the financing, such amounts shall not count against the appropriation authorities of the Farmers Home Administration.

(e) The rate of interest on any loan made by the Farmers Home Administration of a farm unit shall be an amount equal to the rate on all interest bearing obligations of the United States forming a part of the public debt as computed at the end of the fiscal year next preceding the date of the loan, adjusted to the nearest one-eighth of 1 per centum, plus one-half of 1 per centum.

BORROWING AUTHORITY OF CORPORATION

SEC. 9. (a) The Corporation is authorized to obtain funds through the public or private sale of its bonds, debentures, notes, and other evidences of indebtedness (herein collectively called Corporation debentures).

(b) Corporation debentures shall be issued at such times, bear interest at such rates, and contain such other terms and conditions as the Board shall determine, except that the amount of Corporation debentures which may be outstanding at any one time under this section may not exceed $1,000,000,000 during the first year following the date of enactment of this Act or exceed $2,000,000,000 at any time thereafter.

(c) Corporation debentures shall be lawful investments and may be accepted as security for all fiduciary, trust, and public funds, the investment or deposit of which shall be under the authority and control of the United States or any officer or officers thereof.

(d) The Corporation is also authorized to issue Corporation debentures to the Secretary of the Treasury, and the Secretary of the Treasury shall purchase such debentures, and for such purpose the Secretary of the Treasury is authorized to use as a public debt transaction the proceeds of the sale of any securities hereafter issued under the Second Liberty Bond Act, as now or hereafter in force, and the purposes for which securities may be issued under the Second Liberty Bond Act as now or hereafter in force are extended to include such purchases. Each purchase of Corporation debentures by the Secretary of the Treasury under this section shall be upon such terms and conditions as to yield a return at a rate not less than a rate determined by the Secretary of the Treasury, taking into consideration the current average yield on outstanding marketable obligations of the United States of comparable maturity. The Secretary of the Treasury may sell, upon such terms and conditions and at such prices as he shall determine, any of the Corporation debentures acquired by him under this subsection. All purchases and sales by the Secretary of the Treasury of such debentures under this section shall be treated as public debt transactions of the United States.

DEPOSIT OF FUNDS

SEC. 10. All money of the Corporation not otherwise employed may be deposited with the Treasurer of the United States, or in any bank approved by the Secretary of the Treasury, subject to withdrawal by the Corporation at any time, or with the approval of the Secretary of the Treasury may be invested in obligations of the United States or in obligations guaranteed as to principal and interest by the United States. Subject to the approval of the Secretary of the Treasury, the Federal Reserve banks are hereby authorized and directed to act as depositories, cus-

todians, and fiscal agents for the Corporation in the performance of its powers conferred by this Act.

TAX EXEMPT STATUS

SEC. 11. (a) Except as provided in subsection (b), the Corporation, its capital, reserves, and surplus, and its income and property, shall be exempt from all taxation now or hereafter imposed by the United States or by any territory, dependency, or possession thereof, or by any State, county, municipality, or local taxing authority.

(b) Farm units acquired by the Corporation shall not be exempt from any tax referred to in subsection (a) of this section.

ACCOUNTING BY CORPORATION

SEC. 12. The Corporation shall at all times maintain complete and accurate books of account and shall file annually with the Secretary of Agriculture a complete report as to the business of the Corporation. The financial transactions of the Corporation shall be audited at least once each year by the General Accounting Office for the sole purpose of making a report to Congress, together with such recommendations as the Comptroller General of the United States may deem advisable. Such report shall not be made until the Corporation shall have had reasonable opportunity to examine the exceptions and criticisms of the Comptroller General to point out errors therein, explain or answer the same, and to file a statement which shall be submitted by the Comptroller General with his report.

ADVISORY COUNCIL

SEC. 13. (a) The Secretary of Agriculture shall appoint an advisory council to advise the Board regarding the administration of this Act.

(b) In order to obtain an advisory council with as broad a national perspective as practicable, the Secretary of Agriculture shall divide the United States into not less than ten geographic regions and appoint two individuals to the council from each such region of which one shall be engaged in farming as a full-time occupation and the other to be one who has an interest in rural America.

(c) Individuals appointed to the advisory council shall serve for such period and for such compensation and expenses which shall be reasonable as may be prescribed in regulations issued by the Secretary and shall meet upon the call of the Board but not fewer than four regularly scheduled meetings each calendar year two of which are to be held in the city of Washington, District of Columbia.

(d) In carrying out its functions under this section the functions of the advisory council shall include, but shall not be limited to—

(1) advising the Board on what the eligibility qualifications should be for leasing farm units under this Act, including maximum net income and net worth;

(2) recommending the methods for determining the net income and net worth of lease applicants under this Act;

(3) advising the Board regarding the farm or ranch training or experience that should be required for leasing a farm unit under this Act; and

(4) advising the Board regarding the terms and conditions that should be included in leasing agreements entered into under this Act.

ANNUAL REPORTS

SEC. 14. The Board shall submit an annual report to the Committee on Agriculture and Forestry of the Senate and the Committee on Agriculture of the House of Representatives on or before February 1 of each year on the operations of the Corporation during the past fiscal year. The Board shall include in such report a statement of policy regarding the operation of the Corporation in the next fiscal year. The statement of policy shall become effective thirty days after the submission thereof to such committees and publication in the Federal Register unless within such thirty-day period one or both of such committees adopt a resolution disapproving such statement of policy.

RIGHT TO AMEND

SEC. 15. The right to alter, amend, or repeal this Act is hereby reserved.

APPROPRIATIONS

SEC. 16. There are authorized to be appropriated such sums, not in excess of $, for each fiscal year beginning on or after October 1, 1976, as may be necessary to cover the operating and administrative costs of the Corporation, which shall be allotted to the Corporation in such amounts and at such time or times as the Secretary of Agriculture may determine.

CRIMINAL PROVISIONS APPLICABLE TO FEDERAL FARM ASSISTANCE CORPORATION

SEC. 17. Sections 657, 658, 1006, and 1014 of title 18, United States Code, are each amended by inserting "Federal Farm Assistance Corporation," immediately after "Federal Crop Insurance Act," each time the latter term appears in each such section.

By Mr. HUMPHREY (for himself and Mr. BAYH):

S. 753. A bill to amend title II of the Social Security Act so as to liberalize the conditions governing eligibility of blind persons to receive disability insurance benefits thereunder; to the Committee on Finance.

DISABILITY BENEFITS FOR THE BLIND

Mr. HUMPHREY. Mr. President, early this month, a delegation of members of the Minnesota Federation for the Blind came to visit me at my office. These blind citizens are not sitting at home feeling sorry for themselves. They are confronting and overcoming all the barriers that a seeing society thoughtlessly erects. I was impressed anew with their spirit, their abilities, and their determination.

The bill that I and Senator BAYH are introducing at their request is identical to legislation introduced by Mr. HARTKE and 37 cosponsors in the last Congress. It has a simple, twofold thrust. This bill would permit blind persons who have worked six quarters, or a year and a half, under social security covered employment to both qualify for and draw disability benefits so long as they remain blind, and to receive benefits regardless of their earnings.

The purpose of this bill is essentially to encourage and support the efforts of the blind who wish to be self-supporting and productive. The blind receiving social security disability insurance benefits frequently can increase their earnings only at the risk of losing the security of insurance benefits.

It is wrong to hold back persons intent on overcoming obstacles from devoting that extra dedication and that extra effort required to function in a world made to the specifications of those of us who have the inestimable good fortune and advantage of sight.

I am aware that the current earnings limitation is challenged not only by the blind but by the other disabled and by the aged who can not live on social security income alone. I have also cosponsored legislation to increase the overall limitation from $3,000 to $4,800.

A very basic problem of our systems of income maintenance are that they reward idleness. There is no better medicine, no greater tonic—and I say that from firsthand experience—than honest labor. Ambition, hard work, and the challenge of self-improvement are what this Nation is all about. Until we have a perfect system, that is equitable, we can make a good argument for certain exceptions in disability insurance coverage.

The blind point out with justice that they are frequently denied the equal educational opportunity and job experience that permit most young adults to steadily increase their earning power and secure their future on the strength of their best working years.

The number of unemployed or underemployed blind has been estimated at 70 percent. Many of these people have the capability, the desire, and the right to earn a good living. Too many of the barriers to earning are erected by society and not imposed by the nature of their handicap.

If the blind do overcome the discrimination which often sidelines them into short-term, insecure, and low-paying employment, they face substantial extra costs. Often, they must pay for special transportation and special services. Rarely will their income approach what it would be without this handicap. Disability insurance compensates for the lack of opportunities and services which limit their earning power.

The Department of Health, Education, and Welfare will be called upon to comment on this bill and to estimate its cost and appropriateness. Even if such estimates are large, society will be better for an exercise of compassion and an expression of faith in the principles of individual effort and independence. But there are dollar-and-cents benefits as well. The blind who are freed to earn to the best of their ability will be paying income and social security taxes. A part of the costs incurred will be offset as recipients eligible for disability benefits are dropped from supplemental security and other public assistance programs.

All of us are conscious of the immense demands upon our Nation's social security program and on the Federal budget. Each of us is privileged to signal by our legislative proposals those that deserve special attention. We offer this amendment to insure that any consideration of the extension, expansion, and improvement of our social security system address serious and energetic attention to the needs of the blind.

Mr. President, I ask unanimous consent that the text of the bill be printed in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 753

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 214(a) of the Social Security Act is amended by adding "or" after the semicolon at the end of paragraph (3), and by inserting after paragraph (3) the following new paragraph:

"(4) in the case of an individual who has died and who was entitled to a benefit under

section 223 for the month before the month in which he died, 6 quarters of coverage;".

(b) Section 215(b)(1) of such Act is amended by striking out "shall be the quotient" and inserting in lieu thereof "shall (except as provided in paragraph (5)) be the quotient".

(c) Section 215(b) of such Act is further amended by adding at the end thereof the following new paragraph:

"(5) In the case of an individual who is blind (within the meaning of blindness as defined in section 216(i)(1)), such individual's average monthly wage shall be the quotient obtained by dividing (A) the total of his wages paid in, and self-employment income credited to, all of the calendar quarters which are quarters of coverage (as defined in section 213) and which fall within the period after 1950 and prior to the year specified in clause (i) or clause (ii) of paragraph (2)(C), by (B) the number of months in such quarters; except that any such individual who is fully insured (without regard to section 214(a)(4)) shall have his average monthly wage computed under this subsection without regard to this paragraph if such computation results in a larger primary insurance amount."

(d) Section 216(i)(3) of such Act is amended to read as follows:

"(3) The requirements referred to in clauses (i) and (ii) of paragraph (2)(C) are satisfied by an individual with respect to any quarter only if—

"(A) he would have been a fully insured individual (as defined in section 214) had he attained age 62 and filed application for benefits under section 202(a) on the first day of such quarter, and (i) he had not less than 20 quarters of coverage during the 40-quarter period which ends with such quarter, or (ii) if such quarter ends before he attains (or would attain) age 31, not less than one-half (and not less than 6) of the quarters during the period ending with such quarter and beginning after he attained the age of 21 were quarters of coverage, or (if the number of quarters in such period is less than 12) not less than 6 of the quarters in the 12-quarter period ending with such quarter were quarters of coverage; or

"(B) he is blind (within the meaning of 'blindness' as defined in paragraph (1) of this subsection) and has not less than 6 quarters of coverage in the period which ends with such quarter.

For purposes of clauses (i) and (ii) of subparagraph (A) of this paragraph, when the number of quarters in any period is an odd number, such number shall be reduced by one, and a quarter shall not be counted as part of any period if any part of such quarter was included in a prior period of disability unless such quarter was a quarter of coverage."

(e) The first sentence of section 222(b)(1) of such Act is amended by inserting "(other than such an individual whose disability is blindness as defined in section 216(i)(1))" after "an individual entitled to disability insurance benefits".

(f) Section 223(a)(1) of such Act is amended—

(1) by striking out the comma at the end of subparagraph (B) and inserting in lieu thereof "or is blind (within the meaning of 'blindness' as defined in section 216(i)(1)),";

(2) by striking out "the month in which he attains age 65" and inserting in lieu thereof "in the case of any individual other than an individual whose disability is blindness (as defined in section 216(i)(1)), the month in which he attains age 65"; and

(3) by striking out the second sentence.

(g) Section 223(e)(1) of such Act is amended to read as follows:

"(1) An individual shall be insured for disability insurance benefits in any month if—

"(A) he would have been a fully insured individual (as defined in section 214) had he attained age 62 and filed application for benefits under section 202(a) on the first day of such month, and (i) he had not less than 20 quarters of coverage during the 40-quarter period which ends with the quarter in which such month occurred, or (ii) if such month ends before the quarter in which he attains (or would attain) age 31, not less than one-half (and not less than 6) of the quarters during the period ending with the quarter in which such month occurred and beginning after he attained the age of 21 were quarters of coverage, or (if the number of quarters in such period is less than 12) not less than 6 of the quarters in the 12-quarter period ending with such quarter were quarters of coverage, or

"(B) he is blind (within the meaning of 'blindness' as defined in section 216(i)(1)) and has not less than 6 quarters of coverage in the period which ends with the quarter in which such month occurs.

For purposes of clauses (i) and (ii) of subparagraph (A) of this paragraph, when the number of quarters in any period is an odd number, such number shall be reduced by one, and a quarter shall not be counted as part of any period if any part of such quarter was included in a period of disability unless such quarter was a quarter of coverage."

(h) Section 223(d)(1)(B) of such Act is amended to read as follows:

"(B) blindness (as defined in section 216(i)(1)),"

(i) The second sentence of section 223(d)(4) of such Act is amended by inserting "(other than an individual whose disability is blindness, as defined in section 216(i)(1))" immediately after "individual".

SEC. 2. In the case of an insured individual who is under a disability as defined in section 223(d)(1)(B) of the Social Security Act, who is entitled to monthly insurance benefits under section 202(a) or 223 of such Act for a month after the month in which this Act is enacted, and who applies for a recomputation of his disability insurance benefit or for a disability insurance benefit (if he is entitled under such section 202(a)) in or after the month this Act is enacted, the Secretary shall, notwithstanding the provisions of section 215(f)(1) of such Act, make a recomputation of such benefit if such recomputation results in a higher primary insurance amount.

SEC. 3. The amendments by this Act shall apply only with respect to monthly benefits under title II of the Social Security Act for and after the second month following the month in which this Act is enacted.

Mr. BAYH. Mr. President, I feel great pride when I see individuals who have risen above a handicap and been able to make worthwhile contributions to their communities and the Nation.

One group of Americans which has consistently been able to overcome a problem associated with a handicap is the blind. Their determination to work and be productive members of society has always impressed me. For that reason, I am pleased to join my colleague from Minnesota, Mr. HUMPHREY, in introducing the disability insurance for the blind bill.

This is the seventh time this important legislation has been introduced in Congress. It was originally sponsored by my respected friend Mr. HUMPHREY, and subsequently by my former colleague, Mr. Hartke. The bill passed the Senate six times. Mr. JAMES BURKE of Massachusetts, chairman of the Social Security Subcommittee of the Ways and Means Committee in the House introduced identical legislation, H.R. 3049.

There are an estimated 9,596,000 people in the United States who have some degree of visual impairment. Of these, approximately 1,306,000 have such severe visual impairment that they are unable to read ordinary newsprint with either eye, even with glasses. There are 94,000,000 people in this country who wear glasses or contact lenses to improve their vision.

At least 475,000 people in the United States are legally blind and an estimated 44,350 people in this country become blind each year. Visual impairment ranks third among diseases that restrict Americans from leading productive lives. At least 32,000 blind persons are under the age of 20.

The economic aspects of blindness are staggering. The annual potential income lost because of loss of vision is conservatively estimated at $600 million per year. In addition, the loss of potential tax revenue amounts to a minimum of $140 million each year. The expense of blindness to public welfare agencies is $468,567,000 annually. The National Center for Health Statistics estimates the average cost of supporting one blind person is $2,100 per year. The estimates cost of supporting all blind persons in this country is $500 million.

Presently those who are blind and are receiving social security disability insurance benefits are faced with losing money if they pursue their efforts at employment. Under the current law, the only long range economic security belongs to those disability beneficiaries who remain idle rather than productive. Mr. President, this is clearly not what it should be, and the legislation we are introducing today will correct this unfortunate situation.

What does this legislation provide? Very simply, under the provisions of this legislation, blind people who have worked a year and a half under social security covered employment would be able to qualify for and to draw disability benefits so long as they remain blind. There would be no limit on the amount of earnings. The present law with its more restrictive work requirements does not take into account the often substantial and overwhelming economic disadvantages of blindness. Our legislation would be a first step toward reducing these disadvantages, by placing maximum encouragement and support behind the efforts of blind people to be self-supporting.

With passage of their legislation, the blind will no longer have to make the choice between staying idle and having a secure income from the Government or working and running the risk of losing their eligibility for disability benefits. The Government and the American public both win. These working citizens who are gainfully employed will pay social security taxes, thus contributing to the fund rather than only draining benefits from it. They will also contribute through the payment of income taxes, thus reducing expenditures from the general revenue. As the blind work and earn more of their income for themselves, the loss to Government in welfare payments will decrease.

Mr. President, this legislation represents an investment in our people and

their future, and I am happy to give it my enthusiastic support.

By Mr. KENNEDY (for himself, Mr. SCHWEIKER, Mr. WILLIAMS, Mr. RANDOLPH, Mr. PELL, Mr. HATHAWAY, Mr. RIEGLE, and Mr. STAFFORD):

S. 754. A bill to amend the Public Health Service Act to extend through the fiscal year ending September 30, 1978, the assistance programs for health services research; health statistics; medical libraries; cancer control programs; the National Cancer Institute; heart, blood vessel, lung, and blood disease prevention and control programs; the National Heart, Lung, and Blood Institute; and National Research Service Awards; and for other purposes; to the Committee on Human Resources.

By Mr. KENNEDY (for himself, Mr. SCHWEIKER, Mr. WILLIAMS, Mr. JAVITS, Mr. RANDOLPH, Mr. PELL, Mr. NELSON, Mr. HATHAWAY, Mr. RIEGLE, and Mr. STAFFORD):

S. 755. A bill to amend the Public Health Service Act to extend through the fiscal year ending September 30, 1978, the assistance programs for comprehensive public health services, migrant health, community health centers, hemophilia programs, national health planning and development and health resources development; to amend the Community Mental Health Centers Act to extend it through the fiscal year ending September 30, 1978; and for other purposes; to the Committee on Human Resources.

Mr. KENNEDY. Mr. President, I am pleased to introduce two pieces of legislation which, when enacted, will extend for 1 year numerous expiring health authorities under the Public Health Service Act and the Community Mental Health Centers Act. Under the provisions of the Budget Act, committee action on these expiring programs must be completed by May 15, 1977. In order to meet this requirement and at the same time give the administration a reasonable period of time to develop its views with regard to the substantive changes in this important area of health policy, I believe that a 1-year simple extension of all of these programs is needed.

I am happy to note that my good friend and colleague, the chairman of the House Subcommittee on Health and the Environment, Mr. PAUL ROGERS, introduced legislation last week to accomplish this same purpose.

There are, of course, numerous substantive changes in these laws which are being proposed by those who are affected by them. These proposals deserve serious consideration on their merits, and that consideration will be forthcoming in the months ahead.

I also wish to emphasize that these bills are cosponsored on a bipartisan basis by a host of the members of the Committee on Human Resources, including its distinguished chairman and ranking minority member Senator WILLIAMS and Senator JAVITS, and the distinguished ranking minority member of the Health Subcommittee, Senator SCHWEIKER.

Finally, Mr. President, I want to take a few more minutes to describe each of the programs proposed for extension, including a summary of their most recent accomplishments.

The first bill, S. 754, will extend the assistance programs for: First, comprehensive public health services; second, migrant health; third, community health centers; fourth, hemophilia treatment centers and blood separation centers; fifth, national health planning and development; sixth, health resources development; and seventh, community mental health centers.

The second bill, S. 755, will extend the assistance programs for: First, health services research; second, health statistics; third, medical libraries; fourth, cancer control; fifth, the National Cancer Institute; sixth, heart, blood vessel, lung, and blood disease prevention and control; seventh, the National Heart, Lung, and Blood Institute; and eighth, the National Research Service Awards.

GRANTS TO THE STATES FOR COMPREHENSIVE HEALTH SERVICES

Federal support on a continuing basis for State public health activities can be traced back to 1935, when legislation was enacted providing grants to the States for specified categories of health services, such as tuberculosis and cancer control. In 1966, the legislation was amended by the so-called Partnership for Health (Public Law 89–749), which replaced the categorical grant authorities with broad grant-in-aid programs. Formula grants were awarded to the State health and mental health authorities for comprehensive State, public health services without tailoring the grants to specific diseases.

Services that have been supported include communicable disease control, environmental services, chronic disease control, emergency and home health services, cancer and vision screening, and a variety of community mental health programs. Some States have used the flexibility of these funds to support new approaches to the delivery of health services.

This program was most recently amended in 1975, with passage of Public Law 94–63, which modified the State plan requirements to make them consistent with provisions of the National Health Planning and Resources Development Act of 1974. It also earmarked special funds for hypertension. In fiscal year 1977, $90 million was appropriated for grants to the States, with an additional $9 million appropriated for the hypertension program.

MIGRANT HEALTH CENTERS

Originally authorized under the Migrant Health Act of 1962 (Public Law 87–692), the migrant health centers program provides authority for Federal grant support to health clinics that provide services to migratory and seasonal agricultural workers and their families.

The program was most recently amended in 1975 with passage of Public Law 94–63. During the program's reexamination, it was found that serious problems continued to exist with regard to hospitalization for migrants, migrant camp sanitation and living conditions, and barriers excluding migrant participation in medicaid.

In fiscal year 1977, $30 million was appropriated for this program which provided support for 125 migrant health centers and 33 rural health initiative projects.

COMMUNITY HEALTH CENTERS

Authority for the community health centers program was originally provided under section 314(e) of the Public Health Service Act, as amended in 1966 (Public Law 89–749). The original intent of the section was to fund special projects for the development of health services for special population groups or geographic regions. Before funds had been appropriated for this section, however, it was amended in 1967 (Public Law 90–174). Its authority was focused on support of ambulatory or comprehensive health care programs serving areas with scarce or nonexistent health care services.

In the first year that appropriations were available, eight neighborhood health centers, NHC's, based on the model initiated by the then Office of Economic Opportunity, OEO, were funded. Since that time, the program has been further expanded by the transfer to HEW of NHC's originally administered by OEO.

In fiscal year 1977, $215,148,000 was appropriated for this program, which provided support for 164 community health centers and 280 rural and urban health initiative projects, serving a total population of 3,354,000.

HEMOPHILIA PROGRAMS

Special authority for hemophilia programs was provided under Public Law 94–63 to provide Federal assistance to establish comprehensive hemophilia diagnostic and treatment centers, and to develop and expand, within existing facilities, blood-separation centers.

In enacting this legislation, Congress noted that, while there were 67 existing hemophilia treatment centers in 27 States, there was a need for such facilities in areas which had no or limited diagnostic and treatment facilities. In addition, support for blood-separation centers was recognized as necessary in order to make optimal and more efficient use of blood components and to encourage the blood banking community to make components more readily available.

During fiscal year 1977, Congress appropriated $3 million for support of these programs.

NATIONAL HEALTH PLANNING AND DEVELOPMENT

The national health planning and development program was created in 1975 by Public Law 93–641. The health planning program represents the combination and redirection of preexisting Federal, State, and local planning authorities which had been operating under the now-replaced comprehensive health planning program, regional medical program, and the Hill-Burton hospital construction program.

It provides for a single new program of State and areawide health planning and development through the creation of a nationwide network of over 200 health systems agencies, the creation in each State of a State health planning and de-

velopment agency, and a statewide health coordinating council. Financial assistance is provided through Federal grants to State and local planning agencies and project grants for State rate regulation.

In reviewing the activities of the earlier planning authorities, Congress concluded that the health planning function needed a stronger legislative mandate; that the overlap and duplication of responsibilities must be eliminated; and that the generation of new health resources must be more closely coordinated with planning activities. As a result, the new law vests the newly created agencies with broader powers than under earlier programs, particularly with regard to regulation, control of Federal funds, resources development, and actual implementation of health systems plans.

For fiscal year 1977, $125 million was appropriated for the title XV planning program.

HEALTH RESOURCES DEVELOPMENT

In addition to the new planning authority Congress has also authorized Federal assistance to provide for projects for modernizing medical facilities; building new outpatient medical facilities and new inpatient medical facilities in areas which have experienced recent rapid population growth.

COMMUNITY MENTAL HEALTH CENTERS

Community Mental Health Centers, CMHC's, were created in 1963 with the enactment of the Mental Retardation Facilities and Community Mental Health Centers Construction Act to provide comprehensive mental health services to the American people, under President Kennedy's leadership. Such services represent a community outpatient alternative to State inpatient facilities for mental health care. Some 88 million people are expected to be covered by these centers during fiscal year 1977.

The original legislation authorized project grants only for the construction of CMHC's, but the scope of the program has been expanded by a series of amendments. Most recently, Public Law 94–63 required all centers to provide designated essential services as well as certain specialized services to children, the elderly, alcoholics, and drug dependent persons. It also created the National Center for the Prevention and Control of Rape, which conducts research into the legal, social, and medical aspects of rape.

In fiscal year 1977, $232,846,000 were appropriated for CMHC's and $5 million for the National Center for the Prevention and Control of Rape.

HEALTH SERVICES RESEARCH

The National Center for Health Services Research was created in 1974 by Public Law 93–353. The legislation authorizes the Secretary of HEW, working through the Center, to undertake a broad range of research, demonstration, and evaluation activities relating to health services delivery in the United States. The new law resulted from the recognition of the need for a better understanding of the behavior and performance of the health industry as a prerequisite for improving its performance.

The Center's principal activities have been managing intramural and extramural health services research programs, training persons to conduct health services research, and disseminating research findings. In fiscal year 1977, Congress appropriated $24 million for support of this program.

NATIONAL CENTER FOR HEALTH STATISTICS

Initial authority for health statistics activities was first enacted by the Congress in 1902. The National Center for Health Statistics, NCHS, created in 1960, consolidated vital statistics activities and health survey activities.

Most recently, Public Law 93–353 further extended the authority for more comprehensive health data collection. NCHS programs focus on the need for the reliable and timely production of data on the health status of the population; the health resources available for the provision of care; the utilization of those resources; and the associated costs of such care and utilization for informed health policymaking at all government levels. In fiscal year 1977, $27,636,000 was appropriated for support of these programs.

MEDICAL LIBRARIES

The original Medical Library Assistance Act was enacted in 1965 to provide for the coordination and dissemination of the increasing volume of biomedical literature. Funds were also authorized to establish regional branches of the National Library of Medicine of which there are presently 11. The program authorized by this legislation has supported the improvement of health library resources, increases in trained library manpower, and development of modern communications tools and techniques.

In fiscal year 1977, $8 million was appropriated for the program.

NATIONAL CANCER INSTITUTE AND CANCER CONTROL PROGRAMS

Authority for the National Cancer Institute, NCI, was first established in 1937. The National Cancer Act of 1971, which I authored, initiated a national cancer program, and established new research, training, diagnosis, treatment, prevention, and cooperative programs. The NCI has initiated efforts with regard to such areas as virus research, cancer screening, therapy and control, and international cooperation.

In fiscal year 1977, total appropriations for NCI and cancer control programs amounted to $815 million.

NATIONAL HEART, LUNG, AND BLOOD INSTITUTES AND ASSOCIATED PROGRAMS

The National Heart Institute was first established in 1948. In 1972, the authority of the Institute was enlarged by enactment of the National Heart, Blood Vessel, Lung, and Blood Act (Public Law 92–423), which I authored. The new law provided for expanded, intensified, and coordinated Institute activities in accordance with a specified comprehensive national heart, blood vessel, lung, and blood disease program.

In fiscal year 1977, $396,661,000 was appropriated for the Institute to fund its numerous activities.

NATIONAL RESEARCH SERVICE AWARDS

The Federal Government has been sponsoring the training of biomedical researchers since 1930. By 1971, the National Institutes of Health, through their fellowship and training grant programs, supported 38 percent of the Nation's fulltime graduate students in the medical sciences and 21 percent in all biomedical sciences.

The National Research Act of 1974, Public Law 93–348, amended the Public Health Service Act by repealing existing research training authorities and consolidating them in the "National Research Service Awards" authority of the act. In fiscal year 1977, $118,794,000 were appropriated for this program, which is responsible for the training of future generations of research scientists for this Nation.

Mr. President, none of these programs is perfect, but each one has been important in making an effort to meet a portion of the health needs of the American people. I look forward to working with the administration in the coming months in determining what improvements can be made in each of these programs.

Mr. SCHWEIKER. Mr. President, as ranking minority member of the Senate Health Subcommittee I am pleased to join in the introduction of two important health program extension bills: the Health Services, Hemophilia and Health Planning and Development Extension Act of 1977 and the Health Services Research, Health Statistics, Medical Libraries, Biomedical Research and Research Training Extension Act of 1977.

The first bill extends existing health service and planning programs for comprehensive public health services, migrant health, community health centers, community mental health centers, hemophilia programs, and health planning efforts begun under the Health Planning and Resources Development Act.

The second bill extends assistance programs for health services research; health statistics; medical libraries; cancer control programs; the National Cancer Institute; heart, blood vessel, lung, and blood disease prevention and control programs; the National Heart, Lung and Blood Institute; and the National Research Service awards.

Both bills are simple 1-year extensions of expiring health programs through fiscal year 1978 with a few strictly technical changes in existing law. Under this legislation, program continuity will be maintained while Congress and the administration review the programs to develop any additional legislative proposals in these areas which may be required during the coming year. A 1-year extension is desirable for many of the programs involved such as the health planning law and the Community Mental Health Centers Act, to give existing law a chance to work before we embark on any new major program changes. In some cases, the original law or substantive changes enacted during the last Congress have not yet had time to be fully implemented and evaluated.

In addition, the Health Subcommittee, under the leadership of Senator KENNEDY, is planning an extensive review of federally supported biomedical and behavioral research activities during the

current session. In the meantime, until the Committee on Human Resources and the Congress approve any changes in existing programs, it is essential that we continue our strong commitment to important research activities such as those sponsored by the National Cancer Institute and the National Heart, Lung, and Blood Institute and not allow these vital disease control and research efforts to lapse.

These bills allow the committee to proceed with program reviews and develop needed modifying legislation without having to rush its consideration of substantive changes in these programs in order to meet Senate budget deadlines.

Authorization levels have not been specified in either bill as introduced and will be developed as the subcommittee and committee conduct hearings and complete work on the legislation. Hearings are scheduled for tomorrow, and interested groups have been invited to submit their suggestions for the subcommittee's consideration at that time.

I believe these bills represent a prudent and responsible approach and I am pleased to join with Senator KENNEDY in introducing them.

By Mr. GRAVEL:

S. 757. A bill to terminate the airlines mutual aid agreement; to the Committee on Commerce, Science, and Transportation.

AIRLINE MUTUAL AID PACT

Mr. GRAVEL. Mr. President, I am introducing today a bill to abolish the airline mutual aid pact.

In order to understand the full impact of the airline mutual aid pact, it is necessary to place it within the context of the overall thrust of American transportation and labor policy.

From the enactment of the Railway Labor Act in 1926 to the extension of its provisions to the airline industry in 1936, national policy has reflected the unique character and relationship of transportation to the national welfare. Congress has consistently legislated that, while the rights of business and labor must be respected and protected, every effort must be made to avoid strikes and, failing that, to assure that strikes are short in duration.

The major purpose of the Railway Labor Act as stated in section 2(1) is "to avoid any interruption to commerce or to the operation of any carrier engaged therein." The act exerts pressure on both management and labor to make and maintain agreements. Regulation of the industry is far more stringent than it would be under the Taft-Hartley Act or the Wagner Act.

Today, unions are an accepted and integral part of America's social, political and economic life. The bloody disputes between labor and management of 100 years ago that revolved around the railroad, steel, and coal industries will never be repeated. The days of the strike breakers, the mandatory 10-hour day, and the 7-day work week are gone. Sweat shop conditions have been eliminated. Child labor limitations, increased safety standards, minimum wage measures, and laws safeguarding the collective bargaining process are now cornerstones of American rights.

The Federal Government's role in labor negotiations is supplemental, except in wartime. The Congress establishes basic rules, sets minimum standards and assures that in collective bargaining the scales are not unfairly tipped one way or another.

It is against this background that we should view the airline mutual aid pact.

The pact was created in 1958 by the six largest trunkline carriers in the United States—American, Eastern, Capital, Pan Am, TWA, and United. Its original purpose was to provide a source of income from the revenues of pact members to a member whose employees were on strike. These payments, called windfall payments, were modest. They consisted solely of the increased revenues, minus expenses, that accrued to the nonstruck pact members who flew routes that directly competed with the struck member's routes.

These payments were made only when one of the three mechanisms activated the pact. They were: when strikes called by the union were due to demands that exceeded or opposed the recommendations of the Presidential Emergency Board created by the Railway Labor Act; when strikes were called before exhaustion of the prestrike procedures of the act or; in cases of what was nebulously referred to as "otherwise unlawful" strikes.

The pact has undergone radical changes since its creation. The airlines made several liberal additions between 1959 and 1964, including:

First, payments beginning with the onset of any strike;

Second, the addition of "supplemental payments" to "windfall payments."

The combination of these two payments guaranteed the struck carrier a recovery of 25 percent of its normal operating expenses.

In 1969, MAP supplemental compensation was increased to guarantee that such payments, when combined with windfall payments, would total 50 percent of a struck airline's normal operating expenses for the first 2 weeks of a strike; this figure decreased to 45 percent for the third week, 40 percent for the fourth week and 35 percent thereafter until the strike was settled.

In 1970, local service carriers—often referred to as regional carriers—were admitted to the pact.

The Civil Aeronautics Board and the courts have ruled that the mutual aid pact is not illegal. Administrative and judicial remedies have been exhausted. The matter rests in the Congress. We must decide if the continuation of MAP is good public policy and if it treats all involved—the general public, the airlines, and the working man and woman—in a manner consistent with national transportation and labor policy.

The havoc the mutual aid pact wreaks on even the most conservative concepts of collective bargaining is obvious.

Collective bargaining works only when financial hardship forces both sides to an agreement. If the financial pressure is removed from one side, there is no incentive to bargain seriously prior to, or immediately after, contract expiration.

MAP has clearly removed this pressure from the airlines in allowing the payment of up to 50 percent of normal operating costs.

During a strike, airline clerks and machinists may, if strike funds are available, receive $15 and $40 per week respectively. The pilots receive one-fifth of their salary after 1 month of a strike.

On the other hand airlines receive millions of dollars in payment for a strike. My 1975 MAP payments totaled more than $320 million. Payments are so large that airlines can make a profit during a strike.

During the 1970 strike against National Airlines, the carrier showed a net profit of $810,000 due to receipt of $28 million in mutual aid income.

In 1970, Northwest Airlines showed a year-end profit of $44 million despite a 5-month strike by airline clerks. During the walkout, Northwest received $47.3 million in MAP payments.

Northwest also received $43.6 million in payments during a 1972 strike by the airline pilots that lasted 95 days. At the end of the year, the company showed a $17.2 million profit. Clearly, it would not have done as well without the MAP compensation.

In referring to a 1973 TWA strike, TWA Board Chairman C. C. Tillinghast, Jr., stated,

> TWA's profits for 1973 would be better off if the strike were not settled before year end. Should the strike end now, Mutual Aid income would end and all expenses would resume.

TWA received $74.4 million from MAP coffers during the strike.

Ozark Airlines President, Edward Crane, stated on April 26, 1973, that "as a result primarily of the Airline Mutual Aid Pact, we do not anticipate suffering a loss of any significance during the strike."

The airline mutual aid pact has clearly removed the crucial ingredient in the collective bargaining process—the fear of financial loss or disaster—from the airlines. At the same time potential strike benefits to workers are very low.

The pact, therefore, runs counter to American labor policy.

MAP thwarts the goals of national transportation policy as the removal of financial fear from the collective bargaining process has reduced the desire of the airlines to bargain seriously prior to, or immediately after, contract termination. As a result, the duration of airline strikes has lengthened dramatically.

The nonairline work stoppages have averaged between 22 and 27 days since 1958.

Prior to the adoption of the pact, work stoppages in the airline industry averaged 15 days.

From October, 1958—the date of the first strike after the introduction of MAP—until May, 1961, the mean strike duration was 22 days.

Strikes that occurred after the 1962 MAP payment liberalization averaged 27 days. From January 1970, through November 1974, strikes averaged 73 days. If one does not include a 2-day strike

by ALPA against Braniff and the 1-day TWA–TWU strike from the figures, the average for this time period was 102 days.

Work stoppages involving local carriers averaged 117 days between 1970 and 1975.

MAP encourages the type of labor policy that the United States rejected years ago. It makes a mockery of national transportation principles, whose major goal is to encourage conditions that limit the length of strikes.

And, the American public suffers from the lack of airline service.

I am extremely hopeful Congress will abolish the airline mutual aid pact this year.

By Mr. STONE (for himself and Mr. CHILES):

S. 758. A bill to amend the Immigration and Nationality Act of 1952; to the Committee on the Judiciary.

Mr. STONE. Mr. President, I am today introducing a bill to assist refugees in our country—persons admitted under section 203(a)(7) of the Immigration and Nationality Act—who desire to become American citizens. The senior Senator from Florida, Mr. CHILES, also joins me in introducing this bill.

Americans have historically welcomed people from other nations who have suffered persecution and abuse because of their political or religious beliefs. I believe that we should also facilitate their full participation in our society and its democratic process.

Many political refugees, coming to our country in search of justice and liberty, have not been able to share in the rewards of American citizenship because they have been unable to learn English. However, such people are generally very much appreciative of justice, freedom and democracy, which were probably lost in the country from which they fled. As a result, many are already U. S. citizens in spirit if not by law.

Section 312(1) of the Immigration and Nationality Act (8 USC 1423) prohibits any person who cannot pass an English literacy test from being naturalized. This bill would amend section 312 by making it possible for political refugees at least 50 years of age having lived a minimum of five years in the United States to take the citizenship exam without being required to pass the literacy test.

It is difficult for most people in their later years to learn a new language. This bill would provide refugees past middle age with the opportunity of integrating themselves more fully in the American way of life. After years of working, paying taxes and living as Americans, it is only fitting that the language requirement, insurmountable to many refugees past middle age, be removed as an obstacle to their obtaining citizenship.

By Mr. JOHNSTON (for himself and Mr. LONG):

S. 761. A bill to extend for 1 year the Rice Production Act of 1975; to the Committee on Agriculture, Nutrition, and Forestry.

Mr. JOHNSTON. Mr. President, today I am introducing a bill in behalf of myself and my distinguished colleague Senator LONG to extend the current rice program for 1 year, rather than the 5 years now contemplated. Last year the Congress passed legislation which drastically changed the rules of the game for rice producers by removing acreage restrictions and developing a "target" approach to rice production. I believe we should wait until the evidence is in on how these changes have affected our rice system before making long-term policy decisions.

We do know that the huge, economically depressing surpluses continue and that some have estimated the carryover will be increased by 10 million hundredweight at the end of the 1976 crop marketing season. At the same time rice acreage for both 1976 and 1977 is estimated to be lower than the 1975 acreage planted in rice. However, the impact of projected production reductions and large carryovers is not known.

Rice is the main staple product for approximately half the world's population. It is also important domestically inasmuch as it is one of the principal cash income crops in at least four States including Louisiana. Over 60 percent of U.S.-produced rice is exported, making rice a significant cash-producing crop, assuredly important to improving our Nation's balance of payments. To develop long-term policies for rice without having all the data in, therefore, is not prudent. It is my sincere hope that we will not act hastily—and possibly unwisely—but will wait until we have the data to make sound, well-based decisions on rice.

By Mr. MATHIAS:

S. 762. A bill entitled "The Congressional Ethics Act of 1977"; to the Committee on Rules and Administration.

THE CONGRESSIONAL ETHICS ACT OF 1977

Mr. MATHIAS. Mr. President, I send to the desk the Congressional Ethics Act of 1977."

For the past 16 years—since my first year as a Member of the House of Representatives in 1961—I have pressed for every Member of Congress, and every candidate for the Congress making a full public disclosure of his or her personal financial situation. I have introduced successive bills to make such disclosure mandatory, and am encouraged by the fact that each year more Senators and Congressmen voluntarily disclose personal financial assets and liabilities.

Financial disclosure can improve the political process. During his Presidency, Thomas Jefferson wrote that when a man assumes a public trust "he should consider himself a public property." This concept has been restated and reaffirmed many times since, most notably by Presidents Roosevelt, Wilson, Eisenhower, and Johnson.

The issue is not a new one to the Congress. In 1951, a committee, chaired by the late Senator Paul Douglas, rated financial disclosure as the single most important piece of legislation that the Congress could enact to lessen the appearance of conflict of interest on the part of public officials. Twenty years later, in November 1971, the Subcommittee on Privileges and Elections of the Senate Rules Committee, under the distinguished chairmanship of Senator CANNON, held hearings on bills which would have provided financial disclosure for Members of Congress and selected officials of the executive and legislative branches.

While testifying before the committee on his bill, S. 343, Senate CASE stated clearly the argument for full disclosure. He said:

> The judgment of the people, I think, will be a real and effective sanction . . . disclosure will help people to elect whom they wish by giving them full knowledge of the personal financial interests of those who present themselves as candidates for election.

We can no longer say that people are rapidly losing confidence in the ability of Congress to set, and conform to, ethical standards. They have already lost their confidence. Moreover, it is now clear that this disillusionment is not limited to the young, but pervades our society. Loss of confidence is the most dangerous and pressing problem facing the Congress today.

I believe that for the most part this attitude of distrust is unfounded. The vast majority of those in Government are hard-working men and women of impeccable integrity. Unfortunately, these people are being stereotyped by the activities of a few.

We are witnessing a continuing drop in participation in the political process by the American people. This is a threat to our representative system because its strength is based upon the consent and participation of the people. The most difficult challenge to this Congress is to restore confidence in our Government and to reverse this trend toward nonparticipation.

There are many methods that can be employed to achieve this goal. We can be more candid and open in our legislative activities. We can be more responsive to our constituents.

We also can do something much more tangible to dispel the attitude of mistrust. We can enact the bill which I offer today.

I ask unanimous consent that the text of this bill be printed at this point in the RECORD.

There being no objection, the bill was ordered to be printed in the RECORD, as follows:

S. 762

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 11 of title 18, United States Code, is amended by adding at the end thereof the following new section:

"SEC. 225. DISCLOSURE OF FINANCIAL INTERESTS BY MEMBERS OF CONGRESS AND CERTAIN CONGRESSIONAL EMPLOYEES

"(a) Each Member of Congress, each employee of the Congress, and each candidate, shall file annually with the Comptroller General a report containing a full and complete statement of—

"(1) the amount and source of each item of income, each item of reimbursement for any expenditure, and each gift or aggregate of gifts from one source (other than gifts received from the Member's, employee's, or candidate's spouse of any member of the Member's, employee's, or candidate's immediate family) received by the Member, em-

ployee, or candidate and the Member's, employee's, or candidate's spouse jointly during the preceding calendar year which exceeds $100 in amount or value, including any fee or other honorarium received by the Member, employee or candidate for or in connection with the preparation or delivery of any speech or address, attendance at any convention or other assembly of individuals, or the preparation of any article or other composition for publication, and the monetary value of subsistence, entertainment, travel, and other facilities received by him or her in kind;

"(2) the value of each asset held by the Member, employee, or candidate, or by the Member, employee, or candidate and the Member's, employee's, or candidate's spouse jointly, which has a value in excess of $5,000, and the amount of each liability owed by the Member, employee, or candidate, or by the Member, employee, or candidate and the Member's, employee's, or candidate's spouse jointly, which is in excess of $5,000 as of the close of the preceding calendar year;

"(3) any business transaction, including the sale, purchase, or transfer of securities of any business entity, commodity, real property or any other asset or any interest therein, by the Member, employee, or candidate, or by the Member, employee, or candidate and the Member's, employee's, or candidate's spouse jointly, or by any person acting on the Member's, employee's, or candidate's behalf or pursuant to the Member's, employee's, or candidate's direction during the preceding calendar year if the aggregate amount involved in such transactions exceeds $5,000 during such year; and

"(4) the amount of local, state, and Federal income taxes, and the amount of local and state property taxes paid by the Member, employee, or candidate and the Member's, employee's, or candidate's spouse for the most recent tax year.

"(b) Reports required by this section shall be filed not later than May 15 of each year. In the case of any person who ceases, prior to such date in any year, to occupy the office or position the occupancy of which imposes upon the member the reporting requirements contained in subsection (a) shall file such report on the last day the Member, employee, or candidate occupies such office or position, or on such later date, not more than three months after such last day, as the Comptroller General may prescribe. In the case of a candidate who is not a Member of Congress, the report shall be filed not later than one month after he or she becomes a candidate.

"(c) Reports required by this section shall be in such form and detail as the Comptroller General may prescribe. The Comptroller General may provide for the grouping of items of income, sources of income, assets, liabilities, dealings in securities or commodities, or purchases and sales of real property of any individual.

"(d) Whoever willfully fails to file a report required by this section, or knowingly and willfully files a false report under this section, shall be fined $2,000, or imprisoned for not more than five years, or both.

"(e) All reports filed under this section shall be maintained by the Comptroller General as public records which, under such reasonable regulations as he shall prescribe, shall be available for inspection by members of the public.

"(f) For the purposes of any report required by this section, an individual shall be considered to have been a Member of Congress or an employee of the Congress during any calendar year if that person served in such position for more than six months during the calendar year.

"(g) As used in this section the term—

"(1) 'income' means income from whatever source derived;

"(2) 'security' means security as defined in section 2 of the Securities Act of 1933, as amended (15 U.S.C. 77b);

"(3) 'commodity' means commodity as defined in section 2 of the Commodity Exchange Act, as amended (7 U.S.C. 2);

"(4) 'Member of Congress' means a Senator, a Representative, a Resident Commissioner, or a Delegate;

"(5) 'employee of the Congress' means a congressional employee, as defined in paragraph (1), (2), (3), or (5) of section 2107 of title 5, United States Code, who is compensated at a rate in excess of $22,000 per year;

"(6) 'immediate family' means the child, parent, grandparent, brother, or sister of an individual, and the spouse of such persons; and

"(7) 'candidate' means an individual who seeks nomination or election as Senator or Representative in, or Delegate or Resident Commissioner to, the Congress of the United States. An individual shall be deemed to seek nomination for election, or election, to Federal office if he has—

"(a) taken the action necessary under the law of a State to qualify himself for nomination for election, or election; or

"(b) received contributions or made expenditures, or has given his consent for any other person to receive contributions or make expenditures, with a view to bringing about his nomination for election, or election, to such office."

(b) The table of sections for such chapter 11 is amended by adding at the end thereof the following item:

"225. Disclosure of financial interests by Members of Congress and certain congressional employees.".

(c) The chapter analysis for title 18, United States Code, is amended by striking out the item relating to chapter 11 and inserting in lieu thereof the following:

"11. Bribery, graft, and conflicts of interest.".

By Mr. ALLEN:

S.J. Res. 25. A joint resolution proposing an amendment to the Constitution of the United States with respect to the terms of office and method of selection of judges of the Federal courts; to the Committee on the Judiciary.

REFORMING THE METHOD OF SELECTION OF FEDERAL JUDGES

Mr. ALLEN. Mr. President, I take this occasion to introduce a Senate joint resolution proposing an amendment to the Constitution of the United States relating to the subject of appointments and terms of office of Justices of the U.S. Supreme Court and of all judges of inferior courts created by Congress under provisions of article III of the Constitution.

Mr. President, I ask unanimous consent that the proposed resolution be printed in the RECORD at the conclusion of my remarks.

The VICE PRESIDENT. Without objection, it is so ordered.

Mr. ALLEN. Mr. President, I introduced this proposed resolution in the first session of the 92d Congress as Senate Joint Resolution 38 and again in the 94th Congress as Senate Joint Resolution 175. Related reform measures, such as Senate Joint Resolution 16 of the last Congress, have been from time to time introduced by my distinguished colleague and friend from Virginia, Senator HARRY BYRD, and I have fully supported him in his efforts. Mr. President, neither my resolutions nor measures proposed by Senator BYRD have yet to be adopted or frankly, ever seriously considered; however, I feel events have occurred over recent months and years which ought to lead many Senators to the opinion that the time has now come for very serious consideration and adoption of this resolution or of a similar proposal.

In the years since I first introduced the amendment I am again proposing, the Supreme Court and the other courts of the Federal judiciary have become increasingly bold in the exercise of power in areas heretofore thought to be solely within the domain of the legislative or executive branch. In some unfortunate instances, Federal district court judges have behaved in a manner resembling political commissars or local potentates. Unmindful of the wishes of the people, they have been rightly accused of usurping the rights and power of both State and local government. Not answerable to the people, they have behaved imperiously and arbitrarily.

The Supreme Court itself has done little or nothing to curb the excesses of certain of the judges of the inferior courts of the Federal system. In fact, the Supreme Court has itself in radical departures from accepted legal principle mandated sweeping social change not endorsed by the people or the people's elected representatives. This situation can no longer be tolerated. The growing tyranny of the Federal courts must be checked. The judges of Federal courts must be made the servants of the people and not their masters.

Mr. President, there is unfortunately no difficulty in finding examples of Federal usurpation of the rights and prerogatives of the other branches and divisions of Government nor is there any dearth of examples of judicial arrogance and abuse of power, but to illustrate my point, I would nevertheless particularly call to the attention of the Senate the action of an obscure Brooklyn Federal judge which in practical effect caused to be appropriated from the Treasury of the United States money for a purpose not authorized—and, in fact, specifically forbidden—by Congress. I am referring, Mr. President, to the recent decision of Federal District Judge John Dooling which purports to enjoin the decision of the Congress not to appropriate Federal funds for welfare abortions. Senators recall the heated debate in the Senate and in the House prior to adoption of the Hyde amendment, and no one—notwithstanding a Senator's personal opinion on the merits of the amendment—no one would deny that the amendment was validly adopted by the Congress and was signed into law by the President, thus becoming an expression of the will of the people of the United States to the clear effect that funds from the Treasury of the United States were not appropriated for the purpose proscribed.

I had always understood, Mr. President, that the Congress was given exclusive power under the Constitution to appropriate money and, in fact, that appropriation bills were required to originate in the House presumed to be most in

touch with the wishes of the people—the House of Representatives. Yet one Federal judge, unheard of and unelected, has arrogated to himself the authority to appropriate money from the Treasury for a purpose he presumably deems proper and wise. Now, Mr. President, that sort of judicial usurpation has got to be brought to a halt, and my resolution will insure that the Judge Doolings of the country are made promptly to realize the limits on their authority. For that purpose, Mr. President, I am once again offering this day my resolution, and I ask its careful and serious study by Senators; I ask for hearings in the Committee on the Judiciary; and thereafter I urge its adoption.

In print, the amendment may appear to some to be complicated. In fact, it is quite simple and the thrust and objectives of the proposed amendment can be stated in clear and precise terms.

First, the proposed amendment provides that Justices of the U.S. Supreme Court be appointed in the same manner as now but that they shall serve for terms of 8 years subject to reappointment and reconfirmation by the Senate for succeeding terms of 8 years.

Second, the proposed amendment provides that all judges of all U.S. inferior courts shall be appointed in the same manner as now but shall serve for terms of 6 years and subject to reappointment and reconfirmation for succeeding terms of 6 years with the following exception:

Judges of U.S. district courts would not be appointed in the same manner as now. Instead they would be elected by the qualified voters of the district within which the respective district courts are situated and subject to reelection for succeeding terms of 6 years.

Third, Congress is empowered to stagger the terms of office of all of the judgeships to which the proposed amendment applies, as nearly as may be practicable, in such a manner as to assure that one-third of the judges of inferior courts shall terminate every second year.

With further reference to judges of inferior courts, Congress is authorized to provide, as nearly as may be practicable, in such a manner as to assure that one-fourth of the judges of the Supreme Court and one-third of the judges of inferior courts shall terminate every second year.

With further reference to judges of inferior courts, Congress is authorized to provide, as nearly as may be practicable, that one-third of those who are elected to office and one-third of those appointed to office shall terminate in the same year.

Naturally, in order to implement the above provisions, Congress is empowered to prescribe by law the time at which judges of the Supreme Court and inferior courts shall first take office under the provisions of this proposed amendment and to further prescribe initial terms of office which are shorter than terms of 8 and 6 years as the case may be.

Mr. President, it is not my purpose to elaborate further on the compelling reasons which justify this proposed amendment. It is sufficient to say that the U.S. Supreme Court and inferior Federal courts have assumed legislative and executive powers and functions and that it is imperative that this situation be corrected. It is imperative that any agency of Government which exercises legislation or executive powers of Government be made responsible to the people or to elected representatives of the people. This amendment, if adopted, would accomplish this purpose.

Mr. President, again let me say, with reference to some of the changes which have taken place in our Nation, I dare say that none has been more profound than the change resulting in the gradual accretion of powers in the U.S. Supreme Court to the extent that judicial, legislative, and executive powers and functions are exercised by the single nonelective and nonresponsive branch of Federal government. The combination of such powers in one branch of government is despotic by definition and is judicial despotism in its practical effect. I cannot believe that despotism or despotic government is a wholesome change or one that should be longer tolerated.

Mr. President, the proposed amendment which I have introduced will go a long way toward correcting the problem. In my judgment, it may take two decades to restore our judicial system to sound constitutional principles. Let us begin now.

The proposed resolution follows:

S. J. RES. 25

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, (two-thirds of each House concurring therein), That the following article is proposed as an amendment to the Constitution of the United States, which shall be valid to all intents and purposes as part of the Constitution if ratified by the legislatures of three-fourths of the several States within seven years after its submission to the States for ratification:

"ARTICLE —

"SECTION 1. Notwithstanding the provisions of the second sentence of section 1 of article III of the Constitution relating to the terms of office of judges of the United States, each judge of the Supreme Court shall hold office for a term of eight years. Each judge of an inferior court established by the Congress under such section 1 shall hold his office for a term of six years.

"SEC. 2. Notwithstanding the provisions of the second sentence of section 2 of article II of the Constitution, each judge of each United States district court shall be elected by the persons within the judicial district within which such court is situated who are qualified to vote for members of the legislature of the State in which such court is situated.

"SEC. 3. The Congress shall provide by law a division of all the judgeships to which this article applies so that, as nearly as may be practicable, the terms of office of one-fourth of the judgeships of the Supreme Court, and one-third of the judgeships of inferior courts, shall terminate every second year. Such division of the judgeships of the inferior courts shall be made in such a manner that, as nearly as may be practicable, the terms of office of one-third of the judges of any class of inferior courts who are appointed to office, and one-third of the judges of inferior courts who are elected to office, shall terminate in the same year. Whenever a vacancy occurs in any judgeship, because of the death, resignation, retirement, or removal from office of the judge holding such judgeship, his successor shall be chosen for the remainder of his term in the same manner in which he was chosen.

"SEC. 4. Judges holding office under section 1 of article III of this Constitution on the date of ratification of this article shall continue in office until their successors have been appointed or elected and have qualified for office under this article.

"SEC. 5. The Congress may carry this article into effect by appropriate legislation. The Congress shall prescribe by law the time at which the judges of the Supreme Court and of each inferior court shall first take office under this article. To carry into effect the provisions of section 3 of this article, the Congress may prescribe for the judges of each such court who first take office under this article terms which are shorter than the terms prescribed by section 1 of this article.".

ADDITIONAL COSPONSORS

S. 8

At the request of Mr. DOLE, the Senator from Maryland (Mr. MATHIAS), the Senator from Montana (Mr. MELCHER), the Senator from North Dakota (Mr. YOUNG), and the Senator from Wyoming (Mr. HANSEN) were added as cosponsors of S. 8, to amend the Watershed Protection and Flood Prevention Act.

S. 12

At the request of Mr. DOLE, the Senator from New Mexico (Mr. DOMENICI) was added as a cosponsor of S. 12, to extend the rural community fire protection program.

S. 32

At the request of Mr. KENNEDY, the Senator from Minnesota (Mr. HUMPHREY) was added as a cosponsor to S. 32, Continuing Education in Science and Engineering Act.

S. 120

At the request of Mr. ABOUREZK, the Senator from California (Mr. CRANSTON) and the Senator from Colorado (Mr. HASKELL) were added as cosponsors of S. 120, to amend the Disaster Relief Act of 1974.

S. 170

At the request of Mr. HUMPHREY, the Senator from Indiana (Mr. BAYH) was added as a cosponsor of S. 170, the Comprehensive Youth Employment Act of 1977.

S. 236

At the request of Mr. ABOUREZK, the Senator from Alabama (Mr. ALLEN) was added as a cosponsor of S. 236, to amend the Veterans Education and Employment Assistance Act of 1976.

S. 240

At the request of Mr. DOLE, the Senator from Maryland (Mr. MATHIAS), the Senator from Minnesota (Mr. HUMPHREY), the Senator from New Mexico (Mr. SCHMITT), the Senator from North Dakota (Mr. ABOUREZK), and the Senator from Oregon (Mr. HATFIELD) were added as cosponsors of S. 240, to amend the Soil Conservation and Domestic Allotment Act.

S. 245

At the request of Mr. THURMOND, the Senator from Montana (Mr. MELCHER) and the Senator from Vermont (Mr. STAFFORD) were added as cosponsors of S. 245, to amend title 5, U.S. Code.

S. 248

At the request of Mr. DOLE, the Senator from Maryland (Mr. MATHIAS) and the Senator from Oregon (Mr. HATFIELD) were added as cosponsors of S. 248, to establish a National Agricultural Research Advisory Board.

S. 261

At the request of Mr. KENNEDY, the Senator from New York (Mr. JAVITS) was added as a cosponsor of S. 261.

S. 297

At the request of Senator PACKWOOD from Oregon, the Senator from Massachusetts (Mr. KENNEDY), the Senator from Wyoming (Mr. HANSEN), the Senator from Utah (Mr. GARN), and the Senator from New Mexico (Mr. SCHMITT) were added as cosponsors of S. 297, a bill to label imported products and to improve their wholesomeness.

S. 317

At the request of Mr. MCGOVERN, the Senator from Oregon (Mr. HATFIELD) and the Senator from Minnesota (Mr. HUMPHREY) were added as cosponsors of S. 317, to provide service pensions to World War I veterans and their widows.

S. 322

At the request of Mr. ABOUREZK, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 322, to authorize, under certain circumstances, payments to producers of certain agricultural commodities who are unable to plant all or a portion of their allotment for such commodities or who are unable to harvest more than one-third of their allotments for such commodities because of a natural disaster or condition beyond the control of such producers.

S. 323

At the request of Mr. ABOUREZK, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 323, to amend subtitle C of the Consolidated Farm and Rural Development Act to reduce the rate of interest on emergency loans made under such subtitle, to increase the term of such loans, and for other purposes.

S. 371

At the request of Mr. ABOUREZK, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 371, to establish a farm training adjustment program for farmers whose farming operations are adversely affected by a natural disaster.

S. 372

At the request of Mr. ABOUREZK, the Senator from Colorado (Mr. HASKELL) was added as a cosponsor of S. 372, to assist farmers and ranchers to replace foundation herds of cattle such farmers and ranchers are forced to sell as the result of natural disasters.

S. 375

At the request of Mr. BELLMON, the Senator from Oklahoma (Mr. BARTLETT) and the Senator from New Hampshire (Mr. MCINTYRE) were added as cosponsors of S. 375, to amend the Wild and Scenic Rivers Act of 1968.

S. 408

At the request of Mr. DOLE, the Senator from North Carolina (Mr. HELMS) was added as a cosponsor of S. 408, relating to benefits to former employees of county committees.

S. 411

At the request of Mr. PROXMIRE, the Senator from Illinois (Mr. PERCY) was added as a cosponsor of S. 411, the Neighborhood Preservation Act of 1977.

S. 417

At the request of Mr. PROXMIRE, the Senator from Illinois (Mr. PERCY) and the Senator from Maryland (Mr. MATHIAS) were added as cosponsors of S. 417, the National Neighborhood Policy Act.

S. 497

At the request of Mr. DOLE, the Senator from Nebraska (Mr. CURTIS), the Senator from North Dakota (Mr. YOUNG), and the Senator from Oregon (Mr. HATFIELD) were added as cosponsors of S. 497, to amend the Federal Crop Insurance Act.

S. 519

At the request of Mr. MCGOVERN, the Senator from Nevada (Mr. CANNON), the Senator from Florida (Mr. CHILES), the Senator from Maryland (Mr. SARBANES), and the Senator from Florida (Mr. STONE) were added as cosponsors of S. 519, to amend the Older Americans Act of 1965.

S. 551

At the request of Mr. HUMPHREY, the Senator from Arkansas (Mr. MCCLELLAN), the Senator from Alaska (Mr. GRAVEL), the Senator from Arizona (Mr. DECONCINI), and the Senator from Maryland (Mr. SARBANES) were added as cosponsor of S. 551, a bill to provide for grants to States for the payment of compensation to persons injured by certain criminal acts and omissions, and for other purposes.

S. 672

At the request of Mr. HUMPHREY, the Senator from North Dakota (Mr. YOUNG), the Senator from South Dakota (Mr. ABOUREZK), the Senator from Massachusetts (Mr. KENNEDY), and the Senator from Nevada (Mr. CANNON) were added as cosponsors of S. 672, a bill to provide for the procurement by the General Services Administration of existing solar energy devices for use in Government buildings.

S. 674

At the request of Mr. CURTIS, the Senator from Texas (Mr. TOWER) was added as a cosponsor of S. 674, the Sugar Act Extension of 1977.

SENATE RESOLUTION 70

At the request of Senator PACKWOOD, from Oregon, the Senator from New Mexico (Mr. DOMENICI), the Senator from New Mexico (Mr. SCHMITT), and the Senator from Wyoming (Mr. HANSEN) were added as cosponsors to Senate Resolution 70, to make the CONGRESSIONAL RECORD a verbatim transcript of Senate proceedings.

AMENDMENT NO. 42

At the request of Mr. METCALF, the Senator from Montana (Mr. MELCHER), the Senator from South Dakota (Mr. MCGOVERN), the Senator from South Dakota (Mr. ABOUREZK), the Senators from Kentucky (Mr. HUDDLESTON and Mr. FORD), the Senator from Alaska (Mr. GRAVEL), and the Senator from Hawaii (Mr. MATSUNAGA) were added as cosponsors of Amendment No. 42, intended to be proposed to S. 11, a bill to provide additional district court judges.

AMENDMENTS SUBMITTED FOR PRINTING

KENNEDY CENTER ACT—S. 521

AMENDMENT NO. 43

(Ordered to be printed and to lie on the table.)

Mr. SCHMITT. Mr. President, on behalf of the Senator from Idaho (Mr. MCCLURE), I submit an amendment for printing to S. 521, the Kennedy Center bill, and I ask unanimous consent that a statement prepared by Senator MCCLURE be printed at this point in the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

STATEMENT BY SENATOR MCCLURE

Mr. President, the amendment authorizes $4.5 million for repairs to the Kennedy Center, the same amount authorized in the bill as reported, S. 521. The amendment differs from the bill by authorizing the appropriation directly to the Secretary of the Interior, acting through the National Park Service. In contrast, S. 521 as reported authorizes repair funds to the Board of Trustees of the Kennedy Center, with direction to the Park Service to perform the work.

Mr. President, appropriation directly to the Park Service will avoid potential delay in beginning emergency repairs, due to the necessity of obtaining an appropriation to the Board.

The amendment would also authorize to the Park Service an additional sum of $3.7 million, for ordinary operation and maintenance of non-performing arts functions of the Kennedy Center for fiscal year 1978. Current authorization for this function expires with the current fiscal year and it will be necessary to extend this authorization.

NOTICE OF HEARINGS

COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I wish to give notice that a public hearing has been scheduled for Wednesday, March 2, 1977, at 10:30 a.m., in room 2228 Dirksen Senate Office Building, on the following nominations:

Wade H. McCree, Jr., of Michigan, to be Solicitor General of the United States vice Robert H. Bork, resigned.

Barbara A. Babcock, of California, to be an Assistant Attorney General (Civil Division) vice Rex E. Lee, resigned.

Benjamin R. Civiletti, of Maryland, to be an Assistant Attorney General (Criminal Division) vice Richard L. Thornburgh, resigning.

Drew S. Days, III, of New York, to be an Assistant Attorney General (Civil Rights Division) vice J. Stanley Pottinger, resigning.

Daniel J. Meador, of Virginia, to be an Assistant Attorney General (Office for Improvements in the Administration of Justice) vice A. William Olson, Jr., resigned.

Patricia M. Wald, of Maryland, to be an Assistant Attorney General (Office of Legislative Affairs) vice Michael M. Uhlmann, resigned.

Any persons desiring to offer testimony in regard to these nominations, shall, not later than 24 hours prior to such hearing, file in writing with the committee a request to be heard and a statement of their proposed testimony.

This hearing will be before the full Judiciary Committee.

SUBCOMMITTEE ON OCEANS AND INTERNATIONAL ENVIRONMENT

Mr. SPARKMAN. Mr. President, I wish to announce that there will be a meeting of the Subcommittee on Oceans and International Environment of the Committee on Foreign Relations on Thursday, March 31, 1977, at 10 a.m. in room 4221 of the Dirksen Senate Office Building to receive testimony from executive branch and public witnesses on Senate Resolution 49, expressing the sense of the Senate that the U.S. Government should seek the agreement of other governments to a proposed treaty requiring the preparation of an International Environmental Impact Statement for any major project, action, or continuing activity which may be reasonably expected to have a significant adverse effect on the physical environment or environmental interests of another nation or a global commons area.

The hearing on this resolution, which was previously scheduled for Wednesday, February 23, has been cancelled.

COMMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS

Mr. PROXMIRE. Mr. President, the Committee on Banking, Housing, and Urban Affairs will hold 3 days of hearings, on March 2, 3, and 4, 1976, on authorizations for major housing and community development programs.

The hearings will be concerned primarily with authorization levels to be recommended for inclusion in the Congressional Budget. Additional hearings will be held in April prior to reporting major housing and community development legislation.

The hearings will be held in room 5302, Dirksen Senate Office Building, and will begin at 10 a.m. each morning.

NOMINATION OF SAMUEL WINFRED BROWN, JR. TO BE DIRECTOR OF THE ACTION AGENCY

Mr. WILLIAMS. Mr. President, I wish to announce that the Committee on Human Resources has scheduled a hearing on Thursday, February 24, 1977, at 11:15 a.m. in room 4232 Dirksen Senate Office Building, on the nomination of Samuel Winfred Brown, Jr. of Colorado to be Director of the ACTION Agency.

Persons wishing to testify or submit statements, please contact Lisa Walker of the Committee staff.

ADDITIONAL STATEMENTS

PANAMA CANAL NEGOTIATIONS

Mr. THURMOND. Mr. President, a column appeared Saturday, February 19, 1977, in the Washington Post written by Jack Anderson and Les Whitten entitled "Report Could Upset Panama Talks."

The column refers to a report prepared by Representative JOHN M. MURPHY, Democrat, of New York, about torture and murder of opponents in Panama of the current military dictator, Omar Torrijos.

As I have warned in the past, the United States is making a serious mistake by attempting to negotiate a treaty on the Canal with a government which was not freely chosen by the people of Panama.

Further, this particular government has denied its citizens many of the basic political and human rights promoted by President Carter.

By negotiating a treaty with Torrijos the Carter administration is giving more power to the current Panamanian government which Congressman MURPHY's report claims has tortured and murdered up to 32 political opponents.

Mr. President, I ask unanimous consent that this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Jack Anderson and Les Whitten)

REPORT COULD UPSET PANAMA TALKS

The United States must soon decide whether to give up the Panama Canal Zone, a colonial strip that is offensive to all Latin America.

We warned on Nov. 20, citing secret intelligence reports, that the canal issue was a "ticking time bomb" about to explode.

President Carter gave it top priority after he took charge of foreign affairs. He dispatched a crack negotiating team, headed by the veteran diplomat Ellsworth Bunker, to Panama this week. Its secret instructions are to seek a reasonable formula that will permit the United States to relinquish sovereignty over this strip of Panamanian territory.

But there are some flies in the diplomatic ointment. Ominous cracks have appeared, for example, in the Panamanian economy. Dictators habitually try to divert public attention from their domestic failures by stirring up emotional issues. There is concern that Panama's military dictator, Omar Torrijos, might forego a reasonable settlement and use the canal as a political issue.

Carter, for his part, has pledged to restore morality to U.S. foreign policy and to take a stand against nations that abuse human rights. He has just received a confidential report from Rep. John M. Murphy (D-N.Y.) about torture under Torrijos. Murphy pointedly urged the President not to surrender the Panama Canal until the allegations have been cleared up.

The disturbing report, written and translated in Panama under extreme duress, was smuggled out of the country. Some of its allegations have been confirmed by diplomatic sources.

The report charges that Torrijos' political opponents have been shot, drowned, beaten, sexually abused and electrically shocked. It names 32 persons who allegedly have been murdered by the Torrijos government.

For example, a Roman Catholic priest, Hector Gallegos, was arrested by the Panamanian National Guard in June, 1971. He had been organizing agricultural cooperatives in his impoverished parish. Apparently he found himself working against the interests of some local relatives of the Panamanian dictator. Diplomatic sources confirm that Gallegos has not been heard from since.

"The usual pattern," states the report, "is that a person is arrested without a warrant and without accusation, and then the authorities deny any knowledge of their whereabouts. Sometimes the victim is released after questioning or torture or both, and sometimes nothing more is heard about the victim."

The state police seldom allow relatives to claim the victims' abused bodies. But the report alleges that four bodies—those of student Marlene Mendizabal, student Dorita Moreno, lawyer Ruben Miro and Eduardo White—were recovered and showed evidence of torture.

There are no individual rights in Panama, where, the report alleges "the unwarranted search of homes by the military police is an everyday happening." The report includes affidavits and details about the torture that is inflicted.

It also charges, as we reported in 1973, that members of Torrijos' family are involved in international narcotics smuggling.

The allegations could upset the delicate negotiations for a new Panama Canal treaty.

Footnote: A Panamanian embassy spokesman said the charges were fabricated by American opponents of a new canal treaty and Panamanian opponents of the Torrijos regime. He invited us to visit Panama to see whether there is torture, an invitation we will be happy to accept if we can be guaranteed access, unannounced, to any prisons we wish to inspect, without government escort. Only proven terrorists, agitators and subversives have been exiled rather than being jailed, said the spokesman.

TRIBUTES TO SENATOR ABOUREZK

Mr. MCGOVERN. Mr. President, some time ago our colleague and my friend, the junior Senator from South Dakota, anounced his intention not to seek reelection when his current term expires. It was a decision which took courage and conviction. All of us in this body know, as do many in South Dakota and the rest of the country, that JIM ABOUREZK has never been found lacking in those two qualities.

His announcement was noted with regret and understanding. I ask unanimous consent that the editorial from the South Dakota State University Collegian of January 26, 1977, my hometown of Mitchell's South Dakota Daily Republic, of the same day, and the Memphis, Tenn., Press Scrimitar of January 27, 1977, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the South Dakota State University Collegian, Jan. 26, 1977]

LOSS OF SEN. ABOUREZK WILL HURT SOUTH DAKOTA

South Dakotans should be saddened by the announcement earlier this week by Sen. James Abourezk that he will not seek reelection in the 1978 general election.

Abourezk represents a voice heard far too few times in the nation's capitol. A voice which calls for changes that are desperately needed; a voice which cannot be stilled by criticism; a voice that is heard and respected by other Congressmen—something that will most likely not be achieved by his successor.

America and South Dakota need such a voice during these trying times.

Too few Congressmen have had the guts to call for a moratorium on nuclear power plants; too few Congressmen have had the guts to stand above petty politics; too few Congressmen have had the guts to fight for Indian rights; and far too few Congressmen have had the guts to support the environment as Jim Abourezk has.

He has served South Dakota well. As one farm lobbyist put it, "He has always been an outspoken supporter of the family farm-

er." The fact is, Jim Abourezk has always been an outspoken supporter of South Dakota and the United States.

Abourezk may be a prime example of a pure, untarnished South Dakotan. Born of immigrant stock, he knows the problems of the underprivileged. Raised in a rural community, he knows the effects of a drought on an agricultural economy. And being a South Dakotan, he stands behind what he believes and says—with a word that can be trusted.

His concern for his family is also typically South Dakotan. Not many politicians would give up such a promising career for their families. His background has taught him the importance of family and heritage. His statement that he was not "the least bit reluctant" about his decision demonstrates the importance his family holds in his life.

South Dakota and the nation will sorely miss Jim Abourezk. Fortunately, he does have two years remaining in which to carry on his fine job. But it will be with a saddened heart that we bid him farewell in 1978.

We wish him the best of luck in the future and thank him for all he has done—for South Dakota and for America.

[From the Daily Republic, Mail, Jan. 26, 1977]

ABOUREZK—A COMMITMENT FULFILLED

Sen. James Abourezk's announcement Monday that he will not seek re-election to that position opens the door for an even more interesting political season in 1978.

The Abourezk decision will leave Republicans and Democrats alike scrambling for a shot at the prestigious political plum.

What the general public and political experts rush to uncover, is Abourezk's ulterior motive in his decision.

But from here, we can see nothing about Abourezk's announcement that was anything but a sincere explanation of his desire to be closer to his family and practice his legal profession.

Abourezk has been and will continue in the next two years to be a credit to his political profession and a compliment to the people of South Dakota for choosing him for a position of extreme importance.

He has been a tireless worker for the good of South Dakota and for the good of a nation. In particular, he has recently been cited by both the State Dept. and the National Security Council for his efforts in keeping some Middle East nations from raising their oil prices. With that bipartisan praise, there can be no question that his efforts were recognized as a value to this country regardless of which side of the aisle was making the observation.

Abourezk is regarded as a popular senator partially because of his down-to-earth approach of running his office. He has been a responsive senator and no doubt will continue to be just that in the next two years.

As Americans, we find it hard to accept the fact that someone who has had success in political office would step away from it without much reluctance and offer the simple explanation that his family is more important. But for those who know Jim Abourezk, they can easily understand that he is a man of commitment and a man of sincerity.

It takes a certain breed of politican and a special type of person to leave office while he is ahead. This is what Abourezk will be doing, knowing that he has done his best to fulfill his only promise he made to his constituents in the 1972 campaign . . . "Work hard and do the best I can to serve the people of South Dakota."

[From the Memphis Press-Scrimitar, Jan. 27, 1977]

A SENATOR OPTS OUT

One of the nicest things that happened at the opening of Congress this year was the announcement by Sen. James Abourezk, D-S.D., that he will not seek re-election to a second term in 1978.

We say this not because we have anything against Abourezk, but because of admiration for the thoughts he expressed as he announced out. Abourezk, who is only 45, and might be expected to run again and again, said:

"I came into politics with the idea that I had a contribution to make. I never had the idea that I should perpetuate myself in office.

"I realize that it has become normal procedure for those successfully elected to office to run term after term. The temptation is great, and few are able to resist it. But I've never believed that I am indispensable."

Finally he pointed out that his work in the Senate had caused him to neglect his children and wife. He chose duty to family over politics. Altogether as graceful an exit as it is rare.

DISTURBING EARLY SIGNALS TO MOSCOW

Mr. GOLDWATER. Mr. President, how do the men in the Kremlin view the new Carter administration? This is an extremely important question because in a period of transition, powerful nations watch each and every move for indications of what kind of policy will be forthcoming in the future. It strikes me that Moscow must be overjoyed at some of the signals which are going up from Washington at the present time. It certainly must be satisfying to the Soviets when they see repeated pledges by the Carter administration to reduce defense expenditures, to cut down on arms sales to our allies, and to push for restrictions on nuclear testing with no mention of on-site inspections.

Mr. President, I am concerned about the signals which Moscow is receiving at the present time and I would like to offer the appraisal of one our Nation's most important military spokesmen, Lt. Gen. Ira C. Eaker, U.S. Air Force, retired, on this subject. Therefore, I ask unanimous consent that a recent newspaper column by General Eaker, entitled "Disturbing Early Signals to Moscow," be printed in the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

DISTURBING EARLY SIGNALS TO MOSCOW

(By Lt. Gen. Ira C. Eaker, USAF, retired)

How does our number one potential adversary now view the new administration in Washington? That is a critical question for the next four years. Our national security may depend on the answer.

The first official act of President Carter must have been a pleasant surprise to the Politburo. When he pardoned the draft dodgers, Moscow realized that this would increase the divisiveness in the U.S. and make it difficult, if not impossible, for the U.S. to raise the necessary military manpower for adequate U.S. defense forces in the future.

Next, Vice President Mondale's mission to our Free World allies included a strong plea to curtail arms sales. If Mondale could give assurance that the U.S. would reduce arms sales and influence Britain, France and other NATO allies to follow suit, Arab and Third World nations would be forced to turn to Russia for weapons. Middle East and African nations prefer U.S. weapons because they are better and cheaper. Next they prefer British and French weapons, but if these are not available, Russia is always glad to oblige.

U.S. arms sales are now running at about $10 billion annually, largely to the Arab nations. This is very fortunate as it helps to offset the quadrupled price of OPEC oil. But if the U.S. foolishly fails to seize this opportunity, Russia will promptly accept its good fortune.

Then, there is President Carter's evident desire to reach SALT agreements as soon as possible, coupled with his expressed determination "to banish all nuclear weapons from the earth." The Kremlin was undoubtedly surprised that there was no mention of on-site inspections to confirm compliance. This signals Moscow that any agreement can be made with impunity, since Russia will be trusted for good faith and compliance. The Kremlin will perceive this as a license to cheat.

President Carter's designation of U.S. unilateral disarmament advocates and confirmed pacifists to conduct our disarmament negotiations also undoubtedly meets with Soviet elation. They probably can scarcely believe their good fortune.

Perhaps the most welcomed signal the Kremlin has received from the new leadership in Washington is its determination to reduce the U.S. defense budgets. The Politburo had undoubtedly feared that the Carter cabinet might be apprehensive about recent findings of the U.S. intelligence community that Russia plans military superiority. This was a logical conclusion since they have been outspending the U.S. by 40% on military forces for several years, long after achieving parity. If this does not fill U.S. leadership with apprehension, that is very good news in Moscow.

The recent renewal of Panama Canal negotiations, the plan for increased trade with Cuba and the prospect that Hanoi will be given U.S. aid are also encouraging to Kremlin leadership.

Ambassador Dobrynin's complaint to Secretary of State Vance about our warning on the treatment of Sakarov and other Soviet dissenters may also be significant. All the details on this exchange may not have been revealed despite the repeated promise of "open diplomacy."

After the agreeable surprise of naming a cabinet more experienced and able than feared, subsequent appointments have been mainly leftists or liberals.

On balance, during the early days of the Carter presidency, Washington's signals must be gratifying to Moscow.

EQUAL OPPORTUNITIES FOR THE HANDICAPPED

Mr. RANDOLPH. Mr. President, on February 7, 1977, our able colleague from Iowa (Mr. CULVER) testified before the Subcommittee on the Handicapped during oversight hearings on legislation to aid the physically handicapped and the mentally retarded. Senator CULVER's eloquent statement focused on one aspect of human development that is often neglected in the daily lives of the handicapped—the opportunity to participate in sports and recreation. Senator CULVER has had extensive experience as a member of the President's Commission on Olympic Sports which explored closely athletic activities for disabled Americans. He presented vital recommendations for improving Federal programs in this area.

It is a privilege to have this opportunity to share Senator CULVER's effective comments with the Members of the Senate.

Mr. President, I express genuine appreciation and commendation to the Senator from Iowa (Mr. CULVER) and ask

unanimous consent that his testimony be printed in the RECORD.

There being no objection, the testimony was ordered to be printed in the RECORD as follows:

TESTIMONY OF SENATOR JOHN C. CULVER BEFORE THE SUBCOMMITTEE ON THE HANDICAPPED

Mr. Chairman and members of the subcommittee, I am pleased to open this hearing examining the problems of attaining equal rights for the handicapped. I know that the chairman is widely respected and recognized for his support of the Nation's handicapped citizens, and I appreciate the opportunity to testify.

Mr. Chairman, in 1975, I was appointed to the President's Commission on Olympic Sports. As a member of the commission, I chaired hearings which received testimony from representatives of the many programs designed to provide opportunities for handicapped persons to compete in athletics at the local, national and international level. It is to this subject that I wish to address my comments today.

I think you will agree that in order for handicapped persons to become a total part of society, they must have the opportunity to participate in all aspects of a community's lifestyle. And recreation is surely an integral, important part of day-to-day existence.

Participation in recreation can assist the disabled in living with dignity and in functioning as independently as possible. It can also accelerate the integration of handicapped persons in a community, reducing isolation and stigma. And participation in recreation can be a major factor in the rehabilitation of an individual. It can be argued that in some instances, the provision of recreation services is the most important concern of handicapped individuals since many are confronted with enforced leisure, either as a result of their disability or continuing discrimination in the job market.

Approximately 35 million adults and children are handicapped—10 percent of the American population. While innovative and creative recreation programs are being conducted in some areas, the sad fact is that they are estimated to serve only 5 percent of the national handicapped population. This means that fewer than 2 million of our handicapped citizens can adequately participate in the cultural, recreational and leisure life of their respective communities. In rural areas, non-participation is likely to be much worse. According to Dr. John Nesbitt, chairman of the recreation education program at the University of Iowa, "Iowa's rural community make-up is causing handicapped participation in recreation to be even lower than 5 percent".

The underlying question is—whether all our Nation's people will be able to participate in the full social life of our country or whether nearly 35 million handicapped citizens will be left behind?

I believe that the compassion of the American people will answer that question in the affirmative. I hope that we do not lack the will: but existing programs do not adequately provide the means. I hope that by identifying some problems in the provision of recreation opportunities to the handicapped, I will assist this subcommittee in its efforts to evaluate and improve legislation on this subject.

Mr. Chairman, four problems plague the availability of recreational programs for the handicapped.

First, too many programs suffer from a lack of adequate funding and trained leadership.

Second, too many programs lack coordination and public awareness.

Third, too many programs still operate on a segregated basis which tends to perpetuate the concept that handicapped people are different and unable to participate in the "mainstream" of life.

Fourth, too many implemented programs are not given adequate administrative review.

First, with regard to funding. We can and should increase federal support of recreation services for handicapped individuals. I know that there can never be enough money to do all that one would like. However, because greater participation is blocked by inadequate financial assistance, this is a critical and continuing problem. Inadequate support of coaching and training for both novice and accomplished disabled athletes is a significant aspect of the funding problem. Although the federal government has increased its support of recreation services for handicapped persons, many of these additional dollars go almost exclusively to research and demonstration. Federal assistance to states for training of special recreation teachers under the Education of the Handicapped Act has grown from $150,000 in 1969 to $1 million in 1976. But this is still only 2 percent of the total Handicapped Act appropriation. Additional emphasis needs to be placed on training programs.

No reliable figures exist on the number of qualified coaches and trainers for the handicapped. And there are few career opportunities or certification programs in this area. Therefore, much of the training that the handicapped receive is done on a volunteer, non-expert basis. Even coaches of most able-bodied athletes are not trained to deal with the problems of the physically handicapped or mentally retarded. I believe that federal assistance in this area can be more effectively utilized and I would urge the subcommittee to carefully examine this problem during its deliberations.

My second point, Mr. Chairman, is that we need to develop an increased awareness of handicapped needs and capabilities. An increased awareness leads to improved coordination between all programs for the handicapped. And currently, there is, in many instances, little cooperation, coordination or communication among these handicapped groups, even those serving the same populations. This lack of awareness, for example, can mean insufficient knowledge of a new adaptive or prosthetic device which enhances the athletic abilities of a physically handicapped individual. Lack of communication also isolates individuals and groups, leading them to believe that not enough effort is being made in their behalf. Finally, failure to communicate and coordinate can result in duplications of effort, as well as competition for funding and facilities.

Mr. Chairman, I believe we can improve conditions for handicapped individuals by developing more effective outreach programs. For instance, handicapped individuals could learn about programs in their communities by advertisements, commercials, newspaper items or other possible media means. I would urge the subcommittee to examine ways for developing outreach capability.

My third point deals with segregation. There seems to be an ever-growing philosophy that handicapped individuals are interested only in programs specifically for the handicapped. It has been my experience that the handicapped person really wants integration into society—not segregation. Segregated programs and facilities needlessly delay a disabled person's incorporation into the mainstream of life. While special programs can be used effectively to prepare individuals for taking part in regular programs, they by no means should be the sole opportunity. But in order for a handicapped person to use recreational facilities, they must be accessible.

Mr. Chairman, we need to establish a vehicle to ensure accessibility and equality of opportunity in all aspects of athletics and recreation for handicapped individuals.

Major efforts are needed to enforce all legislation concerning the elimination of architectural barriers at national, state and local levels. More thought must go into the development of accessible recreation and park facilities; information regarding accessible and barrier-free recreation programs needs to be readily available for and broadly distributed to recreation planners. All existing buildings and facilities must be made accessible and new buildings should incorporate barrier-free designs. I am aware, Mr. Chairman, that legislation has been passed that would require all new buildings constructed with federal funds to be barrier-free, but there is still widespread non-enforcement of the law—which brings me to the fourth point—ensuring that laws passed by the Congress are carried out.

Mr. Chairman, our government is a government for all our people. Nowhere in the Bill of Rights is the term "people" defined to exclude those citizens with physical or mental disabilities. These people, I believe, should share equally in any federal, state, or local program designed for the general public—for they, too, are part of the general public. Unfortunately, however, this seemingly obvious fact is lost sight of time and time again by government administrators in the daily translation of the Bill of Rights into programming. I find it inexcusable, for example, that four years after the enactment of the rehabilitation act there still are no final regulations implementing section 504, prescribing a congressional mandate to prohibit discrimination against handicapped individuals. If, we, as a nation, cannot convince our own administrators about the validity of this basic premise, we're doomed to failure in our efforts to secure equality of opportunity for handicapped people.

I know that this has been a source of frustration to the subcommittee and I hope that the new administration will expedite implementation of long-delayed regulations.

While it is true that programs in athletics and recreation for the handicapped are still inadequate, improvement has been made over the past years. Through the perseverance of concerned groups, an increased effort is calling attention to recreational opportunities for disabled persons.

There are currently 30 regional and national organizations that either sponsor or promote athletic programs for approximately one million handicapped people. Of course, I am most familiar with programs in my own State. So if I might take a moment, I'd like to describe recreation programs and services in Iowa which serve as demonstrations of the important and meaningful opportunities that can be provided when enough effort is put forth.

The handicapped village of Clear Lake, Iowa is an alternative to institutionalization. The village provides its 152 residents with an opportunity to develop skills in pottery, rugmaking, and other similar crafts.

At Camp Sunnyside in Des Moines, Iowa, home-bound persons are trained in craft design. The camp was developed to assist the multi-handicapped with an emphasis placed on therapy.

In Iowa City, Iowa, the Department of Parks and Recreation, in cooperation with the University of Iowa Recreation Curriculum, has initiated a "special population involvement" program which aids 200 handicapped children and adults with various recreational activities.

Therapeutic recreation services are also offered at the University of Iowa Hospital School where occupational and physical therapy, along with medical diagnostic efforts, are emphasized. The handicapped receive special training in reading, math, and writing.

The Iowa Braille and Sightsaving School in Vinton, Iowa is a residential school for the visually handicapped. Students attending are taught shop, homemaking, and braille, among other subjects. It is possible

for the students to earn a high school certificate.

Students attending the Iowa School for the Deaf in Council Bluffs are given the opportunity to earn a high school certificate with the benefit of specially trained instructors.

Finally, special olympics for the mentally retarded has been one of our State's most successful voluntary efforts. Special olympics sports training and athletic competition has played a major role in Iowa as well as the rest of the country in changing the image of mental retardation and in instilling an appreciation of the retarded in our society.

Mr. Chairman, I am well aware that making recreational facilities and programs available to the handicapped is not a simple task; it is not just a question of ramps and other appropriate facilities, expanded staffing or more money. These, of course, will help, but recreation for the handicapped requires many levels of affirmative action: law enforcement; removal of architectural barriers; utilization of available technology; dissemination of vital information; and the application of new programs and facilities. Moreover, the problem involves many different constituencies: the general public; the handicapped; and the legal, recreational, educational, and human service professions. Thus, the resources of already established programs and services must be redirected to meet new needs.

Finally, Mr. Chairman, recreation in the rehabilitation setting cannot be looked on as slack in the day that adds a bit of zest to the routine existence. Recreation must be thought of as a service within the rehabilitation process that will enable a handicapped person to function in society as efficiently and as independently as possible. Rehabilitation is only complete when the person can function socially as well as vocationally, and when he or she no longer sees themselves or are perceived by others primarily in terms of their limitations.

HOW THE UNEMPLOYMENT PROBLEM CAN REALLY BE SOLVED—ON THE LOCAL LEVEL

Mr. HELMS. Mr. President, I received a piece of mail from the Weyerhaeuser Co. in North Carolina which outlines some of the activities of the Eastern North Carolina Opportunities Industrialization Center, Inc., an organization which helps utilize in a constructive way, the abilities of those in need of work. The OIC programs throughout the Nation have done much to bring people into the work force through locally developed and administered programs of training and job placement.

Mr. President, I also noted recently a column by a distinguished North Carolina editor, H. Clifton Blue.

I should mention, Mr. President, that Cliff Blue is a former speaker of the North Carolina House of Representatives. In his column in the Sandhill Citizen, Cliff Blue suggests a way we can bring the less-skilled thousands of unemployed men and women back onto the job rolls.

The key in this matter is, of course, providing the services that these people can provide at a cost to the employer that will make it economically possible for him to provide a job.

Mr. Blue proposes a means of seeing to it that the unemployed still receive a minimum wage while lowering the cost of labor enough to encourage employers to hire those without high-paying skills.

The OIC program and Cliff Blue's idea of a cooperative plan for employment complement each other and could accomplish wonders in combating the problem, employment for the unskilled and untrained.

Mr. President, I ask unanimous consent that the statements of the Eastern North Carolina Opportunities Industrialization Center, Inc., and Mr. Blue's column be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

EASTERN NORTH CAROLINA OPPORTUNITIES INDUSTRIALIZATION CENTER

Eastern North Carolina Opportunities Industrialization Center, Inc., has become a positive force in rural eastern North Carolina by attempting to meet the needs of the unemployed, underemployed, and disadvantaged citizens. Under the directorship of Mr. E. V. Wilkins, former high school principal and educator in the area, the ENC/OIC intent became a reality, through a comprehensive program of motivational and attitudinal training geared toward job placement. Weyerhaeuser Company Foundation, through its pilot project, became a major thrust for the development of the ENC/OIC Skill Center by authorizing a venture grant. In addition, other major industries in the area supported the establishment of the OIC.

After a series of conferences, workshops, and observations of OIC of Philadelphia, Pennsylvania, and other locations, and the ideas of the Weyerhaeuser project, EMC/OIC was incorporated under the laws of the state of North Carolina as a non-profit corporation.

Roper, North Carolina OIC opened its doors on March 17, 1975. Participants at Roper have attended comprehensive motivational training classes consisting of a total of 240 hours over a period of eight weeks. A total of 150 people have taken advantage of the training opportunity at Roper and they have not been paid for attending the training, but were there because they wanted to improve their chances of finding and holding a job. This is a good demonstration of the "self help" concept of OIC. Because of the productive working relationship of the Board of Directors of ENC/OIC and Martin Technical Institute as well as friends of the OIC project, the idea of self help became a viable activity in the community.

The ENC/OIC Child Development Center began operating on April 14, 1975. Children from ages three to five who have parents enrolled in the center receive free day care for the duration of their training. Once again, ENC/OIC solved the problems of the communities by establishing a center that made it possible for parents to attend training and assisted in the development of children's needs in a rural setting. The Day Care Center at Roper is the only licensed and certified center which is meeting Day Care Center needs in Washington County, North Carolina.

To provide similar services to other areas in eastern North Carolina ENC/OIC developed two satellite programs in Lewiston and Elizabeth City, North Carolina. On December 1, 1975, fifty-three participants were received in Lewiston and on April 19, 1976, the OIC doors opened at Elizabeth City to more than thirty participants.

Serving a fifteen county area, and with the support of technical institutes, businesses and industries, and the communities, ENC/OIC has become an effective program serving rural needs in eastern North Carolina.

ENC/OIC attributes its success to the services provided and the innovative projects and training philosophy for Manpower Development.

SERVICES

Counseling—On-going counseling provided for participants in individual and group setting.

Day Care—Participants receive free day care during 8 week cycles up to 60 days after graduation.

Job Placement—Upon graduation, participants are assisted in finding jobs.

Transportation—Participants and Day Care children receive transportation to and from the Center.

Meals—Adult participants are provided hot lunches. Day Care children receive 2 hot meals and a snack.

PROJECTS

A. Rural Home Care Training—On July 12, 1976, this program began by providing classroom and clinical training, and a three (3) month internship. The training enables graduates to care for homebound patients in their respective communities. The project is supervised by a registered nurse and in cooperation with local Social Services and Health Departments. This project is equipped with a 27-foot Mobile Unit designed to provide onsite training and assistance to areas where transportation is limited.

B. Boredom Zero—This project is designed to serve youth, ages 10 to 17. With the elimination of "Boredom," the time spent in mischief and petty crime is considerably diminished. The project curriculum is flexible to the needs of the rural community, and extends to such things as, school homework hour, cultural enrichment, field trip, sports and career guidance, and a hot meal. Helping to shape and guide today's youth ensures the presence of more responsive adults in the future.

C. Rural Offender—To serve a neglected population, not only in eastern North Carolina, but across the country; ENC/OIC in cooperation with the N.C. Department of Corrections developed and implemented a Rural Offender Program. The project commenced December 6, 1976 with 15 inmates from Gates County Minimum Security Prison Unit. The project was designed with specific goals in mind: (1) Direct Placement pending parole or placement in the Work Release Program; (2) To assist with housing upon parole.

ENC/OIC will continue to develop programs geared to meeting the needs of the people of rural eastern North Carolina.

JOBS FOR THE JOBLESS

(By Cliff Blue)

Jimmy Carter has called upon the people to write and let him have their suggestions for consideration by his administration. Since the former Georgia governor has put jobs for the jobless at the top of his list, our suggestion will be on this subject.

We are leary, and question the idea of solving our unemployment through a public works program unless the public works are needed. Public works for needed projects are quite proper.

We are afraid we have too many people on the "unemployed" rolls who do not want to work. They work a few weeks then "draw" as long as possible. Too many of our unemployed have been brought up under the welfare system and have little incentive for earning a living when they can draw welfare payments and Food Stamps.

On the other hand, we have many people who are entitled to welfare aid and Food Stamps and to the deserving people we would take nothing from them, but would like to see them given greater help and support.

We are concerned about the unskilled and the untrained who add to the unemployed and welfare rolls.

We suggest the following co-op plan between the government and private enterprise to train and give them a job.

Period	Employer	Govt.	Total pay
1st 3 months	$1.00	$1.00	$2.00
2nd 3 months	1.30	.80	2.10
3rd 3 months	1.60	.60	2.20
4th 3 months	1.90	.40	2.30

We are not wedded to the above figures but a system with the government thrust toward getting the unemployed trained and-or off the welfare rolls and back to work is what we are thinking about—not some program which would perpetuate government handouts.

After this one-year of training there would be no further obligation on the trainee or the employer. Hopefully, the employer would be able to continue to offer employment at a higher rate of pay.

Remember, these people would not be on the training program if they had a job. It would be for the unemployed and untrained and if they could find a better job elsewhere while on training they could go to the better job.

The wage scale listed above is low but the whole plan is based on the theory of taking people who want to work off the unemployed rolls and giving them a chance to draw a salary while training.

This is similar to the Veteran's Training program which the U.S. Government promoted after World War II.

The G.I. on the job program trained young veterans in a similar U.S. Government approved program after World War II which proved beneficial to the veterans as well as the employer.

NEW THREAT TO FAMILY FARMING

Mr. McGOVERN. Mr. President, Members of this body know of my concern about recent announcements by Consolidated National Bank and the Merrill, Lynch, Pierce, Fenner & Smith brokerage house to acquire an initial $50 million of farmland under an Ag-Land Trust arrangement. They plan to lease the land to tenant farmers on an investment basis.

I have pointed out the pitfalls of such a scheme in other issues of the CONGRESSIONAL RECORD. The February 1977 edition of the South Dakota Union Farmer carries a story on the matter taking a position similar to my own. I ask unanimous consent that the article entitled "New Threat to Family Farming" be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AG-LAND TRUST—NEW THREAT TO FAMILY FARMING

The long-term corporate invasion of American agriculture has taken a new and disturbing direction. The $16 billion Continental Illinois National Bank and Trust Company of Chicago recently announced plans to put together a massive new mutual fund whose stock will consist of working farms throughout the country.

The fund-AG-Land Trust, would be marketed by Wall Street giant brokerage house Merrill Lynch, Pierce, Fenner and Smith, Inc. Buyers would be trustees of pension funds and other tax-exempt institutions.

Harvey Borsuk, vice president of the investment banking division of Merrill Lynch told a New York Times reporter that AG-Land "would only buy up working farms, no ranches or livestock operations, and bring in management to run them."

Borsuk said the Fund plans to sell $100,000-unit shares and would limit individual institution holdings to $5 million. Overall he expects to sell between $15 and $50 million in shares to tax-exempt institutions.

William G. Sayre, vice president of Continental Illinois, who dreamed up the AG-Land scheme, says the Fund hopes to acquire land in 12 to 15 states throughout the Midwest and South. Overall the fund initially has its eye on buying up approximately 100,000 acres of farmland in 640 acre tracts.

Sayre said the fund plans to buy land from a variety of sources, including retiring farmers, liquidations and estates.

One unidentified Wall Street banker predicted that if the AG-Land plan succeeds "we may see mutual funds set up for the average investor in agricultural ventures."

Perhaps it was inevitable that the recent rapid escalation in farmland values would eventually attract Wall Street and the nation's major banks, but the announcement of the formation of the AG-Land Fund must be seen as bad news for farmers and other rural Americans throughout the country.

One major impact of the AG-Land scheme will be to further fuel the spiraling inflation in the price of farm land—inflation that is making it nearly impossible for a young farmer to get started.

Sayre asserts that the Fund will not drive up prices because "we definitely are going to be careful not to compete for property that a lot of other farmers are interested in."

The fact is the AG-Land Fund will be competing with and will be in a good position to outbid farmers in purchasing land. At the same time the Fund's promoters make no secret of the fact that they expect to reap solid, long-term profits from the continued appreciation in land values.

Continental and Merrill Lynch also claim that AG-Land Fund and other such plans would provide a major break for young people who wanted to start farming. But the proliferation of schemes such as the AG-Land Fund would likely have just the opposite effect in reducing the opportunities for young men and women to become owner-operators of farms. Moreover, plans of this type threaten to turn independent American farmers into a new generation of sharecroppers.

Anti-corporation farming laws can provide a buffer against this type operation. Sayre concedes that because of restrictions in state law, some states will not be considered for land purchases. He cites Minnesota as an example. South Dakota's Family Farm Act, passed in 1974, should mean that South Dakota is also safe from the AG-Land Fund.

But, across the United States only a handful of states have acted to protect family farmers from the incursions of corporate agriculture. Most states, including prime target areas like Illinois and Iowa have done nothing.

"This, the AG-Land scheme, is definitely another blow to family farmers in that it will drive land values higher making it even more difficult for them to stay in business or get started," commented Maurice McLinn, chief of Farmer Programs for the Farmers Home Administration in South Dakota.

South Dakota Farmers Union President Ben Radcliffe said Congressional action is needed to protect family farmers from a corporate takeover.

"Corporate control of agriculture, whether it be by Tenneco or the Continental Illinois National Bank, would be a disaster for farmers, for our rural communities and for American consumers." Radcliffe declared.

The state farm leader contended that the American family farm owned and operated by individual farm families—has been proven to be the most efficient and successful producer of food the world has ever known.

"This new corporate land buying scheme once again underlines the importance of keeping and strengthening our South Dakota Family Farm Act," Radcliffe continued. He predicted that the AG-Land proposal will lead to renewed interest in the Family Anti-Trust Act first proposed in Congress by South Dakota Sen. Jim Abourezk several years ago.

Both Congress and the U.S. Department of Agriculture may soon be taking a critical look at the Continental Bank plan. Rep. Paul Findley (R-Ill.) recently asked for an Agriculture Department study and possible Congressional Committee investigation of the land investment fund.

He urged the agriculture department to investigate the impact of the AG-Land Trust on: (1) The value of farm land, (2) the family farm structure, (3) tax rates for agriculture, (4), prospects for young men and women to become owner-operators of farms, (5) the vitality of rural communities and local units of government and (6) federal farm programs.

Continental Bank and Merrill Lynch say they are really friends of family farmers and that a Wall Street-Mutual Funds takeover of American farmland would be a boon to young and beginning farmers. With friends like these who needs enemies.

VIRGINIA KNAUER: CONSUMERS' CHAMPION

Mr. DOLE. Mr. President, it is my honor and privilege today to pay tribute to a woman who has befriended thousands of Americans through her unceasing efforts on their behalf. She defies classification and refutes all stereotypes. She has had an outstanding career in Government at the local, State, and Federal level. At the same time she has combined public service with unqualified personal success as a wife, mother, and grandmother. In this era of antiheroes, she has provided the inspiration and model for many to emulate. Her leadership ability has been attested to by her achievements and the subsequent outstanding careers of many of her former staff members. There are so many high level graduates of her operation that she has been referred to as a one-person university. This Washington institution to which I refer is Mrs. Virginia H. Knauer.

Mrs. Knauer served for the past 8 years under President Nixon and President Ford as the Special Assistant for Consumer Affairs—OCA. This dual role allowed her to represent the interest of American consumers in the highest councils of Government here and abroad. She led the fight to initiate a multiude of new programs and new services for American consumers so that they could function more effectively in the marketplace.

GOSPEL OF CONSUMERISM

After President Nixon appointed her as his Special Assistant in 1969, Mrs. Knauer enthusistically undertook her mission to preach the gospel of consumerism everywhere and anywhere. She sought out every opportunity to do this. Under her directorship, the office evolved from the President's Committee on Consumer Interests into the Office of Consumer Affairs with a $1.5 million budget and a staff of 55 people.

As a Presidential spokeswoman, she sought to restore the lines of communication that had broken down among Government, industry, business, and consumers. To do so, she effectively utilized all aspects of the media. The statistics themselves illustrate her energetic campaign: she visited each of the 50 States, including Puerto Rico and the Virgin Islands. She submitted written or oral comments on 309 occasions. She delivered 575 formal speeches, held 177 press conferences, gave 1,004 interviews and made 312 radio and television appearances and appeared in 115 magazine articles. Her efforts on behalf of consumers were further extended through her Presidential appointments to eight Cabinet-level committees.

BUYER'S BILL OF RIGHTS

Throughout all this activity she forcefully expressed the belief that consumerism is good business. Her theme was the Buyer's Bill of Rights which enunciated the consumer's right to make an intelligent choice among products and services; the right to accurate information; the right to safe and healthful products; the right to register dissatisfaction and have a complaint heard and weighed; and the right to consumer education. Consonant with these principles was her fundamental belief that she would show consumers how to help themselves.

Along with her 8 years as an elected member of the Philadelphia City Council, Mrs. Knauer's experience as director of the Pennsylvania Bureau of Consumer Protection convinced her of the critical role small and local consumer affairs offices can play in the progress of consumerism. At the outset, stimulation of more consumer offices at the grassroots level was a top priority of hers. In 1969, there were 16 such offices. In 1976, State and local consumer offices numbered 362.

VOLUNTARY ACTION

Unquestionably, Mrs. Knauer's greatest talent was her ability to persuade others that voluntary action on their part was in their own best interest. This ability to stimulate action on the part of industry and business was the hallmark of her term of service. She reached voluntary agreements with industry to provide nutritional labeling. Also three food retail chains voluntarily adopted unit pricing. Examples of other voluntary actions that were taken at Mrs. Knauer's urging include window packages on bacon; cessation of child attractive packaging of inedible or toxic household products; and promises by industry to abide by the findings showing that consumers would suffer from the elimination of individual package pricing.

Mrs. Knauer took these same skills and expertise abroad. She served as the U.S. Representative and Vice Chairman of the Consumer Policy Committee of the 23-member nation Organization of Economic Cooperation and Development—OECD. During her OECD services she presented numerous American position papers including consumer credit, labeling, safety and marketing practices, and consumer information and education.

In addition to the immediate problems confronting the Nation, Mrs. Knauer forecasted several emerging issues and lobbied for consumer involvement in the initial stages of their development. Examples of such topics include solar energy, import quotas, fuel conservation, privacy, and EFTS. Other areas addressed covered product liability, price supports, meat imports, and food programs. With the same eye to the future, Mrs. Knauer encouraged the development of the National Center for Innovation and the National Center for Appropriate Technology.

CONSUMER PUBLICATIONS

A revolution virtually occurred during Mrs. Knauer's tenure in the area of publishing consumer materials. A strong believer in the public's right to know, she immediately established Consumer News, an interagency newsletter to report Federal Government programs for consumers. Later it was supplemented by a four-page enclosure entitled "Consumer Register," which contains summaries of items of consumer concern, notices of hearings, and blank forms on which consumers can register their comments on proposed regulations. Present circulation is 25,000.

A myriad of other publications were initiated to keep consumers advised and in touch: "Directory of Federal, State, County, and City Government Consumer Offices," "State Consumer Action," "Directory of Consumer Organizations," "Forming Consumer Organizations," "Directory of Federally Funded Consumer Programs," "Low Income Communities," and "Guide to Federal Consumer Services." Since 1970, 41.3 million of these publications have been ordered by consumers.

This effort was further supplemented in a weekly newspaper column entitled "Dear Consumer," which ran in about 7,000 weekly and small daily newspapers under Virginia Knauer's byline. In addition, she hosted a weekly, 4 minute, radio program called HELP on which she interviewed prominent citizens and Government officials. Approximately 1,000 commercial stations and 449 Armed Forces networks subscribe to this show.

Recently, she launched the largest survey ever conducted by the Federal Government to discover consumer attitudes toward their experiences in the marketplace with over 200 products and services. This topped off her 5-year effort to survey State and local offices for their top 20 complaints. The results of both efforts will be an invaluable planning tool for Federal departments and agencies, business, and industry.

CONSUMER JUSTICE

Mrs. Knauer worked with the Secretary of Commerce to reconstitute the National Business Council for Consumer Affairs. It is a voluntary advisory group composed of 50 business leaders seeking identification and resolution of different consumer problems. Likewise, she was instrumental in the creation of the National Institute for Consumer Justice. This organization was dedicated to the improvement of the grievance-solving mechanisms such as arbitration and the legal remedies available to the consumer particularly small claims procedures. Many of the recommendations made in the institute's report have found their way into proposed legislation.

An outgrowth of this experience was Mrs. Knauer's proposal to establish consumer action panels—CAPS—which mediate grievances between businessmen and consumers. Her efforts have been rewarded by the formation of CAPS in several industries: major appliances, carpet and rugs, furniture, automobiles, insurance, health care services, and new homeowners.

Over and above these achievements, Virginia Knauer's most significant and profound contribution to the Nation has undoubtedly been the forceful oversight she exercised over the creation and implementation of President Ford's consumer participation plans. Mrs. Knauer was given the responsibility by President Ford to work with the Office of Management and Budget as well as the heads of 17 executive branch departments and agencies in developing plans for actively seeking consumer participation in the decisionmaking and program planning process of the Federal Government. Her efforts resulted in monumental adjustments in the process by which many Federal decisions are determined. No longer was Government to be solely "for the people." Virginia Knauer insured that Government will also be "by the people."

EXTRAORDINARY BLEND

With her departure from the public sector, the United States faces one more crisis of a dwindling natural resource. We doubt that we shall see again soon that extraordinary blend of determination, enthusiasm, and compassion unique to Virginia Knauer.

Mrs. Knauer dedicated her talents most generously to the cause of consumerism. Her mark can be seen in the advancements of health, safety, and welfare of the American consumer that have occurred in the marketplace over the past decade. For this, we are forever indebted to her and wish her Godspeed in the years ahead.

GOVERNMENT DREDGE URGED FOR THE PORT OF SAVANNAH

Mr. TALMADGE. Mr. President, the Georgia House of Representatives, now in session in Atlanta, has adopted a resolution which, for myself and my colleague, Senator NUNN, I bring to the attention of the Senate, and ask unanimous consent that it be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

A RESOLUTION

Urging the construction of a new government dredge for the Port of Savannah; and for other purposes

Whereas, the maintenance of ship channels in the orderly, safe and efficient use of the harbor is a paramount requirement in the day-to-day operation of the Port of Savannah, Georgia; and

Whereas, the Port of Savannah represents an extensive investment by the federal, State and local governments with a resultant economic asset beneficial to the Port area, the State of Georgia and the United States; and

Whereas, physically, Savannah Harbor has the problem of shoaling to a degree greater than any Atlantic seaport, which has been

controlled by regularly scheduled dredging supplemented by additional contract dredging; and

Whereas, historically, there has been assigned at the Port of Savannah for over fifty years, a U.S. Corps of Engineers pipeline dredge, and since 1947 the government dredge, Henry Bacon, had been available for regular maintenance works and to handle emergencies as they frequently occurred; and

Whereas, since the sinking of the Henry Bacon in December, 1975, the Port of Savannah has been without this vital equipment which has caused frequent shoaling and the necessity for contract dredging and greater expenses occasioned thereby; and

Whereas, the U.S. Corps of Engineers has recommended the construction of a new government dredge to replace the Henry Bacon and has also recommended that this new dredge be stationed in Savannah.

Now, therefore, be it resolved that the House of Representatives, on behalf of the Port of Savannah, hereby urges the construction of a new government dredge to be stationed at the Port of Savannah.

Be it further resolved that the Clerk of the House of Representatives is hereby authorized and directed to transmit an appropriate copy of this Resolution to Honorable Jimmy Carter, President of the United States, each member of the Georgia delegation to the United States Congress, the U.S. Army Corps of Engineers and the Savannah District Engineer.

THE JOB OPPORTUNITIES AND ECONOMIC REFORM ACT OF 1977

Mr. HELMS. Mr. President, the development of a comprehensive reform bill such as the Job Opportunities and Economic Reform Act of 1977 (S. 40) takes a great deal of research and analysis which would be impossible for Members to do alone. This is, of course, why Senators have staffs—to formulate legislation.

However, other organizations contribute to this effort as well. I understand, for example that there is a privately funded committee that has a full-time staff of 12 individuals aimed at pushing the so-called Humphrey-Hawkins bill. In my efforts to put a bill that moves away from Government intervention instead of toward it, I have received invaluable assistance from the Institute on Money and Inflation, a public policy research organization founded last year here in Washington.

Mr. President, I ask unanimous consent that a section-by-section analysis of S. 40 and the text of the proposal be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

DESCRIPTION AND ANALYSIS OF THE JOB OPPORTUNITIES AND ECONOMIC REFORM ACT OF 1977, S. 40

I. Legislative history:

Senate: S. 40 was introduced on January 10, 1977, by Senator Jesse Helms (R-NC). It has been referred to the Committee on the Budget, the Committee on Banking, Housing, and Urban Affairs, and the Committee on Labor and Public Welfare by unanimous consent.

II. Summary of S. 40:

S. 40 is essentially a policy bill. It contains a statement of General Findings in the preamble, which highlights some of the economic problems which the bill addresses. The bill is then divided into four major titles. The first title of the bill is a policy statement outlining some of the sources of economic dislocations such as those recently experienced. It states that the act is intended to provide a stable economic environment, and that it shall be the continuing policy and responsibility of the government to reduce its intervention in the economy. Title II requires a gradual balancing of the budget. Title III would require steps which would lead to a strengthened, gold-backed currency, and Title IV establishes a Federal Commission on Barriers to Employment.

III. Major issues:

Perhaps the key issue raised by S. 40 is the establishment of a coherent free-market economic policy. Senator Helms has cited the fact that Congress has usually taken a scattershot approach to the economy as a major reason for his introduction of this measure. This approach, he feels, has contributed heavily to economic dislocations in recent years. Since the bill's approach is essentially a return to more traditional economic theories, it represents a departure from current trends in economics. In many respects it conflicts with the principles of the liberal London School of Economics theories which have enjoyed much popularity, albeit little success in recent years.

Senator Helms has indicated that the primary source of conflict between the two schools of economic thought lies in the perceived economic role of the government. The proponents of the liberal London School policies advocate an expansive governmental role. An example of their policies would be the concept that the government should serve as the "employer of last resort". Economists with a more free-market orientation have frequently criticized the London School, using Great Britain as an example. The current British economic problems, they point out, have resulted from, and increased with, government intervention in the economy. Opponents of the London School have also expressed concern over the loss of personal freedom which occurs when the government regulates some aspect of economic life.

Closely related to the question of what economic theory to follow is the question of whether or not to balance the budget. Senator Helms has expressed concern over the growing size of the federal debt. He feels that it has been a major cause of the inflation which we have experienced. He notes that as the money supply has been increased beyond its normal rate of growth, it has effectuated and increased government allocation of resources. According to Helms, it contributes to the capital shortfall which the country is currently experiencing. The long-run effect of this is to cause increased unemployment.

Opponents of the balanced budget contend that it is necessary to incur deficits in order to stimulate the economy. They further contend that, while there is always some inflation associated with deficits, it does not constitute a problem of any magnitude.

Other issues raised in the bill include a provision which would eventually bring the government's selling price for gold into line with the world price, and a provision which would create a Federal Commission on Barriers to Employment.

IV. Section-by-section analysis:

Preamble Section 2. (a): This section contains the General Findings of the act. It outlines various economic costs of the economic disruption which the nation has experienced. Among these costs are included the demise of the monetary system as a standard of value, the fact that income taxes have risen at a faster rate than income, the decrease of purchasing power experienced by those on fixed incomes, and the underutilization of capital and other resources. Other costs mentioned include the shortfall of productive capacity, the job insecurity experienced by workers in times of economic dislocations, the social costs to the family, declining government revenues, and the lack of a stable economic environment for business.

Preamble, Section 2. (b): This section contains further findings. Among these are included the fact that inflation increases unemployment by reducing consumer confidence, the fact that although barriers toward entry into the capital and labor markets must be lowered in order to insure a stable economy, no steps have been taken to do so, and the fact that federal deficits result in inflation. Further findings cite the debasement of the monetary system by the Federal Reserve Board through its creation of money to finance federal deficits, the burden created by the deficit-fueled inflation, and the need for a "sound and effective program for the Nation's economic well-being" based on "minimum government interference in the economy".

Section 101: This section is a statement of the purpose of the act. It indicates that the purpose is "to provide a stable economic environment". It also refers to the necessity to minimize Government intervention, and to the necessity of sound fiscal and monetary policy.

Section 102. (a): This section amends the Employment Act of 1946. It states that the federal government has the responsibility to avoid and reduce federal intervention in the economy whenever possible. It further states that this reduction of intervention is in recognition of the fact that the use of fiscal and monetary policy to regulate the economy is counterproductive.

Section 102. (b): This section declares that individuals should not be restricted from obtaining jobs due to government regulations, which act to prevent employers and employees from coming to mutually agreeable arrangements.

Section 102. (c): This section declares that the policies of the Federal Reserve System, concerning the regulation of the economy through expansion of the money supply have had adverse effects greater than the problems the policies were supposed to solve.

Section 201: This section is the beginning of the title dealing with balancing the budget. It is a policy declaration which states that the American economy has been adversely affected by deficit spending, that the federal government must balance the budget, and that the responsibility for balancing the budget rests with the Congress under Article I of the Constitution.

Section 202: This section amends the Congressional Budget Act of 1974. It adds language which would call for a gradual phasing in of a balanced budget. The phasing would begin in 1977, with the requirement that budget outlays not exceed revenues by more than 7%. The following year (1978), outlays may not exceed revenues by more than 4%. As of 1979, the total level of budget outlays must match total revenues. The balance of the section sets forth language to bring sections of the Congressional Budget Act of 1946 into compliance with the language of this section, by prohibiting concurrent budget resolutions from setting forth levels of outlays in excess of the level permissible under the new language of this section. It prevents a resolution from containing a figure which would create a de facto deficit.

Section 203: This section also amends the Congressional Budget Act of 1974. It is, however, more in the language of a technical, or perfecting amendment. It deletes the word "deficit" from certain sections, and makes certain other deletions and additions which are in keeping with the goal of disallowing deficits.

Section 301: This section is again, a declaration of policy. It emphasizes the importance of a sound money system. It states that the current monetary system has been subject to abuse and has lead to inflation, and other problems. It further states that inflation is considered our nation's most serious problem by the American people, and

that money redeemable in gold meets the vital needs of the United States in the foreseeable future.

Section 302: This section mandates that on or after October 1, 1980, the Secretary of the Treasury is to begin selling gold from the United States gold stocks at the price of $185 per troy ounce, and purchasing gold of similar fineness in the world market for $85 per troy ounce.

Section 303(a): This section mandates the sale of gold by the Secretary of the Treasury during the fiscal years beginning October 1, 1981, 1982, 1983, and 1984.

Section 303(b): This section sets forth the formula by which the selling price of gold for the sales mandated in section 303 (a) shall be determined. It states that the selling price shall be equal to the selling price during the most recent year during which purchases and sales were made under the act, reduced by the product of $25 and a fraction. The numerator of the fraction is to be the difference between the world-market price for gold, and the selling price which was in effect during the most recent year during which purchases and sales were made under this act. The denominator of the fraction is to be the difference between the selling price and the purchase price, as of the most recent fiscal year.

This method would, in effect, provide a narrowing range over a period of years geared at arriving at a dollar/gold price freely determined by the marketplace. Unless government violated its commitment following the final adoption of a single price for the sales and purchases of gold, and created excess dollars, there would be no net transactions.

Section 303. (c): This section sets forth the mechanism by which the Secretary of the Treasury is to determine the world-market price for gold. It is to be the average market price of gold on the major international markets for the preceding 12-month period. The only exception to this is in the case of the first year of sale, in which the preceding 10 month period will be used.

Section 304: This section authorizes the President to extend the purchase or selling price of gold for up to one year if he determines that either price has been manipulated. He must report this determination to the Congress, and either house may veto his action.

Section 401: This section establishes a Federal Commission on Barriers to Employment. The commission is to be composed of seven members, appointed by the President, with the advice and consent of the Senate. One of the seven is to be designated by the President as Chairman of the commission at the time of appointment.

Section 402: This section charges the commission with the responsibility to undertake a comprehensive investigation of the costs of various barriers to employment of individuals, to businesses, to the economy, and to the government. Any law, regulation, or judicial decree or consent agreement which prevents or tends to prevent individuals or businesses from offering or filling positions of employment shall be considered a barrier to employment under this act.

Section 403: This section authorizes the commission to receive, transmit and solicit information.

Section 404: This section requires semi-annual reports to be given on a number of matters. Among these are

1. government incentives to encourage individuals to stay out of job market;

2. laws or regulations which increase the cost of starting a business enterprise;

3. laws which increase the cost of expanding a business enterprise;

4. laws which increase the cost of maintaining or operating a business enterprise;

5. provisions obtained in the Internal Revenue Code which have an influence on or which constitute a determining factor with respect to business practices affecting employment; and

6. laws or regulations which confer special rights on any group or individual to reduce or restrict employment opportunities.

Section 405 (a): This section provides that members of the commission who are members of Congress or federal employees shall serve without additional compensation.

Section 406: This section is the administrative provision of the act. It authorizes the hiring of employees, the applicable statutes under which they shall be compensated, and similar purely administrative aspects of actually organizing the commission.

Section 407: This section authorizes that such funds as necessary to carry out the functions of the act be appropriated.

V. Commentary:

The Helms proposal is the first attempt in recent years to establish a coherent free-market-oriented economic policy. As a point of comparison, where S. 50 (the Humphrey-Hawkins Bill) would increase the government's role in the economy, S. 40 would have the effect of decreasing it. Where S. 50 concentrates on creating Public Service Jobs, S. 40 concentrates on creating an economic environment which would allow for the creation of jobs in the private sector. Senator Helms has described the contrast between the two philosophies in statements on the floor of the Senate. He said, among other things:

". . . There are those who accept the argument that if the government spends more than it takes in, then the economy will be stimulated and more people will be employed and more people will pay taxes and somehow government deficits will go away. If that is the case, then it isn't so very bad to have bad programs as long as the motives are good. Money must be spent somewhere to stimulate the economy. But, what if things were different? What if priorities had to be set? What if leaders were to become serious about setting those priorities? What would happen to marginal programs? They would start to fall by the wayside. If Congress had to choose between taxing for programs and eliminating programs, not just a lot of fat would be trimmed. Tons of blubber would be hacked away. The effects of such a happening would be entirely salutory. Resources would not be grabbed away by the government, the Federal employment would tend to stabilize. One set of government regulations would remain in effect long enough for people to understand them. . . ."

Specifically hitting the concept of Public Service Employment jobs, Helms went on:

". . . There would be some additional unemployment created by the elimination of Federal make-work jobs, and the Federal jobs administering the make-work jobs. But, if we are to make a serious attack on the unemployment situation, it will take a concerted look at what has caused unemployment: First, economic instability. There is a reduced incentive for new investment, reduced predictability and as a result, fewer new jobs in industry. Second, there is government intervention in creating barriers to employment. Barriers place a legal impediment to people coming to mutually agreeable economic arrangements. Third, there are incentives for not working. High levels of benefits for the unemployed, and penalties on social security recipients who seek employment. . . ."

There is one provision in the bill which will likely have support from both liberal and conservative members of Congress. This is the creation of a Federal Commission on Barriers to Employment. Even the most liberal member recognizes that there has been increasing public concern over the increased government involvement in the economy. This concern is likely to create a favorable environment for such a commission.

In sum, the Helms proposal calls for a reversal of federal economic policy which has been dominant since the 1930's. Recent popularity of non-Keynesian economists such as Frederick von Hayek, Milton Friedman, Ludwig von Mises and others have generated increased academic skepticism of the value and ability of government to provide beneficial stimulation to the economy through fiscal and monetary policies. Helms attempts to embody the theory into a comprehensive political program. He candidly expects little of it enacted, but hopes to start a debate with this bill that will eventually lead to the reforms he advocates.

S. 40

A bill to provide for high levels of employment, stable prices and economic growth by reform of Federal economic policy, revision of congressional spending practices, stabilization of the United States monetary system, the limitation of artificial barriers to employment, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act and the following table of contents may be cited as the "Job Opportunities and Economic Reform Act of 1977".

GENERAL FINDINGS

SEC. 2. (a) The Congress finds that the Nation has suffered substantial economic disruption including inflation, unemployment and underemployment, the underutilization of productive capacity and the misallocation of resources, over prolonged periods of time, imposing numerous economic and social costs. Such costs include the following:

(1) The monetary system has ceased to serve as a standard of value.

(2) Individual income taxes have increased faster than real income.

(3) The disadvantaged and the elderly and those on fixed incomes are deprived of purchasing power.

(4) The Nation is deprived of the full supply of goods and services, the full utilization of labor and capital resources, and the related increase in individual income and well-being that would exist under stable economic conditions.

(5) Insufficient production is available to meet pressing national priorities.

(6) Workers are deprived of job security, income, skill development, and productivity necessary to maintain and advance their standards of living.

(7) Business and industry are deprived of a stable economic environment and consequently have lost production, sales, capital flow, and productivity necessary to maintain adequate profits, create jobs, and contribute to meeting society's economic needs.

(8) The Nation's citizens are exposed to social costs and traumas, including disruption of family life, loss of individual dignity and self-respect, drug addiction, crime and social conflict.

(9) Federal, State, and local government activity is disrupted as Government revenues decline in periods of economic contraction.

(b) The Congress further finds that—

(1) inflation increases unemployment by reducing the confidence of the consumer in the economy, it disrupts the individual's and businessman's ability to predict economic activity, and inflation thus reduces the productivity of capital, and tends to increase demands for remedies such as wage and price controls, restrictions on international commerce, subsidy programs, allocations, and economic regulations which tend to reduce the market's ability to economically allocate resources and adjust to the inflation, thus, increasing the costs of inflationary disruption to the entire economy;

(2) although a stable, noninflationary economic growth is impossible without proper monetary and fiscal policies, high levels of employment, the maximum rate of economic growth, and increased per capita income cannot be achieved without concerted efforts to reduce private and public barriers to job and capital markets, and such barriers have not been lowered, in part because this goal has not been established and implemented by the President and the Congress;

(3) Federal deficits result in economic disruption and impose great costs on the American people and the Nation's economy by providing incentives for the Federal Reserve System to increase the money supply, and by displacing private investment by causing interest rates to be higher than those which would otherwise prevail;

(4) the Federal Reserve Board, when it creates money to finance Federal deficits, debases the currency resulting in inflation and its concomitant dislocations;

(5) inflation, thus used to finance Federal expenditures, places inequitable burdens on Americans and, further, disrupts productive enterprise so as to reduce the real and potential output of the Nation's economy, thus reducing the average income of all Americans.

(6) when money is created to finance Federal deficits, the full effects of inflation are felt throughout the economy a considerable period of time after the deficits occur thus giving rise to public misinterpretations of the real cause of inflation: and

(7) a sound and effective program for the Nation's economic well-being should be based on minimum Government interference in the economy.

TITLE I—ESTABLISHMENT OF GOALS AND GENERAL ECONOMIC POLICIES

STATEMENT OF PURPOSE

SEC. 101. It is the purpose of this Act to provide a stable economic environment under which individuals and groups can act with maximum freedom, to minimize disruptive Government intervention in the economy, to provide a framework for a sound and fiscal policy and to provide for a monetary system exemplified by stable values and minimum fluctuations.

DECLARATION OF POLICY

SEC. 102. Section 2 of the Employment Act of 1946 is amended to read as follows:

DECLARATION OF POLICY

"SEC. 2. (a) The Congress declares that it is the continuing policy and responsibility of the Federal Government to avoid and reduce whenever possible intervention in the economy, recognizing that fiscal and monetary policies when used for purposes of regulating the economy tend to be counterproductive, and that the absence of such intervention tends to foster and promote free competitive enterprise; the general welfare; conditions which promote balanced growth; and useful employment opportunities, including self-employment, for those able, willing, and seeking to work and to foster and promote high levels of employment, increased production, and increased standards of living for all.

"(b) The Congress declares that all adult Americans able, willing, and seeking work should not be restricted from obtaining jobs because of Government regulations which impede the freedom of employee and employer to enter into mutually satisfactory agreements.

"(c) The Congress further declares that inflation results and has resulted from the creation of excessive quantities of money by the Federal Reserve System in its attempts to control interest rates, minimize the adverse effects of fiscal policy, and generally regulate the Nation's economy; and that such efforts have caused greater disruption and resulted in greater costs to the Nation than the conditions those efforts are intended to remedy.".

TITLE II—BALANCED BUDGETS AND ECONOMIC STABILITY

CONGRESSIONAL FINDINGS AND DECLARATION OF POLICY

SEC. 201. The Congress finds and declares that—

(1) the American economy has been adversely affected by Federal deficits which have resulted in inflation, misallocation of resources, and other hardships caused by economic instability, and in the imposition of inequitable burdens of individuals for the cost of Federal programs;

(2) the Federal Government must balance its revenues with outlays to avoid disruptive effects on the economy; and

(3) the chief responsibility for determining Federal revenues and outlays rests with the Congress in accordance with article I of the Constitution.

CONGRESSIONAL BUDGET ACT AMENDMENTS TO REDUCE DEFICITS

SEC. 202. (a) Section 301(a) of the Congressional Budget Act of 1974 is amended by adding at the end thereof the following new sentence: "For the fiscal year beginning on October 1, 1977, the appropriate level of total budget outlays shall not exceed the recommended level of Federal revenues by more than 7 percent; for the fiscal year beginning on October 1, 1978, the appropriate level of total budget outlays shall not exceed the recommended level of Federal revenues by more than 4 percent; and for the fiscal year beginning on October 1, 1979, and each fiscal year thereafter, the appropriate level of total budget outlays shall not exceed the recommended level of Federal revenues.".

(b) Section 304 of such Act is amended by adding at the end thereof the following new sentence: "No such concurrent resolution on the budget shall set forth an appropriate level of total budget outlays which exceeds the amount permissible under the last sentence of section 301(a).".

(c) Section 310(a) of such Act is amended by inserting after the first sentence thereof the following new sentence: "No such concurrent resolution on the budget shall set forth an appropriate level of total budget outlays which exceeds the amount permissible under the last sentence of section 301(a).".

CONGRESSIONAL BUDGET ACT AMENDMENTS TO BALANCE BUDGET

SEC. 203. Effective with respect to the fiscal year beginning on October 1, 1979, and succeeding fiscal years—

(1) section 301(a)(3) of the Congressional Budget Act of 1974 is amended by striking out "or the deficit";

(2) section 301(a)(5) of such Act is amended by striking out "increased or";

(3) section 301(d)(6) of such Act is amended by striking out "or deficit";

(4) section 303(a)(3) of such Act is amended by striking out "an increase or" and inserting in lieu thereof "a"; and

(5) section 202(f)(1) of such Act is amended by striking out "and deficits".

EMERGENCY PROVISIONS

SEC. 204. The provisions of section 904 of the Congressional Budget Act of 1974 shall apply with respect to amendments made by sections 202 and 203 (other than the amendment made by section 203(5)) of this Act.

TITLE III—SOUND CURRENCY

CONGRESSIONAL FINDINGS AND DECLARATION OF POLICY

SEC. 301. The Congress finds and declares that—

(1) without a sound monetary system, the United States will suffer economic, political, and social consequences of unacceptable severity;

(2) the present monetary system has led to abuse and has resulted in inflation, economic instability, and unemployment;

(3) a sound money system cannot be dependent on the individual judgments of small numbers of individuals;

(4) a sound money system must have the trust and support of the American people;

(5) the American people view inflation as the single most important problem facing our Nation; and

(6) money redeemable in gold meets the vital needs of the United States in the foreseeable future.

UNITED STATES TREASURY SALE AND PURCHASE OF GOLD

SEC. 302. During the fiscal year beginning on October 1, 1980, the Secretary of the Treasury shall offer for sale gold from United States gold stocks at the price of $185 per troy ounce (hereinafter referred to as the "selling price"), and shall purchase such gold of equivalent fineness as shall be offered at the price of $85 per troy ounce (hereinafter referred to as the "purchase price").

ADJUSTMENTS IN SALE AND PURCHASE PRICES OF GOLD

SEC. 303. (a) During each of the fiscal years beginning on October 1, 1981, 1982, 1983, and 1984, the Secretary of the Treasury shall offer to sell and purchase gold at selling and purchase prices successively adjusted in accordance with subsection (b).

(b)(1) The selling price during each such fiscal year shall be determined as the selling price during the most recent fiscal year during which purchases and sales under this title were made, reduced by the product of $25 and a fraction, the numerator of which is the difference between the world market price (determined under subsection (c)) and the selling price which was in effect during the most recent fiscal year during which purchases and sales under this title were made, and the denominator of which is the difference between the selling price and the purchase price, as in effect during that most recent fiscal year.

(2) The purchase price during such fiscal year shall be determined as the purchase price during the most recent fiscal year during which purchases and sales under this title were made, plus the product of $25 and a fraction, the numerator of which is the difference between the world market price (determined under subsection (c)) and the purchase price during the most recent fiscal

year during which purchases and sales under this title were made, and the denominator of which is the difference between the selling price and the purchase price, as in effect during the most recent fiscal year.

(c) The world market price shall be determined by the Secretary of the Treasury as the average market price of gold at major international markets (1) during the ten-month period beginning on October 1, 1980, for fiscal year 1981, and (2) during the twelve-month periods beginning on August 1, 1981, 1982, and 1983, for the fiscal years beginning on October 1, 1982, 1983, and 1984, respectively.

EXTENSION OF TRANSITION PERIOD

SEC. 304. Notwithstanding any other provision of this title, the President may extend for not to exceed one year any purchase price or selling price established in under section 302 or 303—

(1) if he determined that the market price of gold has been manipulated in order to affect the actions of the Secretary of the Treasury under this title,

(2) if he reports such determination to the Congress, and

(3) if neither the Senate nor the House of Representatives agrees, within thirty days after receipt of the report, to a resolution stating in substance that the purchase price or selling price as established under the provisions of this title should be put into effect.

TITLE IV—FEDERAL COMMISSION ON BARRIERS TO EMPLOYMENT

APPOINTMENT OF COMMISSION

SEC. 401. (a) There is established a Federal Commission on Barriers to Employment (hereinafter referred to as the "Commission").

(b) The Commission shall be composed of seven members, to be appointed by the President, by and with the advice and consent of the Senate, one of whom shall be designated by the President at the time of appointment to serve as Chairman of the Commission.

DEFINITIONS AND PARAMETERS OF STUDY

SEC. 402. The Commission shall undertake a comprehensive study and investigation of the costs of various barriers to the employment of individuals to businesses, to the economy, and to the Government. For the purpose of its study, the Commission shall treat any law, regulation, or judicial decree or consent agreement which prevents or tends to prevent individuals or businesses from offering or filling positions of employment, as barriers to employment.

SOURCES OF INFORMATION

SEC. 403. In carrying out its study, the Commission shall solicit and receive information on barriers to employment from private organizations, individuals, and Government agencies.

CONGRESSIONAL REPORTS

SEC. 404. The Commission shall report to the Congress at least semiannually on the following matters:

(1) Government incentives to individuals to stay out of job markets;

(2) laws or regulations which increase the cost of expanding business enterprises, thereby reducing employment opportunities;

(3) laws or regulations which increase the cost of expanding busines enterprise, thereby reducing employment opportunities;

(4) laws or regulations which increase the cost of operating or maintaining a business enterprise, thereby reducing job opportunities;

(5) provisions contained in the Internal Revenue Code of 1954 which have an influence on or which constitute a determining factor with respect to business practices affecting employment; and

(6) laws or regulations which confer special rights or powers to any group or individual thereby enabling that group or individual to reduce or restrict employment opportunities.

COMPENSATION OF COMMISSION MEMBERS

SEC. 405. (a) Members of the Commission who are Members of Congress or full-time officers or employees of the United States shall serve without additional compensation, but shall be reimbursed for travel, subsistence, and other necessary expenses incurred in the performance of the duties vested in the Commission.

(b) Members of the Commission, other than those referred to in subsection (a), shall receive compensation at the rate of $100 per day for each day they are engaged in actual performance of the duties vested in the Commission and shall be entitled to reimbursement for travel, subsistence, and other necessary expenses incurred in the performance of such duties.

ADMINISTRATIVE PROVISIONS

SEC. 406. (a) The Commission shall have the power to appoint and fix the compensation of such personnel as it deems advisable, without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and the provisions of chapter 51 and subchapter III of chapter 53 of such title, relating to classification and General Schedule under section 5332 of such title.

(b) The Commission may procure, in accordance with the provisions of section 3109 of title 5, United States Code, the temporary or intermittent services of experts or consultants. Persons so employed shall receive compensation at a rate to be fixed by the Commission but not in excess of $100 per day, including traveltime. While away from his or her home or regular place of business in the performance of services for the Commission, any such person may be allowed travel expenses, including per diem in lieu of subsistence, as authorized by section 5703(b) of title 5, United States Code, for persons in the Government service employed intermittently.

(c) Each department, agency, and instrumentality of the United States is authorized to furnish to the Commission, upon request made by the Chairman, on a reimbursable basis or otherwise, such statistical data, reports, and other information as the Commission deems necessary to carry out its functions under this Act.

(d) The Commission or, on the authorization of the Commission, any subcommittee or member thereof, may, for the purpose of carrying out the provisions of this Act, hold hearings, take testimony, and administer oaths or affirmations to witnesses appearing before the Commission or any subcommittee or member thereof.

AUTHORIZATION

SEC. 407. There are authorized to be appropriated such sums as may be necessary to carry out this Act.

AGRICULTURAL LAND VALUES UNDER THE 1976 TAX REFORM ACT

Mr. McGOVERN. Mr. President, the final version of the 1976 Tax Reform Act contained a little noted section allowing an alternative land valuation formula for use in decedents' estates based on a "protectivity" concept rather than a "fair market value" criterion as provided for under prior law. I first advanced this concept in legislation introduced on the Senate side early last year and was pleased to note its acceptance by House-Senate conferees as the legislation progressed through the Congress.

The formula basically consists of taking average cash rentals for agricultural property less local taxes divided by average interest rates of new Federal Land Bank Mortgages. The resultant figure is the "use or capitalized factor." Executors by using this formula can reduce the value of land in central Corn Belt States by as much as 22 percent.

The February 1977 edition of the Farm Journal describes this procedure in an article entitled "Look What Congress Did to Your Land Values" by Laura Lane. I ask unanimous consent that the text of the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOOK WHAT CONGRESS DID TO YOUR FARM VALUES

(By Laura Lane)

You need to give priority this year to reviewing your estate plan and your will, because of last year's monumental changes in tax laws. But before you see your lawyer or tax consultant about revisions, you need to understand how a farm now may be valued for estate tax purposes.

The intent of Congress was to help keep a farm within the family when the owner dies, so lawmakers designed this new procedure for "special valuation" of farmland. An executor can choose to value a farm at its agricultural (current) use, rather than at its potential use—for example, as the location for a shopping mall. This "election" could be a real break for your heirs if they are eligible, says Charles F. Lein, Jr., a North Dakota tax consultant.

Here's the new formula. Value is arrived at by taking the average annual gross cash rent for comparable farms in your area, subtracting state and local real estate taxes on that land, and dividing that figure by the average annual interest rate on new Federal Land Bank (FLB) loans. Calculations are based on figures for the five most recent calendar years prior to the owner's death.

Example: For the best soils in Indiana, values for estate settlement purposes could be around $1,000 an acre. Ag economist G. A. Harrison of Purdue explains: "If you consider cash rents minus land taxes for the last five years at $80 to $100 per acre and divide by (capitalize by) a 9% FLB loan rate, the result will be around $1,000. This quality of Indiana land is now selling for more than twice $1,000 per acre."

Lein adds: "A formula such as this is much better than the old way of having to predict fair market value—how much the land would bring at a sale. That's basing the appraisal on a questionable or speculative amount."

An executor has some other options for calculating value of farmland, says J. A. Kirby, attorney and Director of Examinations, Estate Planning and Taxation, The American College, Bryn Mawr, Pa. An executor might:

1. estimate expected farm income over a reasonable period, under prudent management; then figure the land's capital value, using expected income as a fair rate of return;

2. use fair rental value of the land the same way, in order to figure the property's capital value;

3. use assessed land value in states which have a differential or use-value assessment law for farmland;

4. base land values on sales of comparable land in the area, where nonagricultural use was *not* a significant factor in the price.

Remember, once the executor selects what the law calls "special-use valuation," the estate is "locked in" at that value for estate tax purposes. All qualified heirs must sign an agreement consenting to special-use valuation when the election is made.

Not all farms qualify for agricultural valuation under the law. Lein gives principal requirements:

Real and personal property (land and machinery) must equal at least 50% of the gross estate (reduced by debts and expenses).

Land must equal at least 25% of the adjusted value of the gross estate.

The farm must pass to what the law calls a "qualified heir." That means a spouse, lineal descendants (children or grandchildren), parents, and close relatives such as brothers or sisters.

For five of the eight years prior to the owner's death he must have owned the land, and he or a member of his family must have "materially participated" in the farm operation.

Watch out for a big drawback to "special valuation." Congress tied to it a tax-recapture rule. If within 15 years after an owner's death the property is no longer used for farming or is sold to someone outside the immediate family, estate tax benefits can be wiped out. IRS can make full recapture of tax savings in the first 19 years from the qualified heir or heirs, with diminishing amounts subject to recapture for the last five.

If a qualified heir dies without having disposed of the property or without having converted the farm to a non-qualified use, there will be no recapture. Lein gives an example: "If a father died and left his farm to a son, and the special valuation was used in the father's estate, recapture wouldn't apply if the son died a year afterward and the farm was sold."

Owners of big estates need to know other provisions of the law. Under no circumstances may the special-use valuation reduce the gross estate by more than $500,000. Kirby gives this example: "Assume the adjusted gross estate at the time of the owner's death consists solely of a working farm valued at $1,800,000. He is single—his wife has died earlier. Also assume that the special-use valuation (figured by the formula above) is $1 million. Since the law provides that the maximum special-use reduction can be no more than $500,000, the valuation for estate tax purposes must be $1,800,000 less $500,000, or $1,300,000."

What would estate taxes be under the new rate schedule, assuming the adjusted gross estate is valued at $1,300,000? On the first $1,250,000 the Federal taxes are $448,300. On the next $50,000 they would be $21,500 (43%), or a total of $469,800. The new unified estate tax credit of $30,000 will apply if the owner died during 1977, so the estate would owe $439,800 estate tax within nine months.

FALSE ECONOMY ON METRO

Mr. MATHIAS. Mr. President, during the last session of Congress there was a great deal of discussion about the costs of completing the Washington Metro system. Escalation of the original cost estimates for Metro is certainly a matter of serious concern to local officials as well as to Congress, but increases in the cost of major construction projects are, unfortunately, a fact of life. When compared with the cost increases of certain highway projects, and the entire Interstate System, Metro's experience is not so unusual at all.

The most recent estimates of the cost for completing Metro have led to renewed discussion of cutting back the original system plan that was approved by Congress. New circumstances may always require a review of old plans. Nevertheless, the Washington Metro system is a project that will shape the future of the National Capital region for the next century. Short-range efforts to cut costs may have a very large price tag in the longer run.

Warren Quenstedt, Metro's deputy general manager, recently delivered an address that outlines some of the costs that will result from not completing the Metro system. I believe that our colleagues will find his comments on the potential for false economies in Metro of great interest, and I ask unanimous consent that they be printed in the RECORD, together with an edtorial comment from the Washington Star.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Washington Star, Nov. 21, 1976]

FALSE ECONOMY ON METRO

Warren Quenstedt, deputy general manager of Metro, had some words the other night about the Metrorail system that seem worth repeating.

He made these points:

Cutting back the rail system would necessitate purchase and support of up to 1,000 more buses, whose drivers earn salaries approaching $8 an hour. Each bus—at today's prices—means a subsidy of $30,000 a year, he said.

A cutback in Metrorail means a loss of revenue for that portion of the transit system and that, in turn, means increased subsidies would be needed from tax revenues.

Any capital cost savings in cutting back rail lines would be eaten up in large part by additional costs of expanded facilities such as parking, bus bays and unplanned bus-rail interchanges.

Metro was planned as "an efficient, economically operating whole system" serving the Washington region. Cutting back the system in certain areas—as some Northern Virginia officials appear to desire—would throw the regional concept and the financial balance out of kilter.

Mr. Quenstedt, addressing Northern Virginia builders and contractors, made the further point that the availability of public transit is an important factor in the location of new industry.

In short, the thrust of Mr. Quenstedt's speech was that cutting back on the proposed 100-mile rapid rail system would be false economy. It's a point that Metrorail critics ought to ponder seriously.

REMARKS OF WARREN QUENSTEDT, DEPUTY GENERAL MANAGER, WASHINGTON METROPOLITAN AREA TRANSIT AUTHORITY BEFORE NORTHERN VIRGINIA CHAPTER, ASSOCIATED BUILDERS AND CONTRACTORS, INC., NOVEMBER 9, 1976

Tonight I want to remind you of, some things you may already know, but may have forgotten.

And of some things you have not read in the newspapers or seen on TV.

You are aware that those who predict doomsday make the news more often than those who work quietly and achieve progress. One way to make headlines is to attack the biggest thing around. And Metro is the biggest game in town.

The doomsday criers are always with us—people with a blind fear of change. They are descendants of the people who proved that Wilbur and Orville Wright's flying machine would never become popular, much less useful.

They are the kinds of people who proved that the horseless carriage could never be popular or useful. After all—it would need hundreds of thousands of miles of costly paved right-of-way called roads, and tens of thousands of small stores with facilities for dispensing petroleum fuel along those right-of-ways—all that would be much too expensive!

Now, the same kinds of people suggest cutting the arms and legs off Metro, the region's carefully, laboriously planned, regionally-agreed-upon public transportation system. But they do not tell you the cost of not completing it.

There are others of more courageous spirit. I hear them say that "Metro should have been built 20 years ago." I'm sure you remember the regional bond referenda on Metro—a record in United States urban history—with a YES vote as high as 79 percent in a Virginia community—voting yes for the long-awaited project.

And, gentlemen, that vote was taken even before gasoline prices doubled, before pollution became a household word and a political concern, and before energy conservation became an apparent and vital necessity.

We have the second guessers, the Monday morning quarterbacks. The people who, on the back of an envelope, so to speak, rethink what this region and its people and its leaders have so carefully worked out over the years with the best resources and experts at their disposal.

I want to speak briefly about these things, and end with some thoughts about construction after Metro is built and running.

Some of the people—those who previously said nobody would ride Metro—are now silent. They now have ridden it themselves. They have seen that almost three times as many people are riding it as were predicted. They know that almost half of those riders are from the suburbs directly.

Metro will directly serve Virginia this coming summer, so those doubters ain't seen nuthin' yet. Airport to Rosslyn—downtown—and all the way to Kennedy Stadium!

It is presently popular to down-talk the bus system. Again, problems make the news more than progress. Let's look at the progress. Ridership is up ten million since the local governments, through Metro, took over the failing bus systems in 1973. Patrons continue to increase by 5% each year. In comparison, Baltimore lost 12 percent of its riders.

Today buses are cleaner, more reliable, have fewer breakdowns, show an improved on-time performance, have an outstanding safety record, and stop at more and more shelters as new ones are installed.

Individual problems, yes, of course. You hear about them because we have opened up to the public for suggestions and criticism as the bus systems never did before.

In our bus operations we have higher revenues than other cities' average. And we have higher fares. Our level of subsidy—tax money, in other words—compares favorably with other cities.

Spending public money for public transportation is very new for the taxpayers and political leaders of this region. Reason enough, perhaps, for demands for explanation—for fears of the future. Other cities have long taken it for granted. Here we were shielded while the private operators scrimped and scraped and plunged into near bankruptcy until desperation itself dictated public operation. The need for public transportation cannot be ignored. Remember—there are many who are too old, too young, too infirm or too poor to drive automobiles. But they must have transportation. This region has long dreamed of the only kind of total public transportation system that can be truly economical in the long run—a totally coordinated bus and rail operation. We are within only a few months of achieving this.

Right now we are holding hearings on the most innovative and far-reaching proposals ever advanced for transit service in this area—the coordination of bus service with train service so that buses can be more efficient and more economical, and so that trains can do what they do best in the whole scheme of things.

As a result of our proposals there have been a few outraged cries. Some are justified

and we will attend to them. But most of the outcries are heard because innovation is often called for, but not always welcomed. Most people want progress, but few people want change . . . in their daily routines or in their immediate neighborhoods.

Metro is the target of criticism by some who attack us on two fronts: (1) the 100-mile Metrorail system is too big and too expensive, and (2) the operating deficits of Metrorail and Metrobus are too large. I suppose such criticism represents the sincere and conscientious convictions of those who are doing the criticism, but I happen to disagree with them.

True enough, the original cost for Metro was estimated at $2.5 billion, but inflation raised havoc with that figure just as it has with you in the operation of your businesses. But that figure is not the whole story. At that figure the local contribution was estimated at $570 million for the entire metropolitan area.

$570 million would buy a 2.5-billion dollar public improvement. Now, with a 5-billion dollar price tag, the local regional share is $900 million. So the true increase for the local taxpayer is around 50 percent. Compare that with the price of a loaf of bread. In the face of runaway inflation, some economists call this a decrease.

Let's be more specific. For the communities of this region the cost of Metro for both operating subsidies and debt service for the capital program is 3½% of the FY 1977 budgets. For Fairfax County Metro construction and operation is 2½ percent of the budget. Police, 5.3 percent. Fire protection, 4.4 percent. Schools are 47 percent.

Is this an intolerable burden? Remember: this is an investment. And remember something else: Operating subsidies are the direct result of fare levels.

More than any other system anywhere, Metro was planned from the beginning as an efficient, economically operating whole system serving the whole region. Storage yards placed carefully to reduce wasteful deadhead train return time, stations located for economical bus transfer, and so on.

Today half of all this is under construction and another one-fourth well along in design with much of that nearing readiness for construction. Most of the toughest and most expensive part of the system—the core—is well advanced or completed. 4.6 miles are operating; ¾ miles will be opened July 1; 13.7 miles from National Airport to Kennedy Stadium begins operation July 1st, and November 1st of next year the total reaches 25 miles with service to Silver Spring.

If you want to try to handle the same number of people in the future, with a reduced system, you are talking about 300,000 more auto trips each day, with resulting pollution, tremendous added fuel cost to each individual, time lost in traffic jams, and all the rest.

Cut it back and you are asking for up to 300 more lane miles of highways—highways the citizens are going to fight and the federal government, likely, isn't going to help pay for.

The advocates of cutting it back don't tell you that cutting it back would mean you are going to have to buy and support up to 1,000 more buses, with their operators going on eight dollars an hour. Each bus—at today's prices—means a subsidy of $30,000 per year.

Cut it back and you lose perhaps one-third of the revenue and the tax subsidy will climb accordingly. And the system will cost a great deal more to operate.

Cut it back and you are asking for lawsuits from citizens who have made plans to take advantage of the improved transportation service, based on the promises of elected officials in office when decisions were made.

And ironically, if you cut back now you cut primarily the surface lines. This is less expensive construction.

I hope you realize that any capital cost savings would be in good part eaten up by additional costs of expanded facilities such as parking, bus bays, inefficient bus-rail interchanges, and the like, at a half-dozen unplanned-for terminals. There will be additional garage facilities for all those buses you will have to buy. And there will be countless mechanics and operators to hire and support. . . .

Our Board of Directors knows this. They have the responsibility to decide and they have repeatedly reviewed the question. They are determined to see METRO completed to its full 100 miles.

Improved transportation generates investment—through construction of new homes, new commercial buildings, new streets, new water treatment plants, new installations, new schools, new neighborhoods, improvements in old neighborhoods . . .

There's no question that Metro construction has had its impact upon the local construction industry, but a good deal of the activity has gone to the heavy contracting organizations who are located elsewhere. They'll move on when the special need has been filled. Our construction people tell me that our activity will phase out gradually and the void will be filled by increased activity and still other public projects. But it would not phase out gradually if the system were arbitrarily truncated on short notice.

The region cannot afford to have a second-class transportation system. The availability of public transportation is a powerful factor in the location of new industry. Mobility assures vitality.

If Virginia were to settle for inferior public transportation compared with, say, Montgomery County, we in Virginia would be at a disadvantage, to say the least. Never doubt it—we have regional competition. With better transportation Montgomery County would get the action—the new industry—homes—commercial activity.

I am talking about growth. Anything that does not grow must certainly wither and die. Growth doesn't stop. Some may challenge our projections, but we will get to them sometime. Maybe two or three years later, but we will get there. And believe me—building Metro will never be cheaper.

I say this despite the well-known escalation we all suffer from. I don't have to tell this crowd about the costs of reinforcing bars, structural steel, or asphalt paving or a thousand other things.

The good news is that right now we are in a downward trend. Since June of this year we have opened five bids totalling more than $5 million LESS than our estimates. And we have nine updated estimates from our section designers totalling $29 million dollars less than our program estimates. Our present factor for inflation is 7% per annum, compounded, until the project's completion. We now feel the factor will stand up.

So, let me sum up.

Let us not sacrifice the tremendous long-range benefit for the short term scare talk.

Let us keep an eye on the unspoken side of the arguments put forth by the faint-hearts, the short-term critics.

Let's realize that public transportation supported by public funds is here to stay. Federal contributions to our economy demand and depend on it. And I don't mean a fractionated public transit system. You are dreaming if you think that federal money will support a lot of individual public systems within this region.

Let's remember the terrible cost in dollars and pollution and traffic jams and facilities if we do not complete what the region has been promised.

Let's be aware that good coordinated public transit is essential for a healthy region, and a healthy region is absolutely essential for a healthy building industry.

You build for people. Transportation moves people to and from what you build.

And people are what you—and Metro—are all about.

LET US GET THE FACTS ON NATURAL GAS

Mr. PROXMIRE. Mr. President, this winter's natural gas shortage has renewed calls for deregulation of natural gas prices.

The emergency bill signed by the President earlier this month has already exempted emergency purchases from regulated prices through August 1, 1977. Now the major gas producers are gearing up for a spring campaign to remove controls once and for all.

Some good arguments have been made in support of deregulation as an effective way to encourage conservation of this premium fuel. Opponents have argued equally well that consumers must be protected from the monopoly characteristics of the gas industry. At some time in this first session of the 95th Congress, both sides will be heard from once again as yet another try is made to nail down this plank in America's national energy platform.

Inexcusably, it is possible that this year's debate—as in other years—will be carried forth entirely unsupported by independent data on which to base reasonable conclusions. The fact is that the Federal Government is relying solely on gas industry statistics for its information on how much natural gas we have and where it is now. Congress may very well proceed on the deregulation issue without independently verifying the figures given to us by the one industry that stands to gain enormously by fudging the facts.

James Nathan Miller succinctly described the current situation in a February 13 Washington Post article entitled, "Natural Gas: The Hidden Reserves." He shows how the critical data underlying the deregulation debate may be a "statistical delusion—a gross underestimation of the Nation's true reserves."

Mr. President, any Senator who will be voting on deregulation would be well advised to review the Miller article to get a better understanding why it would be premature to act on this issue before we get all the facts.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Feb. 13, 1977]

NATURAL GAS: THE HIDDEN RESERVES

(By James Nathan Miller)

The companies that supply U.S. energy are trying to convince Congress and the public that the present cold-weather crisis actually does prove that there is a long-term shortage of natural gas. If they succeed, the United States will have a gas deregulation law that's based on data that are at best doubtful and at worst false.

To understand what's involved, it's essential to realize that the deregulation question actually involves two very different kinds of shortage, which press accounts have jumbled together. There is a true, demonstrable shortage in deliveries of gas. The reason for it are the apparent physical inability of pipelines to satisfy the demand created by the record-breaking cold wave and the unwillingness of

producers to meet this emergency demand at a controlled price when they know they can get several times as much if they can force the removal of controls.

The second shortage is something quite different. It is an alleged shrinkage in the country's long-term underground reserves of gas. The companies that own the long-term reserves—and claim that the shortage exists—also claim that the size of their holdings is a trade secret; as a consequence, the figures that could prove or disprove the existence of a reserve shortage are hidden behind a curtain of secrecy that the present cold spell has done nothing to pierce.

For many years the gas industry has claimed that underground stocks of "proved" reserves have been declining at an alarming rate. "Proved" reserves are the only ones that the country can be certain about. They represent gas fields that the producing companies have drilled into, measured with considerable precision and deemed to be economically recoverable. Beyond the "proved" reserves there are others labeled with adjectives representing the spectrum of geological speculation: "probable," "inferred," "possible," etc.

How much does the United States now possess in these various categories? The most recent estimate of the industry's trade association, the American Gas Association (AGA), is that there are 228 trillion cubic feet of proved reserves now in the ground, or about a 10-year supply at the present national consumption rate. But nobody expects us to run out in 10 years, because geologists know that there are huge amounts of the less certain categories waiting to be discovered. Most estimates conclude there are between 700 and 1,200 trillion more cubic feet of gas ultimately available; some go much higher. This means we probably have enough to carry us several decades into the next century if we go out and prospect for it. Which brings us to the industry's main argument for deregulation.

THE INDUSTRY ESTIMATES

The producers say that, because government regulation is holding down the price of gas, they haven't been doing the expensive exploratory work necessary to move the "probable," "possible," etc. fields into the "proved" column. According to AGA's figures, the decline in proved reserves began in 1968. From 1945 to 1968, the gas companies managed to discover a lot more gas each year than the country consumed. So for 22 years our "proved" stockpiles kept increasing, until they reached a peak of 293 trillion feet in 1967. Since then, according to industry figures, new discoveries each year have totaled *less* than consumption, and the "proved" reserves have shrunk from 293 to 228 trillion feet. At that rate, we will run out of "proved" by the end of this century.

But the "proved" figures come from only one source: the gas producers themselves, who draw them up in complete secrecy. Thus, for the critical set of statistics that underlie the whole deregulation debate, the country depends totally on the chief private participant in the debate. In the last few years several outside investigations have turned up evidence that these figures may be fundamentally incorrect. They may be a statistical delusion—a gross underestimation of the nation's true reserves.

Proved estimates require a large amount of raw data—core samples, pressure readings, voltage measurements, etc.—that can be obtained only by actual drilling into the gas pockets. Acquiring these data for all the country's 6,300-odd gas fields is a colossal physical job, and only the gas industry itself owns the billions of dollars worth of equipment necessary to do it. The only group to which the producers are willing to confide some of their information is the AGA, for its once-a-year survey of the nation's total reserves. Each year the association assigns 100 industry geologists to its Committee on Natural Gas Reserves. These geologists annually canvass the producers in their assigned areas for the necessary data to form their own estimates.

In 1970, responding to suspicions that had been voiced about the accuracy of the figures, the chairman of the reserves committee described the system in detail to the Federal Power Commission. He said the drawing up of the estimates was a rigorously supervised process specifically designed to eliminate any chance of manipulation by the producing companies. He said the companies gave the 100 geologists all the data they needed and the geologists, regarding themselves as public servants rather than as representatives of their companies, were scrupulous about insulating themselves from company pressure. All the geologists used the same precise AGA estimating formulas, said the official, and the resulting national estimate was "one of the most consistent and reliable series of statistics available anywhere." The FPC, which is known as one of the most supine of regulatory agencies in its relations with the industry it regulates, accepted this testimony at face value, and looked no further.

A DIFFERENT PICTURE

Last year a House Commerce subcommittee headed by Rep. John E. Moss (D-Calif.) conducted an investigation that drew a very different picture of the way the process worked. Moss' picture was based partly on facts turned up by an investigation by the Federal Trade Commission of AGA's estimates in the Gulf of Mexico, and partly on testimony by industry officials including some of the geologists who had drawn up the AGA estimates for the Gulf.

What Moss found was that the whole estimating process was dominated by a few of the largest gas producing companies. These companies were allowed to choose the geologists who served on the Reserves Committee, and they regarded these geologists not as servants of the public but as their own representatives. AGA made no attempt to make the geologists follow its own estimating rules, and in fact the AGA man in charge of the program admitted that he had no idea of what estimating methods they used.

Under oath, the geologists admitted that they ignored AGA's definition of what constituted "proved" reserves and, in case after case, gave whatever estimates their companies wanted them to give. One admitted that his company drew up all his estimates for him. Another said that, when a company refused to give him information on a gas field, he simply listed the field as "zero"; in one year he listed five such fields. Another geologist said that companies often refused to give him any information at all, and he was forced to make "ballpark" guesses based on scraps of information from the trade press.

Moss turned up one huge field containing 400 billion cubic feet of gas that had been unlisted for two years, even though it had two platforms and 13 wells and its existence was known to the entire industry. If this single field had been included in AGA's figures, it would have increased the AGA's 1974 national estimate of new-field discoveries by 23 per cent.

The FTC's investigators, after a five-year examination of AGA's estimating methods, had recommended taking the association and the companies to court for "concertedly maintaining a deficient reporting system" that produced "serious underreporting." The FTC commissioners rejected this recommendation on what appear to have been political grounds. Moss uncovered a memo in the FTC files recommending against any legal action that might encourage "continued FPC regulation into the distant future." The FTC investigation, now seven years old, drags on.

THE PRICE INCENTIVE

The obvious reason the companies have to give AGA incorrect figures is the propaganda value of proving that a national shortage exists. But there is a more immediately practical reason: The Supreme Court ruled in 1968 that the FPC could let producers increase the price of gas whenever AGA's figures showed that their rate of new discoveries had decreased. Thus, the fewer new discoveries the producers tell AGA about, the more they can charge their customers. Interestingly enough, the first drastic drop in the new-discovery figures appeared in the AGA statistics that were issued a few months after this landmark decision.

The industry claims that AGA's figures are accurate because two national surveys of proved reserves—one by the FPC, the other by the Federal Energy Administration—came up with totals that were only a few percentage points different from AGA's. However, FPC and FEA both have been lobbying for deregulation; and though the two agencies claim their surveys were completely independent of the industry, both surveys actually depended heavily on industry cooperation and in fact couldn't have been carried out without it.

The FPC, in its survey, selected 158 out of the nation's 6,300 gas fields, and asked the industry for the raw data on these fields. On the basis of this information the FPC's geologists projected a national estimate that was only 10 per cent different from AGA's. The FPC's methodology was developed by a "technical advisory task force" whose chairman and cochairman were Exxon geologists and a majority of whose members were industry executives. Three subsequent analyses of the 158-field sample by others all concluded that the sample had been drawn up in such a way as to minimize the possibility of finding under-reported fields.

As to FEA's study, its dependence on industry-generated figures was also self-evident. In authorizing the FEA's survey, Congress gave the energy agency power to subpoena whatever raw data it needed from the producers. But FEA chose not to subpoena anything, even when companies refused to provide requested information. Instead, it used only what information the companies were willing to turn over voluntarily. Since this is the same information AGA depends on, it doesn't seem surprising that FEA's and AGA's reserves estimates were almost identical.

"SQUIRRELED AWAY"

Besides failing to report reserves, the companies are withholding from the market large quantities of gas that they have reported. By law, when companies discover produceable quantities of gas in fields leased from the federal government, they are required to market it at the federally regulated price. But Moss' staff exposed cases in which companies—at the very time they were warning of a gas shortage—had failed to produce very large quantities of gas available in fields in the Gulf of Mexico developed under federal lease.

President Carter's energy chief, James Schlesinger, was quoted last week in Newsweek as saying, "I keep hearing about gas that's been squirreled away, but whenever we get close to it, it becomes evanescent." He should look at Moss' findings; they are not evanescent.

Here is one example of what the Moss subcommittee discovered. By law, companies that lease oil- and gas-producing land from the federal government must turn over all their raw data on these leases to the U.S Geological Survey. By subpoenaing the AGA's (hitherto secret) estimate of reserves in the Gulf of Mexico (all developed under federal lease) and comparing this to the Geological Survey's own (hitherto secret) estimate of the reserves in the Gulf, the Moss staff was able to make the first direct comparison between the AGA's detailed estimates of reserves in a specific group of fields and another set of estimates for the same fields

that were based on the companies' own raw data. Moss found that the Survey estimate was 60 percent higher than AGA's 23.5 trillion feet for the Survey, 14.7 trillion for AGA.

Thus, in only 153 fields (2.4 percent of the nation's 6,300 fields) AGA apparently had missed 8.8 trillion feet of gas. This is a little more than twice as much as the estimated 3.5 trillion feet of delivery curtailments that are involved in this winter's gas crisis.

The AGA insists that to compare its figures with the Survey's is comparing "apples" and "oranges," because the Survey said it was estimating "measured" reserves, while AGA uses the "proved." But the Survey says that the two terms are "essentially synonymous."

From all the above, it seems apparent that the present 3.5-trillion-foot crisis in pipeline deliveries caused by a record cold winter tells us nothing about the more fundamental questions of what the companies' reserves actually are and why they are not making them available in sufficient quantity. The answer to these questions will come when and if Congress uses its subpoena power to conduct a survey of the industry's holdings that is demonstrably and unquestionably independent of the industry's influence. I don't pretend to know what such a survey will prove; perhaps it will confirm the industry's figures. But it is startling to realize that the nation's basic energy policy is being formulated on the basis of a fundamentally important set of statistics supplied by an industry that has every incentive to misrepresent them.

STUDYING THE LIFE OF THE WOLF

Mr. HUMPHREY. Mr. President, I wish to share with the Senate an article in the February 16 edition of the New York Times entitled "The Wolf Gets a Better Image With Biologist's Help."

This informative article by Boyce Rensberger deals with the work of Dr. L. David Mech who has been studying wolves for 18 years and is considered the Nation's leading expert on wolf behavior.

The article provides a great deal of information on how wolves are tracked by radio after having been immobilized with drugs.

Through the work of Dr. Mech and his associates a great deal has been learned regarding the habits of the wolves, both alone and in packs. In 1974 Dr. Mech also was involved in an effort to relocate four Minnesota wolves in Michigan's Upper Peninsula. While the four wolves were killed by human beings, the experiment did indicate that relocated wolves could establish themselves in a new territory and survive.

The main problem is how the wolf impacts on human beings and also other animals. With the information which Dr. Mech and his group are developing, it will be possible to develop more effective wildlife policies and also encourage a better understanding on the part of the public regarding the wolf and its role in the ecosystem.

Mr. President, I ask unanimous consent that this informative article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WOLF GETS A BETTER IMAGE WITH BIOLOGIST'S HELP

(By Boyce Rensberger)

ELY, MINNESOTA.—A crimson pool of blood lay frozen in the snow. Ravens pecked at the last shreds of what had been a deer.

"There they are!" David Mech, wolf biologist, shouted over the roar of a Cessna 180 circling tightly above the frozen lake as he pointed down at the shore. "The wolves!"

About a hundred yards from the kill in the middle of the lake, six timber wolves rested drowsily after the kill in the cold, bright sun. One jumped up to watch the little plane as it banked sharply.

Dr. L. David Mech, who has studied wolves for 18 years and is widely acknowledged as this country's leading expert on wolf behavior, marked down on a tracking form the location of the wolves, how many there were and what they were doing. Then he directed the pilot to head southwest toward the place where another wolf pack had last been seen.

Through such aerial observations, a technique he helped develop, Dr. Mech has gathered much of the evidence that has debunked many of man's oldest myths about the wolf.

Once widely hated and persecuted as a dangerous predator, the wolf today, thanks largely to Dr. Mech's research, is coming to be regarded as an ecologically important member of its wilderness habitats and as an animal with a complex and fascinating society. Once feared as dangerous to people, the wolf is now known not only as friendly and sociable within its pack, but as no threat to man. There is no documented instance of a free-living wolf attacking a person in North America.

Dr. Mech (pronounced Meech), now 40 years old, began his wolf research in 1959 as a graduate student while observing the two dozen wolves of Isle Royale National Park in Lake Superior. Today, employed by the Endangered Wildlife Research Program of the United States Fish and Wildlife Service, he is in charge of a wide-ranging, long-term study of the relatively stable population of 1,000 to 1,200 wolves in northern Minnesota. These animals are the last substantial population of wolves in the United States outside of Alaska.

The greatest concentration of these wolves is in the Superior National Forest near here in the extreme northeastern corner of the state, and the dead of winter, when the beasts can be spotted against the snow, is the best time for studying them.

As the little plane headed toward the next wolf pack sighting, Dr. Mech put his headphones back on and listened intently for a clicking signal picked up by antennas mounted on the plane's wing struts.

One of the wolves in the pack, like one in the pack sighted near its kill, was wearing a tiny, battery-powered transmitter on a collar around its neck. The signal from this constantly operating device picked up by the antennas on the plane guides Dr. Mech to the wolves.

Over the years Dr. Mech and his assistants, most of them graduate students in wildlife biology at the University of Minnesota, have trapped and radio-tagged about 140 wolves in the Superior National Forest area.

After being captured in a modified leg-hold trap, the wolves are immobilized with drugs, weighed, and identified by sex. Blood samples are taken. Ear tags are clipped on and the collar is fitted. As the drugs wear off, the wolf, transmitting on its own frequency, runs off to rejoin its pack. Because wolf packs are stable social units, the signal from a single radio collar can lead Dr. Mech or his students to the entire pack.

Because the antennas are highly directional, picking up signals from either the left or right side of the plane, depending on which antenna is used, Dr. Mech can tell where the transmitting wolf is in relationship to the plane. Dr. Mech can switch from one antenna to the other. When the signal is equally strong from the two antennas, the plane is headed directly for the wolves.

Twenty-four of the 140 radio collars are still working, the others either have stopped operating (usually after a year or so) or the wolves have been killed (wolves that venture too near human beings risk being shot or trapped). The 24 tagged animals represent nine packs, one newly formed pair that may breed to establish a new pack, and four lone wolves, animals who have left their original packs to wander alone and sometimes find a mate and a vacant "territory" in which they can establish a new pack.

Minutes after leaving the pack with the deer kill, Dr. Mech signaled the pilot to circle above a forested ridge.

"They're down there," Dr. Mech shouted. "Can't see 'em. They're probably under the trees."

After logging their position and that of some other packs, Dr. Mech headed back to the airport. Every day during winter and at least weekly during the summer Dr. Mech or his students go up in planes to find the collared wolves. One pack has been tracked for six years.

When the locations for a given wolf pack are plotted on a map, almost all fall within a tightly circumscribed territory abutting the territories of other wolf packs and almost never overlapping them. One pack, for example, has fluctuated from two to nine members over the year, but has always maintained the same territorial boundaries with its neighboring packs. On a larger scale, wolf densities usually are about one for every 10 square miles.

Wolves mark the boundaries with urine and, even when chasing prey, seldom enter alien territory. When they do, they risk attack from the resident pack.

Back at the log cabin or a Forest Service compound near Ely that serves as the wolf study's field station, Dr. Mech and half a dozen students come and go throughout the day, drying out soaked gloves, pouring hot coffee, calibrating radio receivers, exchanging information on the day's sightings. In the refrigerator, vials of wolf blood share space with bottles of beer. Several of the students track wolves from the air and others manage projects on deer, lynxes, moose, snowshoe hares, ravens and other local fauna. Many of these animals are also wearing radio collars.

By studying both wolves and their prey, Dr. Mech and his students hope to discover and understand those elements of their behavior that have evolved as ways of coping with the other species. Anatomical adaptations for attack and defense are well known but behavioral adaptations are not.

Biologists have long known that wolves have developed certain ways of hunting that maximizes their chances of killing deer. Presumably deer, who heretofore have not been intensively studied as one-half of a predator-prey relationship, have evolved defensive behaviors as well.

One deer behavior that is under study is the congregating of deer in open meadows, or deer yards, in the winter. In spring and winter deer are dispersed through the forest. Why do deer shift back and forth between two different systems of social organization?

Somehow, Dr. Mech suspects, the deer's slower metabolism in winter, the difficulty of moving in snow and the fact that fawns have grown more independent since their birth make "yarding" a better way to defend against wolves in winter but a poorer way in summer. A four-year study of deer behavior is planned in an attempt to explain this phenomenon.

One recent morning a student reported that wolf No. 2407 and its pack were found well out of their territory. Dr. Mech checked the location on a map. "That's interesting," he remarked. "Those sons of guns, they're trespassing, really striking out on their own." From the map it appeared that they would have had to cross two roads to reach their present location from where they had been the day before.

Later in the day, after a futile attempt to find a radio-collared wolf that someone reported seeing on a road with a trap on its foot, Dr. Mech drove the snow-covered roads that the "trespassing" wolves had crossed to look for scent marks. When wolves cross a road or other physical boundary, they mark the junction with urine. He wanted to collect urine samples frozen into the snow for biochemical analysis but a snowplow had recently obliterated the marks.

SOME STILL HUNT WOLVES

The biologists' interactions with the human population in and around Ely have proven both rewarding and frustrating.

Dr. Mech said that although most townspeople were sympathetic to the wolf research and favored the species' protection, a few retained the older antipathy. There is a vigilante group that kills wolves whenever possible and puts the carcasses on other people's doorsteps with notes arguing that wolves destroy deer that should be protected for hunters.

Although wolf hunting and trapping have been illegal in Minnesota since 1965, it continues. Whenever one of the collared wolves is killed, however, some sympathetic trappers notify Dr. Mech by leaving anonymous notes at a local bar.

Because some of Dr. Mech's colleagues study deer, some townspeople are puzzled that scientists who specialize in species that are seen as "natural enemies" can be friends.

"We have a ways to go in changing peoples attitudes about these animals," Dr. Mech said.

Dr. Mech says he likes to get into the field as often as possible but noted that he had a desk job with the Fish and Wildlife Service in St. Paul. There, with access to libraries and laboratories, he writes scentific papers on wolf behavior, consults with scientists and conservationists around the world. Last year he spent a month in India training biologists there in radio tracking. He also develops strategies for protecting wolves.

For example, Dr. Mech was heavily involved in the 1974 effort to relocate four Minnesota wolves in Michigan's Upper Peninsula. Within eight months after the wolves were released, all four, two males and two females had been killed by human beings. Two were shot; one was trapped and then shot; one was hit by a car.

ANIMALS CAN BE RELOCATED

The experiment did establish that relocated wolves could establish themselves in a new territory and survive. "The problem," Dr. Mech said, "is the human population. Next time we would want to do a more intensive public education effort."

Dr. Mech is a member of the Eastern Timber Wolf Recovery Team appointed by the Fish and Wildlife Service to devise a program for the protection and re-establishment of wolf populations. The group has suggested that wolves be reintroduced to wilderness areas in Michigan, Wisconsin, New York State's Adirondacks, Maine, and the Great Smoky Mountain National Park.

Dr. Mech has found that wolves can double their numbers every year. However, they do not if the area is already full and each pack's territory abuts others on all sides. Lone wolves, unable to establish a territory near their place of origin, disperse to a less desirable habitat and, in many cases, are killed by people.

Thus, Dr. Mech has found, wolf hunting or trapping can continue at a substantial rate on the fringes of prime wolf country without lowering the average wolf population.

In Minnesota, for example, the Wolf Recovery Team has recommended that controlled wolf killing be permitted in a buffer zone around the wolf's 10,000-square-mile prime range, which would remain totally protected. Limited wolf hunting or trapping, the group believes, is necessary to minimize the loss of livestock to wolves and to increase the base of local citizen support for conservation, without which wolves might not survive at all.

CANADIAN PARLIAMENT STATEMENT ON HUMAN RIGHTS

Mr. CASE. Mr. President, the Canadian Government has played an important role on the issue of human rights. It is noteworthy and praiseworthy that the Canadian Parliament recently reaffirmed its position in respect to the Helsinki accords. As a member of the U.S. Helsinki Commission, I welcome the recent motion approved by the Canadian Parliament. A motion expressing the Canadian position was introduced February 15 by Mr. Mitchel Sharpe, the Foreign Minister, and unanimously passed the same day.

I ask unanimous consent that the eloquent statement by Mr. Sharpe be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HUMAN RIGHTS IN U.S.S.R.

Canada was the strongest proponent of basket three incorporated in the final act of the Conference on Security and Co-Operation in Europe, popularly known as the Helsinki Agreement.

As such, we have reason to be concerned about what are regarded internationally as serious violations of the spirit and letter of that Agreement by the Soviet Union. I refer in particular to the recent arrest of certain citizens of that country who have been endeavouring to ensure the full implementation of the Helsinki Agreement and who have been defending fundamental human rights whenever they are menaced in the Soviet Union and elsewhere.

From my own experience as Foreign Minister, I am aware of the difficulties and dangers of appearing to interfere in the internal affairs of another country. I am also aware of the implications of selecting particular individuals for mention. Since the signature of the Helsinki Agreement, however, such matters can no longer be regarded as purely internal and there are occasions when protest is both justified and necessary, since failure to do so might imply indifference.

Accordingly, I move that the Secretary of State for External Affairs convey to the Government of the Soviet Union the disappointment and deep concern of the elected representatives of the Canadian people in Parliament assembled at the arrest of Alexander Ginsberg, Mykola Rudenko, Yuri Orlov and Alexei Tikhy.

VA'S NEW BOSS

Mr. TALMADGE. Mr. President, there appeared in the Monday edition of the Washington Star an excellent article on Max Cleland, who has been designated by President Carter as Administrator of the Veterans' Administration.

Mr. Cleland is a triple amputee veteran of the Vietnam war and this article reflects his courage, determination, and leadership. Mr. Cleland is a man of high character and outstanding ability and I am proud to have known him as a personal friend for a number of years.

Mr. Cleland is eminently qualified to direct the Veterans' Administration's important programs and activities and I am confident that he will be duly confirmed by the Senate.

I bring this article to the attention of my colleagues and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VA's NEW BOSS: A TAKE-CHARGE WAR HERO MINUS LEGS AND AN ARM

(By Judy Flander)

Max Cleland doesn't have either of his legs or his right arm. Max Cleland doesn't have a Purple Heart. But Max Cleland is one of the true heros of the Vietnam war and his choice by President Carter to head the Veterans Administration is so inspired that in retrospect it seems to have been inevitable.

Cleland was the first person on Carter's appointment schedule—"four hours and 40 minutes" after the inaugural.

"I was told to come to the White House at 4, the parade was hardly over when I saw him," Cleland says with great pleasure but not a trace of pride. He won't say exactly what the President wanted to see him about, but obviously the VA appointment came up in the conversation.

If Cleland hadn't been a good ole Georgia boy, it's possible that he might have escaped Carter's notice. But not likely. Graphically, of course, he's a natural.

Cleland, 34, lost his limbs in a grenade accident near Khe Sanh in 1968, while serving as a captain in the 1st Air Cavalry Division. He wasn't eligible for the Purple Heart because he wasn't wounded in action, but he received the Silver Star for gallantry in action and the Soldier's Medal for heroism in Vietnam.

Max Cleland is not a bitter man. "After I was in Vietnam a few months, my evaluation of the war changed radically," he admits. "We were obviously on thin political ice, there was weakness in the whole effort," says Cleland, who has no regrets about volunteering for Vietnam.

And he is no protester. "If I wanted to protest I could go out in the back yard and holler," says Cleland, who has no quarrel with those who did. But he's a "systems' guy. There's a difference between protest and leadership."

Cleland is a take-charge guy who hasn't changed since he was a "little blond angel one minute and a Dennis the Menace the next" as a child in Lithonia, Ga., growing up across the street from DeWitt and Winette Buice, now of Arlington, whom he regards as his second parents. "All the qualities you see in Max now came out when he was a little boy," says Winette Buice.

Cleland, today, is extremely sensitive to others needs, full of fun, exuberant, vigorous, ambitious. He has a roaring, infectious laugh that makes everyone around him feel good. "Resentment is a luxury I can't afford," he says, but he clearly doesn't consider it one of his life's necessities, either.

So well has Cleland managed to put others at their ease that Mrs. Buice has had to catch herself from saying things like, "When are you going to come over and put your feet under my table?" Cleland himself quite unconsciously makes remarks about cooling his heels.

Walter Russell, a nephew of the late Sen. Richard Russell, D-Ga., now chairman of the DeKalb Board of Commissioners, has a one-word description of Cleland—"guts."

Russell recalls the evening the two of them went to a burlesque restaurant in Georgia, Russell "in worse shape than I am now," dragging along on his cane, Cleland, still walking with difficulty on his artificial legs. Russell opened the door and Cleland drawled, "Jeesus Chreeist look at that cotton-pickin' cripple openin' that door for *me*."

Despite his extreme disability, Cleland is neither handicapped nor inhibited. If any-

thing, he's speeded up. He's a whirlwind. Two sets of wheels keep him moving fast.

He gave up artificial legs for the greater mobility of a wheelchair. He flips into it from a chair, from his bed, from his car, efficiently folds each empty pant leg under each thigh and zooms about his business. He plays tennis and basketball from his wheelchair, tucking the ball under the stump of his right arm and making baskets with his super-strong left arm and hand.

On the go, for any purpose—Cindy Prather, a Capitol committee aide, once accompanied him as he went from store to store searching for a small electrical gadget—he hurls himself into his car from the curbside, pulls the heavy wheelchair in after him, fits his right arm stump with a prothesis and, using the specially fitted hand controls, guns the engine of his 1970 Olds Toronado on which there are 159,000 miles, "all put on by myself."

You're only with him five minutes before you forget how much he lost in the Vietnam war. Because Max Cleland isn't a loser. Since Vietnam, he has served two terms in the Georgia State Senate.

"I ran for the State Senate at the same time a young fellow named Jimmy Carter ran for governor. He won. I won," says Cleland, explaining how he happened to first meet the President.

"He and I were deeply involved together in veterans' concerns." Carter backed legislation Cleland authored to beef up state money for veterans wanting to go back to school on the GI bill and he put Cleland in charge of a special committee he created to investigate the problems of returning veterans.

"I was an early, ardent supporter," says Cleland, who clearly venerates Carter. "I can't tell you how strongly I feel about him. When he said in his acceptance speech, 'to do justly and to love mercy and to walk humbly with thy God,' well, that's my favorite passage in the Bible, too.

"That's my approach to living, to tragedy, to heartbreak. I have come to this. I wasn't always this way. My country wasn't always this way, either. But now, it is a lot more restrained, a lot more open minded."

In 1974, Cleland ran for lieutenant governor of Georgia, and although he didn't make it, he came in third out of a field of 10.

Then he came to Washington, where he has been a staff member of the Senate Committee on Veterans' Affairs for the past two years. His area has been as monitor of the Veterans Administration hospital system, where he put in his time as an impatient patient.

He's glad he had that job and even happier to get his new one because "of the passion I haven't been able to shake about the injustices in the hospitals. They are out of tune and out of touch, especially with the severely wounded veterans of the Vietnam war."

After he was maimed, Cleland was forced to wait a year to get a wheelchair and artificial limbs because he was considered by the VA hospitals as "a long-term case," and therefore not in urgent need of immediate rehabilitation. He was ready to get on with his life in less than half that time.

Why did he volunteer? "There happened to be a war going on," he explains, without an American flag popping out of his lapel. As member of the ROTC in college (he is a graduate of Stetson University in DeLand, Fla., and received his master's degree in American history at Emory University in Atlanta), he became an Army officer upon his graduation, and went into active duty late in 1965.

With his training and education, he felt he had a "certain obligation as a leader. I could not sit comfortably here in the States letting less trained people go in my stead. It was a matter of conscience that I take my chances along with anybody else."

He served in Vietnam for 11 months. His accident was shortly before he was supposed to be returned to the United States.

His battalion was loading up a chopper, preparing to move to the Khe Sahn combat base when Cleland noticed a grenade. "It must have dropped off somebody's pack. People were milling around near it. Nobody else realized it was there, much less that it was live. My reactions were reflexive—to investigate, to get the thing out of the way."

The grenade blew up as he lunged toward it. It blew off his right arm and leg, and severed his left leg. Winette Buice says he told her that his only thought was to stay conscious so he could tell medics not to amputate his left leg. But it was beyond saving.

Cleland credits fast action by Army doctors for saving his life; the contrast between them and the Veterans Hospital staff in the States was the subject of his testimony before the Senate Veterans Committee hearings a year later.

"Unfortunately, I did not find the up-to-date, rapidly applied medical techniques used in saving men on the battlefield had counterparts in my rehabilitation and administrative processes," he told the committee.

Winette and DeWitt Buice went to see him in "the snake pit ward" where severely injured Vietnam veterans were bedded at Walter Reed General Hospital.

Cleland was sent there 16 days after he was hit. Although he had dictated a letter to his parents, Mr. and Mrs. Joseph Hugh Cleland of Lithonia, the day after he was wounded, and had spoken to his mother by short wave radio four days later, it took Cleland a while before he was able to call and ask them to come and see him in Washington.

But on Mother's Day of 1968, shortly after a march on Washington protesting the Vietnam war, the Buices and the Clelands were walking up the sidewalk to Walter Reed Hospital. They didn't notice Cleland watching their approach from a window, and the Buices were hanging back, thinking it wasn't their son and it wasn't their place to be there just then.

But they were wrong. "I heard this little voice calling from the window," Mrs. Buice recalls, "Well, look at that, another march on Washington!' " I knew everything was all right."

But Cleland's parents have taken his fate hard, perhaps harder than he has himself. "They know how I feel and that helps them," he says tautly. "It's not a pleasant thing."

The Clelands both worked, and the Buices were childless; they have always shared Cleland. "The Clelands had the responsibility, we had the joy," says Mrs. Buice, who doesn't in any way want to imply that she and her husband had a part in his upbringing.

But DeWitt Buice "carried" young Cleland everywhere, to sports events, to see Santa and flying in his airplane. Every Sunday morning, after his breakfast at home, Cleland came over to the Buices for a dish of strawberry jam. "His little head came just up to the table," Buice remembers.

Cleland, who grew to 6-foot-3, became an outstanding student, winning high school letters in baseball, basketball and tennis. "You'd have to call Max Cleland the all-American boy," a teacher said.

When Cleland came to Washington as an exchange student at American University in 1963, the Buices were already here (Buice, a division officer for Southern Railways, who transferred here from Georgia 16 years ago), and met him at the airport.

He sat in their apartment and said, "I'm home. I had a most unusual experience today. My parents took me to the airport and my parents met me at the airport."

The Buices introduced Cleland to their church, the First Baptist Church of Clarendon, and although he is a Methodist he attends regularly.

"He comes sashaying into that church of a Sunday mornin'," Mrs. Buice says with her soft southern accent, "looking like a million dollars. I feel like running up to him and kissing him." Lots of people do. Cleland has an eye for the pretty ladies and when you ask him if he plans to get married soon and he throws back his head and laughs lustily.

"He's no eunuch, you know," says Walt Russell.

Sometimes when the Buices talk about Cleland, there is a tremor in their voices. DeWitt Buice remembers the time he took Cleland, then about 9, to an Atlanta Crackers baseball game and a ball was knocked into the stands. "Max ran and caught it," Buice says. "Ah, he could run."

THE HOME-HEATING STAMP ACT OF 1977: SECTION-BY-SECTION ANALYSIS

Mr. MATHIAS. Mr. President, on February 3, 1977, I introduced the Home Heating Stamp Act of 1977, to establish a home-heating stamp program within the Department of Agriculture which would provide assistance to low-income and fixed-income households in meeting the cost of rising fuel bills. A section-by-section analysis of that bill, S. 609, has now been completed, and I ask unanimous consent that the text of that analysis be printed in the RECORD.

There being no objection, the analysis was ordered to be printed in the RECORD, as follows:

SECTION-BY-SECTION ANALYSIS OF S. 609

Section 1 provides that this Act may be cited as the "Home-Heating Stamp Act of 1977."

Section 2 sets forth the finding of Congress that the recent rise in home-heating costs is working a serious hardship on households living on fixed and low incomes and necessitates the establishment of a program of Federal assistance in meeting rising fuel expenses by utilizing the administrative apparatus of the Food Stamp Program to simplify administration and speed implementation.

Section 3 amends the Food Stamp Act's "Declaration of Policy" to include: (1) a policy declaration that low-income households should have access to purchasing power adequate to permit them to obtain reasonable amounts of home-heating fuels; home-heating fuel purchasing power imposes serious health and safety risks on low-income households; and (3) an authorization for a Home-Heating Stamp Program to reduce the hardships imposed on low-income households by high home-heating costs by permitting low-income households to obtain reasonable amounts of home-heating fuels through normal channels of trade.

Section 4(a) amends section 3 of the Food Stamp Act to establish a definition of "household" for the purposes of the Home-Heating Stamp Program. A "household" would be a group of individuals who are not residents of an institution and who live in a single economic unit or an individual living alone. Recipients of assistance under the Supplemental Security Income Program would be eligible for the Home-Heating Stamp Program regardless of any restrictions on their participation in the Food Stamp Program.

Section 4(b) amends section 3 of the Food Stamp Act to establish a definition of "State" for the purposes of the Home-Heating Stamp Program. "States" allowed to participate in the program would be the 50 States and the District of Columbia.

Section 5 amends section 3 of the Food Stamp Act to clarify the meaning of the term "food stamp program."

Section 6 amends section 3 of the Food Stamp Act to establish definitions of the terms "home-heating stamp program," "home-heating fuels," "provider," and "heating season."

"Home-heating stamp program" would mean any program established under the amended Food Stamp Act which relates to increasing home-heating fuel purchasing power among low-income households.

"Home-heating fuels" would mean fuel or energy used in a household's heating system such as heating oil, natural gas, electricity, kerosene, wood, propane, and coal.

"Provider" would mean any business entity, public or private utility, or individual that regularly provides, distributes, or delivers home-heating fuels.

"Heating season" would mean the period of time which an allotment of home-heating coupons is intended to cover. Heating seasons would be established for each State by the appropriate State agency and could not be longer than six consecutive months.

Section 7 amends a section heading in the Food Stamp Act to include a reference to the Home-Heating Stamp Program.

Section 8 amends the Food Stamp Act by deleting section 4(c) of the Act (relating to the Secretary's authority to issue regulations).

Section 9 amends section 4 of the Food Stamp Act to include authority for the Secretary of Agriculture to establish, at State option, a Home-Heating Stamp Program. Eligible households within an opting State would be provided with an opportunity to obtain reasonable amounts of home-heating fuels through the issuance of monthly home-heating coupon allotments with a greater monetary value than any charge paid by recipient households.

Home-heating coupons are to be used only (1) to purchase home-heating fuels, and (2) to offset any rent due a landlord where the household rents its residence and does not pay its home-heating fuel bill directly to a provider. Landlords accepting home-heating fuel coupons as partial payment of rent due are not to increase household rents in connection with or as a result of the use of home-heating coupons. Tenants using home-heating coupons to offset rent due are not to use more than one month's coupon allotment to offset rent due for any one month (unless an alternate arrangement is agreed to by the landlord).

Home-heating coupons are to be redeemable at face value by the Secretary of Agriculture through the facilities of the Treasury.

Section 9 also amends section 4 of the Food Stamp Act by adding a new subsection (d) which gives the Secretary authority to issue regulations for the Food Stamp Program and the Home-Heating Stamp Program.

Section 10 amends section 5(a) of the Food Stamp Act to provide that, except in the case of households that are victims of a disaster, eligibility for the Home-Heating Stamp Program is to be limited to households whose income and other financial resources are such that they are eligible for assistance under the Food Stamp Program.

Section 11 amends section 5(b) of the Food Stamp Act to provide for temporary emergency standards of eligibility (without regard to income or other financial resources) for the Home-Heating Stamp Program in the case of households that are victims of a disaster.

Section 12 amends section 5 of the Food Stamp Act to provide authority for the Secretary to establish uniform national standards of eligibility for the Home-Heating Stamp Program which are consistent with those used for the Food Stamp Program.

Section 13 amends section 6(a) of the Food Stamp Act to provide for coupons to be printed for the Home-Heating Stamp Program.

Section 14 makes a conforming amendment in section 6(d) of the Food Stamp Act.

Section 15 amends section 6 of the Food Stamp Act to provide that home-heating coupons are to be used only as specified in the new section 4(c) of the Food Stamp Act (to purchase home-heating fuels or to offset rent due a landlord) and the new section 6(g) of the Food Stamp Act (relating to the issuance and use of monthly home-heating coupon allotments). It also provides that nothing in this Act is to be construed as authorizing the Secretary to specify the prices at which home-heating fuels may be sold.

Section 15 also amends section 6 of the Food Stamp Act to provide that, under the Home-Heating Stamp Program, each eligible household is to be issued monthly allotments of home-heating coupons for the entire heating season for the State or, in the case of households applying after the beginning of a heating season, monthly allotments for the remaining number of full months in the State's heating season. It also provides that each eligible household may elect to be issued monthly allotments for periods of time shorter than an entire heating season. Furthermore, it provides that home-heating coupons may be used to pay all or part of a bill which includes the cost of home-heating fuels, that they shall be valid only for the State's heating season and one month thereafter, that they shall not be valid for more than one heating season, and that cash in change (up to $1) may be returned to those using home-heating coupons.

Section 16 makes a conforming amendment to section 7(b) of the Food Stamp Act.

Section 17 amends section 7 of the Food Stamp Act to provide that the face value of monthly home-heating coupon allotments shall be "in such amount as the Secretary (of Agriculture) determines will reflect the monthly equivalent of the minimal cost of a reasonable amount of home-heating fuel for a single heating season." Home-heating coupon allotments are to be established only after consideration of the average cost of a reasonable variety of home-heating fuels and are to be set with a due regard to minimizing the extent to which allotments might exceed the actual cost of home-heating fuels to eligible households. Home-heating coupon allotments are to be varied by household size and geographic location, to be set so as to minimize the extent to which home-heating stamp assistance might induce unnecessary consumption, and are to be adjusted annually to reflect the Secretary of Agriculture's evaluation of changes in the costs of home-heating fuels.

Section 17 also amends section 7 of the Food Stamp Act to provide that households participating in the Home-Heating Stamp Program are to be charged a standard percentage of monthly income for their home-heatinng coupon allotments. This charge is to represent a reasonable investment on the part of the household, but may not exceed the percentage of personal consumption expenditures shown to be spent on home-heating fuels by the best information available to the Secretary of Agriculture. In establishing the standard percentage charge, due consideration is to be given to the extent to which home-heating costs reduce the charge to households which simultaneously participate in the Food Stamp Program.

For purposes of computing the charge to each household participating in the Home-Heating Stamp Program, the household's net monthly income (as computed for Food Stamp Program purposes) is to be used.

Section 17 also amends section 7 of the Food Stamp Act to provide for the issuance of home-heating coupon allotments free of charge to households with net monthly incomes of less than $30 per month (for a family of four). It also provides authority for the Secretary of Agriculture to authorize the issuance of home-heating coupon allotments without a purchase requirement, if these allotments are reduced by a standard percentage of household income and if he deems this a more efficient, effective, and equitable method of providing assistance.

Section 18 amends a section heading in the Food Stamp Act to include a reference to home-heating fuel providers.

Section 19 amends section 8 of the Food Stamp Act to provide authority for the Secretary of Agriculture (in consultation with the Federal Energy Administration) to approve home-heating fuel providers for participation in the Home-Heating Stamp Program. Only approved providers could participate.

Section 20 makes a conforming amendment to section 9 of the Food Stamp Act.

Section 21 amends section 10(a) of the Food Stamp Act to provide that all practicable efforts shall be made to insure that assistance provided by the Home-Heating Stamp Program does not induce unnecessary additional consumption of home-heating fuels, that the Secretary of Agriculture shall consult with and solicit technical assistance from the Federal Energy Administration and the Department of Health, Education, and Welfare, and that the Secretary of Agriculture shall make all practicable efforts to carry out an informational program regarding insulation and other means of reducing home-heating costs.

Section 22 makes a conforming amendment in section 10(c) of the Food Stamp Act.

Section 23 amends section 10(e) of the Food Stamp Act to require State Plans of Operation in the Home-Heating Stamp Program. It also amends section 10(e) to make the appropriate provisions of the Food Stamp Act relating to the content of State Plans of Operation applicable to the Home-Heating Stamp Program.

Sections 24, 25, 26, 27, 28, 29, and 30 make conforming amendments to sections 10, 11, 13, and 17 of the Food Stamp Act.

Section 31 authorizes such appropriations as may be deemed necessary to carry out the purpose of the Home-Heating Stamp Act of 1977.

COAL AS A SOURCE OF ENERGY

Mr. McGOVERN. Mr. President, a cold wave and a natural gas shortage, with all the related problems they create, get no lack of space in the daily press. Anyone who is interested—and we all are—can learn a great deal about the problem and suggested solutions. But, when such an emergency passes, it seems harder to find balanced discussions in the newspapers about one of the most promising midterm solutions to our energy problems: increased production and use of Western surface-mined, low-sulfur coal and lignite. Many of the articles which do get published emphasize the negative rather than the positive benefits of coal: the problems created by strip mining, by burning coal to create vital electricity, and by disruption of traffic in cities and towns through which pass the long-unit coal trains.

A fellow South Dakotan, Ken Holum, who is now working to develop coal supplies for rural electric cooperatives and municipal electric utilities, took note of some articles and an editorial in the Washington Post recently and was inspired to write the letter I now ask to be printed as part of my remarks. The letter was not published by the Post, but it has been printed by the Mid-West

Electric Consumers News, the publication of an organization of rural electric cooperatives in the Midwest and Mountain States. I ask unanimous consent that it be printed in the RECORD so that my colleagues can see and share the informative discussion and the innovative suggestions made by Mr. Holum.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Midwest Electric Consumers News]

HOLUM ANSWERS WASHINGTON POST

EDITOR,
The Washington Post
Washington, D.C.
To the Editor:

To meet America's energy needs without undue reliance upon imported oil, we need a better understanding of the situation and a better climate for development of our domestic energy resources.

"The truly dismaying thing about it is that the choices (on raising oil prices as they see fit) are entirely up to OPEC. Three years after the great oil revolution and the embargo, the United States still has no very clear ideas for recapturing it."

The words are from the December 13 lead editorial in The Washington Post, which properly deplored the fact that as a nation we have done very little since 1973 to attain anything resembling energy independence. The editorial concluded wishfully that OPEC in considering new oil price increases at least is going to remind us all "how large a stake we have in the world politics of energy—and how little we have done to protect that interest."

Excellent thoughts, well expressed!

And on page one of the same issue of the Post, what did we find? Two emotion-laded, staff-written articles from Wyoming, under scare-word headlines, deploring the impact of large numbers of coal-hauling trains on the communities through which they must go to enable us to make use of the plentiful coal resources of the West, and the impact on people who have to live in boomtown coal mining towns, particularly the children.

The "really and truly" dismaying thing about it is that instead of helping create a favorable climate for development and use of our reliable and plentiful coal resources on an environmentally acceptable basis, the Washington Post and other national publications constantly give encouragement by such stories to those who would deny, or at best delay, the use of coal as one vitally essential way to meet our energy requirements. Only with coal can we avoid the dangers of depending on oil produced beyond our borders by nations over which we can expect to have no control.

Different analysts and different organizations come up with varying figures on the nation's energy needs by 1985 and on the amounts of coal or oil or uranium or whatever it will take to produce the electricity we will need by then. Despite some difference, and despite all-out efforts at energy conservation, there is general agreement that we will be using vastly more electricity 10 years from now than at present; also, that coal will have to provide about half of the fuel for all purposes.

The Washington Post's reporters and editorial writers are not uninformed, so it seems awkward to spell out some basic facts. However, in the midst of what remains a major unresolved national problem—and for purposes of this communication—I feel these should be noted:

If coal is to do its anticipated part, production will have to be almost doubled in the coming decade, from perhaps 665 million tons this year to 1.2 billion tons.

Two-thirds of that production will be needed to produce electricity for lighting, heating, cooling offices, homes and industrial plants, and for powering a large part of our nation's industry, much of it replacing imported petroleum products.

The low-sulphur, surface-mineable coal of the West, largely untouched at the moment, will have to account for 300 million tons annually by 1985, up from less than 50 million tons this year.

Uncertainty over what rules will prevail for strip mine reclamation, clean air and water, alleviation of impacts on communities and existing agriculture, and lease terms on federal coal continue to delay orderly development of western coal.

The long lead-time necessary to get heavy mining equipment (four to five years at best for a large dragline) which can't be ordered until leases and mining plans are approved, adds to the period in which we continue to be at the mercy of the OPEC leaders.

While overseas oil now supplies more than 42 per cent of America's requirements, U.S. reserves of oil and natural gas are declining.

There are national costs which must be met if we are not to undergo the economic dislocations caused by severe energy shortages; these are national needs, and the costs should be met nationally.

Certainly clean air and water standards and restoration rules for stripped lands should be enforced, but they should not be allowed to delay the opening of new mines and construction of new generating stations. And, certainly there must be alleviation of the impact of all this activity on small western towns where the coal is mined and through which it must be hauled.

On the last, there is already financing which can be used. The Federal Coal Leasing Amendments Act (S. 391) passed last summer increased the share of federal royalty payments for coal mining returned to the states where the mining will take place. Large sums will be returned if new coal leasing and new mining ever gets underway again after a long moratorium. Let Congress earmark some of this money for underpasses or overpasses to keep railroads crowded with coal trains from cutting in half the affected communities for long perids each day. Other portions of this revenue are available for schools, roads, and such other uses as the states may decide.

The mining and electric generating industries themselves already are contributing to public service and social services costs brought about by their activities.

It is possible that in spite of uncertain federal rules and increasingly difficult state rules and taxes that coal will be able to meet its share of energy needs. I know that an alert press will continue to report significant developments, support necessary legislation, and comment on what is occurring.

But, please, try to resist publishing four or five stories a year about the adverse impact of mining and growth on small towns and ranch country. Coal is needed. People need jobs and go where they are available, such as new mining areas. Some people drink too much alcohol—in boomtowns as well as more stable communities. And some people beat up helpless children. It would be surprising though if your reporters could not develop similar stories in almost any neighborhood. Such tragedies should be dealt with by a concerned and sympathetic society. We must do so while we also continue to work to meet important national needs, including the development of our essential energy supplies.

KEN HOLUM,
General Manager, Western Fuels Association, Inc.
WASHINGTON, D.C., *December 20, 1976.*

TOP RANKS DON'T FLOCK TO U.S. JOBS

Mr. GOLDWATER. Mr. President, many times, in fact, far too many, colleagues of mine on this floor will stand up and berate the retired military man for having taken a job with the Government. The Air Force Times has recently published a Civil Service Commission study of 141,800 service retirees who are pursuing second careers in civil service. Their findings put the lie to the astronomical distortions we have heard on this floor time after time. It is difficult to pick out the most salient part of this story, so I ask that the entire article from the Air Force Times of February 14 be printed in the RECORD; and before some of us are inclined to go off half-cocked in the future, I would suggest that we refer to this article and the figures.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Air Force Times, Feb. 14, 1977]

CSC STUDY: TOP RANKS DON'T FLOCK TO U.S. JOBS

(By Lee Ewing)

WASHINGTON.—A Civil Service Commission study of the 141,817 uniformed service retirees pursuing second careers as federal civil servants refutes the popular notion that senior officers flock to fill U.S. jobs after they retire.

As of June 30, 1975, the cutoff date for the study conducted for Congress, there were 177 generals, admirals and equivalent working for the U.S. government. That figure is 0.13 percent of all federally employed military retirees.

The number of flag officers retired as of June 30, 1975, was not immediately available, a Defense spokesman said, but he said the total for June 30, 1976, was 4,567. If about the same number were retired in 1975, the percentage working for the U.S. government then would be about four percent of all retired flag officers.

The study also showed that there were 2,486 retired colonels or equivalent on the civil service rolls, or 1.8 percent of the total number of military retirees working for the government. Officers below the grade of colonel accounted for the 25,019 jobs, or 17.6 percent of the federally employed retirees.

Thus, enlisted retirees hold the great (78.8 percent) majority of the 141,817 U.S. jobs filled by retirees. The study shows 111,793 enlisted retirees working for the U.S. (Besides the officer and enlisted retirees, the study included 2,342 civil servants who were receiving full Veterans' Administration benefits. Their ranks were not specified. This category accounted for 1.7 percent of the 141,817 total.)

The flag rank retirees included 16 O–10s, 34 O–9s, 67 O–8s and 60 O–7s.

Overall, the study showed that the 141,817 military retirees made up 5.05 percent of the federal workforce of 2,809,541, and that about 13 percent of all 1.1 million military retirees were working for the U.S. government.

The Civil Service Commission produced the study at the request of the House Post Office and Civil Service Committee's subcommittee on manpower and civil service.

Highlights of the study findings were released by CSC last November and were reported in the Nov. 15 issue of *Air Force Times*. The study itself was not released then, but in late January 1977 the Associated Press obtained a copy and produced news stories based on it. Subsequently, *Air Force Times* obtained a copy of the study, which was used to prepare this analysis.

Civil servants often have complained that military retirees who take U.S. civilian jobs are "double dippers" who get dual compensation—one U.S. check for military retired pay and one for civil service jobs. Military

retirees counter that they should have the same right to federal employment as other citizens, and that since their retired pay is based on basic pay only (not quarters and subsistence allowance), they must take a second job to make ends meet.

The dual compensation law was designed to prevent Regular officers from serving a full military career, then switching to a civil service job at full pay. Under that 1964 law, retired Regulars are allowed to work for the U.S. government, but are subject to certain restrictions. Retired Regular officers may draw all of their federal civilian pay plus the first $3859.89 of their military retired pay, and half of the total remaining retired pay after $3859.89 is subtracted. The dual compensation limit rises to $4045.16 effective March 1, 1977. (Some exceptions are provided under the law.)

Although the CSC study drew no conclusions about the impact of the dual compensation law, it probably was a major reason why far more non-Regular than Regular officers go to work for the U.S. as civilians after they retire.

The study showed that of the 27,682 retired officers working for the U.S. government, 5164 retired as Regulars and 22,518 as non-Regulars. Thus, retired Regular officers made up only 3.6 percent of all military retirees working for the U.S., compared with 15.9 percent for non-Regulars.

Among enlisted retirees working for the U.S., who are not restricted by the dual compensation law, there were 109,950 Regulars and only 1843 non-Regulars. That is to be expected because a very high percentage of all enlisted non-disability retirees are Regulars.

Among the military retirees federally employed at the time of the study, 121,953 (86 percent) retired for length of service (non-disability), 17,522 (12.4 percent) retired for disability, and 2342 (1.6 percent) received full VA benefits for disability.

Critics also have charged that retired military officers have secured a disproportionately high number of senior government civilian jobs. According to the CSC study, of 61,273 military retirees holding federal jobs on the General Schedule and equivalent, 39 were flag officers, 1855 were colonels, 19,343 were officers below colonel, 39,204 were enlisteds, and 832 were drawing VA pensions.

Four colonels held GS jobs in grade GS-4 or below, along with 497 other officers and 7511 enlisted personnel.

One O-7 was in a slot in the GS-5 through GS-8 range, as were 31 colonels, 2119 other officers and 14,351 enlisteds.

The largest group of military retirees on the General Schedule were the 27,805 in grades GS-9 through GS-12. They included five flag officers, 511 colonels, 11,035 other officers and 15,958 enlisteds.

In the GS-13 through GS-15 bracket, there were 18 flag officers, 1193 colonels, 5587 other officers, and 1383 enlisteds.

There were 239 retired military people in the grades GS–16 through GS–18, including 15 flag officers, 116 colonels, 105 other officers, and one enlisted.

Listed as employed under the Federal Wage Systems were no generals, four colonels, 1399 other officers, and 37,480 enlisteds.

A little over one percent of the total (1505) earned less than $6000 a year as federal civilians, and less than one percent earned $36,000 or more. The majority (66 percent) had salaries in the range of $10,000 through $17,999.

At the time of the study, 7897 of the military retirees employed by the federal government were under the age of 40—about five percent of the total.

There were also 9246 (6.5 percent) over 60. Forty-six percent were between 40 and 50, and 41 percent were between 50 and 60.

Sixty-eight percent (96,347) of the federally employed military retirees had white collar jobs, including 45,220 classified as clerical, 24,235 as administrative, 12,334 as technical, 5802 as professional, and 8756 as "other." Ninety-three percent of the retired officers and 61 percent of the retired EM working for the U.S. had white collar jobs.

Of the 45,010 military retirees in blue collar jobs, most were either skilled (21,948) or semi-skilled (14,272).

Overall, military retirees made up 4.21 percent of all federal workers on the General Schedule and equivalent, 8.72 percent of the Federal Wages Systems force, 4.83 percent of the Postal Pay Systems, 5.85 percent of the Executive Schedule, 1.32 percent of Other Pay Systems, and 2.56 percent of Unspecified Pay Systems.

More former Air Force retirees (49,688) worked for the U.S. government than those of any other service. Next was the Army (44,856), Navy (36,510), Marine Corps (7153), Coast Guard (1163), Public Health Service (103), National Oceanic and Atmospheric Administration's Commissioned Corps (two), plus the 2342 VA pensioners, who served in various services.

About 82 percent of the retirees worked in metropolitan areas. The largest group worked at the Washington, D.C. area (11,604), followed by the San Diego, Calif., area (6982), the Norfolk, Va., area (4223), and the San Francisco-Oakland area (3883).

The Department of Defense employed the most retirees (78,124), followed by the U.S. Postal Service (34,724), the VA (7288), the Department of Transportation (3585), the Treasury Department (2939), the General Services Administration (2280), the Department of Health, Education and Welfare (2076), and the National Aeronautics and Space Administration (716). Total for the executive branch was 106,820 military retirees. Only 260 military retirees were among the 14,827 federal workers in the legislative branch (including the General Accounting Office and the Government Printing Office), and only 13 of the 395 employed by the judicial branch were military retirees.

MONEY ORDER FAILURES

Mr. McINTYRE. Mr. President, I wish to call the Senate's attention to the fact that the Subcommittee on Financial Institutions, which I chair, is conducing an inquiry into the recent failures of the Universal Money Order Co.

Many American consumers have suffered substantial financial hardship as a result of this situation.

To this end, I have directed the Federal financial regulatory agencies to report to the subcommittee on the adequacy of existing laws and regulations to protect the public interest in such instances as these.

Mr. President, I ask unanimous consent that a letter which I have written to Chairman Burns of the Federal Reserve Board and an article entitled "There Can Be Alternatives to Money Orders," by Jane Bryant Quinn, which appeared in the Washington Post on February 7, 1977, be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

COMITTEE ON BANKING, HOUSING, AND URBAN AFFAIRS,
Washington, D.C., February 9, 1977.

Hon. ARTHUR F. BURNS,
Chairman, Federal Reserve Board, Washington, D.C.

DEAR MR. CHAIRMAN: For the past 3½ years I have been actively engaged in legislative efforts relating to competition in the United States financial institutions industry and, more particularly, to the availability of retail banking services to the American public. These efforts have included successful Senate passage of the omnibus Financial Institutions Act of 1975, legislative expansion and oversight of NOW accounts in New England and, more recently, a broad-based inquiry into Federal branching policy as contained in the McFadden Act of 1927 and the Banking Act of 1933.

These efforts have revealed many complexities in our banking laws which, in my opinion, work to the detriment of the American banking public by unduly restricting competition between institutions and by arbitrarily restricting the availability and types of services which different types of institutions may offer.

This situation has given rise to many instances, as you know, of the public being forced to avail themselves of banking substitutes where banking services are not otherwise directly available, often at substantially higher prices and with attendant risks substantially greater than those involved in dealing directly with a financial institution.

I am particularly disturbed, therefore, by recent press reports alluding to the difficulties encountered by those individuals unfortunate enough to have done business with the failing Universal Money Order Company. One of these reports entitled "There Can Be Alternatives to Money Orders" by Jane Bryant Quinn, appeared in the Washington Post on February 7. A second article was in the Wall Street Journal on February 8.

It is my intention to direct an inquiry by the Subcommittee on Financial Institutions into the situation described in these reports for the purpose of examining the adequacy of existing laws and regulations to protect those in the market place who avail themselves of financial institutions and by other than depository financial institutions.

I am particularly concerned because Universal Money Orders were sold by various financial institutions and thus carried with them the aura of reliability which they obviously did not have.

The Universal Money Order situation is disturbing enough in itself. It is all the more disturbing because of the manner in which our present laws may foster the risks and costs involved to those living in areas where direct banking services are arbitrarily denied.

To this end, I would appreciate a prompt report on the adequacy of existing laws and regulations to protect the public interest in these areas, generally, and on specific actions taken by your agency to protect the public against these types of abuse. The Congress looks to the regulatory agencies for leadership on these matters, but in this area, unfortunately, the agencies have been remiss.

Sincerely,

THOMAS J. MCINTYRE,
U.S. Senator.

[From the Washington Post, Feb. 7, 1977]

THERE CAN BE ALTERNATIVES TO MONEY ORDERS

(By Jane Bryant Quinn)

NEW YORK.—Money order companies don't go broke very often, but when they do it hurts. It's just as if a bank went bust and took everyone's outstanding checks down the tubes. And since money-order companies typically deal with low-income people, the damage is particularly bad.

The Universal Money Order Co. and its affiliate, USN Co., which together did business in eight states, filed for protection under the bankruptcy laws last week. Thousands of consumers were left stranded—their bills unpaid, their legal situation unclear, and in some areas facing eviction from their apartments or having their loans called in.

Money orders are the typical mode of payment for people who for one reason or an-

other don't use banks. There are good reasons for this choice:

They may keep their money in interest-paying credit union accounts and use money orders to pay their bills. Several credit unions in Massachusetts had been affiliated with Universal Money Order.

If a person has only three or four bills to pay by check each month, it's cheaper to buy money orders than maintain a checking account.

There may be no banks in the neighborhood. In some states—particularly those that don't allow branch banking—there's little profit in starting a bank in a depressed area. Money-order and check-cashing companies serve as substitutes.

Money orders are also available from banks and the U.S. Post Office. But the poor typically buy them from neighborhood companies for payment of rent, utilities, insurance premiums, installment debt and other regular bills, chiefly because they're safer to carry or mail than cash. The person who receives the money order turns it in to the company that issued it for payment.

And there's the rub. When Universal Money Order got into trouble, the money orders couldn't be cashed in. So the creditors haven't yet received payment. Yet the consumer paid in full when he bought the money order and sent it on.

I talked with several of the states that have been affected by the bankruptcy to see what consumers are being advised to do. The legal situation is still unclear, but here are some possibilities:

Take the money order to the agent who sold it to you. Any funds he was holding at the time Universal filed under the bankruptcy laws were probably not sent to the company—and could be used to pay you back.

Make sure you're officially listed as one of the people whose money order bounced, so that when there's a financial settlement you'll be able to get at least part of your money back. Various state and local agencies are distributing forms for this purpose—call the consumer protection agency, the attorney general's office, or Legal Aid.

If you're threatened with eviction or some other precipitate act, ask for emergency help from Legal Aid, your own lawyer or your area's consumer protection office. They may be able to hold the action off. Many housing authorities, utilities, insurance companies and others have agreed to hold the money orders temporarily to see if Universal has enough funds to pay them off.

Robert Hobbs of the National Consumer Law Center in Boston, which gives technical assitance to poverty lawyers, is working on a legal theory to stem consumer losses. He argues that money orders are similar in nature to bank cashier's checks, which are treated differently in law from personal checks. Once you pay for a cashiers' check and present it to the creditor, you have discharged your debt, Hobbs says. If the bank went broke and couldn't honor the check, the creditor would have to sue the bank rather than collect again from you. If money orders were treated the same way, consumers couldn't be billed again.

Unfortunately, by the time that issue is resolved in the courts it may be moot. If creditors don't soon get payment from somewhere, the consumer may be out on the street. For absolute safety, postal money orders are probably your best bet.

KENNEDY REPORT ON AIRLINE REGULATION

Mr. MATHIAS. Mr. President, in 1974 and 1975 the Senate Subcommittee on Administrative Practice and Procedure held a series of detailed hearings on the effects of Federal airline regulation. These hearings were organized and conceived by the subcommittee's distinguished chairman, Senator EDWARD KENNEDY of Massachusetts. The subcommittee last year issued a report on its hearings which should be read by all who are concerned with this issue. I ask unanimous consent that a review of that report, by Prof. Richard Caves, be printed in the RECORD.

There being no objection, the review was ordered to be printed in the RECORD, as follows:

(From the Bell Journal of Economics)

THE KENNEDY SUBCOMMITTEE'S CIVIL AERONAUTICS BOARD PRACTICES AND PROCEDURES

(By Richard E. Caves)

A major document in the current debate over deregulation of the U.S. domestic airlines is this report of the Subcommittee on Administrative Practice and Procedure of the Committee on the Judiciary, U.S. Senate.[1] Stephen G. Breyer served as special counsel to the subcommittee during the preparation of the report and the hearings that preceded it. The report does not break much new ground in its technical analysis of regulated competition in the airline industry. However, it provides a clear and sophisticated synthesis of recent economic analyses of the industry and develops new evidence on the Civil Aeronautics Board's procedures and operations. The committee's recommendations strongly support relaxed controls over entry and pricing in domestic air transportation, as well as calling for reform of some shocking procedures of the Board.

During the last two decades a number of economists have studied the effect of regulation on the structure and performance of the air transport industry. Their findings display a remarkable consensus. The industry's intrinsic structural characteristics include only moderate barriers to entry and levels of product differentiation, so that an unregulated airline industry would display something close to competitive performance although seller concentration would be high in individual city-pair markets. The actual industry, as regulated since 1938, has been afflicted with blockaded entry and rigid prices that are often set high enough above minimum attainable marginal costs that extensive nonprice is induced (principally expanded flight schedules leading to low load factors). This nonprice competition elevates costs substantially over their minimum attainable level, as does the rigidity of the route structures imposed on carriers by the Board's certification procedures. The airlines have not earned more than a normal rate of return on their investment, over the long run, but they have incurred costs significantly higher than the minimum attainable.

The report's analysis of the effect of the Board's policies follows the lead of several scholars[2] in drawing heavily on a comparison between largely unregulated airlines competing in the intrastate markets of California and Texas and the regulated interstate industry. The report provides (pp. 40–53) a careful analysis of the factors that might explain the markedly lower fares found in these intrastate markets—30 to 50 percent below interstate city-pair markets of comparable size and length of haul. Even after careful allowance for differences in weather conditions, traffic delays, interline connections, etc., it turns out that the principal factor explaining the lower fares and costs per passenger is higher load factors. Higher load factors ideally permit substantially lower fares; furthermore, given the elasticity of air-travel demand, the lower fares may induce enough additional traffic that the public experiences no net reduction in the choices of departure times available. The report points out that the turnover of carriers in these markets has been high, but that the availability of service to the public has not been destabilized.

Another source of originality in the report lies in its dissection of the arguments put forth by the airlines and their supporters for continued regulation or for collusive arrangements such as agreements to restrict capacity on selected routes (for example, pp. 58–76). The report displays the clever debater's facility for skewering the many specious analyses that have been put forth. Economists who have stayed clear of the day-to-day debate over regulatory policy will enjoy this sample of the repartee.

The report's greatest substantive contribution comes not from its economic analysis but from its evidence on the procedures and practices that the Civil Aeronautics Board has employed over the last decade; how it reaches and implements major policy decisions, allocates its enforcement efforts, and the like. The report concentrates on certain major decisions and policy areas. One of these is the moratorium on new awards of competitive city-pair routes adopted in 1970, under which the CAB declined to schedule hearings on applications for new routes (pp. 77–102). In this and other policy areas, the Board used a device to avert judicial review of its decisions. Rather than setting applications by the airlines for hearing and decision, it forced the applicants to apply for an expedited hearing. If this procedural application were granted, it meant that the Board had also decided to grant the substantive application. If the application for an expedited hearing were turned down, no unexpedited hearing was likely ever to follow, but the frustrated applicant could probably not overturn the procedural ruling on appeal.

Another procedural area covered by the report is that of the Board's enforcement activities. These have been mostly concerned with adherence to a set of complex and economically meaningless rules designed to limit the use of low-fare charter flights. In general, the report concludes that enforcement activities are mostly responsive to complaints, and that complaints tend to come not from overcharged or underserviced members of the traveling public but from disadvantaged competitors or travel agents.

The report's evidence on the Board's decisionmaking processes invites some reflection on the competing political-behavioral models of the regulatory process that have emerged in recent years. These include the following approaches: (1) regulation was originally undertaken for some good public purpose, but the regulatory agency is subsequently captured by and thereafter serves those whom it regulates;[3] (2) a slightly more cynical variant of this approach holds that securing protective regulation is an economic choice made by an industry, and so the regulators serve the regulated from the start;[4] (3) regulation may pursue some good public purpose, but be frustrated by inadequate analytical capability or access to information;[5] and (4) regulation emerges as a device to smooth over a political conflict between strong interest groups by providing cross subsidies that will permit both groups to be satisfied at the expense of the passive general public.[6] Previous research on the Civil Aeronautics Board has declined to embrace any of these hypotheses in its pure form and instead has opted for a somewhat more complex explanation, stressing the consistency of the Board's actions with the promotional goals laid down in the legislation—goals that give some legitimacy to the Board's concern both with assuring the adequacy of airline profits and with promoting the cross subsidy of less profitable parts of the airline system by its more profitable parts.[7]

The report's evidence on the Board's actions in the last decade or so propels one, it must be said, toward a simple "capture"

theory of the agency's behavior. The Board appears concerned primarily with maintaining the profitability of its principal clients, the domestic trunk airlines—and not for the service of any higher social goal. The route moratorium, the Board's encouragement of collusive agreements to reduce capacity, its preoccupation with limiting the spread of low-fare charter flights, and its handling of decisions on fare levels and other key matters can hardly be interpreted other than as service to dominant firms among its client group. The Board's concern with the carriers' profits could formerly be excused by its responsibility as a provider of subsidy, but this function is long gone. The Board's concern with protecting profits on the potentially more profitable routine could once be exonerated by its goal of extending air service by cross subsidizing unprofitable routes, but little or no cross subsidy now exists (the report provides evidence at pp. 66–67).

In devising its substantive recommendations, the subcommittee weighs the possibility that the Board's role as a cartel manager could be extended to secure an efficient cartel that provided a minimum-cost service at "competitive" fares (pp. 130–160 passim). No wonder that it instead joins the mainstream of economic analysis of airline regulation and calls for greatly relaxed controls on both fares and entry. The report is both an important contribution to the current debate over regulatory policy and a scholarly study worth the attention of economists concerned with economic regulation.

A SHERATON ROSE

Mr. METZENBAUM. Mr. President, I ask unanimous consent to have printed in the RECORD a recent column in the Cleveland Press dealing with a great and wonderful person—Rose Perry—a lady known and loved by all who have come in contact with her over the years. She has served hundreds of prominent public figures, including both former President Ford and President Carter. She is a rare human being.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

A SHERATON ROSE

(By Bob Seltzer)

For 16 of her 21 years as a waitress, Rose Perry has carried on a love affair with the Sheraton-Cleveland Hotel, and she hopes the hostelry regains its physical and financial health of yesteryear.

Mrs. Perry, brown-eyed brunet mother of three, began her warm attachment in 1961, when she joined the hotel as it opened its grand ballroom. Her ardor for the hotel is almost a fetish.

"I am happy at the Sheraton-Cleveland," she said. "It is THE hotel. To me, it is home. I hope Art Modell will find a buyer, and preserve this fine landmark on Public Square.

"I have had the pleasure of serving presidents of the United States, senators and congressmen, and a host of celebrities and VIP's.

"Everybody is special to me. I like people, and am pleased to serve them. Many of the Secret Service agents know me. It always is gratifying when out-of-town visitors at the hotel ask for me.

"The hotel's food and service are good, but the building needs to be refurbished to regain the eminence it once enjoyed.

"I served Gerald Ford once as vice president and twice as president. The last time was at the $500-a-plate Republican dinner. He is down-to-earth and likable. He recognized me, and introduced me to Sen. Robert A. Taft. I asked President Ford how his wife was, and he thanked me for my consideration.

"I met President-elect Jimmy Carter, and thought he looked younger than his 52 years. I shook hands with former President Eisenhower, Sen. Robert Kennedy and his wife Ethel, Sen. Ted Kennedy, Gen. William C. Westmoreland, David Brinkley, and George Steinbrenner.

"I have served Sen. Hubert H. Humphrey of Minnesota, the late actress Agnes Morehead, and actor John Wayne. Wayne asked only for Scotch and water at the banquet table.

"Prominent Clevelanders I have served include Mayor Perk, judges, leading attorneys, bank presidents, and department store executives."

Mrs. Perry, solicitous and accommodating, was born at Fairpoint, O., Belmont County, daughter of a miner. When she was seven, her family moved to Cleveland, and her father joined the Fisher Body Co.

A graduate of South High School, Mrs. Perry passed a Civil Service examination and joined the Social Security Administration. She was married in 1939, and left her job to become a mother.

She later joined Local 10 of the Waiters and Waitresses Union, and worked at the Hotel Manger, the Hollenden, the Alcazar, the Statler, the Carter, and the Sahara Motor Inn to put her two sons through college.

Mrs. Perry and her husband, Louis J., a foreman at the Leece-Neville Co., live at 19102 Sunset Dr., Warrensville Heights. The Perry children are Kenneth L., 35, a salesman for Westvaco Corp., who attended John Carroll and Western Reserve Universities; Douglas A., 31, a graduate of Cleveland State University, now budget analyst for Gould Corp., and Linda, an assistant buyer for the May Co.

THE B–1 BOMBER

Mr. GOLDWATER. Mr. President, the other afternoon, while standing in front of the White House to be admitted for an appointment with the President, I was approached by a member of a protesting team of people who were protesting the B–1. They gave me a pamphlet which I have carefully read, and I am utterly shocked to see that two organizations obviously connected with church groups are the sponsoring bodies behind the stop the B–1 bomber. One group is the American Friends Service Committee and the other is the Clergy and Laity Concerned.

What disturbs me about having church groups opposed to this weapon system is not the fact that it is a weapon system, but the fact that a church organization would lend its name to such a dishonestly, disoriented piece of literature.

Let us look at a few of the things on their first page. They say that the B–1 would be one of the most expensive systems ever built. I ask these people to go back to World War II and compare the price of a B–24 or a B–17 bomber to the existing economy at that time. It would be equally as expensive.

The B–1 would perpetuate the dangerous arms race: Any weapon that we build will do this. Our job is to get our potential enemies, the Soviets, to realize this, then maybe we both can come to some agreements.

The B–1 would lose jobs compared to the same amount of money on production for civilian needs: This is absolutely ridiculous, unsupportable, and it has never been proven. Jobs created by money given to welfare are not the kind of jobs the American people need. They are permanent jobs that are not at the whim or fancy of some politician.

The B–1 would provide super profits to corporations: This is patently dishonest on the face of it because as I understand it, the profits being realized by the largest aircraft manufacturers in the country run less than 7 percent which is somewhat less than the average of other large corporations, but I would ask these church groups, where do they get their support? Is it not true that they get it from companies and people in this country making money? Or do they want to become completely dependent upon the Federal Government?

The B–1 would pose a major threat to the environment: Oh, the number of times I have heard this distorted statement. It started with the SST, now it is against the B–1; and there is not one iota of evidence to show that this is true or would be true; another lie.

The B–1 may be used against developing countries in future Vietnam-type wars. If we are smart and have the right kind of Presidents, we are not going to have any future Vietnam-type wars, but if we happen to have to go to war against a Vietnam-type country, what is wrong with any weapon we have to get it over with? That is how we lost the last one.

I could go on through this pamphlet, picking out serious misstatements or distortions. Because we are going to be faced with a proliferation of this type of dishonesty against the B–1, I wanted to make these few comments, and if any further ones are needed, I stand ready at any time to make them and back them up. It is one thing to oppose a weapons system, but let us oppose this system on honest grounds and not distorted ones.

THE HIDDEN CAMPAIGN

Mr. PROXMIRE. Mr. President, last month I introduced S. 22, the First Amendment Clarification Act of 1977, which is designed to give the United States the full benefit of a free press, electronic as well as printed.

In America today, the preferred source of news for 76 percent of our people is radio and television. Yet because of the Fairness Doctrine, the equal time rule and other controls imposed by the Federal Government, the freedom of the press guaranteed by the first amendment applies to only part, the smaller part of our news media. The quality and quantity of news and information offered through the electronic media often pale by comparison to that offered by newspapers and magazines.

Enactment of S. 22 would result in the repeal of section 315 of the Communications Act of 1934, which contains both the equal time rule and the authoriza-

tion for the Federal Communications Commission's Fairness Doctrine.

The equal time rule requires that when a legally qualified candidate for public office is given or sold broadcast time, any other candidate for that same office must be given an equal opportunity to use the same airwaves, unless the appearance occurs in the context of a legitimate news event.

On its face, this rule seems eminently reasonable. But closer examination reveals that the equal time rule is a clear abridgment of the first amendment to the U.S. Constitution. It is Government telling journalists how they should use their medium of expression. It is Government control over a part of the free press.

Under the Fairness Doctrine, broadcasters are required to air programs dealing with controversial issues of public importance and to afford reasonable opportunities for the presentation of contrasting viewpoints on these issues.

The Fairness Doctrine, unlike the equal time requirement, does not call for each viewpoint to receive the same amount of air time. Neither does it require that the other viewpoints be given in the same program.

Again, this seems at first glance to be a reasonable rule. But like the equal time rule, the Fairness Doctrine obligates journalists to devote a portion of their broadcast time to views which they, in the exercise of editorial discretion, might choose not to put on the air. The Fairness Doctrine permits that editorial discretion to be usurped by a Federal regulatory authority. Like the equal time rule, it is Government control over a part of the free press.

Mr. President, it is not my present intention to recite all the arguments in favor of S. 22 and against the fairness doctrine, the equal time rule and other governmental controls on the broadcast media.

But I would like to share with my colleagues some thoughts about the disservice done to the goal of an informed public by the fairness doctrine and equal time rule.

My remarks are prompted by an article I recently received in the mail, written by the California journalist Mary Ellen Leary, entitled "The Hidden Campaign." This article, published in the June 1976 issue of the California Journal, explores the impact of the California electronic media in the 1974 gubernatorial campaign.

Ms. Leary concludes that while television coverage dominated the campaign efforts of the candidates, the quality of television political reporting had so deteriorated from the levels of earlier years that the media campaign actually diminished the involvement of the public in the electoral process and served to erode, rather than support, the democratic process.

Ms. Leary produced some interesting statistics about media coverage of the 1974 California gubernatorial campaign which seem highly pertinent to our consideration of S. 22. Broadcasters, she notes—represented by six major television stations and five key radio stations chosen for observation and monitoring—devoted 2 percent of their total news time to reports on the campaign. Faced with covering 29 candidates in the gubernatorial primary, she explains, the broadcasters "justified their inattention on the ground that it was impossible to meet equal time and fairness [doctrine] requirements."

These observations indicate to me, Mr. President, that if political reporting is deliberately kept off the air by the operation of the fairness doctrine and equal time rule, then the purpose of these rules—to promote free and uninhibited political dialog—may be frustrated by the fears they instill in the minds of broadcast journalists.

Ms. Leary argues compellingly that these fears actually shaped the manner in which newsworthy events were reported on the air. A Los Angeles radio station, she notes, issued a verbal order that no Member of Congress could be interviewed on the air during the campaign because of the equal time doctrine. Meanwhile, in San Francisco, Ms. Leary reports a night news editor refused to broadcast Representative Jerome Waldie's report that the House Judiciary Committee had voted to subpena the President of the United States. His reason? He feared the station would be obligated to ask a Republican to comment on the story.

These anecdotes, Mr. President, suggest the manner in which the Fairness Doctrine and equal time rule operate to lead broadcast journalists down a path to self-censorship. But it is not only the first amendment right of the broadcast journalist which is at stake here. It is, as well, the first amendment right of the public to be informed about the workings of Government and the course of public affairs.

Describing the role of the media in the 1974 California gubernatorial campaign, Ms. Leary observes:

> No one raised a question on the rights of the listening public to be informed or the adequacy of the "marketplace of ideas," as broadcast has been described.

And she further explains:

> The election disclosed . . . that in practice the (equal time) proviso leads broadcasters to steer clear of political stories where possible and drain those that couldn't be avoided of any eelments that could cause equal time problems.

Mr. President, I am distressed by Ms. Leary's conclusion that television served to erode, rather than support, the democratic process and that it distorted, rather than clarified, the issues and candidates in the 1974 California gubernatorial campaign.

I believe her findings may be indicative of the predicament confronting broadcast journalism in informing the public in many areas of our country. Ms. Leary's conclusions have reinforced my previously expressed belief that the American people at large, and our national goal of an informed electorate, would be best served by the abolition of the equal time and Fairness Doctrine rules, as I have advocated through my sponsorship of S. 22.

So that my colleagues may have the opportunity to read the full text of Ms. Leary's article, I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the California Journal, June 1976]

THE HIDDEN CAMPAIGN: EXCERPTS FROM A NEW BOOK DETAILING THE DISINTEGRATION OF CALIFORNIA TELEVISION POLITICAL REPORTING

(NOTE.—Over the past 18 months, Governor Jerry Brown has repeatedly been described as the most fascinating politican in America. Yet, when he was running for governor, he was viewed as "dull", and his contest with Republican Houston I. Flournoy was almost ignored by California television stations. The relationship between the candidates and the media in that election was examined in detail by the California Center for Research and Education in Government, publisher of the California Journal, under a grant from the Ford Foundation and the John and Mary Markle Foundation. The results of that study will be published this summer in a book by Mary Ellen Leary, director of the project and long-time California political writer. That book, to be published by Public Affairs Press and tentatively entitled "The Hidden Campaign," will tell in detail what's wrong with the communications link between candidate and voter in California today. (Copies will be available from the California Journal upon publication.) What follows are excerpts from the book.)

(By Mary Ellen Leary)

"I haven't seen any candidates for office do or say anything worth putting on the air—not when I have big stories on cab drivers being arrested for transporting illegal aliens, drug busts on local Navy bases, large buildings being burned down in major blazes and many other stories like that, all interesting to people right here locally."

Ray Wilson, news director of San Diego's CBS television affiliate, KFMB, was speaking just five weeks before election day. The prevailing opinion in the television world was that political news was not merely competing with other news, but that it was also somehow inferior to other news. What did interest the public, television news executives believed, was photographic excitement and actions, visible drama such as fires, accidents, crowds, picket lines, lively social conflict, human interest stories and even animal stories. Bob Moretti complained that during the primary one television station interviewed him and ran one minute of his interview and four minutes on the same newscast about "togs for dogs." At another point, he said, a different station ran six minutes on a frog-jumping contest and a few seconds on his campaign remarks.

Moretti symbolized the candidates' central predicament, especially in the primary: Television, the one medium by which they felt they could most directly present their case was closing them out. Even in the general election, television gave only snippits of time, and then, only occasionally. Politicians were not "exciting" and their campaigns lacked "action" or emotion. This came as a stunning rebuff to the main thrust of their camapign efforts. Candidates came to realize it as one press conference after another was ignored, as one solemn announcement after another was released into a void. Television executives had their own reasons to feel aggravated. They voiced respect for the electoral process, but they felt annoyed when politicians did not make their campaigns conform to television's news standards.

Between the conflicting expectations of candidate and television, the campaign process fell into a chasm, with no one alert to the need for insuring the vitality of communication between voter and candidate, no one concerned to fit television into the democratic electoral system.

Throughout the campaign the candidates pursued television. They magnified criticism of their rivals because television liked con-

flict. They designed their campaigns around scenes and activities aimed at attracting television cameras. Not only did television fail to cooperate, it actively resisted.

The television industry was intent on a pursuit of its own. It was engaged in competition for "ratings" through programs of what came to be called "happy talk" or "action news." This format stressed brevity, fast pace, and lively visuals, all of which made it inhospitable to political news. The preferred subject matter was that which taxed the viewers least, simplest to tell photographically, and least in need of explanation. It laid great emphasis on the anchorman's style—his visual attractiveness, chatty manner and light pleasantries.

THE EXCEPTIONS

Two stations, as disengaged as any other TV stations in the primary, undertook a substantial effort to maintain a serious flow of news about the two candidates in the run-off for governor. KNBC–TV in Los Angeles, whose news executives, backed up by station management, made an initial determination that the gubernatorial race was important and should be reported on a continuing basis, committed money, staff and air-time to the campaign as it unfolded for two months. In quality and in quantity, its reporting was unusual.

Often, KNBC was the only television station represented at a campaign event and, in almost every instance when the candidates were traveling outside Los Angeles, it would be the only nonlocal station present. One striking example of this was the Flournoy speech before the San Francisco Commonwealth Club, one of the most prominent California platforms afforded major political candidates. That event was a KNBC exclusive; no San Francisco station attended. Bob Eaton, KNBC's news director, expressed that station's attitude: "Politics can be interesting. I think that people are interested in the candidates and in what they are saying. Maybe in the upsurge of 'happy news' other stations thought otherwise. But if you believe all the studies that say television is one of the major factors in helping people make up their minds, even if that isn't a role we sought for ourselves, then it has been put upon us. And we do have a responsibility to do as much as we can to cover an election." Chuck Rossi, KNBC news assignment manager, confirmed the front-office support: "I didn't want to leave 'The Making of the Governor' to some Teddy White. I wanted to report it as it went along. Bob Eaton told us early to go ahead and cover the race. That's all."

The other station to make a significant commitment of staff, funds and air-time was KGO–TV, the ABC-owned-and-operated station in San Francisco. It sent two news teams to cover Flournoy and Brown for three days in mid-October. They produced four-to-five minute segments that were run, two to each program, over six successive newscasts. In addition, KGO carried lengthy interviews with each candidate and undertook considerable local coverage, using the same reporters who did the traveling. The interviews were designed to deal with issues, the travel reports with the candidates' style and personality.

Apart from these two, a few stations from Los Angeles and San Francisco made occasional forays to camps of either candidate to spend a day on the trail to film "profiles." Most major television stations, and many smaller ones as well, invited the candidates to their studios for interviews. These ran anywhere from two minutes to ten and, in rare instances, longer. As a general rule, the candidates got television news attention only when they were in the individual station's immediate range, and not always then. All stations included some news at least once about the two minor party candidates for governor. Some, during the primary, issued blanket invitations to all gubernatorial candidates to appear on a program at a specified time, a device that gave at least one opportunity to the long list of unknown people. But apart from KNBC, the concept of reporting the campaign as a continuing, unfolding process intended to inform the public about the men seeking office and their positions as expressed over a period of time clearly was not what television considered its responsibility.

THE LONE SURVIVOR

One surprising discovery was that television newsrooms had discarded specialists (apart from sports and weather reporters). They actively discouraged reporters from becoming expert in any field. As a result, there were no political reporters. In all California broadcasting, only one person, Rollin Post of public television station KQED, San Francisco, was designated as a political reporter. (A strike at the station during the campaign period kept him off camera.)

The paucity of political coverage gains significance by contrasting it with the intense interest in politics in past years. Local television news programs across the country expanded greatly in the last decade. In 1961, KNXT, Los Angeles, started "60 Minutes" of what it termed "Big News," staffing stories well and using generous film on local events. By 1965, this station offered one of the most attractive news opportunities for broadcast journalists, and other stations were emulating it. The concept of airing hour-long news spread, and political news became an important part of it. Symbolic of the growing attention to political reporting among television stations in the mid-1960's was establishment of news bureaus in the Capitol. KNXT opened its bureau in 1964, and shortly after, KNBC followed suit, along with Sacramento's KCRA. By 1965, Governor Edmund G. Brown Sr. responded to television's interest by installing a news conference room in the Capitol designed to accommodate cameras. When Ronald Reagan succeeded Brown in January 1967, the arrival of a movie actor and television personality whose "talking head" was quick with a quip attracted unprecedented TV attention to Sacramento.

John Jervis, who opened KCRA's bureau and has since quit television to work in politics, looked back on that period as a time when news editors and assignment editors were excited about the story quality of politics. "I'd get two, three, even more days to develop a story," Jervis recalled. "Nobody pressured me to produce one or two a day. There wasn't such pressure as they get today." Such encouragement is the crucial factor in developing complex stories for television, he said. And at that point, the political reporters enjoyed support and cheer from their home offices. They were urged to show initiative.

Jervis's memory is supported by that of Vic Biondi, former capital bureau political reporter for KNBC television and now press director for a state agency. Biondi called the period of the late 1960's "California's golden days of television journalism." Political stories were as exciting to editors as to reporters, he said. "We were encouraged and supported in doing backgrounders or in-depth political reports. There was a fight to get adequate time to tell the story, yes. But today, they don't haggle over time for such reports. They have simply wiped out in-depth political reporting."

GOODBYE, GOLDEN AGE

Three developments came along to tarnish the "golden age": Vietnam, the recession and "action news." The Vietnam war and the national turmoil and urban riots suddenly made sensational and highly visual news available in abundance. But it was also deadly serious. News managers began seeking lighter subject matter as relief. On top of that came a financial pinch following the 1967 recession. To California television, Sacramento bureaus began to seem extravagant. Stations began exacting more efficient performance from their staff, tightening news costs. Business offices were no longer satisfied that news was produced at a loss. They turned their attention to the revenue possibilities from local advertising within the news segments. As this money began to pour in, stations decided to increase the length of their newscasts and go after the larger audiences that trigger higher ad revenue through higher ratings. This quest for ratings brought the phenomenal known variously as "action news," "eye-witness news" and "happy talk."

For years the industry used the resources of research firms to determine audience size, most prominently A. C. Nielsen Co. and ARB (American Research Bureau). They counted television viewers through recognized market-testing methods, to "rate" stations within an area according to audience size. Data about the sex, age and buying potential of the viewers were useful to advertising purchasers. But the new consultants undertook a more sophisticated task, "qualitative research." Their professional evaluation sought such details as audience admiration for a sportscaster's smile or an anchorman's hair style, and they also dealt with the visual attractiveness of the set and the "action" in the news. Consequently, television programming became extraordinarily sensitive to what the viewer was thought to want.

THE MAGID MANIA

The two most successful firms in this field were Frank Magid & Associates, and McHugh & Hoffman, Inc. By 1974, both of them, along with other consultants, were working with a number of California stations, all in the midst of fiercely competitive efforts to enhance the audience appeal of their news programs. As in other states, a great reshuffling of news personnel accompanied these studies, for the appearance and manner of the people on screen figured importantly in the recommendations for improvement.

The first impact of the consultants was felt in San Francisco, when KGO–TV, which had been trailing in audience size, hired McHugh & Hoffman and then undertook an energetic thrust to "action news." The station promoted its news "team" on billboards, in newspapers, on buses. It dressed them in assorted costumes. It presented them as "good guys," as "happy people" whom everybody liked. KRON resisted the "happy talk," but top-rated KPIX went through successive waves of shock as KGO–TV's audience grew. KPIX also began revamping and personnel changes, some of them still under way in 1974. In this shift, political reporter Post, discovering politics was no longer taken so seriously at KPIX, moved to Public Broadcasting station KQED. KPIX retained its top rating for the evening news, but KGO–TV was on the rise. It acquired, in 1974, a new assistant news director, a new assignment editor, a new executive news producer—all but one of them fresh to the station.

Similar repercussions from efforts to entice larger audiences were being registered in other market areas in 1974. KCRA–TV in Sacramento, although dominant in its field, hired Magid to advise it about increasing news-time audiences, an effort coincident with the election period. A rival, KOVR, hired TelCon & Associates of New York. Ron Mires moved from San Francisco to join San Diego's KGTV as news director and McHugh & Hoffman was hired shortly after to consult on program improvements. About the same time KFMB–TV in San Diego hired Magid. Both stations changed faces on camera, and news style became livelier, briefer, more marked with "human interest" and with reporter "involvement."

Los Angeles, resisted the "happy talk" more than most market areas, but KNXT, after KNBC passed it in ratings, dropped many of its solid news reporters and quickened its news format. "KNXT," said Biondi,

"went silly." The consultants turned television news into mere entertainment, Biondi said. "They eliminated specialists. Television today does not offer background stories on politics or anything else. These require more than 90 seconds air time to explain, and 90 seconds has become an optimum for a news item."

This, then, is how it happened that by 1974 the movement away from specialists in television reporting and towards "generalists" had gone so far that Post with Public Broadcasting was the only television reporter in the state specializing in politics. Even those reporters assigned specifically to the campaign were not exclusively reserved for politics. Only one TV person, KNBC interviewer Bob Abernethy, emphasized the "problem" represented by the candidate's difficulty in getting access to television. It is, he said, a major question that needs to be faced. The medium, he added, has not resolved how to give candidates time before the voters and square this with its own economic priorites.

"PRIVATIZING" POLITICS

Although news directors emphasized the "dullness" of the campaign in explaining their reluctance to cover it, many of their reporters mantained that the campaign—and politics in general—could be made interesting and informative to viewers. The brevity to which most television news had been reduced, and the use of reporters on political assignments who are unfamiliar with the field, or are denied the time to background themselves are the principal reasons why political news seems dull, reporters contended. "It is very difficult to do a 20-second or a 30-second story that tells anything," said Post. "It's just got to be superficial," KNXT's bureau chief at Sacramento, Howard Gingold, said, "The emphasis these days is on visuals. We can't get into anything that takes a lot of explaining."

Many reporters kept struggling to get greater campaign coverage. Some assignment editors told of "constant arguments" over the subject. Other editors said they didn't concern themselves about the campaign because they trusted the interested reporters to "push" them into adequate coverage. Still, assignment desks and news desks remained the decision centers.

There was some resistance to the changes recommended by consultants. For instance, it was common talk at station KFMB in San Diego that its long-time political specialist, Harold Keen, was considered by Magid as too stodgy and too old for television. He stayed. His reputation and his capacity were sufficiently respected by his peers to permit them to ignore the advice. In fact, many considered Keen's political coverage a factor in KFMB's strong rating. "The great sin of broadcasting," one reporter said, "is to send a reporter to a complex hearing of some sort and he spends maybe 15 minutes, gets a little film and that night tells the world what went on. No way does he understand it. They've just got to cover more government than is being covered now and with somebody who knows something about it."

KNBC reporter Saul Halpert observed on election night that television "lets the candidates come through" to the public, but "bends the system." In the past, he reflected, there had been more communication between people about whom they favored in campaigns and why. It's different today, he felt. "Television has 'privatized' people. When you're watching, you don't want interruptions. The old-style campaigning can't function where you must deal with so many hundreds of thousands of people, and television is a different kind of communication from your neighbor's remarks at your front door about the man he favors. It is so essentially private. Two things have changed. The involvement of people has declined and candidates have altered their style of communicating with voters." After a moment's thought Halpert added: "I think these developments are not a good thing for our political system. What has happened is that people have been separated from the candidates. But I don't know how you undo this."

On the whole, news directors were not conceding the decline in news quality so many reporters dwelt upon. They usually insisted that ratings had no impact on news selection. (Yet, at one Los Angeles station, just as a news executive was explaining during an interview that ratings had no meaning to the news department, a television reporter was overheard in the hallway calling out to a buddy, "Have you seen the ratings yet?") Some newscasters said that they were never shown the ratings. At KNBC, assignment editor Rossi said, "We don't have to worry about ratings because we are presently Number One. When you have to worry is when you are slipping." But Paul Thompson, news director of Sacramento's KCRA, acknowledged that consultants' studies affected the design of news shows because they indicate the public's interest and public interest guides news selection. "Does political news rate lowest?" he was asked. "Well, I don't know whether it is lowest of all, but it is near the bottom," he replied.

BREAK IN THE BEDROCK

A basic purpose of the "fairness doctrine," which is so integral a part of government policy in the licensing of broadcasters, is the promotion of "robust, wide-open debate." In the context of California's 1974 election, it is almost an amusing phrase. Yet vigorous political exchange in matters of public interest, the U.S. Supreme Court has said (and the FCC has reiterated), is essential to the preservation of our form of government. The FCC has urged broadcasters "to make the maximum possible contribution to the nation's political process. That process is the bedrock of the Republic." In an amplification of the "fairness doctrine," the FCC emphasized "the paramount right of the listening and viewing public to be informed of the competing viewpoints on public issues." The "public interest" in broadcasting, said the Court, "clearly encompasses the presentation of vigorous debate of controversial issues of importance and concern to the public."

Against these standards, the governor's race poses some serious questions. It witnessed some of the most deliberate restrictions on the public's chance to hear political debate ever devised in this country. It occasioned both news coverage and broadcast access that were minimal rather than maximal. Candidate self-interest and broadcaster self-interest produced in the television and radio reports, if not a news black-out, certainly a gray-out. Candidates got access to the airwaves when they bought ads or turned to public television, but on commercial television the decline of interest in political reporting, the pressure for advertising revenue on the stations and the elusiveness of the leading candidate, Brown, all diminished the coverage. No one mentioned whether the public interest was adequately and fairly served. The election can hardly be regarded as an experience consistent with the spirit of the Federal Communications Act.

Nowadays, with broadcast so central to mass communication, it is impossible to examine a political campaign without encountering the standards and strictures of the FCC and its underlying mandate that the air is to be used in the public interest. This is not an easily measured requirement. Since the original legislation in 1927 the concept of licensee responsibility has grown through Congressional revisions and amendments, court opinions and FCC rules. There were three areas in which aspects of the FCC rules figured significantly. The most dramatic was the deliberate restraint on debate and on broadcast media coverage of the debates, contrived by the "agreement" struck by the two candidates and successfully imposed on the broadcasters. The second area concerns a prevalant custom in California broadcasting, especially in television, that appears to apply the "equal time" regulation even in exempt news periods. This broadcaster caution about handling political news, in the name of "equal time" and "fairness" constraints, appeared to impede coverage of the governor's race, especially in the primary. Appearance is emphasized because appearance was all that could be verified. Station managers, news directors and assignment editors frequently said that they were hampered in coverage by the ever-threatening FCC requirements, especially when confronted by so many candidates. Trailing candidates blamed their inability to get coverage on the FCC equal-time requirements. Yet, there kept intruding, through all the wringing of hands over legalisms, hints from experienced broadcast reporters or suggestions from candidates that in fact the equal time and fairness mandates may have been welcomed by the stations. Some people in politics and broadcasting considered the FCC rules a handy shield that permitted the stations to minimize political news, and thus to escape responsibility for alloting time to news they considered "boring." The third area concerns specific complaints to the FCC that arose in the campaign and events that might have occasioned complaint but did not. Although such complaints can lead to the filing of charges and, eventually, hearings and decisions, none of the protests stemming from the campaign led to such results. But there were complaints, and they suggested policy areas in need of reconsideration.

THE UNSEEN DEBATES

In the primary, the broadcasters, faced with 29 candidates for governor, virtually abandoned coverage until the last 10 days, and justified their inattention on the ground that it was impossible to meet equal time and fairness requirements with such a number of candidates. This lack of broadcast coverage became the single most significant issue in the primary. Most stations interpreted the requirements so strictly that they reduced campaign reporting to the news of candidate poll-standing, to the blatant "attacks" one candidate might make on another and to the last campaign swings around the state. Stations in the major metropolitan areas that did interview individual candidates carried the interviews during the final days of the campaign.

In the general election, the broadcasters—represented by the six major television stations and five key radio stations chosen for observation and monitoring—gave 2% of total news time to reports on the race. For radio, this amounted to 4 hours on the five stations out of 463 hours of news; for television, 6 hours on the six stations out of 257 hours of news. Do these measurements of coverage come within Congressional intent and FCC concepts of fairness?

The two major party candidates in the fall run-off—Brown and Flournoy—held six joint appearances or debates. No commercial network carried any of them statewide. None proposed such an idea, except for the weekend immediately before the election, even though Flournoy pressed to have one and found a sponsor to underwrite the cost. The upshot of television's reluctance to air a debate statewide until the campaign was all but over was that only one debate was carried, that conveyed by the public-broadcasting stations. The final debate, seen only in the Los Angeles market, was carried on KNBC's Saturday "News Conference," expanded for the occasion from its usual half-hour to an hour. The first debate was not broadcast at all. Three others were restricted to one outlet in the single market area chosen by the candidates in their "agreement," and

all of these were small-audience markets. Two of the outlets were public-broadcasting stations. Radio transmission of the debates was banned in the "agreement." All other television coverage of them usually was limited to no more than two-minute news accounts.

It would appear that such restrictions were the candidates' doing because of the pact they entered into with such solemnity. But the real explanation is much closer to broadcaster disinterest than to political machinations. Lawyers for the two—Stephen Reinhardt for Brown and John Tretheway for Flournoy—developed the 17-page document, which unilaterally imposed two limitations on broadcast access: One set the total that each might spend on media advertising at $900,000. The other specified "permitted" broadcast coverage for the six "joint appearances or debates." Newspaper coverage was not mentioned.

For both candidates, the document was a compromise. Brown aimed to diminish advertising costs "because it is demeaning for the President and the Governor and the Senator and their challengers for those offices to go around raising money to buy spots," as he explained on KNBC's June 1 debate. Brown's colleagues hinted at concern lest the Republicans raise more money than Brown could. They feared an advertising blitz. Flournoy, for his part, feared that Brown would not meet him at all in debate, and he sought to maximize their joint appearances by proposing a series of ten meetings with as much broadcast exposure as possible, preferably statewide. Brown, with superior name identification, was not eager to help his opponent close the gap. The agreement emerged from compromising those initial positions. But commercial television's attitude was complicit in this outcome. The rejection of any debate except at the peak of public interest, within the final three days, scuttled Flournoy's hopes.

COWING THE MEDIA

The Brown campaign philosophy about debates was summed up by Tom Quinn at a not-for-direct-quotation conference conducted after the election. The Brown campaign felt, he said, that the less coverage that was given the contest, the better off Brown would be. Brown was reluctant to debate, according to Quinn, because such a confrontation was the one thing that could make the campaign exciting. Quinn wanted a dull, dull campaign, and he succeeded. The Brown camp was never quite sure what was happening in the dynamics of the campaign but viewed Flournoy as a very strong opponent. As for the agreement, Quinn said he was surprised by the complete success of it although he expected that it would somehow cow the media, who are not viewed as very gutsy.

Douglas Kranwinkle, Los Angeles lawyer who served Flournoy as campaign manager, pointed out that television proffers of debate opportunities were nearly all proposed on the verge of election.

"We would have liked to have had statewide network television," he said. "None of the networks was at all interested, except maybe in the last four days. None would even consider a debate until about November 2. We felt we needed a series of debates, as early and as frequent as we could get. We had to take the best we could get."

"Are you," he was asked, "suggesting it was not just Brown but the television stations themselves who restricted the debates, and wouldn't permit statewide showings?"

"Yes, television. They simply don't have a statewide concept of presenting programs. We even had stations within the same network coming in separately and asking for conflicting times. They don't coordinate on a statewide basis at all."

After the agreement was reached, the four CBS stations did write jointly to suggest something novel for them: a debate all four would air on the Sunday before the election. The KNBC offer had been accepted by that time. Campaign managers did not relish debates one day after the other.

The prohibition on broadcast use except as specified sprang entirely from the Brown camp, Tretheway said. "We wanted all the air time we could get, anywhere. We'd have let 'em sing it or dance it. The more use, the better." But he recognized the conventional belief that leading candidates risk more by frequent appearances and lagging candidates gain, so Flournoy's team accepted the limitations.

The absurdity of the agreement was that the two candidates set limits on what campaign news broadcasters could dispense—and threatened legal action should their unilateral agreement be violated. So carefully was this specified that the language of the agreement stated, after each television debate was designated by station: "No other television or radio use of all or any part of the program may be made by any person, including a candidate or the station, except for regular news coverage."

In a flourish at the conclusion, the agreement warned: "No person other than a signatory hereto shall have any right to seek judicial remedy as a result of the existence of this agreement or any alleged violation thereof." This demolished the normal constitutional right of any citizen to petition the courts. If it was not nonsense, it was censorship. The only thing more remarkable than the extralegal document itself was the piousness with which broadcasters respected it.

Probably the gravest aspect of the affair was Reinhardt's disclosure that the legal charade was viewed seriously as a model by which future candidates might finagle similar restrictions on broadcast responsibility in elections. Looking back on the negotiations with Tretheway, Reinhardt said they had dressed up the agreement with such elaborate interdictions in legalese—power of subpoena awarded to the arbitrator, and bars against recourse to the courts, and so forth—to "formalize" the obligations on each party. "The stations," he added, "would know that they couldn't really be bound by this, but they would recognize the agreement as a step toward what they would like, so that the wishes of the parties (the candidates) should be respected if the stations wanted other candidates to do similar things in the future." That's how it worked: The prohibitions on airing campaign discussion so neatly coincided with the broadcasters' own preferences for the use of its time that no breach occurred. "I was appalled by their gutlessness," said Tretheway.

Stations might have tested the unilateral restriction this compact laid on First Amendment freedoms but none did. Chuck Rossi, assignment editor at KNBC, voiced the prevailing tolerance to the candidate's limitations: "Because of the way Brown has insisted these debates be run, we can't use it for live broadcast, but it is open for ordinary news coverage, so that is the only thing we can do."

THE NO-TIME DOCTRINE

Whatever the reason, statistics show that the campaign was minimally reported in the broadcast forums. No one raised a question on the rights of the listening public to be informed or the adequacy of this "marketplace of ideas," as broadcast has been described. Discussion erupted in the campaign over equal time and fairness either as hampering limits on political coverage or as unenforced and ineffective ideals. Russ Coughlan, station manager of KGO, expressed the prevailing view: "The fairness doctrine prevents us from lending ourselves to the campaign effort." The station would be happy to show candidates, he said, but numbers defeat them. KABC radio newscaster and talk-show host Michael Jackson said that he refused telephone calls from Senator Alan Cranston, "because it was hard to draw the line definitely that what he was talking about was really news and not campaigning." He said that he had invited former Representatives Helen Gahagan Douglas to appear on his program but "had to ask her to promise not to mention Roth (whom she had endorsed) because, if she did, I'd get into the whole equal-time mess." At KNX-radio in Los Angeles, a reporter said that a verbal order had been issued that no member of Congress was to be interviewed during the campaign because of the equal-time doctrine.

A great deal of attention has been paid to the protections offered minor contenders for political office—and the democratic system as a whole—by insistence upon equal opportunity. The election disclosed, however, that in practice this proviso leads broadcasters to steer clear of political stories where possible and drain those that couldn't be avoided of any elements that could cause equal-time problems. At KSAN radio in San Francisco, news director David McQueen said, "To avoid trouble, we go into political news in less depth than we do other news."

"Balance" was the word most frequently heard about political news coverage, and radio was especially sensitive to it. The watchfulness about balance that resulted led many news rooms to keep careful logs on each candidate's appearances to the second, just in case the FCC should query the station.

The extent to which timidity over equal time sometimes shaped the news was most graphically illustrated by an experience Representative Waldie had with KCBS radio in San Francisco. As a candidate for governor, he had become familiar with the difficulty of getting broadcast time, but knew the stations were eager to use any news he could provide on the Nixon impeachment proceedings of the House Judiciary Committee, on which he served. Logically, he was most likely to communicate with the media in his own Congressional district, which was included in KCBS's area. So when he had something to say about the committee's developments, he telephoned the San Francisco all-news station. He called at one point with what he felt was "a big news break"—the 33-to-3 vote on issuing a subpoena. "I got the station on the phone," he said, "but this night news editor sounded frightened to death. He said, 'Oh, I can't take that. I have to get a Republican to comment on it,'" Waldie was dumbfounded. "I said, 'What do you mean, you can't take it. I'm not asking any mention about the governor's race. I am on the impeachment committee. We just voted 33 to 3 to subpoena the President of the United States. That happens to be a national news story. Are you interested?'" The reply: "I just can't take that news item unless I can get a Republican to comment at the same time. I don't want to argue with you but this is too touchy around here. They are putting a lot of pressure on us." The congressman was outraged. "Who is putting pressure on you?" The fellow replied, "Oh, I didn't mean to say that. I don't mean that. Look, I didn't say that, understand?" Waldie shrugged: "So he didn't use the news. I called up some other stations and they took it gladly."

It was a reflection on the California style of campaign reporting that Kurt Malarstedt, Washington correspondent for a Stockholm television station, followed the campaign for about four days. His 45-minute report was to be aired in Stockholm November 1, paired with a segment on New York's gubernatorial race. That was more total time than many California stations devoted in all their newscasts through September and October to the election!

IN CONCLUSION

There is a blithe assumption in the broadcast world, and even among some politicians, that the public can be trusted to make an

appraisal among candidates given so direct a view of them as television provides. They might, if the candidates had meaningful access. As it functioned in the 1974 election, the medium that was initially expected to bring candidate and voter into closer relationship and to knit the citizen more comprehendingly into the process of choosing political leaders worked to the opposite result. The scant attention television gave the governor's race appeared to diminish public interest. The election had the smallest turnout of registered voters since 1946, the first election since then where turnout fell below 70 percent. Only 64 percent of registrants voted.

Ten prime conclusions have emerged from this study:

1. Television served to erode rather than support the democratic process, and it distorted the political campaign.

2. Television dominated the candidate's entire campaign effort.

3. Opinion polls are pivotal to a candidate's access to the media.

4. Television advertising represents the single largest cost factor in political campaigning.

5. There is a dramatic difference between press and broadcast agencies in the commitment to convey campaign information.

6. A marked interrelationship exists between the three communication channels—radio, television and press—and the most significant is broadcast's dependency on the press.

7. Quite apart from such interdependence, newspaper political reports were heavily influenced by television.

8. A media campaign diminishes involvement of the public in the election process and deflects the campaign and policy formation away from voter participation.

9. Broadcast stations are so affected by the federal requirements for "equal opportunity" that they apply precise measurements to the allocation of time for candidates even in exempt newscasts.

10. The responsibilities Congress imposed on broadcast concerning political campaigns are based on assumptions about news interest in politics that current conditions in the industry have invalidated.

JOE FOSS—AMERICAN

Mr. McGOVERN. Mr. President, the current issue of Frontier, a publication of Frontier Airlines which provides service to Rapid City, S. Dak., contains a sensitive and perceptive article on our former Governor, Joe Foss.

Joe's love affair with South Dakota and the outdoors goes back many years. His understanding and appreciation of the vigorous life is part of our State's oldest traditions.

Joe and I entered public life about the same time in the mid-1950's. Events brought us into the political arena in 1958 as contestants for the same office. Joe was finishing his second term as Governor of South Dakota and I was seeking reelection as the State's First District Congressman. Although I ended up with more votes then he got in that race, in a sense neither of us really lost. Joe went on to become the nationally known figure he is today—and the people in South Dakota have extended to me the privilege of serving them in the U.S. Senate.

Regardless of where Joe Foss happens to be, to us he will always be a part of South Dakota, portraying the kind of spirit and western hospitality that characterizes citizens of our State. The article referred to above also mentions a longtime mutual friend of both Joe Foss and me—Mr. Hoadley Dean—a prominent South Dakotan and a director of Frontier Airlines.

I ask unanimous consent the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOE FOSS—AMERICAN

(By C. A. Stevens)

Today, the renowned hero of World War II is director of public affairs for KLM Royal Dutch Airlines, the oldest air carrier in the world. And he is looking back on a life crammed with enough adventure and drama to fill a few hundred movie scripts.

Joe Foss was born in a South Dakota farmhouse in 1915—four miles east of Sioux Falls. He was bitten by the flying bug—as were so many youths of his time—when Lindbergh made his Atlantic flight. In 1927, his father bundled the whole family into their car and took them to Renner Field north of Sioux Falls to see the Lone Eagle and his Spirit of St. Louis—an event Joe Foss still remembers with fondness. He had no way of knowing that 28 years later Lindbergh would be flying in his squadron as a civilian technical advisor. Lindbergh flew with Joe's outfit for more than a month and they became good friends.

Joe was a senior in his school when the first of many tragedies in his life struck. His father had been plowing a field until midnight and on his way home in his 1927 automobile, a storm came up and the wind loosened a high-tension wire which sagged across the road. The top of the car struck the wire and the engine quit. Joe's father got out of the car to investigate and was electrocuted.

It became Joe's responsibility to run the farm while he was still attending Augustana College in Sioux Falls—a double-duty that didn't work out. After quitting school, he suffered another bad break in the form of a disastrous dry season. Later, he went to work in a packing plant at 43 cents an hour, but he was able to resume his college career at Augustana College and the University of South Dakota, graduating in 1940. A husky 200-pounder, he played football, boxed and was on the track team. But it was flying that was in his blood.

He had taken his first airplane ride when he was still a boy, in a Ford Tri-motor flown by Clyde Ice (who was still flying at age 83!) Clyde gave Joe and his father a ride over the city of Sioux Falls at night for $1.50.

Joe started flying in 1937, and joined the Field Artillery as a private. He enlisted in the Marine Aviation branch the day he graduated from the University of South Dakota, and immediately began primary training at Wold-Chamberlain Field, Minneapolis. He was commissioned a second lieutenant on March 15, 1942,—his wings two weeks later.

His first combat assignment as a fighter pilot—a status he achieved although 27 is supposed to be too old for fighter flying—was leading a flight of Grumman Wildcats against 18 Japanese bombers escorted by a swarm of Zeros attacking Guadalcanal. He scored his first victory on that day, blasting a Zero with one burst at close range. He also almost "bought the farm" himself (three Zeros jumped him, puncturing his oil cooler and ripping away a chunk of wing). He made a forced landing at Henderson Field with a smoking dead engine, coming in so fast that an ambulance was called out to pick up the pieces. It was the first of many narrow escapes.

In only 63 days, between October 1942 and January 1943, Foss shot down 26 Japanese planes and became the first American to tie Eddie Rickenbacker's World War I record. His flight became known as the "Flying Circus," and it was one of the best combat outfits in the Pacific with Foss a natural-born leader.

There was an occasion, however, when the Circus figured it had lost its leader. The day started out good with seven of his flight shooting down six Zeros. Joe recalls seeing five parachutes floating down empty, and above him was the sixth—with an enemy pilot dangling in the harness. At that moment the pilot unbuckled himself and jumped out. He passed Joe on his back and seconds later hit the sea. The other five flyers had apparently done the same. (The reasons for such suicidal tactics was a mystery to Joe, as he had never seen either side shoot at a parachuting man in the Guadalcanal area.) Shortly after this engagement, he spotted a two-place Japanese bi-plane with a gunner in the rear cockpit. Joe came up on this enemy aircraft so fast that he had to dive to the right to keep from crashing into it. This gave the Japanese gunner a perfect shot and he sprayed Joe's plane from nose to tail. Although his F4F was badly shot up, he made a turn-around and sent the bi-plane down in flames. Within the next few minutes he flamed two more enemy planes. During this action he became separated from his teammates and found himself heading for Guadalcanal all by himself. His engine started acting up and occasionally quit. He knew he wasn't going to make it home.

In Joe's words: "My hair stood up so straight it raised my helmet right off my head." He had an island in sight at this point and decided to ditch offshore.

The wildcat sank like a big rock, and Foss wound up floating in his Mae West fully expecting to become shark bait—he actually saw shark fins around. Everytime he put out his arms to swim, he expected to draw back a stub. Luckily, he wasn't attacked, and he headed for a bay.

After darkness set in, he suddenly heard voices—in English. Joe was fished out of the water into a canoe by a sawmill owner who later told him the bay he was aiming at was filled with man-eating crocodiles. The island itself turned out to be Malaita, and there was a mission there largely occupied by missionaries who were refugees from other islands captured by the Japanese.

Foss was given dry clothing and hung out his parachute to dry. Early the next morning, Joe was awakened by singing. Services were underway at a little thatched church with a dirt floor. The singing—a kind of weird howling would describe it better—was the chanting of natives. A Wildcat flew by piloted by Lt. Brugeman who spotted the chute and Joe. A PBY–5A sea-plane showed up later to pick him up. He hurriedly thanked everyone and gave his parachute to the nuns to make vestments for the church.

Joe returned to the squadron wearing old socks, a pair of baggy white pants and a van dyke. After a riotous reunion, Foss resumed his own war against the Japanese—despite a serious case of dysentery and malaria, which dropped him from 197 to 160 pounds and put him in the hospital for awhile.

Shortly after Foss achieved his 26th victory, the Flying Circus flight was shipped home for a rest and reassignment—with a total of 72 enemy planes to its credit, Joe's flight had lost 14 men and the squadron, commanded by Duke Davis, had 263 victories to its credit.

For Foss, the voyage home—on a ship—was a nightmare. The malaria struck again, and at one point he was so sick he overheard a sailor complaining about the canvas that would be wasted when they buried Foss at sea.

He recovered sufficiently to enjoy a thundering welcome home at Sioux Falls where a crowd of 75,000—in a town with only 41,000

inhabitants—greeted him. On May 18, 1943, Foss was presented the Congressional Medal of Honor by President Roosevelt at a White House ceremony.

He returned to combat duty late in the fall of 1943 as a major. A year later, malaria forced him to return to the U.S. for non-combat duties, and he was discharged from the Marines in 1945. His memories of the war, like most men who faced death so often are mixed—they are sharp, poignant, good—and bad. He had grown to hate the Japanese, although he respected them as valiant adversaries. He always felt, that the Zero had the best speed and maneuverability but that the F4F was more durable and had greater fire power.

After the war, he started up "The Joe Foss Flying Service" with Duke Corning, a former Navy pilot. They parlayed a one-plane operation into a 35-plane fleet. During the time the "Foss Flying Service" was in operation, Joe organized the South Dakota Air National Guard, and he and Corning put on air exhibitions throughout the country.

It was at this point that Joe's friends urged him to enter politics. He refused at first.

"Then I remembered some of the politicians who used to come to our bases in the Pacific," he says. "Most of them had backgrounds as shallow as the Missouri River and I decided maybe I could do as well."

A disastrous fire wiped out his flying service in 1949 while he was serving in the legislature.

He served in the house of representatives for one special term and two regular terms, lost the 1950 gubernatorial primary by a hair and went back in the Marines during the Korean War, flying jets. Foss then served two years in the South Dakota legislature before running for governor again. His campaign manager was Hodley Dean, who had known Foss when they were college students together. Dean, today one of South Dakota's leading businessmen and a member of Frontier Airlines board of directors, worked for the Associated Press after World War II and then served as an aide to a senator and congressman before returning to South Dakota. Dean's own business associates talked him into becoming Foss's campaign manager, the two of them criss-crossing the state in a Piper Super Cub—one of the first, and possibly the first time, a candidate has campaigned by airplane.

Foss won the primary and became governor in January 1955. To the man who had successfully managed his campaign went the job of highway commission secretary. Later Dean was named commissioner of the West River area, but his chief contribution to the Foss gubernatoral regime was his role as a trusted advisor (they have remained close friends, and often meet in such places as Washington, where Joe's office is located, the Black Hills and sometimes in Arizona where Joe now lives).

Joe's press secretary during his governorship was Bob Lee, now editor of the Sturgis (S.D.) Tribune, who remembers some anecdotes that reflect the humaneness, refreshing informality and down-to-earth close touch Joe had with his constituents.

"The Pierre Junior High School is situated just across the street from the State Capitol and during the winter a lot of kids from there would spend their lunch hour in the Capitol corridors," Lee recalls. "As the governors' right-hand man, I received complaints from the custodial crews that the kids were scattering parts of their lunches all round. So I stayed in the building over one lunch hour to see if I could catch them. Sure enough, I did. So I very officiously told them they couldn't eat there anymore. It was somewhat to my amazement when they chorused back, 'well, Joe said we could!'

"I asked Joe about it. And they were right—he had given them his permission. But the next day, he called them into his office, explained that the Capitol is a place of pride for all South Dakotans including young people, and that they shouldn't be messing it up. We had no further trouble."

Lee also recalls this story:

"When Ralph Edwards wanted Joe on his 'This is Your Life' program, it was a problem to get the governor to Los Angeles without him knowing the reason for the trip. However, Joe was chairman of the Easter Seal campaign that year for the National Association of Crippled Children and Adults, and we got them to schedule the drive's kickoff in California—as Joe had committed himself to make a number of public appearances throughout the country on behalf of the drive. When he got off the plane in Los Angeles and was greeted by Edwards, Joe thought he was being welcomed as the fund drive chairman and began making an appeal for funds for the Easter Seal Society. Of course, he was surprised to learn that he was the subject of that night's 'This is Your Life' program. But it worked out well for the Easter Seal Society too as it drummed up a lot more contributions on the West Coast."

And this one:

"On one occasion Joe was coming in for fuel at New Orleans, La., while flying a National Guard jet. He radioed to the tower that he had a governor and a VIP aboard as well as an Air Force general. The tower asked how many people were in that single-seat jet. 'One,' was Joe's reply."

After leaving the governorship of South Dakota, Foss became commissioner of the American Football League from 1959 to 1966, subsequently going into television as a producer and later as a star of the television series, "The Outdoorsman—Joe Foss." Throughout the post war years, Joe has been very active in mentally retarded and crippled children programs. He is a board member of the Sun School for Mentally Retarded Children in Phoenix, Arizona.

Today, he confesses to being a "Born Again" Christian. His own words best describe his discovery of serenity after a hectic and often harassed existence:

"I always considered myself a Christian. When I was young I played in the church orchestra and I sat right up next to the preacher. I was taught at a very early age right from wrong. All through my life I always went to church and when I was governor I taught Sunday school. I really thought that was all there was to being a Christian. During my lifetime, I've come close to death many times, in fact I came so close that my whole life passed by in a vision. And that's too close! I thought death was going to score and I wasn't ready to go and now I'm glad I didn't. I mentioned these close calls because I always thought that old Joe had a big part in saving himself. Oh, I prayed, but it was a real short and to the point prayer like: 'thank you!' I always tried to follow what my father said: 'whatever job you do do it right. If it's a digging a ditch, dig the best ditch.'

"About eight years ago I was attending a church service in Scottsdale, Arizona and the preacher was giving a hard hitting sermon. He said, 'A lot of people think they're Christians. But they're not. They go through the ceremony, but when it comes right down to it that's all they are—ceremonial and not real Christians!'

"After the service I realized that all you have to do to become a Christian is to ask the Lord to come into your life, ask him to forgive your sins and pray to God that he will have you say and do the things that he wants you to do.

"Since the day I attended that service in Scottsdale, I have asked God to give me the strength and grace to grow as a born again Christian. And I want to share with other people what the Lord has done in my life.

"I told you about the many times I've been close to death and I wasn't ready to go. I don't see how anyone can be ready without the Lord in his heart. About a year ago after speaking at a large banquet in San Antonio, Texas I started having severe chest pains. My wife, Donna, had a doctor for me in no time. He listened to my heart and said it was skipping beats. I said I didn't mind so long as it didn't skip too many in a row. Somebody said, Let's shut that music off.' The music was a rock band and I said 'it's probably keeping the rhythm of my heart going.' They took me to the hospital and put me in the seclusion room (or whatever they call it). A friend of mine showed up by the name of Chuck Connors. You know him as the TV 'Rifleman' and movie star. He stopped the whole show. Everyone left me to ask him for autographs. Which goes to show you can move off the scene in a hurry.

"For the first time in my life I wasn't worried about the prospect of not making it. As it turned out, it wasn't a heart attack, but a virus infection of the outer lining of the heart. The Lord was with me all the way on that trip and I knew I didn't have a thing in the world to be afraid of.

"I could never in the past bring myself to pray for or love my enemies. Those who have known me through the years know what I thought of enemies. However, I now love and pray for my enemies and all people. I just want everyone to enjoy this wonderful life."

Joe and Donna today reside in Scottsdale, spending time during the summer at their cabin in Wyoming. They enjoy hunting, fishing and other outdoor activities. The Sioux Falls, South Dakota Airport is named "Joe Foss Field." After the dedication, Joe Commented that he sure appreciated having the field named after him while he was still alive and kicking.

To those who know him, there could be no finer tribute to the South Dakota farmboy who personified the American dream.

HELSINKI AND THE U.S.S.R.

Mr. CASE. Mr. President, on February 10, I made a statement which said that even if the administration dropped the term "linkage," the Soviet attitudes on human rights still would have a bearing on American thinking when it came to trade credits and other facets of our relations with Moscow.

I ask unanimous consent that two newspaper editorials, which have appeared since then, be printed in the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Washington Star, Feb. 18, 1977]

WHY "LINKAGE" IS INESCAPABLE

"It goes without saying," said the Soviet Communist party's mouthpiece Pravda the other day—saying it anyway—"that the little heap of renegades presents no danger to the Soviet system." But as usual the reaction of the Soviet regime to the dissidents it classifies as "renegades" belies those bold words.

In the past 10 days—or since the new U.S. administration implemented a new policy of outspoken support for "human rights" afar—the Russians have arrested three prominent internal critics—a physicist and two poets. As usual, the charges aren't specified; but the Pravda editorial offers a clue. Possibly the three are "dazzled by the tinsel of the bourgeois way of life," or "deceived by fairy tales about the rights and freedoms of people in

the capitalist world." Two, Orlov and Rudenko, are among those who take Helsinki's "basket three" (or human rights) accords seriously enough to monitor their effect in the Soviet Union. Alexander Ginsburg, for his part, has been helping families of political prisoners with money sent by Alexander Solzhenitsyn.

The important point for U.S. policymakers is that these arrests, and the bombast of Pravda, may be taken as direct responses to President Carter's solicitude for human rights. It is less dangerous for nuclear powers to spar abstractly over internal dissent than poke at one another over real estate or missile placements. But the new administration is being tested; make no mistake of that.

The insecurity of the Soviet Union about internal dissidence is neither new nor Soviet. It is old and Russian, as any student of the Czarist period knows. But if the U.S. is now to patronize Soviet dissenters as a matter of policy the policy must be carefully measured. The paramount tests, as we see them; are two: whether the policy is responsible, and whether it is effective. The need for responsibility would seem self-evident, although some of us are content with the mere gesture. When this country makes the cause of Soviet or Czech dissenters its own, it assumes moral accountability for the result.

As for effectiveness, it must be said that if words are to be our only weapon they may do as much harm as good.

Unfortunately—one might even say, incredibly—President Carter was at pains the other day to reassure the Soviets, in effect, that ours is indeed a war of words, unrelated to other outstanding issues. This reassurance took the form of a renunciation of "linkage" between Soviet treatment of internal critics and presumably more "important" issues of trade, arms control and geopolitics.

In effect, the President's comment signals the revival of a disconcerting naivete, reminiscent of the illusions of the World War II alliance period when many Americans thought Joseph Stalin could be wheeled into good behavior.

Supporters of the new outspokenness on "human rights" are right to a limited extent: The U.S. would be false to its own values and traditions if it stood silent in the face of political oppression. The free play of public opinion renders that impossible in any case.

But the new administration must shed the notion that Soviet treatment of the Orlovs and Rudenkos, the Sakharovs and Ginzburgs, will be decisively improved by high-minded State Department scoldings. An equally likely result is that mere scoldings will excite lurking Soviet insecurities, and determine the Soviet leadership to show Mr. Carter who's boss in their own household.

If we recall correctly, it was the Manchester Guardian that used to caution Tory-hating readers that a thing could sometimes be true and wise even if Lord Halifax said it. The Carter administration should be similarly cautioned that prudence in the complex matter of "human rights" abroad can make sense even if prudence was favored by Dr. Henry Kissinger.

Is the U.S., then, powerless to influence Soviet internal policy? Or can we do so only by putting at risk the paramount need for rational accord on such issues as arms control and the Middle East? Not at all.

One available lever of "linkage" is trade—trade in grains, trade in advanced electronic technology. It will be a signal that President Carter is serious about human rights issues in the Soviet Union when he links the fortunes of the politically persecuted with our willingness to sell feedgrains and computers to the Russians. Of course, that kind of "linkage" has domestic ramifications for us. To do something effective to alleviate brutal treatment of dissidents, an American president must buck powerful lobbies and interests who take the view that "basket three" is splendid as long as it has nothing to do with our bread basket and hence has no dollar price.

[From the Baltimore Sun, Feb. 20, 1977]

FROM HELSINKI TO BELGRADE

President Carter's protests against Communist violations of human rights dramatically increase the sensitivity of the coming Belgrade review conference on the Helsinki accords of 1975. The accords were widely disparaged in the West as a "sellout" that merely confirmed Soviet hegemony in Eastern Europe. But this view failed to take account of human rights provisions the Kremlin grudgingly accepted as the Western price for participation in the Conference on Security and Co-operation in Europe.

The CSCE's greatest contribution, in the words of a congressional commission last December, "was to place the issue of human rights on the international agenda as a legitimate issue." Principle VII of the Final Act said respect for human rights and freedom of thought is "essential" to friendly relations among states. Basket III contained pledges to promote freer movement of people, ideas and information.

It is ironic that President Ford was criticized for signing the Helsinki accords by some of the same voices that are now applauding President Carter's forceful evocation of their provisions. But if the criticism had no merit so far as the substance of the CSCE document is concerned, it accurately reflected resentment toward the former administration's gingerly approach to human rights questions. Mr. Ford even refused to invite Alexander Solzhenitsyn to the White House for fear the Kremlin would block progress on arms control and other manifestations of detente. This was part of the Henry Kissinger "linkage" theory that Mr. Carter has abruptly discarded. With increasing adamancy, the new President is holding the Russians to their Helsinki pledges even as the Kremlin fulminates ever more bitterly against American "interference" in "internal" Soviet affairs.

Mr. Carter's tactics raise profound questions about the conduct of foreign affairs. The Kissinger school holds that the Communists are so nervous about discontent within their sphere that they may react by acting provocatively toward the West and reversing what progress has been made under the Helsinki provisions. The Carter school seems to operate on the theory that the Kremlin never gives more than it has to give on matters as diverse as arms control and Angola, and the West therefore should not be deterred from espousing the cause of freedom.

With Mr. Carter speaking out and Soviet-bloc dissidents becoming more active, the Belgrade review conference is looming as a key test of Western will and Communist brazenness. Will the Russians try to scrap the meeting if they see it developing as a propaganda embarrassment? The Kremlin promoted a European Security Conference for more than two decades; to jettison its own undertaking might be an even greater embarrassment. Will the Communists hurriedly snuff out dissent so internal conditions will have a surface placidity in the summer and fall? They are trying, but that does not dampen the exultation Mr. Carter is causing among the dissidents. Will the Kremlin respond by increasing international tensions? While this is a risk, the self-interest that led the Soviet Union to adopt a detente strategy still prevails.

As a newspaper that supported the Helsinki Final Act when it was in disrepute, we have a special interest in having its human rights provisions held up as a standard against which all nations should be judged. Mr. Carter should persevere—prudently, of course, but persevere nonetheless. "Because we are free," he said in his inaugural, "we can never be indifferent to the fate of freedom elsewhere."

REPORT ON THE GRAND JURY

Mr. METZENBAUM. Mr. President, I ask unanimous consent to have printed in the RECORD a report on the recent session of the Cuyahoga Grand Jury. The report is authored by the jury's foreman, David Skylar, a great and good friend. His term as the jury's foreman was a most distinguished one. He performed great service to our community.

Mr. Skylar calls his grand jury service "one of the most illuminating experiences of my life." I believe his incisive views on crime and its impact on our society are important, enlightening, and applicable to most major American cities.

It is one of Mr. Skylar's conclusions that—

If we can control guns and drugs, our society may have a chance to survive.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT ON THE GRAND JURY, SEPTEMBER TO DECEMBER 1976 BY DAVID SKYLAR, FOREMAN

The Grand Jury has been the bulwark of the innocent against hasty, malicious and oppressive prosecutions. It serves the invaluable function of standing between the accuser and the accused.

There have been many critics of the Grand Jury, many cries to do away with it entirely. This in my opinion would be a tragic mistake.

Citizen participation in the criminal justice system should not be tampered with or diminished.

To take part in the transformation of ordinary people from all walks of life, from all ethnic backgrounds, from different economic levels, into a tightly knit, disciplined, knowledgeable group sitting in judgment of their men is an experience of what our democratic system is all about.

Critics have suggested that the Grand Jury is untrained, naive, doesn't understand the law and is a tool of the prosecutor. At the start of the term, to some degree this is true. But these deficiencies are soon overcome. After the first few sessions, these weaknesses give way to a degree of sophistication which when blended with ordinary everyday concern, dispenses a unique brand of citizen justice—the very kind called for to represent the innocent, which is the responsibility of the Grand Jury.

To improve the Grand Jury performance and make it more effective quickly, a full day of training and briefing should be initiated. This would remove some of the hesitancy of the jurors and prosecutors. The Grand Jury foreman should be given previous foreman reports to review. These would prepare him for his job and stimulate him to take quick control of the jury.

In the final analysis—the performance of the Grand Jury is a reflection of the enthusiasm, interest and dedication of the foreman. He or she alone can make the difference between a hard working, concerned jury and one which takes a casual, cavalier attitude toward its assignment.

THE GRAND JURY AS AN INVESTIGATIVE FORCE

In addition to the traditional role of the Grand Jury, it serves another important function in American Jurisprudence.

The Grand Jury serves as an investigative body to determine whether there is probable cause to believe a crime has been committed. This investigative role is necessary for fair and effective law enforcement.

To fulfill its investigative role, the Grand Jury has been accorded broad powers of investigation and inquisition. No Judge presides to monitor the proceedings. It deliberates in secret and may determine alone the course of its inquiry. The Grand Jury may compel the production of evidence or the testimony of witnesses as it considers appropriate, and its operation generally is unrestrained by the technical and evidentiary rules governing the conduct of criminal trials.

The weakness of the Grand Jury's investigating role lies in its so-called "citizen" status. It is a non-professional group, and for the most part, only when an obvious wrong-doing is tossed in their laps, does the Grand Jury react and initiate an investigation. Thus it seems that this important role the Grand Jury can play is often unused.

It has been proven time and time again that Grand Jury investigations can be meaningful and productive.

It would be inappropriate for me to comment on the Albert Porter matter since it will soon be in court. But it is public knowledge that the so-called "flower fund" has been around for a long time. It took the Grand Jury's investigation to bring this matter to the courts.

Grand Juries can and should do more of this type of investigation. However, they are inhibited by both resources and manpower.

If the Grand Jury had its own investigative staff, as Judge Saul Stillman suggested recently, this role could be used much more for the public's benefit.

With an investigative staff of three men, assigned to the Prosecutor's office but reporting to the Grand Jury Foreman as well as the Prosecutor, Grand Juries could become an active watchdog in the public sector.

The funding for such a staff would normally come from the county. But because of the uniqueness of this idea, it is conceivable that Federal funding might very well be available from the Law Enforcement Assistance Administration. The County should consider making such a proposal and take necessary steps to file for funding through L.E.A.A.

DRUGS AND THE "NEW" DRUG LAW

During our term of the Grand Jury about 15 percent of the cases we heard were about drugs, drug addicts, drug purchases, etc. Another 25 percent of the cases we heard were drug related, i.e. the crime was committed to get money for drugs; addicts were spaced out and shot or killed people; cars were stolen, stripped for parts and so forth through the entire sad list of crimes.

Law enforcement agencies estimate that there are about 10,000 "hard" drug addicts in Cuyahoga County. Each of these "hooked" people needs $100 a day to support his habit. That's $1,000,000 a day, each and every day of the week, month, the year.

To make a buy of heroin on the street, the addict needs cash. If he doesn't have the cash, he steals for it, she sells her body for it. About $300 worth of merchandise, a TV set, CB radios, jewels, etc. gets an addict-thief the $100 cash he needs. That's the exchange rate on the streets—3 to 1.

That means to support the 10,000 drug addicts in Cuyahoga County it takes $3,000,000 a day of crime. That's over a billion dollars a year of drug related crime in this county alone.

That's the problem. Is there a solution? It would be audacious to think there is a simple answer after four months of Grand Jury service. But there are a few things we can do.

CHANGE THE "NEW" OHIO DRUG LAW

There's street talk that the best thing that ever happened to drug pushers in Ohio was our new drug law. Either through naivete or stupidity, some parts of the law play into the hands of the drug sellers. One narcotics lawman said that ". . . if the drug mob had lobbied for a better break under the law, they couldn't have been treated better than they are under the new law . . ."

There is general agreement among law enforcement professionals that Ohio's new drug law is a bad law. The law, Substitute House Bill 300 places much greater burdens upon the Police officer, the Chemist, the Prosecutor, the Judge and the rehabilitation officer, than the previous law.

The Police officer finds great difficulty in making a major drug buy since the pushers, well aware of the "bulk amount" concept of the new drug law, limit the quantity of each sale and thereby use the law to their advantage, the penalty being much less if the amount sold is small.

The prosecution chemist or analyst must provide broad discovery under the provisions of the new law, allowing the presence of defense analysts in their laboratories during identification, analysis and weighing of the substance. This presence could interfere with preserving the chain of evidence in the subsequent criminal action.

The prosecutor has great difficulty presenting the case because of the complex provisions of the new law. He must treat every case in the light of whether the illegal act was possession, trafficking, or corrupting. He must then determine what schedule the substance belongs in, whether there are prior drug offenses on the defendant's record, and finally apply the concept of "bulk amount." These bulk amounts are set arbitrarily and rather ambiguously in the form of the metric weight or set number of individual doses for each drug or class of drug. The law further provides that a gift of 20 grams or less of Marijuana is not a sale and statutorily sets out defenses to possessing large amounts, if adulterated for the possessor's own use.

From the standpoint of the courts, the Judge must now provide a hearing for a defendant to determine if he is a drug dependent or POSSIBLE drug dependent person. Under the provisions of the new law defendants charged with robbery, burglary, theft and other non-drug abuse crimes can actually receive conditional probation or treatment in lieu of conviction if they can satisfy the court that they are in *danger of becoming* a drug dependent person. This opens a Pandora's Box to the defense attorney since there are few people properly trained to make this evaluation and even fewer qualified and certified treatment programs.

These absurd post conviction remedies have also left the rehabilitation (probation and parole) offices seeking interpretations and generally increasing their work burden without giving them clear direction.

It is obvious that the new drug law places an added burden on all areas of enforcement, prosecution and rehabilitation.

The fact is, certain sections allowed for modifications of penalties and actually reduced sentences for over 400 hard drug pushers, in Cuyahoga County alone, six months before the provisions of the new law took effect.

All laws are strictly construed in favor of the defendant, and that is as it should be. However, when the Legislature sets out to decriminalize Marijuana and in fact revises the law completely it opens a fertile field of ambiguities and new interpretations which ultimately shield the "pusher" who uses these loopholes for his own protection.

Its proponents claim the new drug law is more flexible, indeed it is for the defense attorneys and drug dealers.

It is the considered opinion of the Cuyahoga County Prosecutor's Office and other law enforcement agencies that the old law which had been fully adjudicated and was straightforward and easily understood was far more effective in accomplishing what must be the ultimate purpose of all drug laws, namely deterring drug abuse and punishing perpetration. It could have been amended to decriminalize Marijuana and to encompass certain drugs with a high potential for abuse without incorporating the compliance scheduling of the Controlled Substances Act and the bulk amount concept.

What we have now is a weak, confusing and almost non-enforceable drug law.

I call upon the lawmakers of this state to immediately launch the necessary procedures to change, amend or replace the "new" drug law. Ohio's Attorney General, whose staff drafted and supported the new drug bill, should again take the leadership position in this effort. They should admit the weaknesses of House Bill 300 and move to change them.

There are many law enforcement men and women in Ohio who could lend assistance, testimony and expertise if called upon.

Now is the time to start again. Our drug law stinks. Let's change it.

A PUBLIC AWARENESS CAMPAIGN ABOUT DRUGS

Most, is not all people, in Cuyahoga County feel that . . . "It can't happen to me . . . Drugs won't touch my family . . ."

The middle class thinks drugs are a ghetto problem, the suburbanites think it's a city problem.

In some way, in some fashion—the drug problem touches all of us. The more people who become involved with the drug problem, the more people who become aware of its magnitude—the more people will learn to fear drugs.

An effort should be made in the county to enlist the help and cooperation of various groups in the communications industry to launch a massive drug awareness campaign.

The Cleveland Advertising Club could very well spearhead such an effort. Advertising agencies could be recruited to prepare TV commercials, radio materials, newspaper ads, etc. And the media could be called upon to run these materials as a public service.

Drugs are literally tearing this country apart at the seams. The public should be aware of the seriousness of this problem. I urge communicators in our area to accept this challenge.

GUNS AND CRIME

Cleveland is an armed camp. And all of the gun registration laws, gun sale laws, etc. haven't changed a thing.

It is not our intention to join in the game of "hot potato" now being played by politicians with gun laws . . . to have or not to have gun control, gun registration, etc.

But the Grand Jury sees the results of gun possession.

Since guns are a political issue—and nothing we say will change that—let's save the public from itself.

Let's change the law to make *carrying a concealed weapon* a major crime. Let's bypass the politics of the issue and make carrying a concealed weapon so tough, people will think twice of carrying a weapon.

Nobody carries a concealed weapon to do good with it. You don't build churches with a .38. If we can't inhibit the sale of guns and if people want to keep guns in their homes—there's nothing anybody seems to be able to do.

Let's stop the drug addict with a "Saturday night special" in his belt. He's sure not packing a piece for any other reason but to do somebody harm.

If the penalty for carrying a concealed weapon is so tough—maybe—just maybe, we'll deter this frightening trend of guns used in crimes.

I suggest the Ohio Legislature immediately look to amending this section of the Criminal Code.

I suggest that the spirit and meaning of the law on carrying a concealed weapon in Ohio be changed to reflect the following statement.

"If the offender has been previously convicted of a violation of this section or any offense of violence involving a deadly weapon or a dangerous ordinance, and if the second or subsequent offense is committed, then the offender is guilty of a felony of the second degree and it shall be incumbent upon the judge to sentence the offender forthwith to the state penitentiary or the reformatory as provided by law".

The second offender of the carrying a concealed weapon law is for the most part a hardened criminal. This man or woman should not be dealt with lightly.

THE COUNTY JAIL AND AID TO VICTIMS

The best thing one could say about the County Jail on 21st Street is that it won't be used any more.

It's mess—but it's clean and the Sheriff tries to take care of his charges.

The new jail in the Justice Center looks great. The big question is—will it work? Only time will tell.

The vast amount of money spent on the jail—some $40 million dollars—raises one interesting question.

With all the money spent on the care and rehabilitation of criminals—should some effort be spent to help victims. Here again the Law Enforcement Assistance Administration should come to play.

The State of Ohio's Victim Assistance Program which became effective last week does the bare minimum. It's time society recognized that the victim suffers more than the criminal—yet little or nothing is done for him.

Nationally over $15 billion dollars is spent on police, prisons, rehabilitation programs, etc. Less than 1 percent is spent on victims.

The county should pioneer some effort to assist victims of crimes. Application should be made to L.E.A.A. for funding such an effort.

I'm not suggesting we do less to rehabilitate criminals. I'm suggesting we do more to help victims of crimes.

On numerous occasions, the Grand Jury saw victims on crutches, in bandages, etc. who had already made appearances at lower courts, police line-ups, meetings with police investigators and others. Now they appear before the Grand Jury and then the courts again.

Little, if anything is done to help these people. Surely the County can investigate L.E.A.A. providing some sort of funding for victims. And perhaps the State should enhance its program.

FIFTY-NINTH ANNIVERSARY OF THE FOUNDING OF THE REPUBLIC OF LITHUANIA

Mr. MATHIAS. Mr. President, February 16 marked the 59th anniversary of the founding of the Republic of Lithuania. It is an occasion worthy of the notice of all Americans, of whatever origin or national background. Lithuanians who have come to these shores have greatly enriched our society: their dedication to democracy, their love of freedom, and their gallant efforts to attain national self-determination for Lithuania, are remarkable.

In commemoration of this day, I ask unanimous consent that the text of a resolution adopted by the Council of Lithuanian Societies of Maryland be printed in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION

We, Lithuanian Americans of the Council of Lithuanian Societies of Maryland Commemorating and celebrating the 726 years of the formation of the Lithuanian State when King Mindaugas unified all Lithuanian principalities into one Kingdom in 1251 and the 59th Anniversary of the Restoration of the Republic of Lithuania on February 16th 1918, unanimously adopt the following Resolution:—

Whereas in 1918 the Lithuanian people exercised their right of self-determination and restored the Independent Lithuanian State by establishing the Republic of Lithuania which was restored and protected by the great sacrifices of the Lithuanian people.

Whereas in the peace treaty of July 2, 1920 Soviet Russia officially recognized the sovereignty and independence of Lithuania and voluntarily renounced forever all sovereign rights and claims by Russia over Lithuanian soil and her people; and

Whereas from 1920 to 1940 Lithuania was fully independent and sovereign nation, a member of the League of Nations, and a signatory of numerous international treaties with the Soviet Union; and

Whereas the Soviet Union during June 15–17th, 1940 invaded with overwhelming armed forces occupied Lithuania, and forcefully annexed the Lithuanian Nation in violation of all the existing treaties and the principles of the international law.

Whereas the Soviet Union has systematically conducted within Lithuania a policy of colonization, ethnic dilution, exploitation, oppression of fundamental human rights, by intensive russification, deportations, suppression of religious freedom and political persecutions which is contrary to the Charter of the United Nations, contrary to the principles of the Helsinki Agreenment and is impediment to the promotion of world peace and cooperation.

Whereas that for many centuries Lithuania having enjoyed the blessings of freedom is presently subjugated to the most brutal Russian oppression of the aspirations of the Lithuanian people for freedom and exercise of their human rights.

Now, therefore, be it

Resolved, that we demand that the Soviet Union withdraw its military forces, administrative apparatus and the imported Russian colonists from Lithuania and to restore that the Lithuanian people would govern themselves freely;

That we demand immediate release of all Lithuanians who are imprisoned for political and religious reasons and who for years are lingering in various Soviet jails, concentration and labor camps and/or kept in psychiatric wards.

That we are expressing our gratitude to the United States Government for its firm and continuous position of non-recognition of the seizure of Lithuania and forced annexation of this freedom-loving country into the Soviet Union.

That we are deeply grateful to the 94th Congress of the United States of America for passage of a new resolution expressing a sense of the Congress relating to the status of the Baltic States and we ask the President, Senators and Congressmen of the United States for their continuous support of the cause of freedom for the Lithuanian nation and the other Baltic States.

That the copies of this Resolution be forwarded this day to the President of the United States of America, to the Secretary of State, to the United States Senators from Maryland, the Members of the United States of Representatives from Maryland, the Chargé d'Affairs of Lithuania in Washington, D.C. and the Lithuanian Consuls General in New York and Chicago, to the press and the news media.

This resolution was adopted on February 20th, 1977.

THE NATURAL GAS STUDY

Mr. METZENBAUM. Mr. President, on January 31, 1977, I sent a letter to Interior Secretary Cecil D. Andrus urging him to investigate questions about whether natural gas producers have been withholding natural gas from the marketplace. Last week, the Department, acting on my request, issued a preliminary report.

The report studied a total of five natural gas fields in the Gulf of Mexico that are being leased by the Federal Government to private companies for exploration and production. After reviewing available materials, the investigators concluded that approximately 981.5 billion cubic feet of proved natural gas supplies in those five reservoirs were not being produced. The report did not speculate about the reasons such natural gas supplies have not been placed on the market. Nor did the report indicate whether similar proved reserves were not being produced in other fields.

Secretary Andrus, upon releasing the preliminary report, has announced his intention to conduct a full-scale investigation to determine accurate data on natural gas supplies on Federal lands and waters in the Gulf of Mexico. I commend the Secretary for his efforts and encourage him in pursuing this matter, which has such a serious impact on the citizens of Ohio and the country as a whole. I look forward to results of the completed study, which will allow us to move decisively to provide adequate natural gas supplies to our citizens.

I ask unanmious consent to have printed in the RECORD the letter sent to me by Secretary Andrus dated February 17, 1977, and the Department's preliminary report.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF THE INTERIOR,
Washington, D.C., February 17, 1977.

Hon. HOWARD M. METZENBAUM,
U.S. Senate,
Washington, D.C.

DEAR SENATOR METZENBAUM: Thank you for your letter which questions whether major natural gas producers are withholding large amounts of natural gas. As you know, I share your concern that the Nation's natural gas resources be produced diligently, consistent with good conservation practices.

On February 2, 1977, I commenced a preliminary investigation limited to four fields in the Gulf in order to decide whether or not a full-scale review of gas production was warranted. That preliminary investigation is now complete and a copy of the report is attached. You will notice the report recommends a full-scale comprehensive review.

I expect to make a statement today as to how I intend to proceed. However, I thought you would appreciate having a copy of the report in advance of that statement.

You will notice that proprietary data has been deleted from the report. In my judgment, such deletions do not affect the usefulness of the document.

Sincerely,

CECIL D. ANDRUS,
Secretary.

REPORT TO THE SECRETARY ON PRELIMINARY INVESTIGATION OF PRODUCTION CAPABILITY AND PRODUCTION LEVELS AT SELECTED NATURAL GAS PRODUCING FIELDS IN THE GULF OF MEXICO, OUTER CONTINENTAL SHELF

(Prepared by J. W. Wilson & Associates, Inc., Economic Council)

(NOTE.—Tables and appendixes referred to in text not printed in CONGRESSIONAL RECORD.)

INTRODUCTION AND FINDINGS

Introduction

This report summarizes the results of a preliminary investigation of the rate of development and actual production levels at selected natural gas producing fields in the Gulf of Mexico, Outer Continental Shelf (OCS). This preliminary investigation, which began on February 2, 1977 and was completed on February 13, 1977, was undertaken at the direction of the Secretary of the Interior. The purpose of the investigation was to assess the extent to which OCS natural gas fields in the Federal domain may be producing at less than the maximum attainable rate that is consistent with sound conservation safeguards, and to determine whether a comprehensive investigation is required.

To accomplish this objective, reserve data for five producing natural gas fields and production data for four of these same fields were studied.[1] In order to evaluate gas production records, total monthly gas production during the two-year period January, 1975 through December, 1976 was reviewed and the monthly non-associated gas production (i.e., gas-well gas as distinct from gas associated with oil production) was compared against each field's respective maximum production rate (MPR) for well completions and maximum efficient rate (MER) for reservoirs. In addition, quarterly changes in the field MER and MPR for these same four fields were analyzed.

The quantity of non-producing, proved natural gas reserves at each of the five fields was also reviewed. Specifically, a recent FPC investigation revealed that, as of December 31, 1974 (in some cases, early 1975), each field contained proved gas reserves in non-producing reservoirs which were dedicated by gas sales contracts to interstate pipeline companies.[2] U.S. Geological Survey (USGS) information was utilized to determine which, if any, of these reservoirs and reserves have been placed on production subsequent to that time. Lastly, USGS data were analyzed to identify additional non-producing reservoirs and reserves which had not been listed or reported during the course of the FPC investigation.

Findings

Monthly production data between January, 1975 and December 1, 1976 were reviewed for four large producing gas fields in the Gulf of Mexico. This review resulted in the following findings:

During this period, the rate of production decline for at least three of the four fields has been significantly greater (in one case 26.3 percent per year) than the historical experience in other OCS gas fields would lead one to expect.

In the fourth field, production reached its maximum in March of 1976, fell steeply in September, October and November; then increased back to 90.8 percent of the March peak in December.

In one field where time permitted a more detailed analysis: (a) the number of producing gas completions[3] fell from a high of 65 in January of 1975 to a low of 36 in December of 1976; (b) during that same twenty-four-month period, the number of gas reservoirs on production fell from 37 to 21; (c) all ten successful gas completions at two platforms were totally removed from production, some for an extended period of time; (d) a number of wells have experienced pressure decline, mechanical problems or have "watered out"; and (e) the reserves associated with wells where mechanical or water problems have been encountered have not been lost forever and remain to be recovered if workover operations, recompletions or the drilling of new wells into the same reservoirs by the operators are undertaken.

All four fields are producing at well below their respective MPR's and MER's (in December of 1976, production as a percent of field-wide MPR's and MER's for the combined fields was less than 64 percent and 58 percent, respectively).

Production at each field could be increased to respective MER's if new wells were drilled into currently producing reservoirs.

MER's at all four fields have been reduced. At two fields this reduction has been as large as 45.5 percent and 66.5 percent, respectively.

One of the major causes of the observed decline in field MER's is that a number of reservoirs have been taken off production and in many producing reservoirs the operators have made downward revisions to the reservoir MER's which were submitted to the USGS.

New reservoirs with proved gas reserves exist in these fields, but they have not been brought onto production to offset the declines in production, in MPR's and in MER's in old reservoirs where production has been reduced or has ceased entirely.

In addition, the four fields for which production levels were examined were also reviewed to determine the quantities of non-producing, proved reserves in those fields.

Additionally, a fifth field was examined at the suggestion of USGS personnel. This review was undertaken because the USGS had not yet performed an independent in-depth reserve evaluation on two of the original four fields selected for the preliminary investigation. This analysis of non-producing reservoirs and proved reserves yielded the following findings:

As of the fourth quarter of 1976, 225 non-producing reservoirs with 981.5 billion cubic feet (BCF) of proved reserves were located at these five fields.

188 of these reservoirs with 767.3 BCF of reserves had been reported by the operators to the FPC as non-producing in late 1974.[4]

In the three fields where USGS had performed an independent reserves evaluation, an additional 37 reservoirs containing 214.2 BCF of non-producing proved reserves had not been included in the operators' reports to the FPC.[5]

Only 19 non-producing reservoirs with 48.1 BCF of proved reserves have been brought onto production at these five fields since the operators made their filings with the FPC in 1974.

Many of the non-producing reserves are classified as gas-cap gas (in association with oil reservoirs) and, in some instances, could be brought onto production through recompletions or new wells without reducing the ultimate recovery of the associated crude oil.

In most instances, where direct comparisons could be made, wide variations were found between the operators' reserves estimates and estimates made by the USGS.

In the three fields where reserves have been evaluated directly by the USGS personnel, there were a number of reservoirs for which the operators had listed proved reserves, but which could not be identified in the USGS's studies.

INDIVIDUAL FIELD ANALYSES

The preliminary investigation took place in two stages. Between February 2 and February 7, the initial work was performed in Washington. This involved an analysis of the USGS' quarterly MER and MPR listings and the monthly gas sales volumes, by lease and field, for all OCS producing gas fields.[6] In addition, the non-producing reservoir and reserves data contained in the FPC investigation was reviewed in Washington. These data permitted an identificaton of the fields to be examined during the second phase of the preliminary investigation, which took place between February 8 and February 11 at the USGS office in Metairie, Louisiana.

The following persons from Washington participated in the investigation in Metairie:

Mr. Leo Krulitz, Office of the Secretary, Department of the Interior.

Mr. George L. Donkin, Director of Petroleum Studies, J. W. Wilson & Associates, Inc.

Dr. David S. Schwartz, Economist, Senate Antitrust and Monopoly Subcommittee.

Mr. Victor H. Zabel, Head, Reserves Evaluation Section, Bureau of Natural Gas, Federal Power Commission.

Mr. Lawrence Kruysman, Petroleum Geologist, Bureau of Natural Gas, Federal Power Commission.

Paul E. Martin, Special Assistant to Chief, Branch of Marine Oil & Gas Operations, U.S. Geological Survey.

The investigation in Metairie consisted of numerous discussions with USGS officials and personnel, and an examination of the following types of USGS data and records:

Geologic and reservoir maps.

Reservoir and field reserves studies.

Lease status reports.

Individual well, reservoir and field production reports.

Well files.

Reservoir files.

Unit files.

East Cameron Block 271 Field

Eight individual leases, each of which was acquired in December of 1970, make up the East Cameron Block 271 field.

Total gas production in 1976 amounted to 117.0 BCF.

This is one of the largest gas fields in the Gulf of Mexico OCS.

Block 271 field is operated by four oil and gas companies, and ten production platforms have been installed in the field since exploratory and developmental drilling commenced in 1971. These include the following:

Pennzoil Offshore Gas Operators (2 platforms).

Tenneco Oil Company (6 platforms).

Texaco, Inc. (1 platform).

Phillips Petroleum Company (1 platform).

The natural gas produced at this field is purchased by Tennessee Gas Pipeline Company (an affiliate of Tenneco, Inc.), Columbia Gas Transmission Company, Southern Natural Gas Company and United Gas Pipe Line Corporation (formerly an affiliate of Pennzoil). Tennessee and Columbia supply major markets in the Northeastern United States, and Southern and United serve a large portion of the Southeastern consuming region.

In January of 1975, the Block 271 field produced 16,992,192 MCF of natural gas, 98.4 percent of which was gaswell gas from 65 gas completions. Since that time, production has fallen dramatically, and in December of 1976, field-wide production was only 8,037,769 MCF, 96.8 percent of which came from 36 gas completions. This represents an annualized rate of production decline of 26.3 percent.

During the three days in Metairie, USGS personnel conducted a more detailed review of the recent production history at this field. The results of that study are presented in Appendix B. As indicated therein, "the combination of losing 24 completions and a general pressure depletion of the reservoirs in this field are the reasons explaining this appreciable rate of decline."[7]

Based upon the preliminary USGS staff analysis, many of the wells which have been

Footnotes at end of article.

taken off production appear to have encountered either mechanical problems or began to produce excessive amounts of water. In only a few cases was there an indication that the reservoirs had been permanently abandoned due to a total depletion of the original recoverable reserves. USGS personnel indicated that, depending upon the economics, many of the reserves currently shut-in could be put back on production if the operators elect to recomplete in existing well bores or to drill new wells into these non-producing zones.

In several instances, individual wells were producing at relatively high daily rates and then suddenly were taken off production. According to USGS personnel, in one case, three of the seven producing wells at Tenneco Oil Company's "B" platform experienced subsurface safety valve problems which required that the wells be shut-in pending workover operations. Moreover, as shown in Table 2:

Problems with the "B" platform wells commenced as early as May of 1975.

Only one well at this platform, the B–2, was on production between February and June of 1976.

The entire platform was shut down in June of 1976.

Although several wells resumed production in the latter part of 1976, three wells still remain shut-in.

In discussions with USGS personnel, they indicated that the production equipment for the "B" platform is, in fact, located at a satellite platform. The significance of this operational procedure is that the wells experiencing problems could have been reworked without shutting down the entire platform. Thus, it would appear that either work-over operations or possibly new wells could have been drilled at a much earlier date, perhaps as early as the summer of 1975, in order to sustain production at or near the levels attained during the early months of 1975.

Of perhaps greater significance is the fact that at least two of the wells—the B–1 and the B–8D—were producing at between 6,500 and 8,300 MCF per day when production ceased, yet the B–8D well has not yet resumed production and the B–1 well is now producing at levels substantially below that which was observed in 1975.

In a similar situation, Tenneco's "F" platform, which contained three producing completions in January of 1975, produced a cumulative total of 27 BCF of gas from the Gb–I reservoir through February of 1976, and then it was completely shut down. Although the F–2 well began producing from a new reservoir in May of last year, nonetheless, the F–1, F–4 and F–5 wells remain shut-in as of the end of 1976.

An examination by USGS of the individual well files revealed that two of these wells, the F–1 and the F–4, had "watered out" and that the Gb–I reservoir had apparently been depleted when the F–5 well ceased to produce last February. While these explanations may be quite valid, in the absence of a field-wide reservoir study, which has not yet been made by the USGS, it is impossible to conclude with certainty that all of the reserves in this reservoir have been exhausted or that other non-producing reservoirs could not be perforated and produced from these very same wells. This is particularly true because the individual well files bear the notation that, when taken off production, the F–1, F–4 and F–5 wells had only been temporarily abandoned and that no apparent problems had been encountered with respect to reservoir pressure.

In addition to the fact that many gas reservoirs in this field are no longer producing, those reservoirs currently on production are producing well below their respective reservoir MER's. This can be seen from the data presented in Table 2 of Appendix A, which shows that, for example, in December of 1976, total non-associated gas production at the Block 271 field was only 49 percent of the field-wide MER.

Several USGS officials indicated to the investigating team that most natural gas reservoirs in the Gulf of Mexico are not rate sensitive—that is to say, the quantity of recoverable reserves from a gas reservoir is not a function of the rate of withdrawal (e.g., production) from that reservoir. The USGS personnel also indicated that it would be possible to produce at or near each reservoir's respective MER, but that this would require the drilling of new wells to increase productive capacity up to that higher level when substantial divergence exists between individual well MPR's and their related reservoir MER's. Thus, it follows that additional developmental activity by the operators in this field could increase production well above the levels observed in recent months.

Not only would additional drilling result in an increase in production from currently producing reservoirs, but it would also result in virtually an immediate increase in production from a number of non-producing reservoirs in this field. This would follow because, as of the last quarter of 1976, there were 43 non-producing reservoirs in the Block 271 field which, according to the operators' estimates, contained 90.4 BCF of proved reserves dedicated to interstate pipeline companies. Moreover, inasmuch as an independent reserves evaluation by the USGS has not yet been performed on this field,[8] based upon the results of this preliminary investigation at the three fields where in-depth reserves evaluations have been made, it is highly probable that even greater quantities of non-producing reserves could be brought into production.

Tiger Shoal Field

The Tiger Shoal field is a large natural gas field on a block of leases, which were originally acquired by Texaco, Inc. from the State of Louisiana. Texaco is the only producer in this field and gas sales are made to Natural Gas Pipeline Company of America, which supplies a large portion of the Midwest, and to Texas Gas Transmission Corporation, which serves several South Central states.

Of the fields studied, the Tiger Shoal field is somewhat unique, due to the fact that it is in very shallow water and production takes place from individual wells, as opposed to multi-well production platforms which are typically utilized in deeper waters. Thus, since drilling operations at this field can be accomplished from individual well caissons, additional developmental drilling could take place with no loss of production from already existing wells. This is very significant because several non-producing reservoirs with large quantities of proved reserves are currently not scheduled to be put on production by Texaco until 1981 and 1985.

To illustrate, as shown in Table 6 of Appendix A, five reservoirs containing 150.6 BCF are currently planned to remain in a non-producing status until 1981 and a sixth reservoir representing 27.4 BCF is not scheduled to be produced until 1985. Moreover, since the USGS has made a detailed reserves study on this field, the investigating team identified six additional non-producing reservoirs which were not reported by Texaco in its response in the FPC investigation. While these reservoirs may have been discovered subsequent to Texaco's report to the FPC or, alternatively, at that time had not yet been dedicated by gas sales agreements, this situation does indicate that where the USGS has performed an independent reserves analysis, additional quantities of non-producing reserves were identified.

In addition to containing large quantities of non-producing reserves, the Tiger Shoal field has also produced at levels often significantly below its MER and, perhaps more interestingly, the MER for individual reservoirs in this field appears to fluctuate with the number of well completions in each reservoir. For example, Table 3 reveals that Texaco apparently establishes reservoir MER's on the basis of the summation of the individual well MPR's in each reservoir. Thus, as is shown therein, when new wells were added in the YI and YIIIA reservoirs, both the MPR's and the MER's increased proportionately.

These examples clearly illustrate the validity of the views expressed by the USGS staff concerning the apparent functional relationship between drilling activity and MER. Specifically, it is obvious that the productive capacity and, hence, the reservoir MER is directly related to the number of well completions in many OCS producing reservoirs.[9]

There are significant policy implications illustrated in this field that have even broader application relative to other fields in the offshore Federal Domain. Public policy must be formulated to establish the functional relationship for additional drilling to obtain optimal MER and the related MPR to sustain a production rate commensurate with maximizing deliverability and efficient well depletion.[10]

South Marsh Island Block 48 Field

Five leases make up the South Marsh Island Block 48 field. Operators at Block 48 field include Union Oil Company of California, Shell Oil Company, Gulf Oil Corporation and Amoco Production Company. Most of the gas produced at this field is purchased by Transcontinental Gas Pipe Line Corporation, which supplies gas along the Eastern Seaboard, including much of North Carolina, Virginia, Maryland, New Jersey and New York. In addition, some of the gas reserves are also dedicated to the Michigan-Wisconsin Pipe Line Company, which accounts for more than 50 percent of the interstate gas supply in Michigan. Eight production platforms have been installed by the five operators in the Block 48 field.

During the period January, 1975 through December, 1976, gas production at this field has fallen at a rate of 16.4 percent per year. This has occurred despite the fact that the number of well completions has increased from 41 to 48. Similarly, between July of 1975 and October of 1976, the total field-wide MER has been reduced by approximately 31 percent. The reduction in the MER for this field appears to be largely the result of downward revisions in individual reservoir MER's, as opposed to a reduction in the number of reservoirs currently producing. To illustrate, the following examples were noted:

MER at the B13RD reservoir fell from 30,000 MCF/Day to 11,500 MCF/Day.

MER at the NRA reservoir fell from 30,000 MCF/Day to 18,000 MCF/Day.

MER at the BU22K reservoir fell from 26,750 MCF/Day to 14,000 MCF/Day.

MER at the BU22L reservoir fell from 16,250 MCF/Day to 6,000 MCF/Day.

Obviously, to the extent that these downward revisions in MER's do not reflect the physical capacity of the reservoirs to produce, production at the Block 48 field could be enhanced within the relatively near future if the operators were to drill new wells into the large number of currently producing reservoirs. Production capacity in this field could be increased by an even greater amount were the large number of non-producing reservoirs to be brought on stream.

During the course of the FPC investigation, the operators reported a total of 64

Footnotes at end of article.

reservoirs and 294.1 Bcf of proved, dedicated reserves which are not yet producing. Moreover, many of these reservoirs, according to the operators' responses, were scheduled to be producing in 1976, however, the preliminary investigation revealed that a number of reservoirs that were to be producing at this time remain in a shut-in status. These include the following:

B–15 D; 1.2 Bcf.
10,100 R; 0.2 Bcf.
G4 RA; 4.1 Bcf.
Io RA; 13.0 Bcf.
K2 RA; 0.4 Bcf.
B13 8; 7.0 Bcf.
BUL 4; 2.5 Bcf.
BUL 5x —2; 0.5 Bcf.
BUL 14; 4.1 Bcf.
BUL 15; 12.7 Bcf.
10,100 T–1; 0.4 Bcf.

Grand Isle Block 43 Field

The Grand Isle Block 43 field consists of eleven leases, 10 of which are operated by Continental Oil Company and one lease is operated by Exxon.[11] Conoco has installed 18 platforms on its blocks and Exxon produces its lease from a single platform.

Reserves are purchased by Tennessee Gas Pipe Line Company and Columbia Gas Transmission Company, which supplies a large portion of the gas consumed in Ohio, West Virginia and Western Pennsylvania.

Between the beginning of 1975 and the end of last year, gas production in this field has declined at a rate of 14.7 percent per year. The number of well completions has also fallen from 96 to 76 in this 24 month period.

The apparent reason for the drop-off in production at the Block 43 field is that as existing well capacities have declined, new reservoirs with substantial quantities of gas have not been brought on production.

Again, the operators had indicated to the FPC that many of these reservoirs would be on production in 1976; nonetheless, they remain in a non-producing status. In addition, this field contains a number of shut-up gas-cap reservoirs, which could be produced in the near-term with no loss in ultimate oil recovery.

The investigating team also noted that in several reservoirs, the MER was increased as a result of the operator completing new wells in existing reservoirs. Again, this supports the conclusion that reservoir MER's are as much a function of developmental activity as they are of the physical characteristics of the individual producing reservoirs.

Vermilion Block 250 Field

While the investigating team was in Metairie, the USGS staff suggested that since they had not yet performed an independent reserves evaluation for two of the four fields to be analyzed, that an additional field be selected from the larger sample of fields where such reserves studies had been made. This was done and the Vermilion Block 250 was selected.

The Vermilion Block 250 field is operated by Tenneco Oil Company and all of the gas there is sold to Tenneco's affiliate, Tennessee Gas Pipeline Company.

Wide variations exist between Tenneco's reserves estimates and those made by USGS for the non-producing reservoirs in this field and in several instances, the USGS personnel were unable to identify reservoirs and reserves which Tenneco reported to the FPC.

Based upon the preliminary investigation, the investigating team recommends that the Secretary undertake a detailed and comprehensive investigation of the major fields in the Gulf of Mexico. This is essential to determine our present supply posture to meet immediate requirements for natural gas, and the availability of gas supply for the next winter's heating season. An in-depth study is required to determine the potential for accelerating deliverability from currently producing reservoirs, dedicated but non-producing reservoirs, and other shut-in reserves.

It is essential to realize that in the short time available for the preliminary investigation, the areas analyzed related to the decline in MER's, MPR's, production, dedicated non-producing reserves, and large discrepancies of operator estimates and USGS estimates of proved reserves. The areas not included in the initial investigation concern the potential for significant new supplies from gas-cap gas, producible shut-in leases, the installation of compression, potential for lowering pipeline pressure to accommodate falling well-head pressure, and varying choke size to bring actual production in line with MPR.

A broad investigation is required to interrelate MER's, MPR's and reserves to optimal production levels in the offishore gas fields. Of particular concern is the behind-the pipe reserves of gas committed to contract but not produced. For example, in the Tiger Shoal field, the operator scheduled production for the 1980–1985 period despite the fact that this gas is located in shallow water and produced from single well caissons without the requirement for a platform.

In another instance, the operator indicated that production would not commence in the 1975–1976 period, but the wells have not come on stream. For example, in the South Marsh Island Block 48 Field, there are 64 reservoirs and 294.1 BCF of proved reserves. A number of these reservoirs were originally scheduled to commence production in 1975–76 but still remain shut-in. In another instance, the producer indicated that it was uneconomic to continue production and that a specific reservoir would be shut-in, but production continued. Tenneco reported to the FPC that in the East Cameron Block 271 Field, a reservoir (Dh(3b)) containing 0.3 BCF was to be dropped. Nonetheless, it has since gone on production and had produced 2.2 BCF by the last quarter of 1976.[8] Finally, there are reporting discrepancies in the reserve estimates provided to the Federal Power Commission in comparison with those supplied to USGS.

The following members of the investigating team concur in the conclusions and recommendations contained in this report.

GEORGE L. DONKIN,
VICTOR H. ZABEL,
DAVID S. SCHWARTZ,
LAWRENCE KRUYSMAN.

The following member of the investigating team concurs in the recommendations of the group, but has a number of reservations in the text of the report.

PAUL E. MARTIN.

FOOTNOTES

[1] Four fields were selected initially and, as explained below, a fifth field was subsequently added to the reserve study at the suggestion of U.S.G.S. personnel.

[2] FPC Docket No. R175–112, Investigation of Status of Non-Producing Dedicated Reserves.

[3] Inasmuch as two or more vertically stacked producible zones are often perforated (completed) and produced through a single well bore, for the purposes of this report, it is more appropriate to focus upon "well completions", as opposed to the number of producing wells.

[4] This reflects the operators' own estimates of the reserves in non-producing reservoirs.

[5] These reservoirs and reserves may not have been dedicated or proved as of the time the operators filed their reports with the FPC.

[6] While in Metairie, actual production figures were found to vary significantly from the sales volumes used in Washington. USGS personnel explained that this is because the sales volumes data reflect accounting adjustments not related to actual production.

[7] Based upon individual well production data, USGS has estimated that about 47.8 percent of the production decline at this field is attributable to the loss of 24 completions which were producing in January of 1975.

USGS personnel estimated that 6–8 weeks would be required to map all of the reservoirs and estimate the reserves for this field.

[9] The investigating team noted numerous examples in many fields where the operators submited MER's which changed in unison with changes in MPR's for well completions.

[10] In discussions with USGS personnel, they indicated that reservoirs that are not rate-sensitive have MER's approaching infinity and that the optimal number of producing completions in a given reservoir is predicated upon "economics"—e.g., drilling costs, current and anticipated prices, time value of money considerations, etc.

[11] Both oil and gas are produced in large quantities in this field.

IN OPPOSITION TO PAY RAISE

Mr. THURMOND. Mr. President, in support of my statement several weeks ago, there has appeared in the February 2, 1977, issue of the Augusta Chronicle newspaper, Augusta, Ga., an editorial entitled "Oppose Pay Raise!"

The editors of the Chronicle are to be commended for calling to the attention of their readers the proposed pay raise for Members of Congress.

I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OPPOSE PAY RAISE!

As a letter to the editor on this page indicates, there is mounting opposition to the under-the-table pay raises stipulated by President Ford in his last few days in office.

With little prior publicity, the former President proposed a raise that would bring the base pay of our Washington lawmakers to $55,700. Under the so-called Quadrennial Pay Law, the Commission on Executive, Legislative and Judicial Salaries recommended the hike which conservative estimates indicate will initially cost the taxpayers $120 million.

This pay law allows the commission to review, every four years, the pay of members of the federal judiciary, the Congress and various high officials in the executive branch. The commission's recommendations are then made to the President in the last year of his term, and the President either accepts or rejects the "advice."

Also under this pay law, the President's acceptance of the commission's proposal becomes law in 30 days if it is not vetoed by the House or Senate. So, the deadline for the current raise implementation is February 16.

Concerned Americans have until this date to write their senators and representatives urging them to support legislation to block these devious raises. The blocking measures are: H.R. 115, introduced by Rep. Charles Grassley (R-Iowa) and S. Res. 39 co-sponsored by Senators John Danforth (R.-Mo.) and James Allen (D.-Ala.)

We believe Representative Grassley speaks for large numbers of taxpayers when he complains that "it is especially abhorrent that this high increase, larger than the average American family earns in one year, should go into effect without Congress ever taking a public stand on the issue."

Any member of the Congress who believes he or she deserves a raise ought to be willing to vote for it. It is our hope that Georgia Reps. Douglas Barnard and Ronald (Bo) Ginn, as well as South Carolina Third Dis-

trict Rep. Butler Derrick, and the four senators from Georgia and South Carolina not only are willing to vote on the issue—it is our hope they will actively oppose the raise.

One more note. Congressman Grassley has also introduced legislation (H.R. 1488) which would abolish the Commission on Executive, Legislative and Judicial Salaries. We wholeheartedly concur with such an approach, and we hope concerned voters will make their views known accordingly to their Washington representatives.

CARTER BUDGET REVISIONS EMPHASIZE ENERGY CONSERVATION

Mr. KENNEDY. Mr. President, on the basis of the budget revisions for fiscal year 1978 submitted today, it is clear that President Carter is making a good start in fulfilling his pledge to make energy conservation the keystone of this Nation's energy policy. I commend the President on this effort.

I have said before that the essential first step in giving energy conservation its proper emphasis is the adequate funding of those energy conservation programs that have already been passed by Congress. Many of these programs were passed over the opposition of the Office of Management and Budget which was reflecting the views of President Ford, or at least the views of certain of his energy advisers. Even though Congress passed these programs and President Ford eventually signed them into law, OMB continued its opposition by providing little, if any, funding for their implementation.

Such programs as the $2 billion program of Federal obligation guarantees for cost-effective energy conservation and renewable resource measures, the development of an energy extension service, supplemental grants to States for energy conservation information programs, and grants to States to establish consumer offices which would deal with utility regulatory commissions were ignored in President Ford's 1978 budget proposals.

President Carter has now recommended that budget authority for energy conservation activities be increased by $22 million in 1977 and $244 million in 1978 over the amounts recommended in January. A failure to have recommended such revisions would have raised serious questions about the depth of the Carter administration's commitment to a renewed emphasis on energy conservation.

I am concerned, however, that these and other energy conservation programs get off the mark as rapidly as possible. I doubt whether we can afford to postpone their implementation until the beginning of the next fiscal year in October. Congress should give the most serious consideration to providing some funding in the supplemental appropriations bill of 1977.

In addition, I am concerned about the implementation of the national energy conservation demonstration program for existing dwelling units to be implemented by the Department of Housing and Urban Development. This program was passed by Congress because we must have additional knowledge about the best way to provide homeowners with economic incentives to insulate their homes and conduct a number of other energy conservation measures. The longer we wait in collecting this information, the more difficult it will be to reach sensible decisions about the most effective Federal incentives that can be offered.

Finally, I commend President Carter for increasing the amounts available for the strategic petroleum reserve. The revised budget requests an increase in 1978 of $1.3 billion in budget authority and $858 in outlays. This larger amount will permit the Federal Energy Administration to store 250 million barrels of oil by December 1978.

It is clear that a strategic petroleum reserve is vital in the U.S. efforts to develop a more effective international energy program. However, two points must be made.

First, it is essential that the FEA provide for regional storage of crude oil and products, as specifically authorized by the Energy Policy and Conservation Act. This point has been developed in recent hearings before the Senate Interior Committee, now the Committee on Energy and Natural Resources. This is a matter of great importance to the New England States and it will be pursued.

Second, President Carter should give serious consideration to using his authority, as provided in the Energy Policy and Conservation Act, to have the U.S. Government purchase all or a portion of the oil for the strategic reserve through sealed bids or direct country-to-country negotiations. We can no longer afford to rely exclusively on private multinational oil companies as this country's agents in the international oil market. The opportunity to build a body of knowledge about the U.S. Government's direct role in international energy dealings now exists in the need to purchase oil for the strategic reserve. We should take full advantage of this opportunity, particularly since the President has all the authority he needs to move ahead.

On balance, however, the budget revisions submitted today are pointed in the right direction in terms of building a more rational and effective national energy program. Again, I commend President Carter for this good beginning.

FOREIGN SUGAR IMPORTS

Mr. TOWER. Mr. President, I am pleased to join Senator CURTIS today in sponsoring S. 674, legislation to renew the provisions of the Sugar Act, which is so greatly needed by the U.S. sugar industry.

As many of my colleagues know, the world sugar market is a residual market, where nations dump the sugar they do not need for domestic consumption, and for which they have no ready export market.

The United States is the world's largest sugar importer, and to a great extent, the American consumer is a victim of the wildly fluctuating sugar prices occurring in the world market.

Likewise, American sugar producers have no defense against the predatory practices of foreign nations which attempt to unload their unneeded product without regard to cost or return, but who would rather dump it onto the world market in hope of getting any price when sugar is in excess supply, and who would attempt to drive the price up when the sugar supply situation is tight.

We have gone from one extreme to another in the last 3 years, watching sugar prices go from 8 to 60 cents a pound. No one, from producer to consumer, benefits from such price gyrations which bear no relationship to true costs of production.

Mr. President, the Rio Grande Valley sugar growers recently presented a statement on the present sugar import situation to the international trade commission, detailing the impact on growers in Texas who are in the precarious position of growing a product for 15 cents a pound, and having to sell it for about 8–10 cents a pound.

We can correct the abuse of such a system, and thereby insure fair prices to consumers and fair returns to American sugar producers through the enactment of the legislation Senator CURTIS has introduced. I strongly support this measure and hope the Senate will act swiftly on its consideration.

Mr. President, I ask unanimous consent that the statement of Mr. Art Beckwith, president of the Rio Grande Valley sugar growers, be in the RECORD, together with several newspaper accounts of the impact of sugar imports on Texas' sugar industry.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FOREIGN SUGAR IMPORTS AND THE IMMINENT DESTRUCTION OF THE SOUTH TEXAS SUGAR INDUSTRY

The South Texas Sugar Industry is subject to imminent destruction as a result of foreign imports which have lowered sugar prices far below costs of production. In this South Texas area, with the highest rate of employment in the Nation, the economic adversity of the impact is difficult to comprehend, ranking, at least, as a calamity of major proportion.

In addition to the loss of the mill and related facilities with a book value of $37,601,156, sugarcane growers stand to lose some $40,000,000 in grinding rights equities and production facilities.

Eliminated as a major input into the area economy will be an annual payroll in excess of $7,000,000. Loss of employment will be sustained by some 900 workers, supporting in toto, some 4,500 family members. Greatly increased will be area welfare and food stamp costs.

Lost will be direct tax revenues to state and federal governments estimated to annually exceed $1,500,000; particularly deprived will be local school districts, hard pressed, at best, to provide adequate educational facilities for the ever increasing numbers of Mexican American children.

CoSTEP, an economic development agency, assigned to a 40 County South Texas area, has computed the economic impact value of the industry at $200,000,000 annually. All segments of the economy must bear the enormous loss.

The disastrous impact of the cheaply available imports upon the South Texas industry early became a stark reality to the Rio Grande Valley Sugar Growers, Inc.

Imperial Sugar Company of Sugar Land, Texas was initially closely allied with the South Texas industry; the State's only cane

sugar refiner, the competitive advantages of nearby production and storage facilities were obvious. The competitive, economic pressures of cheap foreign supplies forced this good ally to revise the economic base upon which sugar was purchased. Prior to the negotiations with the South Texas producers for purchase of the 1976–1977 production, the news media throughout the State carried stories relative to a five year supply contract with the Philippine Exchange Company which had been developed by Imperial. Photo copies of such news articles are shown in Attachments 1, 2, and 3. Negotiations were, of necessity therefore, confined largely to consideration of tollage type agreements based upon the residual return, after deduction of all costs, which included those of raw stock and processing, plus margin of profit.

A comprehensive economic analyses of the South Texas Industry reveals the production costs of raw sugar to be 14.69 cents per pound. Production costs for the seasons, 1973–74, 1974–75 and 1975–76, and as projected for 1976–77, are graphically shown in Attachment 4, identifying therein, production, harvesting, milling and debt service costs. Grower costs, developed in cooperation with the Agricultural Extension Service of Texas A&M University, are budgeted in detailed input in Attachment 5.

These basic costs have only to be related to the current FOB price of 10.17 cents per pound to portray the impending disaster of the Industry.

The recent Executive Action to increase the duty on imported sugar had no significant effect upon sugar prices; with refiner supplies protected under long term contracts, there was no basis for favorable market reaction. Consumer reaction to the "so labeled trippling" of the tariff could only be adverse to domestic producers.

Sugar stocks continue to build throughout the World in anticipation of a market outlet in the United States, the World's major importer. F. O. Licht's First Estimate of 1976–77 World Sugar Production stands at 87,-961,000 metric tons to afford an estimate of yearend residual stocks approximating 27,-000,000 million tons.

It was in good faith that a National Sugar Act would be continued in the regulation of the domestic industry, that some 115 grower members committed more than $60,000,000 in funds and production facilities to establish the South Texas Sugar Industry.

Without limitation of imports, often government subsidized and produced with cheap labor, the entire domestic industry is subject to disastrous destruction. Without a viable domestic industry, foreign domination and control of sugar, an essential source of body energy, will prevail. Invited will be the formation of cartels and subsequent exorbitant consumer prices.

The limitation of imports provides and apparent step toward resolution of the problem.

[From the Houston, Texas Post, Aug. 14, 1976]

IMPERIAL SUGAR SIGNS 5-YEAR SUPPLY CONTRACT—FILIPINOS TO SHIP 250,000 TONS ANNUALLY

(By Adine Lundgren)

Imperial Sugar Co., Sugar Land, announced Friday completion of a five-year contract with Philippine Exchange Co., Inc., the exporting agency for Philippine National Bank.

The contract will supply about 40 per cent of Imperial's total annual requirements for raw sugar but that amount could be expanded, Imperial executive vice president Robert Hanna told The Post.

Further, the company is adding to its process with a carbon house at a cost of more than $3 million. Completion is slated for April 1, Hanna said. The facility decolorizes sugar.

The Philippine contract provides Imperial with 250,000 tons of raw sugar a year with a initial shipment of 25,000 tons to arrive in September.

These shipments will be received at Imperial's post terminal in Galveston and moved to the Sugar Land refinery by rail.

The contract's price for raw sugar is based on a formula related to the net proceeds from sales of refined sugar. This means buyer and seller share the risk and responsibility, Hanna said.

Imperial's other suppliers of raw sugar include the Rio Grande Valley Sugar Growers Association, now growing its fourth crop of cane. The group provides 20–25 per cent of the sugar refinery's annual needs.

"As for the rest of our sugar, in the last year we have drawn our supplies from Louisiana, the Hawaiian Islands and 12 to 14 foreign countries, most of which are in the Caribbean," Hanna said.

Artificial sweeteners "haven't cut into the demand for sugar. And, hopefully, there'll always be a preference for sugar."

The refinery, which has a daily production in excess of 3.5 million pounds of refined sugar, dates back to 1843 and is the state's oldest business.

[From the Greenville, Tex., Herald-Banner, Aug. 19, 1976]

TEXAS COMPANY NEGOTIATES FOR FOREIGN SUGAR

The Imperial Sugar Company of Sugar Land, Texas, Texas' only pure cane sugar refiner, has recently negotiated a five-year contract with Philippine Exchange Company, Inc., the exporting agency for Philippine National Bank. The contract provides for Imperial to receive 200,000 tons of Philippine raw sugar each year commencing with an initial shipment of 25,000 tons to arrive in September. The balance of the contracted quantity will be arriving in relatively equal monthly amounts throughout the balance of the annual term. These shipments will be received at Imperial's Port Terminal in Galveston and trans-shipped to the Sugar Land refinery by rail.

This agreement will provide Imperial Sugar Company a continuing source of supply in an amount equal to approximately 50 per cent of Imperial's total annual requirement. The unique feature of that contract is that the price for the raw sugar is based upon a formula related to the net proceeds from sales of refined sugar. At today's raw sugar market, the total value of shipments over the life of the contract will approximate $240,000,000.

Imperial is Texas' oldest business having operated on the same site since 1843. Its daily production of 3,500,000 pounds of refined sugar is distributed to customers throughout the Southwest.

[From the Valley Morning Star, Harlingen, Tex., Aug. 15, 1976]

SUGAR FIRM MAKES SUPPLY PACT

The Imperial Sugar Company of Sugar Land, Texas' only pure cane sugar refiner, has recently negotiated a five-year contract with Philippine Exchange Company, Inc., the exporting agency for Philippine National Bank.

The contract provides for Imperial to receive 200,000 tons of Philippine raw sugar each year commencing with an initial shipment of 25,000 tons to arrive in September. The balance of the contracted quantity will be arriving in relatively equal monthy amounts throughout the balance of the annual term.

These shipments will be received at Imperial's port terminal in Galveston and trans shipped to the Sugar Land refinery by rail.

This agreement will provide Imperial Sugar Company a continuing source of supply in an amount equal to approximately 50 per cent of Imperial's total annual requirement.

The unique feature of the contract is that the price for the raw sugar is based upon a formula related to the net proceeds from sales of refined sugar.

At today's raw sugar market, the total value of shipments over the life of the contract will approximate $240,000,000.

Imperial is Texas' oldest business having operated on the same site since 1843. Its daily production of 3,500,000 pounds of refined sugar is distributed to customers throughout the Southwest.

ESTIMATED GROWER COSTS ON SUGARCANE

Variable Costs	
Fertilizer 18–46–0 200 lbs./AC at $195/ton	$19.50
Fertilizer 32–0–0 400 lbs./AC at $140/ton	28.00
Iron (Material & Application)	4.50
Herbicide	17.65
Insect scouting	4.00
Insecticide	22.00
Insecticide Applications—5 apps. at $2.00	10.00
Irrigation—water 8 apps. at $4.00	32.00
Irrigation—labor 8 hrs. at $2.50	18.00
Pickup Truck	7.50
Tractor & Machinery	8.00
Tractor & labor 2.87 at 2.75	7.89
Shop & miscellaneous	10.00
Interest on operating capital at 9%	10.16
Total variable costs	199.20
Fixed Costs	
Tractor & Machinery	5.25
Irrigation equipment	8.80
Land—$1200/acre at 8%	96.00
Taxes	17.00
Marketing Agreement—$500/acre at 7½%	37.50
Amortization of Seed Cane Costs	34.56
Total fixed costs	199.11
Total costs	398.31

THE THIRSTY LAND

Mr. ABOUREZK. Mr. President, as chairman of the Midwest Caucus, I want to call to the attention of the Senate an excellent series of articles about the midwestern drought which appeared in the Des Moines Register on Sunday, February 6. These articles appeared in a supplement called "The Thirsty Land" in the Sunday paper and do a good job of depicting the drought situation in South Dakota, Iowa, Minnesota, Wisconsin, Nebraska, Missouri, Illinois, Texas, Oklahoma, Kansas, Colorado, North Dakota, and Indiana.

Mr. President, I ask unanimous consent that three articles from the supplement be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SOUTH DAKOTA: SLOWLY, PAINFULLY GOING BROKE

BLUNT, S. DAK.—Like the land he works, David Hauschild is worn out. His face is the face of drought.

Hauschild, 28, owns no land, but leases 2,400 acres here in central South Dakota.

To maintain those leases and make any money, he needs a good crop—wheat, oats, alfalfa, some hay—year after year, plus a good market for his cow-calf operation.

But he hasn't had a good crop in three years, and in 1976 he had no crop at all. Few "cow dollars," as he calls them, either.

So he took a loss he guesses will run $50,000 to $75,000. That will push his total indebtedness to over $90,000. Now, he needs to borrow $50,000 more if he's to operate this spring.

He can't get it.

David, his father Leslie, 53, and brother Burt, 26, have separate farm operations, but they share their labor and machinery.

In the way that woe seems to beget more woe, Burt has now been effectively removed from the operation while he fights cancer, and Leslie can no longer do heavy work because of spinal arthritis.

So the load falls to David, who chores after driving home from a full-time construction job, which he was forced to take, and on which he recently smashed a finger.

"I don't know what we'd do for household money if David didn't have that job," says Cheri Hauschild, 26, who stays at home with Jennifer, 2, and Caleb, 4 months.

But the worst is yet to come, David and Cheri agree.

Mar. 1 will see him in bankruptcy, he says. The 100 cows he still has will go. The farm machinery will go. And David Hauschild will go, too.

"Somebody who's born and raised on the farm and still wants to farm, well it's pretty tough to leave," he says. "I s'pose I'll stay on with construction and try to start building all over again."

When the farm machinery goes. Burt Hauschild's farming operation will go, too, says David. "And with both of us having to go out and get non-farm jobs, Dad will have to get out," he says. "It's not a good time for us."

No one is telling Hauschild his problem is poor farm management—and his situation has been studied closely by his banker, implement dealer, Farmers Home Administration (FmHA) loan officers and officials of the South Dakota Department of Agriculture.

The problem is simpler: In the Blunt area, where the average annual rainfall is 18.79 inches, just 7.39 inches fell in 1976. The situation was only a little better the previous three years.

Conditions like that are especially tough on young farmers, like Hauschild.

"If I owned land, I wouldn't be in this trouble because I could refinance it and have operating money," he says. "But I can't buy land yet. I haven't been in farming long enough to have the capital.

"So I have to borrow and lease. My crop is the security I borrow against, and when I don't have a crop, I don't have any security. I guess there's only so far the bank and FmHA can go on loans, or so they say.

"Times like this, you can't afford to decrease the size of your operation because then you have to make twice as much to get by. The only way out of the hole is to expand, and expanding just makes the hole bigger.

"I'm just like a gopher in a sandpile."

What would help?

"$50,000," says David.

"Some terrific legislation," says Cheri.

She shares the frustration of most South Dakotans, who were stunned when the state's bid to be declared a major disaster area—and thereby be eligible for millions of dollars in federal assistance—was rejected in the late days of the Ford Administration.

What now for the Hauschilds?

"It's impossible to have any ambition," she says, "but we try to have a little hope."

Outside, the winter wind whipped at soil covered only by cow chips. The bark continued to peel off the trees in the shelter belt.

SOUTH DAKOTA: ONE SMALL TOWN IN THE MIDDLE OF A DROUGHT

HIGHMORE, S. DAK.—Here, but for the grace of God and rain, is the story of your little town.

Highmore is a pretty place, pop. 1,000, the only town in a county of 2,000. Up and down Iowa Ave.—the wide, main drag—things don't look so grim.

The bars are still full at night, people still smile—and money? Well, Duke Lawrence, 71, the barber, says: "I don't have any trouble finding someone to shoot craps with."

But things are not right.

You expect to find life pretty well charted in the Highmores of the Midwest, but here uncertainty looms. Says rancher Merle Ankrum, who is also a county commissioner: "People don't know what to do. I've never seen such indecision, and things keep getting worse."

School superintendent Leo Uken says activity ticket sales are down, requests for free hot lunches are up and attendance at Highmore Pirate basketball games is way off.

The local dentist, usually booked three months in advance, is now down to two weeks. "That's how bad it is," says county extension agent Bill Paynter. "People are just letting their teeth go."

Why?

Normal rainfall in this area is 18.79 inches a year. In 1974 and 1975, they didn't receive two-thirds of what they should have. During 1976, only 9.28 inches fell, and only 4.92 inches of that came during the April-to-September growing season.

"Look at the sizes of those growing season rains," say Paynter, fumbling through statistics he's wearing out. "The best one we had in the season was 65-hundredths, and you lose 25-hundredths of any rain to evaporation."

It's been so dry, he says, that "there isn't a natural lake or pond in Hyde County with any water in it."

It's been so dry, says banker Lee Straight, that "right here in the middle of the county, we didn't even have any thistle grow. Twenty miles north, that's about all that did grow, and the boys cut it for feed."

Farmers and ranchers here had a 97 per cent crop loss in 1976, which translates into a financial loss of $16.2 million—or $8,100 for every person in the county.

But crops are only a small piece of the agricultural picture. Livestock is the big item, or was, in a local economy that has virtually no industrial jobs.

When the pastures died last June, most cattle producers began selling part, and eventually most, of their herds.

Two years ago, there were more than 100,000 head of cattle in Hyde County. The "mini-droughts" in 1974 and '75, coupled with sagging markets, cut the number to 75,000 head in January, 1976. Now, one disastrous year later, it is estimated there are fewer than 12,000 left.

The outlook is not good.

There has been almost no snow this winter, leaving loose, unfrozen soil to the wind. "By working the ground very carefully last fall, we were able to leave it furrowed enough to hold down on wind erosion," says Ankrum.

But after the prolonged dryness, it's now easy to walk into a field and kick down 10 inches into the soil. That condition, he says, "scares us to death when we think about the winds of February and March."

There is no winter wheat crop coming in the area and, unless there is above normal rain this spring, pastures won't green and there will be no chance for summer crops.

If there are no pastures or crops, there will be no cattle. Highmore and Hyde County can't survive many more years of such herd depletion.

There's no state income tax in South Dakota. The money that government runs on is the property tax.

"Hyde County is more tax dependent on agriculture than any county in the state," says Paynter. "Unfortunately, agriculture here doesn't have much to offer right now."

County officials have already stripped their budget of "frills"—they cite a road building program and mileage for employes—in anticipation of what's coming. The school, which derives over 70 per cent of its income from the county, will lose more than $150,000 in the next 18 months because of the depleted tax base, officials estimate.

"It means cutting staff, maybe four or five from our faculty of 46," says superintendent Uken. "And it means cutting programs, and I'm not talking about just seventh-grade basketball. I'm talking whole departments."

And yet, the local economy remained fairly strong into late January.

There have been no farm foreclosures. When property taxes came due Nov. 1, there were no more delinquencies than normal.

A few businesses reported drops—the implement dealer says new machinery sales are off 90 per cent and the hardware man is down about 35 per cent—but most say they felt no change in spending habits through Christmas.

Why?

"If you've got kids," says Paynter, "you're going to scrape something together for presents. But I think it was the last big fling. People are starting to pull in their horns now.

"What happened here is that when these guys liquidated their herds, it put money in their pockets. They've been able to meet their loan payments, pay their taxes and live about the way they're used to.

"But to put it in perspective, let's say you own a grocery store. If you just keep selling but don't restock the shelves, pretty soon you're out of business," he says.

"That's what's happening in our cattle business right now. No one's restocking. And when it comes time to, is the money going to be there?"

Banker Straight says his institution's agricultural loan portfolio "has been stretched, but we're still OK." He says there has been wide-scale refinancing of farmland. "The Farmers Home Administration has done pretty well by us up to now," he says, "but I'm afraid we're going to be asking them to do a lot more.

"Before this is over here, I'm sure we're going to see 95 per cent of our farm operators needing some sort of disaster loan."

Unemployment in the county is officially listed at just over seven per cent. "That doesn't include farmers and ranchers who have sold their herds and are effectively unemployed," says Ankrum. "Add them in and you're up to 20 or 25 per cent."

An emergency public works project has put 21 such farmers to work for the county, a few others for the town.

But most are simply sitting, bidding time. Says Ankrum, who has lost $100,000 in three years and wants no more gambles: "Time is the one thing we've got plenty of."

And yet, time is running out.

IF IT IS AS DRY HERE IN 1977 AS IT WAS IN 1976 . . . IT WOULD PUT US OUT OF BUSINESS

PIERRE, S. Dak.—"Every time you flush the stool, you shoot five gallons of water.

Dewey Larson, the mayor of Wood, S. Dak., 60 miles south of here, was talking drought and how to live in it.

"So, you don't flush it as often as you should. You just can't waste the water."

His sidekick, Jim Burnham, who drives a gasoline tank truck, nodded and said, "Yeah, water's worth more than the gas I haul."

South Dakota is sick with drought, and all indications are that it's going to get sicker—even if it rains.

"We're not crying wolf," says Larry Venner, Assistant Secretary of Agriculture. "We don't want to accelerate panic, that serves no purpose. But, yes, we've got serious problems."

In the eastern half of the state, where conditions are most severe, they say it's worse

than the '30s, that it's more comparable to 1910. In many areas 1976 precipitation was the lowest on record, and the records date to the turn of the century.

The winter has produced little snow. "What we've had we call snirt," says state trooper George Samis. "That's blowing snow that's mostly dirt."

No one knows whether the spring will bring average rain. But what about the above average rain the state really needs? That's a 1-in-15 shot, says state climatologist William Lytle.

What if it's as dry in 1977 as it was in 1976?

Robert Duxbury, state Secretary of Agriculture: "It would put us out of business."

The impact is already disastrous:

Crop output in the state in 1976 was 67 percent below the 1967-to-1974 average. In 19 of the state's 67 counties, the crop loss exceeded 90 percent.

Lack of feed has forced the "sell down" of 42 percent of the cattle that were in the state a year ago. In seven counties, the sell-down figure is over 75 percent. Cattle producers are quick to point out that bad markets prevented any profit the previous two years. "If cutting numbers is what's needed to turn these damned markets around," says Jack McCullouh of the Stockgrowers Association, "then South Dakota has done its part."

Most pastures are so severely damaged that officials estimate a five-year recovery. Many will need complete restoration, they say.

Over 30 communities report severe water supply problems. Without good rain this spring, many will totally deplete supplies by mid-summer. In some towns, you *do not* ask for water in restaurants.

Wells have failed everywhere. "Used to be you could hit water at 14 feet," says Wood's Mayor Larson. "Now you go to 70 feet and still can't find much."

That's prompted widescale water hauling, and it's not unusual to pay $30 for 1,000 gallons. An average family, with normal usage, can run through 1,000 gallons in a matter of days. Says Wood grocer Warren Sinkler: "If you've got three or four kids, they find out they can all use the same tub water."

Farm foreclosures have been averted thus far with emergency loans, but state officials predict there will be many if spring crops can't be planted. Young farmers and ranchers will be hardest hit.

The total financial impact of drought in 1976 is $1.5 billion, according to the state's Drought Assistance Office. They say that figure is "conservative."

Early on, President Ford issued an "emergency declaration" covering 62 counties. "That program provided money to maintain production," says Duxbury. "What we need now are programs to maintain life and property."

But when state officials sought to have South Dakota declared a "major disaster area"—which would make even more funds available—the request was kicked around until early January and then denied.

There's bitter conjecture here that the pleas for help were lost in the shuffle of Presidential transition.

Most are hoping President Carter, a farmer, will listen to new Agriculture Secretary Robert Bergland, from neighboring Minnesota, and to South Dakota's two Democratic senators—and then respond favorably.

"The devastating conditions . . . have tested the very fiber of those in the grips of the drought," Governor Richard Kneip told legislators in his state of the state message in late January.

"I pray that God will hopefully intervene and bless all parts of this state with adequate rainfall. This prayer should be in the hearts and minds of all people."

The most seriously affected area is from Pierre to the northeast corner of the state. Average annual rainfall in that area runs from 18 to over 20 inches a year. In 1976, the average received in that area was just over nine inches. One town, Milbank, received 7.67 inches against a norm of 22.12.

What did it mean?

Jerry Bown, 41, Onida: "I work with a neighbor, and in 1975 we put up 300 stacks of alfalfa off our fields. In 1976, on the same fields, we put up three."

Don Eichacher, 41, Salem: "I had 500 acres of corn ground that normally would yield 65 to 70 bushels per acre. I got three-bushel corn on it."

Agriculture Secretary Duxbury, whose sons are the sixth generation on a ranch near Wessington: "We've got 500 acres of hay that would normally give us 750 to 1,000 tons. In '76, we got 36 tons."

Not all of South Dakota was that desperate. In the western tier of counties, rainfall was above average. But now, drought is a factor even there: The western winter wheat crop is said to be "sick."

Projections are that the economy of South Dakota is going to be eight years or more recovering.

The saddest thing, says rancher David Hauschild of Blunt, "is that the effects haven't even started to show." State officials agree with him.

"All the spending figures are up," Hauschild says. "New car sales, appliances. And people are going on long trips. But it's a false picture.

"Ranchers and farmers sold off their cattle and they have a little money. So they started buying while they had it. They take the trips because this is a once in a lifetime opportunity. Every other year, these guys have had cattle they had to stay home to feed."

The cattle sell down is a matter of particular fright to state officials.

"We're very concerned about holding our good bloodlines," says Venner. "If a guy's got 200 head, I want to see him hold at least 40 of his best. That way, when things recover, we don't have to take the culls from other states. But the guy's going to need help to keep even those 40."

The kind of help Venner is talking about is money.

To this point, many farmers and ranchers have been refinancing their land for operating capital and living money. "All we're living on is the equity that's in rising land values," says Pukwana rancher Bob Healy. "But most of us are backed so far into our land that we can't get any more from it."

There's been a rush on Farmers Home Administration (FmHA) money, with even more of a rush predicted.

FmHA official Maurice McLinn says the agency is expecting to make 4,000 production emergency loans in the state in the coming year.

"What we're talking about there is $125 million over and above the $100 million in regular loans we're making year after year," he says.

Besides the money scramble, the drought has also produced a run on irrigation equipment.

Al Griffiths, director of conservation in the agriculture department, says in 1974 the state granted 14 permits for extraction of ground water. In 1976, there were 1,000 such permits.

"Irrigation is a new and expanding art here," he says. "We're still badly in need of more technical knowledge about it.

"We're optimistic about it and we encourage it where possible, but we emphasize it's no cure-all. For one thing, it's a large investment, especially when you're talking about irrigating dry land worth no more than $300 per acre. It's a different story when you're talking about that $1,800 per acre Iowa land."

The drought has also brought calls for the rapid completion of the Oahe Irrigation Project, a long-range program that will take water from the Oahe Reservoir at Pierre and spread it east through canals.

State officials acknowledge that with the irrigation boom, they are wary of water fights.

A year ago the James River—located in east-central South Dakota and fondly called "the Jim"—was sapped by the demands of adjacent crop farms and the towns along the river.

"The state finally shut some irrigators off, and then put up spotter planes to make sure there was compliance," says Mike McNamara, chief of the Drought Assistance Office.

In an attempt to head off such squabbles, the state legislature is expected to renew efforts to delineate water rights.

That's one of about a dozen water-related matters the Pierre newspaper recently said might end up "drowning the legislature."

And the drought has put other matters before that body, too. Taxes, for example.

South Dakota has no state income tax; state government operates on sales and gas taxes. Some officials fear that decreased spending and less use of autos and farm machinery might cut heavily into state revenues and are lobbying for an income tax.

Officials of cities, counties and schools—all of which operate on a property tax that is heavily dependent upon agriculture—say some change in tax structure is necessary to overcome the losses they are sustaining with the crop failure and cattle depletion.

But state agriculture officials worry most about what drought could do to the face of farming in South Dakota.

McNamara says only two per cent of the state's farmers are under 25 years old, while 35 per cent are over 55.

"You worry that the young guys who are renting and depending on good crops may not be able to stay with farming," he says.

"And you worry that the older guys who went through the '30s seeing the handwriting on the wall and figuring this might be a good time to move to town. Who's got the money to come in behind them if they want to sell or lease?"

And then there are those at mid-career—those who have too much invested to quit, but not enough equity to be able to weather several bad years. Like Don Eichacker of Salem, they're caught.

"Luckily, I had enough assets to cover me last year, and using all my capital, maybe I can make it this year," he says. "That's reason for some hope.

"The farmer has always operated on hope. You can't take the attitude that it isn't going to rain and that we're all going to go broke. If you do, you're beat already," he says.

STATEMENT OF THE HONORABLE WILLIAM J. ROGERS, NATIONAL COMMANDER OF THE AMERICAN LEGION, BEFORE THE SENATE COMMITTEE ON VETERANS' AFFAIRS

Mr. THURMOND. Mr. President, this morning the National Commander of the American Legion, the honorable William J. Rogers, presented the Senate Committee on Veterans Affairs with the major legislative concerns of the American Legion for the first session of the 95th Congress.

The American Legion, comprised of over 2.7 million wartime veterans, is the largest veterans organization in the world. Since its formation in 1919, the American Legion through its promotion of Americanism, programs for our children and youth, its insistence upon a strong national defense, and its efforts in

maintaining adequate programs for our entire veteran population, has made incalculable contributions to the promotion and preservation of the American way of life.

In his statement before the Senate Veterans Affairs Committee, Commander Rogers expressed the concern of the American Legion for maintaining adequate staffing and appropriate budgetary levels to enable the VA to continue the furnishing of quality services and programs for our Nation's 29 million veteran population. The necessity for increased construction to meet future service demands, the desirability of expanding the National Cemetery System, and the importance of maintaining the integrity of the VA hospital and health care system in the event of the enactment of a plan of national health insurance were also emphasized. Additionally, Commander Rogers set forth the American Legion's goal for increased employment among the veterans population and stated his organization's opposition to legislative proposals for judicial review of final administrative decisions of the Administrator of the VA.

Mr. President, in order to share the legislative concerns of the American Legion with my colleagues, I ask unanimous consent that Commander Roger's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF WILLIAM J. ROGERS

Mr. Chairman and Members of the Committee:

The American Legion is most grateful for this opportunity given me, as its National Commander, to present to the Committee, matters relating to veterans affairs, that we believe will come to the attention of Congress during the present session. With the Committee's permission, I shall proceed to the matters of substance.

VETERANS ADMINISTRATION FISCAL YEAR 1978 BUDGET

Prior to completing his term of office, President Ford, in accordance with existing law, submitted to Congress his proposed Budget for Fiscal Year 1978. As of this writing, President Carter has yet to send to Congress any Budget modifications he may intend to recommend.

The American Legion is in the process of studying the Budget proposals for the Veterans Administration. Appropriation requests for Fiscal Year 1978, total $18.414 billion. We can offer several observations at this point, and subject to future Budget modifications suggested by the new Administration

Employment levels for VA are projected at 215,732, an increase over last year's level of 3,353, of which 3,488 are for medical care. We commend this increase in the medical care allocation, but we also draw attention to a projected decrease in employees totaling 571 for Veterans Services and for Compensation, Pension and Education. Based on continuing work loads, as we understand them, we question whether an employee decrease at this time will continue to guarantee prompt and efficient service to veterans in these important areas of activity. Our initial reaction to this proposed reduction is that employee decreases be deferred pending experience, especially in the education program during Fiscal Year 1978.

We are pleased with the projected increase in the requested appropriation for medical care. We are especially mindful of the increase of $27.6 million in construction funds. In our judgment, it is critical to the future of the veterans medical care program that the renovation and replacement of aging and outdated facilities, within the VA system, go forward steadily. Construction funds for two hospitals are included in the new Budget, and plans are underway for the replacement of 6 additional hospitals, as well as continuing improvements in existing facilities. We trust that Congress will view these plans favorably. They have the full support of The American Legion.

The proposed Budget includes a number of legislative proposals put forth by the outgoing Administration. We will comment on three of them.

The Budget includes again, a proposal for the elimination with what is termed "duplicate burial benefits." The use of this terminology is a distortion. The burial benefits provided for veterans, are a gratuity, intended to insure that every veteran will be buried with dignity and respect.

This is an honor surely due to those who have defended the nation in its Armed Forces. The Social Security death benefit, is an earned benefit, paid for by every citizen who pays Social Security taxes. It is wrong to refer to these as "duplicate benefits," and we hope that Congress will not look with favor on a proposal of this kind.

The outgoing Administration also proposed a return from 10 to 8 years in the period of eligibility for the education program. The 10-year period was provided by Public Law 93–337, which The American Legion supported. We see no reason whatever to regress from the present delimiting period for this benefit. The 10-year period now provided is fair and reasonable, and eligible veterans should be able to complete their education within that period of time. We hope that Congress will not entertain legislative proposals along these lines, and that the new Administration will not pursue such legislative goals.

The Budget also includes a legislative proposal to authorize an amount of $3.750 million, to enable the Federal Government to share with the states the cost of establishing and maintaining state veterans' cemeteries. This is a proposal The American Legion supports. The need for veterans' cemeteries exceeds the ability of the Federal Government to meet it entirely. So far, three states have commenced a program along these lines, and we hope other states will follow suit. The goal is to provide a suitable place of honor for the interment of the nation's veterans. National cemeteries, and state veterans' cemeteries can be the focal point for patriotic commemoration by succeeding generations of Americans of those who have defended the nation in time of war and armed conflict. This country is built upon the sacrifices of those, who, since the time of the American Revolution, have responded to the call to arms, to defend it against its enemies. It is important to our heritage that the commitment and the sacrifices of all those who have served shall never be forgotten.

VETERANS ADMINISTRATION MEDICAL CARE PROGRAM

It is not possible to submit to this Committee, a statement of this kind, without making a special reference to the VA medical care program. The American Legion is pleased that the proposed Budget includes necessary increases in fund allocations for this program. We continue to believe that the VA medical care program is the finest single health care delivery system functioning in the world today. It represents a national commitment to the welfare of American veterans that represents better than anything else could, the value the American people place on the services of those who have been members of the Armed Forces.

The triad of treatment, teaching and research that comprise the principal elements of the VA medical care program, together form a medical care system that offers to veterans the best possible hope for health care as and when they need it. The primary responsibility of the VA system continues to be the care of those who have been injured or disabled as a result of their service.

Today that responsibility is being met. And its adjunct is first class medical care for all those who, by reason of health needs, or their economic condition, have to look to the VA for assistance.

We believe that Congress views the importance of this incomparable health care program as an irrevocable commitment to the nation's veterans. Its maintenance at its present level of excellence requires constant attention, and provision of adequate funding. We look to Congress to provide the oversight and the funding, and to this end we pledge our full support.

PENSION REFORM

With reference to major legislative matters requiring attention within the veterans benefits program during Fiscal Year 1978, we believe the most important is the need for a reform of the veterans death and disability pension program. We take this opportunity to again point out that the present program is not adequate to the needs of those it is designed to serve. These are mainly those who have become permanently and totally disabled by reason of illness or age, and the dependent survivors of those who have died.

For several years past, we have petitioned Congress for legislative reform of this program to make it responsive to the needs of eligible beneficiaries. That reform has not yet been accomplished, and I can tell you, that the greatest volume of correspondence received at our Headquarters is from older veterans, and from widows who, in increasing numbers find themselves in desperate financial need, with no hope of relief from any of the Federal programs that are intended to help them, including the veterans pension program.

The pension legislation that we are proposing again this year, includes the following elements that would:

(1) assure a level of income above the national measure of poverty;

(2) prevent veterans and widows from having to turn to welfare agencies for financial assistance;

(3) treat similarly circumstanced pensioners equally;

(4) provide the greatest pension for those with the greatest need; and

(5) guarantee regular increases in pension which fully account for increases in the cost of living.

I do not believe it is necessary for me to expand on these goals in this statement. When this Committee is ready to consider the legislation we are proposing to achieve the goals, we will be prepared to support them at length.

The ultimate goal, however, that we ask the Committee to keep before it, is that all of the nation's veterans, and their dependents and survivors shall be afforded the opportunity to finish their lives in dignity, and reasonable comfort, without having to depend upon the mercies of the public welfare. We believe this is what the American people want for their veterans, and it is thus the responsibility of Congress to provide it.

DISABILITY COMPENSATION AND DEPENDENCY AND INDEMNITY COMPENSATION

The continuing responsibility of Congress to look to the needs of those who have been injured and disabled in service, and of the survivors of those who have died in, or as a result of service, must constantly be kept in view.

Historically, Congress has been responsive to these needs, and it is our sincere belief that Congress should be commended for its concern for these most deserving classes of beneficiaries.

The 94th Congress made necessary adjustments in compensation and dependency and indemnity compensation rates in response to inflationary pressures. The point is, however, that those inflationary pressures continue, and the disabled veterans and survivors have nowhere else to look but to Congress, to protect them economically from the consequences of the inflation that persists in our national economy.

It is our request that this Committee shall, in due course, review the compensation and DIC tables, in relation to the economic indexes, and propose necessary adjustments. The American Legion will support this Committee effort, and we rely on the full Congress to enact needed legislation when it is developed by the Committee.

NATIONAL HEALTH INSURANCE

The American Legion continues to observe with close attention the national debate on national health insurance. The legislative vehicle to provide such insurance will not be the responsibility of this Committee. The Members, however, will participate in the Congressional decisions on whether there shall be a national health insurance program, and what form it will take.

We are mindful that the new Administration is committed to a national health insurance program, and we anticipate that legislation to achieve it will be proposed to this Congress, either during the present session, or the next.

The basic decision as to whether the American people shall now have national health insurance is not the business of The American Legion. The impact of such a program on the VA medical care system for veterans, is however, very much the business of our organization. Through special committees, we have studied this matter for a period of several years. It is our conclusion that there will, in fact, be a measurable effect by national health insurance on the VA system. Our goal is that such effect shall not be adverse to the best interests of veterans.

To insure the achievement of this goal, we shall, at the proper time and place, submit to Congress, certain recommendations, for which we solicit the support of the Members of this Committee.

Briefly, it will be our request that legislation to effect national health insurance shall include among its basic provisions:

(1) recognition of the VA medical care program as a Federal deliverer of health services exclusively for the nation's veterans;

(2) that the VA system, as it is now constituted in the VA Department of Medicine and Surgery, shall continue to be so maintained; and

(3) that a veteran who exercises his option to seek needed medical care from the VA, shall not be required, on any statement of inability to pay, to include therein, consideration of any benefits to which he may be entitled under a national health insurance program.

The objective of these legislative requests is to insure that veterans will be able to continue to exercise the option to choose VA medical care, in a system that is designed and maintained for them and is responsive to their particular needs.

We earnestly hope for the support of all of the Members of this Committee for the inclusion of these protective provisions in a national health insurance program.

NATIONAL CEMETERY SYSTEM

One of the significant Congressional achievements in the postwar period, has been the establishment of the National Cemetery System within the Veterans Administration. This is a legislative goal of the American Legion that has been substantially achieved, with resulting benefits to veterans. A great proportion of veterans entertain a desire to find their final rest in a place of honor, in company with their comrades in arms. The establishment of the National Cemetery System, and its present expansion and development does much to make the fulfillment of this desire achievable.

The four new national cemeteries that are now being established, and the additional ones that are projected will relieve a growing need, in a nation that now has nearly 30 million veterans, whose ages span the Twentieth Century. We recommend to Congress, consideration of an additional national cemetery, as soon as possible, in the Midwest, possibly in the Michigan, Indiana, Ohio region. We continue to receive requests for consideration of national cemeteries through American Legion organizations in other parts of the country, and as the need for them becomes apparent, we shall submit further recommendations.

Additionally, as mentioned earlier in this statement, joint funding of state veterans' cemeteries will help to alleviate the need for more cemetery space for the nation's veterans.

JOBS FOR VETERANS

It is important for me, before concluding this statement, to address the continuing problem of Jobs for Veterans. No returning serviceman is truly rehabilitated until he has achieved a satisfactory position in the economic structure of the nation—that is, until he is gainfully and steadily employed.

The unemployment rate among veterans continues to be distressingly high. In January, with a national unemployment rate of 7.9 percent, the rate was 8.6 percent for young male veterans in the 20–34 age group, which includes most of the veterans of the Vietnam Era. In the youngest veterans group, those between 20–24, the unemployment rate was 18.3 percent, compared to 12.5 percent for nonveterans of the same age. The disabled and black unemployed veterans are hardest hit.

We are pleased to note that the new Administration has announced that the plight of these unemployed veterans is one of its highest priorities. We await positive action to alleviate their problem.

It must be said that in our judgment, the Department of Labor, to this point, has not measured up to its responsibilities with reference to unemployment among veterans. It has failed to implement remedial legislation, until prodded to do so by concerned Members of Congress and veterans organizations. The latest legislation intended to help unemployed veterans, Public Law 94–502, created the position of Deputy Assistant Secretary of Labor for Veterans Employment. In view of the unsatisfactory record of the Department of Labor in fulfilling legislative mandates, The American Legion still advocates the establishment of a full Assistant Secretary of Labor, with the authority to effectively carry out and coordinate veterans employment matters, with a Veterans Employment Service as a separate agency within the Department of Labor.

Among other objectives we seek, to improve the veterans unemployment rate, is a recommendation that priority employment service for veterans provided in state employment offices, be limited to wartime veterans only. This is because the veterans of the Vietnam Era specifically are having the hardest time in the job market.

Compared with earlier training programs under the Manpower Development and Training Act of 1972, veterans have been faring badly in programs under the Comprehensive Employment and Training Act (CETA). We urge corrective legislation to provide that 35 percent of all new public service jobs and training slots be filled by veterans. And since efforts have been unsuccessful to have the Department of Labor either define veterans organizations as "community based organizations," and, therefore, eligible for membership on CETA planning councils, or listed separately as organizations to be included, we seek legislation to amend CETA to ensure that veteran organizations will have a voice at the local level on employment and training programs that are federally financed.

Essentially, it must be said, that positive action is necessary, now from Congress and the Executive Branch, to achieve an immediate impact on the excessively high unemployment rate among veterans, and particularly among Vietnam Era veterans.

JUDICIAL REVIEW OF DECISIONS OF THE ADMINISTRATOR OF VETERANS AFFAIRS

Measures have been introduced to amend title 38, United States Code, to provide for the judicial review of the administrative decisions of the Administrator of Veterans Affairs.

Except as to suits arising from contracts of government life insurance and matters arising under the veterans home loan provisions, section 211(a) of title 38 of such code provides that the decisions of the Administrator on any question of law or fact under any law administered by the Veterans Administration providing benefits for veterans and their dependents or survivors shall be final and conclusive, and no other official or any court of the United States shall have power or jurisdiction to review any such decision by an action in the nature of mandamus or otherwise.

Section (b) adds that the Administrator may require the opinion of the Attorney General on any question of law arising in the administration of the Veterans Administration.

Judicial review of the Administrator's decisions has been the subject of Congressional consideration in the past, and properly so, as the ultimate decision is a question of policy to be resolved by the Congress. The arguments in favor of such legislation generally arise from a feeling that a veteran or his dependent, dissatisfied with the administrative determination, should have available recourse to judicial consideration of the claim. The fact that the Congress has consistently barred all judicial review of the decisions of the Administrator in other than contractual matters since 1924, demonstrates its views that the considerations in opposition thereto, are more compelling. As recently as 1970, in view of the increased judicial encroachment upon the finality of these decisions, the Congress firmly and unequivocally reaffirmed its intent that the Administrator's decisions be final when it added to section 211(a) the concluding words "by an action in the nature of mandamus or otherwise."

Based on our many years of presenting appellate issues to boards of original jurisdiction in VA regional offices, to the Chief Benefits Director and the Chief Medical Director for administrative review of lower decisions, and to the Board of Veterans Appeals for appellate review, it is the opinion of The American Legion that the Veterans Administration is guided by a sincere desire to serve the best interest of veterans.

If The American Legion was convinced that an advantage to veterans or their beneficiaries or survivors could be derived from a judicial review of the Administrator's decisions, we would recommend or support such legislation.

But we are not convinced and we do not believe that there would be any net advantage to veterans or their dependents or survivors as a class if judicial review of the Administrator's decisions was authorized.

There are a number of other matters of importance to veterans that should engage the attention of Congress this year. The American Legion awaits opportunity to present them. In this statement I have confined myself to those that are at or near the top of our priority list of goals.

The American Legion continues to rely upon Congress, as it has through the years, to respond to the needs of veterans, as it becomes aware of them. The bond between Congress and the nation's veterans, extends throughout our history, and the responsiveness of Congress has resulted in the most comprehensive program of veterans benefits that any nation has provided to its war veterans. For that fact The American Legion is most grateful, and we look forward to a continuing dialogue with the new Congress, in the interest of all veterans.

Once again, we thank the Members of the Committee for this opportunity.

RESOLUTIONS THAT REQUIRE LEGISLATIVE ACTION

POLICY

A. The American Legion policy on national health insurance

1976 Convention Resolution No. 139 (MA) seeks to provide that any National Health Insurance bill enacted by Congress should include the following: (1) that the medical care program operated by the Veterans Administration is recognized as one proviiding health care services exclusively for veterans, and it shall continue to be so maintained and operated, (2) that a veteran applying for medical care from the Veterans Administration, to which he is otherwise entitled, and who, in accordance with existing law and regulations is required to state his inability to pay for his own care, shall not be required to consider, in making such statement, any medical benefits that would accrue to him under the provisions of a Federal Health Care Act, (3) that if the provisions set forth above are included in a Federal Health Care Act, then The American Legion shall make on objection to any section of the Act providing for reimbursement rendered the veteran for nonservice-connected disabilities, of benefits to which the veteran may be entitled under a Federal Health Care Act, and (4) that The American Legion shall actively oppose the enactment of a Federal Health Care Act that does not include the provisions set forth in clauses (1) and (2).

B. Continue the Veterans Administration as a single agency for veterans programs

1976 Convention resolution No. 111 (KY) urges that The American Legion exert every effort and all resources as will assure that the Veterans Administration shall continue tc be the sole independent establishment in the Executive Branch, responsible for the administration and execution of benefit programs and services provided by law for veterans, their dependents, and beneficiaries.

C. Review and new authorization of veterans benefits and services

1976 Convention Resolution No. 195 (CO) urges that The American Legion use every means at its disposal to oppose enactment of those provisions of any measure which would subject Veterans Administration veterans benefits and services to a periodically scheduled review and new authorization.

D. Reassigning jurisdiction and related functions from the Committees of Veterans Affairs to any other committee

1976 Convention Resolution No. 476 (Conv. committee) that The American Legion shall vigorously oppose passage of those resolutions, either by the House of Representatives or the United States Senate, which would reassign any of the existing jurisdictions or related functions of the standing Committees on Veterans Affairs to any other Committee.

E. Continuation of the Committees on Veterans Affairs

1976 Fall NEC Resolution No. 20 urges that The American Legion, (1) supports the maintenance of Committees on Veterans Affairs in both Houses of the Congress of the United States, as necessary to the effective and economical administration of veterans programs, and the development of such additional programs as may be or may become necessary to the welfare of the nation's veterans, their dependents and survivors, (2) petitions the Temporary Select Committee to Study the Senate Committee System to include in its final recommendations, the present Committee on Veterans Affairs, with all of its present duties, powers, functions and responsibilities, and (3) vigorously oppose any recommendation, and any effort from whatever source, to abolish the Veterans Affairs Committees of the House of Representatives and the Senate of the Congress of the United States.

F. Mustering-out payments for Vietnam era veterans

1976 Convention Resolution No. 49 (OH) seeks legislation to provide mustering-out pay to members of the Armed Forces who served honorably on active duty during the Vietnam Era.

G. Reopening of the Guerrilla Recognition Program

1976 Convention Resolution No. 163 (P.I.) supports legislation for the reopening of the Guerrilla Recognition Program of the Commonwealth of the Philippines by the Department of Defense of the United States.

NATIONAL CEMETERIES

A. The national cemeteries policy of the American Legion

1976 Convention Resolution 255 (WI) calls upon the Veterans Administration to establish additional national cemeteries wherever a need for them is apparent; support legislation to provide contract burials for veterans who are indigent at time of death; support legislation to provide Federal financial assistance for the establishment of State Veterans' Cemeteries, and of Veterans Sections in cemeteries owned and operated by local government units; support legislation providing for the construction of columbaria and mausoleums wherever feasible within national cemeteries; oppose any effort, from whatever source to reduce or eliminate the present burial allowance and plot allowance provided to veterans under the laws and regulations administered by the Veterans Administration, or the reduction or elimination of the earned burial benefit payable to all citizens who qualify for it under the Social Security Act as amended; and, support legislation to abrogate the discriminatory Defense Department Order of February 10, 1967, which limits burials in Arlington National Cemetery to Medal of Honor Winners, active duty and retired members of the Armed Forces, and honorably discharged veterans who have also held high positions in the Federal Government.

B. Memorial markers for certain veterans graves

1976 Convention Resolution No. 81 (N.D.) seeks legislation which will authorize furnishing of memorial markers for graves in private cemeteries where in the remains of an honorably discharged serviceman are not recoverable.

CLAIMS AND RATINGS

A. Armed Forces retirement payments

1976 Convention Resolution No. 138 (MA) seeks legislation so as to remove the restriction against the receipt of Armed Forces retirement pay, due to length of service, concurrently with VA compensation.

B. Transportation costs for burials of certain veterans

1976 Convention Resolution No. 42 (NE) seeks legislation to provide that where an eligible veteran dies in a State Veterans' Home, the Administrator of Veterans Affairs shall pay the cost of transporting the remains to place of burial.

C. Payments to hospitalized incompetent veterans

1976 Convention Resolution No. 41 (NE) seeks legislation to provide that in any case in which a veteran having neither wife nor child is being furnished hospital treatment, or institutional or domiciliary care without charge or otherwise by the United States, or any political subdivision thereof, is rated by the Veterans Administration in accordance with regulations as being incompetent by reason of mental illness, and his estate from any source equals or exceeds $3,000, further payments of pension, compensation, or emergency retirement pay shall not be made until the estate is reduced to $1,000.

D. Improve the disability compensation propram

Adjust Compensation in Response to Cost-of Living Increases

1976 Convention Resolution No. 109 (KY) seeks legislation so as to provide that the Administrator of Veterans Affairs shall be authorized to automatically adjust monthly rates of compensation in response to cost-of-living index increases.

Adjust Dependency and Indemnity Compensation Rates in Response to Cost-of-Living Increases.

1976 Convention Resolution No. 373 (D.C.) seeks legislation so as to provide that the Administrator of Veterans Affairs be auhorized to increase monthly rates of Dependency and Indemnity Compensation in accordance with the cost-of-living index formula established for active duty personnel of the Armed Forces.

E. Improve the disability and death pension program

1976 Convention Resolution No. 39 (NE) seeks legislation to improve the death and disability pension benefits program for veterans of World War I, World War II, the Korean and Vietnams Wars, and for their widows and children.

MEDICAL AND HOSPITAL

A. Extend community nursing home care to nine months

1976 Convention Resolution No. 108 (KY) supports legislation to amend 38 USC 620 so as to extend community nursing home care at Veterans Administration expense to nine months.

B. Extend the grant-in-aid program for Philippine veterans

1976 Convention Resolution No. 166 (P.I.) seeks legislation to extend beyond June 30, 1978, the grants-in-aid program to the Veterans Memorial Hospital, Philippine Islands.

C. VA alcohol and drug treatment programs

1976 Fall NEC Resolution No. 21 urges the Veterans Administration to proceed with formulation of a comprehensive alcohol and drug treatment and rehabilitation program encompassing the entire VA system of hospitals and clinics; and, urges Congress, in funding VA health care programs, to assign high priority to the VA alcohol and drug treatment and rehabilitation programs.

INSURANCE

A. Special government insurance for Vietnam era veterans

1976 Convention Resolution No. 52 (OH) supports legislation so as to provide a special Government Life Insurance program for Vietnam Era veterans.

ARMED FORCES REVIEW BOARDS

A. Characterization of military discharges

1976 Convention Resolution No. 137 (MA) opposes any move by Congress or the military departments to eliminate characterization of discharge, to lower the requirements for an Honorable Discharge, or to demean in any way the special significance appertaining to the concept of honest and faithful service.

ARGENTINA

Mr. KENNEDY. Mr. President, I must speak once again of the conditions of human rights in Argentina. Despite the many public protests against the operation of parapolice squads either tolerated or encouraged by the government and the security forces of Argentina, the situation has deteriorated.

A report in the most recent amnesty publication indicates that the refugee communities are one of the major targets of the parapolice activity. According to the article the refugee community has become increasingly subject to persecution and assassination since the March 1976 coup.

The article states that at least 1,300 people have been killed in the last year. Some were active in politics. But others were the wife or daughter, teacher or student of the suspect individual. Young children have been abducted and killed along with their parents.

Another article on Argentina is also in the amnesty publication. This is derived from testimony given to amnesty by Washington Perez, a Uruguayan exile formerly in Argentina, on the persecution and torture of two prominent Uruguayan labor leaders, Gerardo Gatti and Leon Duarte.

Mr. President, I ask unanimous consent that these articles be printed in the RECORD. It is important that the Senate takes notice of such gross violations of human rights.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TERROR—ARGENTINA STYLE

The door bursts open in the middle of the night. Heavily armed men ransack the house—photographs, books, papers—torn, burned, or confiscated to be used as evidence in trials that never take place. If there is resistance, beating takes place on the spot. In front of wives and children, including wives and children. So begins terror Argentina style.

This chilling scene, directed and staring the rightist forces of the dreaded Triple A—the Argentine Anti-Communist Alliance—is repeated again and again with no government or police interference in the suburbs of Buenos Aires. Victims have included former Uruguayan Senator Zelmar Michelini, former President of the Chamber of Representatives in Uruguay Hector Gutierrez Ruiz, Michelini's daughter and son-in-law, noted Argentinian novelist and journalist Haroldo Conti, and husbands of ordinary Argentinian citizens or Latin American refugees.

Violence is engulfing Argentina. So far this year at least 1,300 people have been killed in the war waged by the security forces against subversives. Some of those abducted, murdered, disappeared, or imprisoned were active in politics—members of trade unions, or teachers unions before those organizations were outlawed; some leaders or members of political parties who opposed the totalitarian regimes now in power in Uruguay and Argentina; but others are singled out for persecution for being the wife or daughter of an individual being sought, for having been a teacher of or student of a suspect individual, for being a refugee, or for no apparent reason at all. The vengeance of the right wing death squad respects neither age nor profession. Young children have been abducted and killed with their parents. Last summer, the AAA shocked public opinion in Argentina with the murders of five churchmen as they kneeled in their parish residence. The murders were a random retaliation for a bombing of a police station which killed 18 policemen.

POLITICAL OPPONENTS MARKED FOR DEATH

The kidnappings and killings show no sign of abating. Recent targets of the para-police squads have been leading members of Argentine political parties, and in some cases their wives and children. The son of former deputy Jose Cane was kidnapped in Buenos Aires on October 20, and a few days later, the invalid son of former senator Pedro Avalos was dragged from his home in the northern province of Missiones. In Chubut, in the south of the country, the former secretary-general of the Communist Party, Elbio Bel, was abducted with his baby son, although the child was later returned. An official of the Popular Socialist Party, Sergio Maida, was kidnapped together with his wife in early November.

These most recent incidents followed the death in military custody of Mario Amaya, former deputy of the center Radical Party. Senor Amaya and his colleague, former senator Hipolito Solari Irigoyen, were abducted on August 17 by unidentified armed men described by the government as "members of the extreme right who had escaped the control of the armed forces." After a national outcry, the two former parliamentarians were rescued by the military two weeks later. They were not released, but taken to a military detention center "for interrogation," and reportedly beaten systematically for 15 days. Senor Amaya died from his injuries on October 19. Senor Solari Irigoyen is still in prison.

The Argentinian security forces have been reporting increasing success against the left-wing guerrilla organizations which are blamed by the government with threatening the social fabric of the country. After the March 24, 1975 coup against Isabel Peron, General Jorge Videla pledged to contain the violence and to safeguard human rights. In a speech of March 21 broadcast on national television and radio General Videla gave this assurance: "For us, respect for human rights is based not on legal mandates or international declarations, but is a result of our profound Christian convictions on the pre-eminent dignity of man as a fundamental value." Yet, there is no doubt that the paramilitary ultrarightist security forces responsible for the brutal murders of Michelini, Ruiz, the five priests, the murder of 46 people in two separate mass executions, operate with the connivance and collaboration of the regular police, armed forces, and intelligence source. Witnesses to murders and abductions have frequently mentioned the proximity of police cars and the impunity with which the masked armed men in unmarked cars gather their startled prey.

REFUGEES IN DANGER

Until very recently, Argentina had been a country open to receiving the oppressed from neighboring countries. After the military coup in Chile and the military putsch in Uruguay, it became the only country in the southern cone of Latin America to which exiles could go and receive some measure of protection. The population of political exiles relates directly to the erosion of democratic governments in the southern cone of Latin America. In general, that population consists of people with leftwing views, who are in opposition to the rightwing governments of Chile, Uruguay, Bolivia, Paraguay and Brazil.

—Paraguay: many Paraguayans have been forced to leave their country since General Stroessner came to power in 1954.

—Brazil: many Brazilians have settled in Argentina since the coup of 1964, which overthrew the democratically elected government of Joao Goulart. Many Brazilians are now refugees for the third time, having previously sought asiyum in Uruguay in the sixties and in Chile under the Allende government.

—Bolivia: many Bolivians entered Argentina after the military coup of August 1971 which brought President Banzer to power and overthrew the government of Juan J. Torres.

—Uruguay: thousands of Uruguayans have fled the country since the abolition of all civil institutions in their country in June 1973, which was formerly one of Latin America's oldest democracies.

—Chile: since the coup, thousands of Chileans have crossed the border into Argentina as a result of the political and economic repression. Many of these have entered the country illegally. Approximately 12,000 Bolivians and Uruguayans had sought political asylum in Chile under the Frei and Allende governments. All left Chile after the coup of September 1973 and the great majority were resettled in Argentina while the remainder came to Europe, notably Sweden and France.

Well founded fears of repression and reprisals keep refugees from registering either with the Argentinian authorities or refugee agencies such as the United Nations High Commission for Refugees which make accurately estimating the total number in Argentina difficult. It has been suggested that the figure is about 100,000, although this may be a conservative assessment.

MINISTRY OF SOCIAL WELFARE

After the death of Peron, political exiles were made to feel increasingly unwelcome in Argentina. With major decisions under the brief presidency of Isabel Peron being made by her foremost aide and confidante, the then Minister of Social Welfare, Jose Lopez Rega, the situation deteriorated rapidly. Right-wing assassination squads began to operate with complete impunity and the vulnerable refugee community attracted the AAA like a magnet. It was later alleged that Lopez Rega had himself created the assassination squads and that they had apparently been financed and their actions coordinated from the Ministry of Social Welfare.

As bad as the situation was under Isabel Peron and in spite of the statements made after the coup by the new Argentinian authorities that international law would be respected, the violence perpetuated against refugee communities has escalated murderously since the March 1976 coup. Just as occurred in Chile after the September 1973 coup, the refugee sector of the population became increasingly subject to persecution, torture and assassination, because, in the eyes of the security forces, exiles were seen as potential subversive elements.

RAIDS

In the days immediately following the coup, as if to demonstrate the intention of the security forces under the new government, terrifying and brutal raids were carried out on refugee centers throughout Argentina.

In Buenos Aires, one of the raids was on the Hotel Corrientes run by CAREF, a church organization to help refugees. Pastor Armin Inle, the head of CAREF, was detained for 24 hours. Refugees staying in the hotel were

beaten up and released after a few days. Before their release, some of the refugees were forced to sign documents claiming they had committed "traicon a la patria" (treason to the fatherland). They were issued expulsion orders.

In a raid on the hostel Jose C. Paz, also in Buenos Aires, 19 refugees, including two children were detained and tortured. Some were released after six days, others remained in Cordoba--a refugee center run by the United Nations—it too was raided. This center is situated in the Campo de Mayo area of Cordoba near a military barracks where many of the disappeared persons are reported to be held. Eighteen people from this center were charged with espionage in the military region and served with expulsion orders.

Similar raids were also carried out in four refugee hostels in Mendoza.

On June 11, a group of 24 refugees of Chilean and Uruguayan nationality were kidnapped from two hotels in Buenos Aires. Two Chileans from this group arrived in London in August under the British government's plan to provide visas for 75 refugees and their families at present under threat in Argentina. At a press conference the two men, Carlos Ayala and Jose Sepulveda, described their abduction which was carried out by forty heavily armed men claiming to be police. As a result of international pressure, the refugees were released, but not before they had been beaten up and subjected to electric shock treatment.

"We were continuously beaten after they took us from the hotel. We were kept blindfolded all the time and stripped of our clothes. Everyone was screaming in agony."

Both Jose Sepulveda and Carlos Ayala had fled to Argentina after the September 1973 coup in Chile.

COLLABORATION

Ary Cabrera, aged 48, married with two children, abducted in Buenos Aires on April 7 by armed men; Telba Juares, 29-year-old teacher, escaped from a Uruguayan prison and fled to Argentina in 1973, abducted in Buenos Aires by armed men; Ricardo Gil Iribarne, aged 27, an economics teacher, married with an infant child, disappeared; student, Eduardo Chiazzola, disappeared; mother, Elida Alvarez, disappeared—the documented death list of Uruguayan refugees begins. On April 23 and 24 five tortured and mutilated bodies, one of them a woman's, washed on to the Uruguayan shore of the River Plate which divides Uruguay from Argentina. The Uruguayan authorities claimed that they were persons of Asian origin, who were probably killed in a quarrel on a fishing boat some 20 days earlier. However, relatives claimed that the bodies were those of the five disappeared exiles named above. One of them had been identified despite the advanced state of decomposition of the bodies.

The evidence of collaboration between the Argentinian and Uruguayan security forces to systematically eliminate Uruguayans living in exile has been mounting steadily. Recent information has established that there are Uruguayan security forces currently operating in the country with the tacit support of the Argentinian authorities. Reliable sources have spoken of the existence of the Plan Mercurio whose objective is to get rid of all Uruguayans of leftwing tendencies living in Argentina. There is a specially selected force of Uruguayan army personnel to direct the campaign, under the direction of Colonel Ramirez, who according to information from refugees, has recently arrived from the United States. With his second in command, one Campos Hermida, a member of the Uruguayan police force, he operates from private houses without any set headquarters in Argentina. Fourteen Uruguayans who were among 60 kidnapped in two incidents in Argentina were identified by a Uruguayan armed forces communique of October 28 as subversives now in detention in Uruguay.

Uruguayan trade unionists in exile in Argentina have been particularly frequent targets of this semiclandestine operation of Argentinian and Uruguayan forces. They account for a high percentage of the kidnap and murder victims of the past months.

ADM. STANSFIELD TURNER

Mr. PERCY. Mr. President, the confirmation hearing on the nomination of Adm. Stansfield Turner to be Director of the Central Intelligence Agency was held before the Intelligence Committee today. I ask unanimous consent that my statement made at the hearing be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

We in Illinois are proud to introduce to you a distinguished native son, Admiral Stansfield Turner. Stansfield Turner is a man of many proven abilities. He is a recognized scholar, capping his number one position in his class at the Naval Academy with a Rhodes Scholarship. He has made a significant contribution to the intellectual world through his writings and as an innovative and extremely effective President of the Naval War College.

But Admiral Turner is more than an intellectual. He has consistently proven his merit as a commander both of U.S. and NATO forces. Through his naval career he has commanded minesweepers, destroyers, guided missile frigates, a carrier task group, NATO Striking Fleet Atlantic, and he is presently Commander-in-Chief of Allied Forces Southern Europe.

In his Washington assignments he has been in the vanguard of Navy and Defense decisionmaking. In highly competitive assignments on the staffs of the Chief of Naval Operations and the Assistant Secretary of Defense for Systems Analysis, and as Aide and Executive Assistant to the Secretary of the Navy he compiled an outstanding record of performance.

Now that Admiral Turner has reached the top rank in the Navy, been acclaimed for his creativity, lauded for his administrative abilities and proven himself an outstanding diplomat in his varied assignments, the President has called upon him to make use of all of these considerable talents. I can think of no more difficult challenge than that facing him as the Director of Central Intelligence. And I can think of no one better qualified to assume this key assignment. We in Illinois have no doubt that he will meet all of the challenges and take all of the frustrations in stride. I am sure that you will find Admiral Turner an excellent choice for this critical and sensitive post.

PROTECTING OLDER AMERICANS AGAINST OVERPAYMENT OF INCOME TAXES

Mr. KENNEDY. Mr. President, one of the greatest inequities in our Nation's Federal taxation system is that millions of Americans needlessly overpay their income taxes each year. Most are unaware of the helpful deductions Congress has enacted through out the years designed to save them considerable tax dollars on tax returns.

Unfortunately, the vast majority of the Nation's taxpayers—especially our older citizens—cannot afford the tremendous cost of seeking professional assistance through private income tax preparation companies. Once again, those who can least afford it have the most to lose from the lack of coherent information on our Nation's tax laws.

To provide protection against this serious handicap, the Committee on Aging, on which I serve, has published a checklist of itemized deductions for elderly persons and, of course, other age groups as well.

The information contained in this important publication will hopefully provide millions of Americans with appropriate remedies to lessen their individual tax burdens.

This publication contains important information on most allowable deductions, for example, for those Americans who itemize their deductions, this checklist can be advantageous in determining whether or not it would be more beneficial to claim the standard deduction.

In my home State of Massachusetts, as across the Nation, the serious economic problems which affect our Nation's elderly citizens warrants greater national attention. This important publication is just a small step by Congress to insure that beneficial information on our Nation's tax laws is available to all Americans regardless of their individual income.

Mr. President, I ask unanimous consent that the Committee on Aging publications, "Protecting Older Americans Against Overpayment of Income Taxes," be printed in the RECORD.

There being no objection, the publication was ordered to be printed in the RECORD, as follows:

PROTECTING OLDER AMERICANS AGAINST OVERPAYMENT OF INCOME TAXES

PREFACE

Over the years the Committee on Aging has published a checklist of itemized deductions to help protect older and younger Americans from overpaying their income taxes.

Hearings conducted by the Committee have made it clear that many individuals pay more income taxes than are legally due.

Some are overwhelmed by the complexities in the tax law. Others are totally unaware of helpful deductions that can save them precious dollars.

The Committee is again updating its summary to reflect recent changes in the tax law for 1976. Major revisions are required because of the enactment of the Tax Reform Act of 1976. Several provisions in the new law—such as the credit for employment-related child and dependent care expenses, the liberalization of the personal exemption credit, and the new elderly credit—will ease the tax burden for many older Americans and other taxpayers. But these measures will be of little value unless taxpayers are aware of their existence.

Once again, the Committee emphasizes that this summary is not intended to be an all-inclusive checklist for every conceivable circumstance. However, it can be useful for the vast majority of taxpayers in assuring that they claim deductions, credits, and exemptions to which they are legitimately entitled. Moreover, the checklist can provide guidance in determining whether it would be more advantageous to itemize deductible expenses, claim the standard deduction, or use the tax tables.

This summary may be valuable in other ways as well. Upon reading the checklist,

taxpayers may discover that they failed to claim allowable deductions on prior returns. These individuals, however, can obtain a refund for qualifying deductible expenditures which were overlooked by filing an amended return—Form 1040X—for the year in question. But Form 1040X must be filed within three years after the original return was due, or filed or within two years from the time the tax was paid, whichever is later.

The Committee also wants to thank the dedicated and competent staff of the Internal Revenue Service who reviewed this publication for accuracy, clarity, and readability. They have performed a valuable public service which will help many Americans in preparing their tax returns.

FRANK CHURCH,
Chairman.
HIRAM L. FONG,
Ranking Minority Member.

CHECKLIST OF ITEMIZED DEDUCTIONS FOR SCHEDULED A (FORM 1040)

Medical and dental expenses

Medical and dental expenses (unreimbursed by insurance or otherwise) are deductible to the extent that they exceed 3 percent of a taxpayer's adjusted gross income (line 15c, Form 1040).

Insurance premiums

One-half of medical, hospital or health insurance premiums are deductible (up to $150) without regard to the 3 percent limitation for other medical expenses. The remainder of these premiums can be deducted, but is subject to the 3 percent rule.

Drugs and medicines

Included in medical expenses (subject to 3 percent rule) but only to extent exceeding 1 percent of adjusted gross income (line 15c, Form 1040).

Other medical expenses

Other allowable medical and dental expenses (subject to 3 percent limitation):

Abdominal supports (prescribed by a doctor).
Acupuncture services.
Ambulance hire.
Anesthetist.
Arch supports (prescribed by a doctor).
Artificial limbs and teeth.
Back supports (prescribed by a doctor).
Braces.
Capital expenditures for medical purposes (e.g., elevator for persons with a heart ailment)—deductible to the extent that the cost of the capital expenditure exceeds the increase in value to your home because of the capital expenditure. Taxpayer should have an independent appraisal made to reflect clearly the increase in value.
Cardiographs.
Chiropodist.
Chiropractor.
Christian Science practitioner, authorized.
Convalescent home (for medical treatment only).
Crutches.
Dental services (e.g., cleaning, X-ray, filling teeth).
Dentures.
Dermatologist.
Eyeglasses.
Food or beverages specially prescribed by a physician (for treatment of illness, and in addition to, not as substitute for, regular diet; physician's statement needed).
Gynecologist.
Hearing aids and batteries.
Home health services.
Hospital expenses.
Insulin treatment.
Invalid chair.
Lab tests.
Lipreading lessons (designed to overcome a handicap).
Neurologist.
Nursing services (for medical care, including nurse's board paid by you).
Occupational therapist.
Ophthalmologist.
Optician.
Optometrist.
Oral surgery.
Osteopath, licensed.
Pediatrician.
Physical examinations.
Physical therapist.
Physician.
Podiatrist.
Psychiatrist.
Psychoanalyst.
Psychologist.
Psychotherapy.
Radium therapy.
Sacroiliac belt (prescribed by a doctor).
Seeing-eye dog and maintenance.
Speech therapist.
Splints.
Supplementary medical insurance (Part B) under Medicare.
Surgeon.
Telephone/teletype special communications equipment for the deaf.
Transportation expenses for medical purposes (7¢ per mile plus parking and tolls or actual fares for taxi, buses, etc.)
Vaccines.
Vitamins prescribed by a doctor (but not taken as a food supplement or to preserve general health).
Wheelchairs.
Whirlpool baths for medical purposes.
X-rays.

Taxes

Real estate.
State and local gasoline.
General sales.
State and local income.
Personal property.

If sales tax tables are used in arriving at your deduction, you may add to the amount shown in the tax tables only the sales tax paid on the purchase of five classes of items: automobiles, airplanes, boats, mobile homes, and materials used to build a new home when you are your own contractor.

When using the sales tax tables, add to your adjusted gross income any nontaxable income (e.g., Social Security, Veterans' pensions or compensation payments, Railroad Retirement annuities, workmen's compensation, untaxed portion of long-term capital gains, recovery of pension costs, dividends untaxed under the dividend exclusion, interest on municipal bonds, unemployment compensation and public assistance payments).

Contributions

In general, contributions may be deducted up to 50 percent of your adjusted gross income (line 15c, Form 1040). However, contributions to certain private nonprofit foundations, veterans organizations, or fraternal societies are limited to 20 percent of adjusted gross income.

Cash contributions to qualified organizations for (1) religious, charitable, scientific, literary or educational purposes, (2) prevention of cruelty to children or animals, or (3) Federal, State or local governmental units (tuition for children attending parochial schools is not deductible). Fair market value of property (e.g., clothing, books, equipment, furniture) for charitable purposes. (For gifts of appreciated property, special rules apply. Contact local IRS office.)

Travel expenses (actual or 7¢ per mile plus parking and tolls) for charitable purposes (may not deduct insurance or depreciation in either case).

Cost and upkeep of uniforms used in charitable activities (e.g., scoutmaster).

Purchase of goods or tickets from charitable organizations (excess of amount paid over the fair market value of the goods or services).

Out-of-pocket expenses (e.g., postage, stationery, phone calls) while rendering services for charitable organizations.

Care of unrelated student in taxpayer's home under a written agreement with a qualifying organization (deduction is limited to $50 per month).

Interest

Home mortgage.
Auto loan.
Installment purchases (television, washer, dryer, etc.).
Bank credit card—can deduct the finance charge as interest if no part is for service charges, loan fees, credit investigation fees, or similar charges.
Points—deductible as interest by buyer where financing agreement provides that they are to be paid for use of lender's money. Not deductible if points represent charges for services rendered by the lending institution (e.g., VA loan points are service charges and are not deductible as interest). Not deductible if paid by seller (are treated as selling expenses and represent a reduction of amount realized).
Penalty for prepayment of a mortgage—deductible as interest.
Revolving charge accounts—may deduct the "finance charge" if the charges are based on your unpaid balance and computed monthly.
Other charge accounts for installment purchases—may deduct the lesser of (1) 6 percent of the average monthly balance (average monthly balance equals the total of the unpaid balances for all 12 months, divided by 12) or (2) the portion of the total fee or service charge allocable to the year.

Casualty or theft losses

Casualty (e.g., tornado, flood, storm, fire, or auto accident provided not caused by a willful act or willful negligence) or theft losses to nonbusiness property—the amount of your casualty loss deduction is generally the lesser of (1) the decrease in fair market value of the property as a result of the casualty, or (2) your adjusted basis in the property. This amount must be further reduced by any insurance or other recovery, and, in the case of property held for personal use, by the $100 limitation. You may use Form 4684 for computing your personal casualty loss.

Credit for child and dependent care expenses

Certain payments made for child and dependent care may now be claimed as a credit against tax instead of as an itemized deduction.

If a taxpayer maintained a household that included a child under age 15 or a dependent or spouse incapable of self-care, a taxpayer may be allowed a 20 percent credit for employment related expenses. These expenses must have been paid during the taxable year in order to enable the taxpayer to work either full or part time.

For detailed information, see the instructions for Form 2441 on page 17.

Miscellaneous

Alimony and separate maintenance (periodic payments).
Appraisal fees for casualty loss or to determine the fair market value of charitable contributions.
Union dues.
Cost of preparation of income tax return.
Cost of tools for employee (depreciated over the useful life of the tools).
Dues for Chamber of Commerce (if as a business expense).
Rental cost of a safe-deposit box income-producing property.
Fees paid to investment counselors.
Subscriptions to business publications.
Telephone and postage in connection with investments.
Uniforms required for employment and not generally wearable off the job.

Maintenance of uniforms required for employment.

Special safety apparel (e.g., steel toe safety shoes or helmets worn by construction workers; special masks worn by welders).

Business entertainment expenses.

Business gift expenses not exceeding $25 per recipient.

Employment agency fees under certain circumstances.

Cost of a periodic physical examination if required by employer.

Cost of installation and maintenance of a telephone required by the taxpayer's employment (deduction based on business use).

Cost of bond if required for employment.

Expenses of an office in your home if employment requires it.

Payments made by a teacher to a substitute.

Educational expenses required by your employer to maintain your position or for maintaining or sharpening your skills for your employment.

Political Campaign Contributions.—Taxpayers may now claim either a deduction (line 32, Schedule A, Form 1040) or a credit (line 52, Form 1040), for campaign contributions to an individual who is a candidate for nomination or election to any Federal, State, or local office in any primary, general or special election. The deduction or credit is also applicable for any (1) committee supporting a candidate for Federal, State, or local elective public office, (2) national committee of a national political party, (3) State committee of a national political party, or (4) local committee of a national political party. The maximum deduction is $100 ($200 for couples filing jointly). The amount of the tax credit is one-half of the political contribution, with a $25 ceiling ($50 for couples filing jointly.

Presidential Election Campaign Fund.—Additionally, taxpayers may voluntarily earmark $1 of their taxes ($2 on joint returns) for the Presidential Election Campaign Fund.

For any questions concerning any of these items, contact your local IRS office. You may also obtain helpful publications and additional forms by contacting your local IRS office.

OTHER TAX RELIEF MEASURES

Filing status:	Required to file a tax return if gross income is at least—
Single (under age 65)	$2,450
Single (age 65 or older)	3,200
Qualifying widow(er) under 65 with dependent child	2,850
Qualifying widow(er) 65 or older with dependent child	3,600
Married couple (both spouses under 65) filing jointly	3,600
Married couple (1 spouse 65 or older) filing jointly	4,350
Married couple (both spouses 65 or older) filing jointly	5,100
Married filing separately	750

Additional Personal Exemption for Age.—Besides the regular $750 exemption allowed a taxpayer, a husband and wife who are 65 or older on the last day of the taxable year are each entitled to an additional exemption of $750 because of age. You are considered 65 on the day before your 65th birthday. Thus, if your 65th birthday is on January 1, 1977, you will be entitled to the additional $750 personal exemption because of age for your 1976 Federal income tax return.

General Tax Credit.—A new general tax credit is available. For this credit, the taxpayer may claim the greater of (1) $35 per exemption shown on line 6d, Form 1040A or Form 1040, or (2) 2 percent of taxable income (line 15, Form 1040A or line 47, Form 1040) but not more than $180 ($90, if married, filing separately).

Multiple Support Agreements.—In general, a person may be claimed as a dependent of another taxpayer, provided five tests are met: (1) Support, (2) gross income, (3) member of household or relationship, (4) citizenship, and (5) separate return. But in some cases, two or more individuals provide support for an individual, and no one has contributed more than half the person's support. However, it still may be possible for one of the individuals to be entitled to a $750 dependency deduction if the following requirements are met for multiple support:

1. Two or more persons—any one of whom could claim the person as a dependent if it were not for the support test—together contribute more than half of the dependent's support.

2. Any one of those who individually contribute more than 10% of the mutual dependent's support, *but only one of them,* may claim the dependency deduction.

3. Each of the others must file a written statement that he will not claim the dependency deduction for that year. The statement must be filed with the income tax return of the person who claims the dependency deduction. Form 2120 (Multiple Support Declaration) may be used for this purpose.

Sale of Personal Residence by Elderly Taxpayers.—A taxpayer may elect to exclude from gross income part or, under certain circumstances, all of the gain from the sale of his personal residence, provided:

1. He was 65 or older before the date of the sale, and

2. He owned and occupied the property as his personal residence for a period totaling at least 5 years within the 8-year period ending on the date of the sale.

Taxpayers meeting these two requirements may elect to exclude the entire gain from gross income if the adjusted sales price of their residence is $20,000 (this amount will increase to $35,000 for taxable years beginning after December 31, 1976) or less. (This election can only be made once during a taxpayer's lifetime.) If the adjusted sales price exceeds $20,000 (this amount will increase to $35,000 for taxable years beginning after December 31, 1976), an election may be made to exclude part of the gain based on a ratio of $20,000 (this amount will increase to $35,000 for taxable years beginning after December 31, 1976) over the adjusted sales price of the residence. Form 2119 (Sale or Exchange of Personal Residence) is helpful in determining what gain, if any, may be excluded by an elderly taxpayer when he sells his home.

Additionally, a taxpayer may elect to defer reporting the gain on the sale of his personal residence if within 18 months before or 18 months after the sale he buys and occupies another residence, the cost of which equals or exceeds the adjusted sales price of the old residence. Additional time is allowed if (1) you construct the new residence or (2) you were on active duty in the U.S. Armed Forces. Publication 523 (Tax Information on Selling Your Home) may also be helpful.

Credit for the Elderly.—A new, expanded, and simplified credit for the elderly has replaced the former more complex retirement income credit.

A taxpayer may be able to claim this credit and reduce taxes by as much as $375 (if single), or $562.50 (if married filing jointly), if the taxpayer is:

(1) Age 65 or older, or

(2) Under age 65 and retired under a public retirement system.

To be eligible for this credit, taxpayers no longer have to meet the income requirement of having received over $600 of earned income during each of any 10 years before this year.

For more information, see instructions for Schedules R and RP.

Earned Income Credit.—A taxpayer who maintains a household for a child who is under age 19, or is a student or is a disabled dependent, may be entitled to a special payment or credit of up to $400. This is called the earned income credit. It may come as a refund check or be applied against any taxes owed. Generally, if a taxpayer reported earned income and had adjusted gross income (line 15c, Form 1040) of less than $8,000, the taxpayer may be able to claim the credit.

Earned income means wages, salaries, tips, other employee compensation, and net earnings from self-employment (generally amount shown on Schedule SE (Form 1040) line 13). A married couple must file a joint return to be eligible for the credit. Certain married persons living apart with a dependent child may also be eligible to claim the credit.

For more information, see instructions for Form 1040 or 1040A.

EDITORIAL ON PAUL C. WARNKE

Mr. THURMOND. Mr. President, the New York Daily News, in their edition of February 11, 1977, offered an editorial entitled "Warnke Is Not the Man." The thrust of this editorial is in line with the concerns expressed by many of us here in Congress.

It is felt he would not be a strong negotiator in view of his numerous statements in the past urging cancellation of important U.S. weapons systems.

The editorial writer further points out the authoritative Paul Nitze, who was at one time Mr. Warnke's boss in the Pentagon, sees the nominee as a soft negotiator.

Mr. President, I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Daily News, Feb. 11, 1977]

WARNKE IS NOT THE MAN

We entertain no delusions about the impact of our words in the salons of Washington, but when a voice as presigious and authoritative as Paul Nitze's speaks out, we trust the people who control the reins of government will lend an attentive ear.

In testimony before the Senate Foreign Relations Committee Wednesday, Nitze raised serious questions about Paul C. Warnke being named the chief U.S. arms negotiator with the Soviet Union.

Although President Carter has stoutly defended Warnke as a tough negotiator, Nitze says the opposite is true.

Nitze, former arms negotiator and deputy defense secretary, insists that all of Warnke's opinions indicate he is too soft for the job—and for the nation's safety.

During the second debate with President Ford, Mr. Carter made it clear that the U.S. would have a defense capability "second to none" if he were elected. But the record shows that Warnke, as of late last year, was willing to allow the Soviets some clear strategic nuclear advantages.

We can't figure out how Carter got Warnke's name past Zbigniew Brzezinski, the President's tough national security adviser. The two are like night and day when it comes to dealing with the Soviets.

The bottom line is that the Kremlin only respects negotiators who are strong in their convictions and who know how to drive a hard bargain. Warnke is neither, and we

hope the President will reconsider his nomination.

LATEST MERGER SERIES

Mr. ABOUREZK. Mr. President, while the Government agonizes about ways to stimulate the economy and increase capital investment in new, job-creating capacity, the corporations continue to pursue their own, counterproductive policies.

I am referring to the conglomerate policy, in which companies use the money generated by high profits not to buy new pollution control equipment, or to update their plants, or to find more energy-efficient processes to accomplish production, or to build new plants to make better goods, but to buy up existing firms. So not only do we forfeit the potential benefits of expansion into new area, or lower prices, but we also gradually lose the diverse, independently managed and owned business base that has allowed for the growth of a relatively fine-tuned economy in this country.

We have a new wave of mergers in our already topheavy economy, and it will undermine our efforts to pump productivity and expansion and jobs back into the economy. We will get administered price inflation and stagnation, despite the best efforts of the Government. It is for this reason that Senator Phil Hart urged, as I have also urged, antitrust action to break up these companies. At the very least, we have the responsibility not to let concentration increase and mergers continue to the detriment of a healthy economy.

Mr. President, I ask unanimous consent that an article detailing the latest merger series from the Wall Street Journal be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wall Street Journal, Feb. 18, 1977]

CASH-LADEN FIRMS ARE IN A MARRYING MOOD, SPURRING MERGER WAVE

(By Ralph E. Winter)

The big merger is back.

After five years or so of much-diminished corporate merger and acquisition activity, a new wave of major corporate combinations appears to be taking place. It is being sparked by factors ranging from corporate prosperity and easier credit to higher stock prices, management conservatism, and, ironically, increased government regulation.

It is still too early to say whether this round will have as great an impact on the American business scene as the merger mania of the late 1960s and early 1970s. Then, such corporate giants as Gulf & Western Industries Inc., International Telephone & Telegraph Corp., Litton Industries Inc. and LTV Corp. were assembled from scores of smaller companies. But it is clear that the current merger movement is going to result in a significant change in the structure of business. For one thing, there will be a further concentration of decision-making power in the board rooms of a smaller number of huge companies.

Of course, the urge to merge never completely died, even during the 1974–75 recession. In 1975, for instance, there were 1,288 corporate mergers, according to the Federal Trade Commission. However, that was down nearly 30% from 1,805 in 1974 and down more than 70% from the recent high of 4,542 mergers in 1969, the FTC says. Furthermore, most 1975 mergers were small; 76% involved less than $1 million of assets, the FTC says. The agency hasn't yet tabulated 1976 mergers.

A DRAMATIC RISE

In recent months, though, there has been a dramatic rise in announcements of major acquisitions—those involving tens of millions of dollars. In 1976, there were 39 announcements of mergers or acquisitions in which the purchase price exceeded $100 million. That was almost treble the 14 such transactions announced in 1975, according to W. T. Grimm & Co., a Chicago consulting concern. And 27 of those 1976 announcements came in the latter half of the year.

Major acquisitions are occurring in many industries. They range from publishing, where the S. I. Newhouse interests purchased Booth Newspapers Inc., a chain of Michigan dailies, for $303.6 million in cash to auto shock absorbers, with Tenneco Inc.'s proposed acquisition of Monroe Auto Equipment Co. for about $167 million in common stock. Last December General Electric Co. completed the largest corporate merger ever, paying $2.17 billion in stock for Utah International Inc., a giant mining and natural-resources concern.

For stockholders, the merger movement often is good news. Ordinarily, a company will pay a significant premium above the market price to grab a tempting target. For instance, the common stock of Milgo Electronic Corp. of Miami was selling at less than $20 a share a couple of months ago. But a bidding contest between two potential merger partners has pushed the most recent offer to about $36 a share.

Furthermore, some companies are raising dividends, partly in an effort to increase the price of their stock and partly to reduce their cash buildup; such moves make takeovers more expensive and less lucrative.

JITTERY MANAGEMENTS

But for many corporate managements, the merger resurgence is producing a severe case of the jitters. A calm disclaimer was the response to a recent call to the secretary of a major Midwestern company to inquire about a rumor that a huge conglomerate was accumulating his company's stock. But a follow-up call a few minutes later to tell the official that the rumor was indeed false had to be transferred to the president's office, where the secretary had dashed to discuss the takeover threat.

"Frankly, we are worried," says the chief executive of another Midwestern concern, a capital-goods maker with more than $200 million of annual sales. "We ought to make a major acquisition ourselves to use up some of our cash and make us less vulnerable to takeover."

What the merger trend means to the general public as consumers, employes and taxpayers is more difficult to assess. Merger proponents say the takeover of a smaller concern by a larger one frequently gives the smaller company additional muscle for expansion, as well as new technology, management assistance to improve efficiency, and a greater ability to survive recession.

CONCENTRATION OF POWER

But critics of the trend worry about the reduction in the number of independent companies. "This kind of concentration of power concerns me personally, but the antitrust laws as they're currently interpreted don't seem to apply unless there are direct anticompetitive aspects," says Daniel C. Schwartz, an assistant director of the FTC's Bureau of Competition.

Critics also note that an acquisition sometimes can be a substitute for constructing a new plant or introducing a new product line. "If a big company with surplus cash buys another company, it solves a problem for the buyer, but it means some new facility doesn't get built," says a top executive of a consumer-products company that recently made a cash acquisition.

Many of the companies being merged into larger concerns these days aren't floundering little businesses that need to be rescued from imminent insolvency. Nor are they necessarily being combined with closely related businesses to form a more efficient whole. Quite the contrary. Many of the large mergers and acquisitions announced recently involve the takeover of a large company by a still-larger one that is seeking to diversify into a new but usually related business.

In this, the present mergers differ both from those of eight or 10 years ago and from those of the 1972–75 era. In the earlier period, disparate enterprises were being thrown together, such as the formation of the current ITT from manufacturing, communications, insurance, leasing and other unrelated enterprises. That era was followed by a period of digestion and consolidation in which the typical acquisition involved the purchase of small enterprises that added to an existing product line.

The current round is illustrated by the recently proposed merger of Koehring Co. into Fruehauf Corp. for Fruehauf common and preferred stock valued at about $57 million.

Koehring, based in Milwaukee, had sales of $342.6 million in the fiscal year ended last Nov. 30. It is a producer of cranes and excavators, hydraulic controls, and other capital equipment. A series of divestitures of unprofitable units, combined with the economic recovery, raised its net income in fiscal 1976 to $8.9 million, or $2.52 a share, from $3.6 million, or 71 cents a share, in fiscal 1975.

For Fruehauf, which is based in Detroit, the purchase of Koehring would increase its sales about 25%. At the same time the acquisition would offer Fruehauf a diversification from its main business of producing semitrailers and freight containers. But, unlike many of the mergers of the 1970s, the businesses are somewhat related; both companies are capital-goods manufacturers.

Why have such major mergers come into favor recently? For one thing, many big companies have accumulated cash in the last year—cash that they would like to invest in productive assets. And many see a favorable cash flow for several years to come. "We pretty well know what we have to spend to meet market demands for our current products, and we are spending to accomplish that," says James W. McSwiney, chairman of Mead Corp., a Dayton-based forest-products, castings, furniture and distribution company. "But with the kind of money we're generating, we feel that we can finance a new business," he adds, explaining Mead's aggressive acquisition search.

Another factor is that stock prices are generally higher than their 1974–75 levels. Thus, a buyer would have to issue fewer shares of its stock to purchase another concern. "The use of shares or securities that can be converted into stock is much easier than it would have been a year or so ago," says Ward Smith, president of White Consolidated Industries Inc., which is also actively seeking merger partners. The stock of the Cleveland-based company is selling at around $25 a share, up from about $10 two years ago.

While stock prices are up, interest rates are down. So a buyer could market bonds or other debt securities to raise cash to purchase a company and would have to pay relatively low interest rates compared with a year or two ago. "Thus," Mr. Smith says, "it has become easier to make a deal regardless of which preference the seller may have."

At the same time, many potential merger candidates have also strengthened their balance sheets and generally cleaned up their operations, making them more attractive

targets. Koehring, for instance, wouldn't have been nearly so inviting two years ago. On Nov. 30, 1974, the company owed $66.1 million of short-term debt and another $79.2 million of long-term debt. Two years later short-term debt was down sharply to $1.1 million, all overseas, and long-term obligations were reduced somewhat to $72.9 million. Six operations that had been eating up capital and producing little or no profit in 1974 were liquidated before the end of 1976.

Ironically, the improved conditions of potential takeover targets are turning them into aggressors; as defensive maneuvers, some of these companies are seeking to acquire other concerns. For example, by late last summer Lamson & Sessions Co., a Cleveland-based nut and bolt maker, had accumulated about $10 million in cash. It had little debt and no need for sizable investment in facilities. In fact, plans already on the drawing boards to realign screw and bolt production would permit sale of a major plant and allow a sizable reduction of inventory, bringing in cash.

With its common stock selling at about $15, the company had a market value of only around $26 million. "Someone could have practically bought us with our own cash," says George J. Grabner, president. Instead of waiting for that to occur, Mr. Grabner last September made a tender offer for the stock of Youngstown Steel Door Co. and eventually bought that Cleveland-based maker of railroad-car parts for $22 million.

Surprisingly, perhaps, a relatively conservative attitude in many corporate executive suites these days is also a factor behind the present merger wave. Many executives think that it is less risky to spend $50 million or $100 million to buy a company than to spend a like amount to develop a new product, build a plant to produce it and then market it. It is easier to assess the prospects of an existing business than of a new product, they say, and investment in a going concern often starts producing a profit right away.

Also, with the huge inflation in the cost of plant and equipment in recent years, it can be a lot cheaper to buy than to build. "The cost of entering a new market is astronomical compared with buying an entity already in the business," says White Consolidated's Mr. Smith. "Even if the acquired company has some problems, it's easier to cure those problems than to have a baby."

Some executives fear that the new replacement-cost accounting will make it clear that their companies are a bargain. The replacement-cost values for plant and equipment that companies will have to show in 1976 reports are likely to be far above book value used in traditional accounting, which is based on original cost. "Our people have been developing numbers on the value of our assets on a replacement-cost basis," the president of one machinery maker says. "The relationship between those values and what the stock is worth is really scary."

Even the government appears to be inadvertently fostering takeovers, some corporate executives say.

"With the difficulty of obtaining various permits and the environmental-impact studies that must be submitted, it takes years to get a major project off the ground," says the chief financial officer of a billion dollar multinational concern. "For heavy industry, the environmental restrictions have almost reached the point of being ridiculous. And corporate executives don't know what the business environment will be like when the project is completed. All the difficulty and uncertainty tend to make companies purchase existing facilities rather than build new ones," he says, adding that it was a factor in a major acquisition his company made recently.

Finally, the abnormally cold weather and the resulting gas shortage could further encourage companies to make acquisitions with surplus cash instead of building new plants, mainly by bringing home the reality of the nation's energy problems. Existing facilities already have natural-gas allocations, electricity service and established relationships with oil suppliers. Those arrangements aren't perfect, as recent widespread shutdowns because of energy shortages prove. But they may be preferable to seeking energy for a new plant.

ANTHONY DREXEL DUKE AND BOYS HARBOR

Mr. JAVITS. Mr. President, in 1937, Anthony Drexel Duke, while still a student, decided to do something to help disadvantaged youth in New York City. Along with several friends, Tony Duke founded Boys Harbor. Over the years, it has grown from a summer program for 12 impoverished boys to its present status as a nationally acclaimed center for youth development and education.

I believe that the following text on the 40th anniversary on Boys Harbor captures the spirit of the place which has meant so much to thousands of disadvantaged boys and girls.

I ask unanimous consent that the following essay about Tony Duke and Boys Harbor be printed in the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

BOYS HARBOR CELEBRATES 40TH ANNIVERSARY

Boys Harbor has been an inspirational, educational, and vocational, vehicle for over 30,000 New York City and Jersey City underprivileged youngsters. White, Black, and Hispanic children and adolescents have been given the appropriate supportive services and educational opportunities otherwise denied them in society. Today, there are alumni of colleges such as Yale, Howard, Johnson C. Smith, Duke, Harvard, Baruch, Charleton, Wesleyn, and Lincoln.

As a nineteen year old student, Tony Duke began what was then just a summer camp when he became vitally interested in the plight of a dozen youngsters trapped in the Great Depression. Today, these first campers are successful business executives, tradesmen, entrepreneurs and professionals. Duke says, "We attempt to stop the unemployment and underdevelopment experience in its tracks. Our underpinnings, thereby avoiding the cycle of despair which tragically confronts so many Americans."

At one time the work was devoted solely to boys—for the past several years the agency has served both girls and boys and today averages about 1,200 youngsters per year in its array of programs. Having gone co-ed, Boys Harbor is really becoming The Harbor. Predicated on the belief that all young people are entitled to dignity, opportunity, and self-expression, The Harbor's professional staff, numbering over fifty, works closely with each youngster in tailoring a pathway up the ladder of life. The staff instills confidence, fosters competence, and conveys positive concern in a results oriented manner. According to Lonnie Williams, Executive Director, "The Harbor has achieved a 95% success record with its youngsters. One reason is that we commit ourselves to work with a youngster continually from age 7 to age 16. The cumulative effect is dramatic."

Programs in remedial reading and arithmetic, alcohol and drug abuse prevention, nutrition and health, grooming, vocational training, daycare, and the performing arts, all contribute to this outstanding record. The Harbor actually operates the first and only Junior High School for Performing Arts in America. Indeed, many of the students train with the Alvin Ailey troupe on a scholarship basis. An active and productive Parents Committee provides a very necessary ingredient in program development, implementation, and evaluation. The Harbor operates two major facilities—the New York City headquarters is located at 19 East 94th Street, a five-story townhouse; the summer camp is located on fifty acres of land at Three-Mile Harbor, East Hampton, Long Island.

Youngsters are referred to The Harbor from several sources, including law enforcement officials, school guidance counselors, members of the clergy, alumni, Board members, and the youngsters already in the program.

Funding for The Harbor comes from several sources, including private, governmental, foundation, and corporate giving. Its full-time staff is augmented by a host of volunteers. With a thirty member Board of Directors and a twenty member Advisory Board, the staff operates in a totally involved and supportive environment. According to William (Bill) Pickens, Co-Chairman of the Board of Directors, "The Harbor's experience with young people clearly demonstrates that constructive, pragmatic, and long-term results can be achieved through careful needs analyses, sound resource allocation, and intense personal involvement. It is of interest that The Harbor concept has been replicated in other areas of the country."

BOYS HARBOR—AN ENDURING CONTRIBUTION

Mr. PELL. Mr. President, throughout the 40 years, Anthony Drexel Duke has been making a unique and enduring contribution to the lives of thousands of disadvantaged children. Boys Harbor, Long Island, was an experiment that began as a haven for 12 boys two score years ago—and I remember being a counselor there in its early days. Boys Harbor has developed into a co-educational program which provides an opportunity each year for 300 young men and women to grow, to learn, and to become self-sufficient and responsible adults.

Tony Duke has made Boys Harbor into a year-around experience for these children and follows them closely for up to 8 years. This thoughtful, long-range investment in human resources is a splendid model for others to follow, and deserves our recognition and acclaim.

I am delighted to join my good friend and colleague from New York, Senator JAVITS, in focusing well-deserved attention on my old friend Tony Duke and upon Boys Harbor, and wishing him and his endeavor continued good fortune.

DEATH IN UGANDA

Mr. KENNEDY. Mr. President, the recent developments in Uganda, involving the death of the Anglican Archbishop and members of the Ugandan Government, remind us again of the continuing human rights problems in that country and of the difficulties inherent in helping to bring some relief to the people who live there.

The world cannot ignore what has happened in Uganda in recent days. Nor can it brush aside the new fears and concerns expressed by some African leaders over the plight of the Ugandan people.

For estimates suggest that up to 250,000 Ugandan citizens have already lost their lives in recent years as a result of Government policies. Many others have been needlessly detained for political reasons. And still others have left their country as refugees or been summarily expelled by their government, including thousands of Ugandan citizens of South Asian origin.

As chairman of the Subcommittee on Refugees, I want to add my concern over recent developments in Uganda and also express my hope that our own Government, in concert with others and appropriate international humanitarian organizations, will do what it can to bring about a better future for the Ugandan people.

Mr. President, an editorial in Sunday's Washington Post comments on the terror unfolding in Uganda, and I ask unanimous consent that the editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEATH IN UGANDA

The world's credulity might have been strained by the claim of Uganda dictator Idi Amin that three highly placed opponents of his chaotic regime died in an automobile accident—it might have, that is, if it had not already been shredded beyond repair. The blood that had already accumulated on the hands of Amin and his henchmen was more than enough to force even the most generous and reasonable people to reverse the presumption of innocence that otherwise might prevail.

Even so, the mind still boggles at the spectacle of terror now unfolding in Uganda. Anglican Archbishop Janani Luwum, not long before his death, warned that Christians in his country were in "grave jeopardy" from Amin's vicious security forces. Amin is a Moslem. Since the death of the archbishop and two ministers of Amin's government in that implausible "accident," reports from East Africa are grim concerning the fate of Christians and educated members of the Uganda community. It now appears possible that these deaths were part of a growing campaign that could lead to massive murder of men, women and children in that country.

When you think of the prospect of massive religiously motivated carnage in Uganda, it is necessary to recognize that there is plenty of evidence that Idi Amin and mass murder tend to go together. A leading newspaper in neighboring Tanzania branded Amin "the brutal soldier from the upper Nile," and it said that "thousands of innocent Ugandans have been found floating in the River Nile in what Idi Amin calls 'accidents.'" By several reliable estimates, as many as 250,000 Ugandan citizens have lost their lives since Amin overthrew the regime of Milton Obote in 1971.

Now, Canon Burgess Carr, head of the All-Africa Conference of Churches, says he is "alarmed and terrified by indications that the murder of the archbishop may be part of a campaign of terror unleashed against Christians in Uganda." It is for these reasons that international humanitarian organizations around the world are urging that all the resources possible be applied to finding out what is going on inside Uganda and making certain the outside would gets the word.

What is the cure for a mad and murderous dictator? He has crippled his opposition through his terror tactics, and he has one of the strongest military operations of any East African country. Perhaps the only sanction the rest of the world has, beyond doing its best to get the facts, is universal condemnation of Idi Amin as the brutal murderer that he is being proved to be. In case he is under any illusions that he is respected for his extermination activities, he should know that the civilized world looks on in horror at him, and with sympathy for his victims. He should be made to know this—to the extent that he is sufficiently sane to recognize it. Any potential opposition figures, who might someday find the resources and summon up the courage to move against him, should also know it—for whatever heart it may give them. And finally, for whatever comfort it may bring them, so should the innocent and helpless citizens of Uganda who have the misfortune of living under his brutal tyranny.

THE GENOCIDE CONVENTION

Mr. PROXMIRE. Mr. President, I am sure that by now my colleagues are tired of hearing me announce my support of the ratification of the Genocide Convention. But apparently something must not be clear in the body of the treaty to warrant its signing. What? I do not know. The treaty is clear to me. It simply states that genocide is a crime under international law and defines it as the commission of specified acts, in the time of peace or in the time of war, with the intent to destroy, in part or in whole, a racial, religious, ethnical, or national group.

Genocide is a concern of not one nation as an individual entity, but the community of all nations. This crime involves the senseless slaughter of masses of people. It is a threat to all society and should be dealt with accordingly. When will the United States see that to join in signing this treaty is of extreme importance? The advice and consent of the Senate is needed to sign the treaty. The United States has freely signed many treaties; one giving animals protection from being slaughtered: Why not give human beings the same protection?

A nation founded on the highest principles of human rights cannot waver any longer in its support of the most basic of such rights: The right to life iteself.

Mr. President, my colleagues, why not act without delay and ratify the Genocide Convention at once.

MISSIONARY MURDERS IN RHODESIA

Mr. KENNEDY. Sunday's murder of Roman Catholic missionaries in Rhodesia is a tragedy that has horrified many around the world. I offer my deepest sympathies and regret to the families and friends of these missionaries.

Press reports of the massacre quote a teacher at St. Paul's Mission as saying:

Nobody likes the gun. The gun is fierce . . .

This barbarous event demonstrates that the question of majority rule must be negotiated and settled swiftly. Further delay can only mean more chaos, tragedy, and a deeper conflict among the peoples in Rhodesia.

BROOKINGS STUDY OVERLOOKS NONMETRO NEEDS

Mr. ABOUREZK. Mr. President, I ask unanimous consent that an article written by Mr. George Rucker which appeared in the February issue of Rural America be printed in the RECORD. Rural America is a publication of Rural America, Inc., a national nonprofit membership organization which was established to serve as a clearinghouse for information about rural America, to conduct action-oriented research on the problems of rural people, to monitor Government programs to insure that rural America receives its just share, and to serve as a national service center for rural individuals and organizations.

Mr. President, this article—"Brookings Study Overlooks Nonmetro Needs," is very enlightening in the way it compares rural areas to our Nation's suburbs and central city areas. I wish to bring this article to the attention of the entire Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BROOKINGS STUDY OVERLOOKS NONMETRO NEEDS

(By George Rucker)

A "hardship index" worked up by experts at the prestigious Brookings Institution to help analyze the "urban crisis" shows that rural and small town areas are even worse off than the big cities. (Both the cities and the nonmetro areas are in more critical need than the suburban areas, of course.) The Brookings index uses six indicators: unemployment, percentage of children and old people in the population, educational level, per capita income, housing supply, and percentage of families in poverty or near poverty.

A Rural America analysis of the most recent data available found that, taken as a group, the suburbs of metropolitan areas are better off than the national average on all but one of the indicators. In contrast, cities of 50,000 and above as a group and nonmetropolitan areas as a group are worse off than the average on all but one of the indicators. On four of the six individual measures, and on the composite index, nonmetropolitan areas are even worse off than the big cities.

Brookings specialists Richard Nathan and Charles Adams discussed their methodology and findings in *Political Science Quarterly* last year and presented some of their findings in testimony before the House Banking Committee in October. Nathan and Adams used the index to compare major cities with each other and with their own suburban areas.

Staff at Rural America wondered what the index might show about rural and small town needs, and put together the statistics shown in the adjoining table. As can be seen, the metropolitan suburbs are better off than the nation as a whole on each of the factors except the share of their population which is in the pre- and post-earning age brackets. Giving all of the six factors equal weight, the suburbs are about 13 percent better off than the average.

By contrast, the metropolitan center cities (of 50,000 or more population) are *worse* off than the nation as a whole on every factor except dependence, while the nonmetropolitan areas show above-average hardship on every score except unemployment. In terms of the composite index, nonmetro areas have a hardship rating nearly two percentage points higher than that of the central cities. (To those who might argue that nonmetro hardship may be less severe because it costs less to live in rural areas and small towns, it should be pointed out that the two income-related factors have been adjusted to allow for that difference, just as Nathan and Adams made similar adjustments to allow for regional differences in living costs.)

UNEMPLOYMENT AND POVERTY

Some comments may be in order with regard to the two measures on which the nonmetro areas showed less hardship than the big cities. It has long been recognized that unemployment figures tend to be less reliable for nonmetro areas than for urban centers. Moreover, the key measures in rural areas and small towns is probably *under-employment*, and we have no good statistics on that at all. Finally, with regard to the unemployment measure, the recession (which is hopefully a temporary phenomenon) has an uneven effect, hitting the central cities harder than either nonmetro areas or suburbs. In 1970, for example, when the economy was closer to normal unemployment, the difference between central cities and nonmetro areas in the unemployment rate was only one-tenth of a percent.

The shift in the concentration of poverty is also a recent development. In part it, too, reflects the recession; in part it is a measure of the flight of the non-poor from the central cities to the suburbs. The 1970 census figures showed 20 percent of all nonmetro families with incomes below 125 percent of the poverty line (even after adjusting for cost of living differences), while the figure for the metropolitan central cities was less than 16 percent. The relative situation has improved in nonmetro areas and in the suburbs. It has deteriorated in the central cities.

COMPARISON OF CITIES, SUBURBS, AND NONMETRO AREAS

	U.S. average	Metro areas: Suburbs	Metro areas: Central city	Nonmetro areas
Unemployment:				
Average annual rate, 1975 (percent)	8.5	8.0	9.6	8.0
Index (United States=100)	100.0	94.1	112.9	94.1
Dependence:				
Percent of 1970 population under 18 and over 64	4.4	4.4	4.3	4.6
Index (United States=100)	100.0	100.0	97.7	104.5
Education:				
Percent of 1970 population over 25 with less than high school education	44.7	40.8	49.2	54.1
Index (United States=100)	100.0	91.3	110.3	121.0
Per capita income, 1974:				
Adjusted for cost of living	$4,450	$4,891	$4,376	$4,171
Index (United States=100)[1]	100.0	[1] 91.0	101.7	[1] 106.7
Crowded housing:				
Percent of 1974 units with more than a person per room	5.4	4.4	5.6	6.2
Index (United States=100)	100.0	82.1	105.2	115.9
Poverty and near-poverty:				
Percent of 1974 families with incomes less than 125 percent of low income; adjusted for cost of living	13.3	8.5	16.4	15.8
Index (United States=100)	100.0	63.9	123.3	118.8
Composite hardship index	100.0	87.1	108.5	110.2

[1] To maintain consistency with the other factors as a measure of hardship, this is an inverted index (i.e., since nonmetro incomes are 6.7 percent below the average for the Nation, that factor is given a 106.7 hardship value by the index).

Sources: Unemployment figures from Bureau of Labor Statistics; dependence and education figures from 1970 census data: per capita income from current population reports, consumer income; crowded housing from annual housing survey; and poverty and near-poverty data from Census Bureau (unpublished data from current population survey). Socioeconomic indicators used are from Richard Nathan and Charles Adams, "Understanding Central City Hardship," Political Science Quarterly, spring 1976. Adjustments in income and poverty figures for cost-of-living differences follow their procedure of utilizing BLS comparative figures for intermediate and lower family budgets, respectively.

AMNESTY—POLITICAL PRISONER

Mr. KENNEDY. Mr. President, Amnesty International has chosen this year as "Prisoner of Conscience Year." This is a year when they hope to increase public awareness of the ongoing violations of human rights throughout the world; 1977 is a year where the United States is making a new commitment to human rights. It is a year in which the new administration has declared that we will no longer, as a nation, be silent in the face of human rights violations. I would like to take this opportunity to reaffirm my own commitment to human rights and to join Amnesty in their efforts to bring greater support to prisoners of conscience throughout the world.

In this most recent Amnesty bulletin six cases of prisoners imprisoned solely for their beliefs are documented: Dr. Mykola Gigorevich Plakhotnynuk is being detained in a psychiatric hospital in the Ukraine. He was arrested in 1972 as a result of his distribution of a human rights journal, the Ukrainian journal; Dr. Edson Sithole and his secretary Miss Miriam Mhlanga were abducted outside a hotel in Rhodesia in October of 1975 in all likelihood by the Rhodesian security police. Dr. Sithole was regarded as one of the leading African politicians in Rhodesia; Mr. Daniel Vergara was arrested by the military in Chile in September of 1973. He served in the government of Salvador Allende as Under Secretary of the Interior; Mrs. Nurtjahja Murad has been detained without charges in Indonesia since 1968. She has not been politically active, but her husband is the younger brother of the Communist party chairman; Mr. Miguel Sales Ordeney "disappeared" in January 1976 in Guatemala along with 36 other members of his farm cooperative; Dr. Kim Chi Ha is on trial for his life in the Republic of Korea because of his criticism of President Park Chung-Hee's regime.

I ask unanimous consent that these case histories and Amnesty's announcement of the "Prisoner of Conscience Year" be printed in the RECORD.

I would also like to include another article in the recent Amnesty bulletin on a prisoner who is being held in Moscow in a psychiatric prison and treated with drugs on the grounds that his religious views are a symptom of mental illness.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

AMNESTY INTERNATIONAL 1977: PRISONER OF CONSCIENCE YEAR

Sixteen years ago, in an article entitled "The Forgotten Prisoner," a British lawyer named Peter Benenson wrote: "Open your newspaper any day of the week, and you will find a report from somewhere in the world of someone being imprisoned, tortured or executed because his opinions or religion are unacceptable to his government." The response to that article which appeared in *The Observer* led to the formation of Amnesty International.

Sixteen years later, Amnesty International has become a worldwide human rights movement with nearly 100,000 members in 32 countries, an organization that has aided in securing the release of over 9,000 men and women—prisoners of conscience—those imprisoned anywhere for their political or religious beliefs, color, or ethnic origin, who have neither used nor advocated violence.

Yet, sixteen years later, if you "open your newspaper any day of the week, you will still find a report from somewhere in the world of someone being imprisoned, tortured or executed because his opinions or religion are unacceptable to his government." While Amnesty International has grown steadily in membership, research capability, and effectiveness, the human rights of hundreds of thousands around the world have never been in greater jeopardy.

Twenty-eight years after the signing of the Universal Declaration of Human Rights drafted to give the protection of law to "the inalienable rights of all members of the human family"—rights to life, liberty and security of person; rights to freedom of thought, conscience, expression and religion; rights to impartial and public trials and the presumption of innocence; the right not to be arbitrarily arrested, and the right not to be tortured: these basic human rights have never been more vulnerable or threatened.

The militarization of the southern cone of Latin America, post-independence Africa turning to one-party systems, the prevalence of permanent states of emergency in many Asian countries, the continued suppression of the human rights movement in the Soviet Union by the KGB and the entire state apparatus; all are chilling testimony in our time to the ability of governments to suspend freedom and suppress basic human rights of its citizens with impunity.

To respond to this appalling situation, Amnesty International has proclaimed 1977 as "Prisoner of Conscience Year." "Prisoner of Conscience Year" is a worldwide and coordinated effort to increase public awareness and concern about the ongoing violations of human rights and to bring greater support to prisoners of conscience throughout the world.

Peasants, laborers, doctors, parliamentarians, teachers, students—husbands, wives, fathers, mothers and children—these are the prisoners of conscience on whose behalf members of Amnesty International work. There is no standard profile of a "prisoner of conscience," although they all must qualify under the AI definition, for the wrath of governments and security forces against their real or imagined opposition and the subsequent suspension of legal safeguards or procedures produces subversives everywhere. Age is no protection—children are often arrested with their parents, aged parents arrested with their sons and daughters.

In the brief case histories printed inside, you can meet prisoners of conscience, men and women who desperately need the help, attention and support of the outside world.

From countries around the globe, no matter what political system, the message of the victims is the same: only the pressure of informed, mobilized worldwide opinion can help, and protect us. "Prisoners of Conscience Year" is a renewed and strengthened effort to transmit that message—to state loud and clear that political and religious persecution and the abominable practice of torture will

not be tolerated. Our own relative helplessness is no excuse for silence. As Edmund Burke observed, "All that is necessary for the forces of evil to win in the world is for enough good men to do nothing."

The Vladimir Prisons, the Buru Islands, and the Tres Alamos of the world must be shut down—the prisoners of conscience everywhere set free.

DR. MYKOLA GRIGOREVICH PLAKOTMYNUK, U.S.S.R.

Dr. Mykola Grigorevich Plakotmynuk is being detained in a special psychiatric hospital in the Ukraine. He was arrested in 1972 and charged with "anti-Soviet agitation and propaganda." The charge related specifically to his distribution of the unofficially produced human rights journal Ukrainian Herald. Dr. Plathotnyuk was told he suffered from "schizophrenia with delusions of persecution" and was "periodically non-responsible." He was sent to Dnepropetrovsk, a special psychiatric hospital officially designated for mentally ill patients who are "especially dangerous." Conditions at Dnepropetrovsk are particularly bad and inmates are regularly terrorized by orderlies and given unwarranted treatment with drugs. As is often the case with prisoners of conscience in the USSR not much is known of the situation of Dr. Plakhotnyuk, but according to a first hand account, his state of health is very disturbing.

DR. EDSON SITHOLE AND MISS MIRIAM MHLANGHA, RHODESIA

Dr. Edson Sithole, publicity secretary of the African National Council, was abducted by a group of unidentified assailants outside a Salisbury hotel on October 15, 1975. His secretary, Miss Miriam Mhlanga, was also abducted. Neither have been seen since and their present whereabouts are unknown. At the time of his abduction Dr. Sithole was regarded as one of the leading African politicians in Rhodesia. Aged 37, he had already spent many years in detention without charge and completed his law studies while in prison becoming the first Rhodesian—black or white—to obtain a Doctorate of Laws. Many sources, including the only eye-witness to the event, suggest the abductions were carried out by Rhodesian security police. The government has denied this but its reluctance to investigate the disappearance has given support to the rumors that Dr. Sithole and Miss Mhlanga are being held in detention and have possibly been tortured.

MR. DANIEL VERGARA BUSTOS, CHILE

Mr. Daniel Vergara Bustos was arrested on on the day of the military coup in Chile on September 11, 1973. He had served in the previous government of Salvador Allende as Under Secretary of the Interior and is a member of the Chilean Communist Party. Senior members of Allende's administration such as Mr. Vergara were taken to a concentration camp on Dawson Island. Mr. Vergara was shot in the hand while being transferred to the island and received no medical care for the next 12 days. His hand is now partially incapacitated. Later he was transferred to another concentration camp where he is presently reported to be very ill. Mr. Vergara has neither been tried nor formally charged with any crimes.

MRS. NURTJAHJA MURAD, INDONESIA

Mrs. Nurtjahja Murad was a teacher of Indonesian until 1959 when she obtained a scholarship to study Russian at the Moscow Lumumba University. She returned to Indonesia just a few weeks before an aborted coup by several middle ranking army officers. Following the coup the government banned the Indonesian Communist Party and other leftwing organizations. More than half a million persons were killed and more than 100,000 persons were detained. Mrs. Murad's husband, younger brother of the Communist Party Chairman, was arrested soon after the coup attempt. Though she was not politically active in either the USSR or Indonesia Mrs. Murad was arrested in September 1968 and is now in a women's detention camp in Central Java. None of the women prisoners in the camp have been tried and none are likely to ever be tried. These are 100,000 political prisoners in Indonesia, most of whom have neither been charged nor tried and been in detention for more than 10 years.

MR. MIGUEL SALES ORDONEZ, GUATEMALA

Mr. Miguel Sales Ordonez is a Guatemalan, campesino, a peasant farmer, detained with three other campesinos by uniformed paratroops in the marketplace of their cooperative on July 7, 1975. Thirty-three other members of their cooperative, principally heads of families, were also detained during the same month. Authorities deny they are in custody but all remain missing. The disappearance appeared to be related to the military's belief that the campesinos have been collaborating with left-wing guerillas in the area but there is no evidence of such cooperation nor have formal charges ever been made. A United States churchman inquired into the "disappearance" of the 37 men of the cooperative in January 1976 and was told the file on the affair was in the Ministry of Defense. The Defense Minister, however, said nothing was known of the prisoners, and the sworn accounts of their abduction were lies intended to defame the Guatemalan armed forces.

MR. KIM CHI HA, REPUBLIC OF KOREA

Mr. Kim Chi Ha is an outstanding poet and writer who is presently on trial for his life in the Republic of Korea. Because of his criticism of the authoritarian administration of President Park Chung-hee he has spent many of the past 14 years in prison. He was re-arrested in March 1975 after publishing articles on the torture of fellow political prisoners. He is now being held in solitary confinement in Seoul's West Gate Prison where he is denied visits from his family and even his lawyers. Thirty-five years old, he suffers from tuberculosis but is being kept in an unheated cell even during the winter months. A devout Roman Catholic, Mr. Kim Chi Ha is charged with violating the Anti-Communist Law; the law which is often used to silence opposition in the Republic of Korea.

NOT QUIET ON THE RUSSIAN FRONT

ALEKSANDER ARGENTOV

Aleksander Argentov is a 25-year-old Orthodox Christian who at last report was being held in a Moscow psychiatric prison and treated with drugs because of an official view that his religious faith is a symptom of mental illness.

On July 14 Argentov, a resident of Moscow, was summoned to the Military Commission of Tushinsky district, where they demanded that he go immediately to the district psychiatric clinic to receive a certificate. Although Argentov had never been under psychiatric treatment or examination, the psychiatric clinic had already issued a file card for him. Upon arrival at the clinic his documents were taken from him by medical personnel and he was sent to an office where two doctors were waiting for him. The chief doctor of the psychiatric clinic Irina Nikolayevna Zinchenko and Aleksander Ivanovich Mazikov put their first question to Aleksander Argentov.

So you believe in God?

Yes, I believe, answered A. Argentov.

And you go to church?

I go to Church.

But how can you believe in this age? . . . And pray to icons?

Doctor Mazikov expressed his view of religion in a few words: "In our age of the flowering of space technology it is impossible to believe in God. It is forgivable only for illiterate old people." The doctors told Argentov that they were sending him to a psychiatric hospital for observation, and if he turned out to be ill he would be treated, and if he was healthy they could send him to study in a seminary. Argentov was surprised to learn that a person could be sent from a psychiatric hospital to a seminary.

After several more questions the orderlies took Argentov against his will to Moscow's Psychiatric Hospital Number 14 and put him in the third ward. Argentov's crucifix was taken from him.

The next day a conversation took place with S.M. Degtyaryov, the head of the ward, during which Argentov was asked: Why did he believe in God? What does religion give him? The head of the ward then prescribed aminazin in tablet form and told Argentov that if he refused to take the tablets he would be given injections by force. Aminazin, which is derived from phenothiazine, is a depressant drug which is used in many countries for the treatment of schizophrenia and other mental disorders. It is a drug which can cause extremely unpleasant side effects unless applied very carefully or if applied to patients who do not suffer from the condition for which it is prescribed. It has been used on a number of occasions on political prisoners in the USSR who were not genuinely mentally ill.

Argentov's parents, who are convinced athiests, repeatedly demanded the release of their healthy son. S.M. Degtyaryov, the head of the ward, refused to show the parents the documented grounds for the compulsory hospitalization of their son and indicated that these documents were a professional secret. Rebutting the parents' assertion that their son was healthy, he replied that not being professionals in the field of psychiatry they could not understand their son's illness. He further claimed that Argentov had voluntarily agreed to hospitalization, which Argentov categorically denies.

Amnesty International first learned of the Argentov case in mid-August 1976 when it received copies of two appeals on Mr. Argentov's behalf by Soviet citizens. The main appeal, dated July 27, 1976, was written by Aleksander Ogorodnikov, the organizer of an unofficial seminar of Orthodox Christians in Moscow. He described how the participants of the seminar, mostly young people, had been harassed by police and state security officials because the seminar was regarded as "anti-Soviet." His appeal ended with a call for help for Argentov, whose punishment for membership in the seminar was confinement to a psychiatric hospital in mid-July 1976.

Mr. Ogorodnikov's appeal was supported by a second appeal signed by seven Orthodox Christians, each of them well known for his or her activities for greater religious and civil liberty in the USSR. One of them, the eminent art critic Yevgeny Barabanov, was himself threatened with confinement to a psychiatric hospital in September 1975 in connection with his religious activities. Another signatory was Mrs. Tayana Khodorovich, a linguist who first documented the now famous case of Leonid Plyushch and was instrumental in obtaining his release in January 1976 from a psychiatric hospital in the Ukraine.

The signers of these appeals assert from personal acquaintance with Argentov that he is not mentally ill and that a psychiatrist in the clinic which sent him for confinement in the psychiatric hospital had stated frankly that Mr. Argentov was being confined on direct account of his religious faith.

Appeal to patriarch of Moscow

Argentov addressed a moving letter to the Patriarch of Moscow, the head of the Russian Orthodox Church to appeal for help. Complaining of the forced medication he was undergoing Argentov wrote:

I am healthy and I sleep beautifully, but here they have persistently given me sleeping

pills I am by nature a calm and well balanced person, but here allegedly to calm me they have forced me to take strong psychotropic medication, threatening that if I did not comply they would subject me to compulsory treatment with injections I am among the seriously ill persons who are tied to their beds on account of their violence. I must listen to their wild howling and this, together with the effect of my treatment is depressing me.

But what depresses me even more is the attitude toward me of the doctors, who although they are completely ignorant about religion try to persuade me that my religious faith is mental illness.

The parting words of the doctor of the clinic that here in the hospital they would "beat all this nonsense out of me" terrified me with their inhumanity. What are they doing with me here now shows that this was no empty threat.

Your Holiness, be kind, intercede for me! . . . And if you have no possibility to intercede for me then bless me, even silently, for being tortured for my faith.

SENATOR HATHAWAY SPEAKS OUT ON BEHALF OF SHOE WORKERS

Mr. McINTYRE. Mr. President, the Washington Post of February 13 carried an excellent statement by the Senator from Maine on behalf of the beleaguered footwear industry. There is no one better able to make the case, since he was instrumental in getting Finance Committee action to open the current investigation of footwear imports.

Those of us who have been fighting this battle for years understand very well the arguments that Senator HATHAWAY has stated so clearly:

We are talking about the future of a major domestic industry and its suppliers, a quarter of a million jobs; we have seen in our own States the devastation which has already ben caused; the impact on rural communities, on older workers and women who predominate in the work force; and we know how hard those jobs are to replace. And we have seen, too, Mr. President, what this devastation means in personal terms to hard-working, productive individuals who are losing their lifelong work. We know, and they know, that adjustment assistance is a cruel farce, an extended dole without future or dignity; it is a totally unacceptable alternative.

As Senator HATHAWAY says, what is at issue in this case is a moderate, a minimal, proposal to temporarily give a troubled industry the breathing space it needs to recover, at minimal cost to consumers. This is the purpose of the Trade Act of 1974 as Congress intended it.

Mr. President, I ask unanimous consent that Senator HATHAWAY'S article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

JOBS AND SHOES

(By WILLIAM D. HATHAWAY)

In a Jan. 28 editorial, "Whose Shoes?," The Washington Post wondered how far society ought to go to protect domestic jobs against the harm caused by imports. The Post suggested that relief for the shoe industry would cost consumers more than the rescued jobs are worth; would destroy retail sales jobs; would start a trade war or possibly bring some of our trading partners under leftwing rule.

Those arguments state the best case for free trade. They can or will be made on behalf of Brazilian handbags, imported honey or Japanese color television sets. But to the considerable extent that such arguments represent the broad principles of a freed trade philisophy rather than the more narrow realities of the world, American trade policy must to that extent be tempered by substantial activity to maintain jobs in existing industries and to avoid the economic and social disruption caused when an industry is destroyed.

Should the President now fail to respond to the needs of this industry in its unique situation, it almost certainly means the end of shore-making in the United States. Aside from continued decline and loss of earnings, shoe companies would soon be unable to attract new workers. Banks and other sources of credit would be reluctant to loan money to an industry with no future. Sources of shoe technology would wisely devote their capital and energies to industries with more promising horizons. Die and pattern makers, tanners and suppliers of all other findings that go into shoes would be similarly affected.

And I hasten to add that adjustment assistance under the Trade Act of 1974 is not an answer. For workers, trade adjustment assistance is a dole. It does not create jobs for the 26,000 shoe workers now unemployed, nor forestall the loss of jobs in an industry impacted by imports. For firms, it is a costly and time-consuming process that leads to loans at usurious interest rates. This tax-supported government scheme does not prevent tax-paying firms and workers from turning into tax-supported citizens. The cost that American citizens would be asked to bear for this type of industry-wide relief would be far higher than a minimal increase in consumer prices resulting from the International Trade Commission's mild form of temporary relief, assuming it proved totally effective.

Such assistance comes too encumbered to be of any use to the company needing it. Affirmative action plans and environmental impact statements may advance excellent public policies but are out of place when trying to aid the recovery of an ailing business, which is the last place in which to launch needed social engineering.

In return for access to our markets, should we not insist on meaningful labor standards in the exporting country? For example, we might insist that South Korea legalize the right to strike and thus enable workers to challenge the 60-cents-per-hour wages and other conditions of employment. Free trade ought not depend upon whose workers live closest to conditions of slavery.

We might inquire into the relationship between government and business in countries administered by dictators before opening our markets to them on an equal footing with countries upholding democratic principles. Bad conditions for workers will persist for as long as the quality of life is of no concern to employers in nations administered by brute force and without popular consent; access to our markets helps such regimes survive. Free trade could do worse than lead toward freedom.

I also believe in fair trade. Domestic shoe manufacturers are prohibited from selling their shoes into most countries that export to us. Korea has a total embargo on shoes, as does India. Sweden, Australia and Japan impose stringent quota restrictions. High tariff barriers and border taxes virtualy prohibit any export markets in Europe. Taiwan imposes strict licensing arrangements. The United States already has the most liberal policy toward shoe imports; other countries have been protecting theirs for years and will continue to do so.

Much of the U.S. shoe manufacturing industry is located in non-urban areas where jobs and opportunities are scarce. More closed shoe factories mean more rural refugees in the nation's slums, seeking work and a new life. In the national economy, the shoe industry has a multiplier effect of about three (compared with industries in urban areas and their multiplier effect of about two). Thus, the 1976 domestic industry factory shipments, valued at $3.4 billion, generate about $10 billion in net national income. This substantial sum, much of it generated in rural areas, is unlikely to be quickly replaced.

A large issue during the next year will be the creation of new jobs. The footwear industry, and its related suppliers, already employs nearly a quarter of a million people, and the ITC tariff-quota recommendation is a moderate way of stabilizing imports and preserving existing jobs. This would not eliminate imports, and it would not greatly drive shoe prices up. Retail clerks in shoe stores, as well as the self-service operations where trained personnel are unavailable anyway, will be unaffected.

This would give, however, the domestic industry five years and the chance it needs to prepare to compete without help at the border. Weak companies will go under, as they should. Others will be strengthened by modern technology.

I do not believe that such relief exceeds society's responsibility to take reasonable steps to preserve jobs. To do nothing about imports themselves is to leave major decisions exclusively in the hands of foreign manufacturers and importers. By such default, the United States would be limited to dressing wounds and burying bodies in the shoe industry. Surely, modest relief that allows domestic and foreign shoes reasonable access to the U.S. market is a better solution for everyone than allowing a total takeover of their market by foreign firms or, at the other extreme, a total exclusion of foreign-made shoes.

LEAA WINS FEBRUARY "GOLDEN FLEECE" AWARD

Mr. PROXMIRE. Mr. President, my "Golden Fleece of the Month" award winner for February is the Law Enforcement Assistance Administration—LEAA—which spent nearly $27,000 to determine why inmates want to escape from prison.

This study is a crime. And if those responsible for it were tossed in jail, I will bet they would not need a dime of the taxpayer's money to decide why they wanted to get out.

Mr. President, as Senators know, I make monthly "Golden Fleece" awards for the biggest or most ironic example of wasting Federal tax funds. These monthly awards are followed by a "Fleece of the Year" winner in late December.

I should point out, too, that I am a member of the Senate Appropriations Committee, which oversees LEAA's budget.

Why does LEAA deserve the "fleece" for February? There are at least three good reasons.

First of all, the researchers are beating a dead horse in asking this question. It should be obvious to one and all why someone in jail wants to get out. And this study belabors the obvious in concluding that—

Escape is both a function of the characteristics of individuals and the situations in which they find themselves.

Second, the study's findings rest heavily on the responses of inmates themselves to a questionnaire. I cannot for the life of me imagine why prisoners anywhere would want to help their captors keep them in captivity. In other words,

can anyone be sure that the inmates were giving straight answers to the researchers? And if not, can we have any faith in the study's conclusions?

And finally, even if one concedes there might be some merit to this study, its conclusions are couched in such technical and obscure language as to reduce greatly any usefulness it might have. To cite one example, the researchers tell us that:

The increase in predictability of escape from R=.64 when secondary variables are used singly and R=.61 when questionnaire variables are used singly to R=.77 when both are used cojointly, empirically demonstrates that escape is associated with both static and dynamic factors.

Now just what is the avowed purpose of this study? It is supposed to help predict which prisoners are most likely and least likely to escape and thereby reduce the costs of escape and of providing more security than necessary.

This sounds great. I am all for these goals of escape prediction and cost reduction. But let's look at some specific examples of what the researchers found.

First, they said that the escaper is more likely than other inmates to be, among other things, one who has been "turned down for parole" and "not scheduled for parole review." Is it surprising to learn that a prisoner whose parole route is blocked might seek the escape route instead? Of course not. Yet public funds were used to pay for just such a profound conclusion.

In a second conclusion, the study reported that—

Analysis tend to depict the escaper, particularly the multiple escaper, as a career criminal.

Again, is anyone dumfounded by this finding? Hardly. This is a matter of commonsense. Yet our tax dollars and cents paid for the research that produced this gem.

Third, an "implication" of the study is that there are certain "critical times" for escape. These are said to include the times "when an inmate is first admitted or transferred to a unit, when his program progress is stalemated, when he encounters family difficulties, and when he feels his security threatened." I must ask, again, are these elusive or amazing determinations? I do not think so. The man on the street knows as much. Yet that very same average American citizen was forced to foot the bill for such findings.

Let me be very clear on one point. I am not saying this study is all bad. Its objectives are good, and some of its contents may well be helpful. But we must have a set of priorities when it comes to spending the taxpayers' money. The deficiencies of this study make it, in my view, not worth the money spent.

Last year I was one of two U.S. Senators to vote against reauthorizing LEAA. I wanted to abolish the agency entirely. Had I been successful, the American taxpayer would not be saddled with paying for studies like this one.

Unfortunately, LEAA lives on. But so does my determination to keep an eye on its spending habits. And that is why LEAA gets the "Fleece" for February.

NATIONAL ACADEMY OF SCIENCES FORUM ON RECOMBINANT DNA RESEARCH

Mr. KENNEDY. Mr. President, as many of you know, the community of Cambridge in my home State of Massachusetts has been engaged in an extensive study of appropriate guidelines for the conduct of research with recombinant DNA, often called genetic research. The report of that citizens' review board made a basic point:

Knowledge, whether for its own sake or for its potential benefits to humankind, cannot serve as a justification for introducing risks to the public unless an informed citizenry is willing to accept those risks.

Recognizing the importance of an informed citizenry, the National Academy of Sciences has scheduled an academy forum on this controversial topic which is open to the public. I invite the attention of my colleagues to the forum which opens Monday evening, March 7, in the auditorium of the National Academy of Sciences and continues through March 8 and 9. The leading proponents and opponents of moving ahead with the research will state their viewpoints and be available to engage in a dialog with the public representatives attending. Risks and benefits will be assessed, and workshops available for discussion of specific risk/benefit situations and issues of local, national, and international control and regulation.

I ask unanimous consent that program of the forum be printed in the RECORD.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

ACADEMY FORUM: RESEARCH WITH RECOMBINANT DNA, MARCH 7–9, 1977

This Academy Forum has received support from:

Abbott Laboratories.
Ford Foundation.
Hoffmann-La Roche Inc.
Merck Sharp & Dohme Research Laboratories.
National Academy of Sciences.
National Institutes of Health.
Pfizer Inc.
Smith Kline & French Laboratories.
The Upjohn Company.

The Forum of the National Academy of Sciences is designed to aid in the resolution of dilemmas arising from the discoveries of science. We hope, at the minimum, to clarify the issues and to illuminate the facts. Beyond that, we hope to develop a consensus for the formulation of sound science policy or to identify the new information needed to generate such a consensus.

Research with recombinant DNA, a subject of great importance and considerable controversy, is particularly suited to the Forum process, which brings together scientists, officials of government, and numerous categories of citizens with wide ranges of expertise and viewpoints. As many individual research institutions, both educational and industrial, and government bodies at all levels now are poised to determine courses of conduct in relation to this research, the timing for such a Forum is appropriate. Inquiries over the past months indicate that the ideas to emerge from this Forum will have great weight in the design of both public and private policy.

The success of the Forum depends primarily on the individuals who participate and their ability to develop constructive and imaginative ideas around questions that emerge from the topic and the known facts. We welcome your participation in this Forum, your evaluation of it, and your suggestions for future Forum topics.

Sincerely yours,

DANIEL E. KOSHLAND, Jr.,
Chairman, General Advisory Committee, The Academy Forum.

REGISTRATION

A registration and information desk will be stationed in the lobby of the C Street entrance to the Academy. There also will be a bulletin board for messages at this location. The schedule for these facilities is:

Monday, March 7: 7–10 p.m.
Tuesday, March 8: 8 a.m. to 10 p.m.
Wednesday, March 9: 8 a.m. to 5 p.m.

The telephone number for the message center and registration desk is 389–6824.

The Forum of the National Academy of Sciences is open to the public. There is no registration fee. Parking is not available.

Cochairmen:

David A. Hamburg, President, Institute of Medicine.

Alexander Rich, Sedgwick Professor of Biophysics, Massachusetts Institute of Technology.

MARCH 7

7:00 p.m.: Registration, C Street Entrance.

7:30 p.m.: Welcome and introduction to the forum:

Daniel E. Koshland, Jr., Chairman of the General Advisory Committee of the Academy Forum; Professor and Chairman, Department of Biochemistry, University of California, Berkeley.

Introduction to the evening: David A. Hamburg, Cochairman.

How Scientists Interact with the Public: Historical Perspective

Scientist Involvement: Maxine Singer, Head, Nucleic Acid Enzymology Section, Laboratory of Biochemistry, National Cancer Institute.

Lay Involvement: Daniel Callahan, Director, Institute of Society, Ethics and the Life Sciences.

Inquiry and discussion from the forum.

Overview of the Research With Recombinant DNA

Potential Benefits: Daniel Nathans, Boury Professor and Director, Department of Microbiology, The Johns Hopkins University School of Medicine.

Potential Risks: Erwin Chargaff, Professor Emeritus of Biochemistry, Columbia University.

Inquiry and discussion from the forum.

10:00 p.m.: Adjournment.

MARCH 8

8:00 a.m.: Registration, C Street Entrance, Coffee, Great Hall.

9:00 a.m.: Priorities for this session: Alexander Rich, Cochairman.

Case analyses

I. Mapping The Mammalian Genome

Potential Benefits: Paul Berg, Willson Professor of Biochemistry, Stanford University Medical Center.

Potential Risks: Robert L. Sinsheimer, Chairman, Division of Biology, California Institute of Technology.

Inquiry and discussion from the forum.

Coffee.

Three commentaries

The Stability of Biological Species: Francisco José Ayala, Professor of Genetics, University of California, Davis.

Research with Recombinant DNA In Europe: Sir John Kendrew, Director General European Molecular Biology Laboratory, Heidelberg.

The Public Interest: A Point of View: Stephen E. Toulmin, Professor, Committee on

Social Thought and the Department of Philosophy, University of Chicago.

Inquiry and discussion from the forum.

Lunch.

2:00 p.m.:

II. The Dangers of Planned or Inadvertent Laboratory Infections and Epidemics

The Epidemiology of Enteric Infections and Laboratory Infections: H. Bruce Dull, Assistant Director for Program, Center for Disease Control.

Natural Selection, Virulence and Communicability: The Handling of Dangerous Organisms: Bernard D. Davis, Adele Lehman Professor of Bacterial Physiology, Harvard Medical School.

Inquiry and discussion from the forum.

Health Hazards to Labor: Anthony Mazzocchi, Director, Citizenship-Legislative Department, Oil, Chemical & Atomic Workers International Union.

An Environmental Overview of Research with Recombinant DNA: Wilson K. Talley, Assistant Administrator for Research and Development, Environmental Protection Agency.

Inquiry and discussion from the forum.

Coffee.

III. Pharmaceutical Applications: Microbial Production of Insulin

Potential Benefits: Cornelius W. Pettinga, Executive Vice President, Eli Lilly and Company.

Potential Risks: Ruth Hubbard, Professor of Biology, Harvard University.

Inquiry and discussion from the forum.

Introduction to the workshops: David A. Hamburg, Cochairman.

5:00 p.m.: Adjournment.

7:00 p.m.: Workshops Convene.

Workshops

1. Is it likely that E. coli can become a pathogen?

Richard Goldstein, Assistant Professor, Department of Microbiology and Molecular Genetics, Harvard Medical School, Chairman.

2. How can we assess the benefits and risks of this research?

William W. Lowrance, Special Assistant for Science and Technology to the Deputy Under Secretary of State, Department of State, Chairman.

3. In what way should laymen be involved in decisions concerning the conduct of research with recombinant DNA?

Stanley B. Jones, Staff Director, Subcommittee on Health, Committee on Labor and Public Welfare, United States Senate, Chairman.

4. National and international efforts to develop guidelines: Should there be voluntary or enforced rules of conduct?

Charles Weissmann, Professor of Molecular Biology and Director, Institute for Molecular Biology, University of Zurich, Co-Chairman.

Harold P. Green, Professor of Law, National Law Center, The George Washington University, Cochairman.

5. What is the appropriate role of sponsoring institutions and of federal, state, and local governments in relation to recombinant DNA research?

Clifford Grobstein, Professor of Biology and Vice Chancellor for University Relations, University of California, San Diego, Chairman.

6. The use of recombinant DNA research in biological warfare is ruled out for nations by the Biological War Convention of 1972 and the Geneva Protocol of 1925. Is it conceivable that terrorists or nations may try to use this technology to develop weapons?

Matthew S. Meselson, Thomas Dudley Cabot, Professor of the Natural Sciences, Chairman, Department of Biochemistry and Molecular Biology, Harvard University, Chairman.

7. How effective is physical and biological containment in recombinant DNA research?

Roy Curtiss III, Professor of Microbiology, University of Alabama Medical Center, Chairman.

8. Can the results of basic research with recombinant DNA be transferred to industrial applications?

A. M. Chakrabarty, Staff Microbiologist, Physical Chemistry Laboratory, General Electric Research & Development Center, Chairman.

9. How natural is the exchange of genes between "unrelated" bacteria? The benefits and risks of prokaryote-prokaryote gene exchange.

Stanley N. Cohen, Professor of Medicine, Stanford University Medical Center, Chairman.

MARCH 9

8:00 a.m.: Registration, C Street Entrance, Coffee, Great Hall.

9:00 a.m.: Priorities for this session, Alexander Rich, Cochairman.

Workshop Reports: David A. Hamburg, Cochairman.

Inquiry and discussion from the forum.

IV. Food Production

Potential Benefits: Raymond Valentine, Associate Professor of Agronomy, Plant Growth Laboratory, Department of Agronomy and Range Science, University of California, Davis.

Potential Risks: Ethan R. Signer, Professor of Biology, Massachusetts Institute of Technology.

Coffee.

V. Genetic Engineering: The Future

David Baltimore, American Cancer Society Professor of Microbiology, Center for Cancer Research, Massachusetts Institute of Technology.

Jonathan Beckwith, Professor of Microbiology and Molecular Genetics, Harvard Medical School.

Inquiry and discussion from the forum.

Lunch.

2:00 p.m.: Problems of Control and Regulation.

An Overview of the Role of NIH and Other Federal Agencies in the Conduct of Research with Recombinant DNA, Donald S. Frederickson, Director, National Institutes of Health.

The Economic Implications of Regulation by Expertise: Roger G. Noll, Professor of Economics, California Institute of Technology; Visiting Profesor, Stanford University.

Reports from Workshops Dealing with Control and Regulation.

Coffee.

Inquiry and discussion from the forum.

Summary

Tracy M. Sonneborn, Distinguished Professor Emeritus of Zoology, Indiana University.

Donald Kennedy, Benjamin Scott Crocker Professor of Human Biology, Chairman, Program in Human Biology, Stanford University; and Senior Consultant to the Office of Science and Technology Policy.

5:00 p.m. Adjournment.

Panel for inquiry, academy forum on research with recombinant DNA

Herbert W. Boyer, Professor of Biochemistry, University of California Medical School, San Francisco.

Donald D. Brown, Director, Department of Embryology, Carnegie Institution of Washington.

Liebe F. Cavalieri, Member, Sloan-Kettering Institute for Cancer Research; Professor of Biochemistry, Graduate School of Medicine, Cornell University.

Stanley N. Cohen, Professor of Medicine, Stanford University Medical Center.

Freeman J. Dyson, Professor of Physics, School of Natural Sciences, The Institute for Advanced Study.

Daniel J. Hayes, Jr., Chairman, Cambridge Experimentation Review Board.

Sheldon Krimsky, Associate Director, Program in Urban, Social and Environmental Policy, Tufts University.

Kurt Mislow, Hugh Stott Taylor Professor of Chemistry, Princeton University.

Robert S. Morison, Class of 1949 Visiting Professor, Massachusetts Institute of Technology.

Robert R. Murray, Jr., Professor of Pediatrics and Medicine, Chief, Division of Medical Genetics, College of Medicine, Howard University.

Talbot Page, Senior Research Associate, Resources for the Future.

Judith E. Randal, Science Correspondent, Washington Bureau, New York Daily News; Science Policy Editor, Change Magazine.

DeWitt Stetten, Jr., Deputy Director for Science, National Institutes of Health.

John Tooze, Executive Secretary, European Molecular Biology Organization, Heidelberg.

Gerge Wald, Higgins Professor of Biology, Harvard University.

Milton R. Wessel, Attorney and Adjunct Professor, New York University School of Law.

Luther S. Williams, Associate Professor of Biology, Department of Biological Sciences, Purdue University.

Norton D. Zinder, Professor, Rockefeller University.

Program committee, academy forum on recombinant DNA research

Lawrence Altman, Medical Writer, New York Times.

David Baltimore, American Cancer Society Professor of Microbiology, Center for Cancer Research, Massachusetts Institute of Technology.

Paul Berg, Willson Professor of Biochemistry, Stanford University Medical Center.

Daniel Callahan, Director, Institute of Society, Ethics and the Life Sciences.

Freeman J. Dyson, Professor of Physics, School of Natural Sciences, The Institute for Advanced Study.

Richard Goldstein, Assistant Professor, Department of Microbiology and Molecular Genetics, Harvard Medical School.

Harold P. Green, Professor of Law, National Law Center, The George Washington University.

Clifford Grobstein, Professor of Biology and Vice Chancellor for University Relations, University of California, San Diego.

David A. Hamburg, President, Institute of Medicine, Cochairman.

Howard H. Hiatt, Dean, Harvard School of Public Health.

Stanley B. Jones, Staff Director, Subcommittee on Health, Committee on Labor and Public Welfare, U.S. Senate.

Daniel E. Koshland, Jr., Professor and Chairman, Department of Biochemistry, University of California, Berkeley.

Cornelius W. Pettinga, Executive Vice President, Eli Lilly and Company.

Alexander Rich, Sedgwick Professor of Biophysics, Massachusetts Institute of Technology, Cochairman.

Maxine Singer, Head, Nucleic Acid Enzymology Section, Laboratory of Biochemistry, National Cancer Institute.

Robert L. Sinsheimer, Chairman, Division of Biology, California Institute of Technology.

General Advisory Committee

Robert McC. Adams, Professor, The Oriental Institute.

Kenneth J. Arrow, James Bryant Conant University Professor, Project on Efficiency of Decision Making in Economic Systems, Harvard University.

David Baltimore, American Cancer Society Professor of Microbiology, Center for Cancer Research, Massachusetts Institute of Technology.

Arthur M. Bueche, Vice President, Corporate Research and Development, General Electric Company.

Freeman J. Dyson, Professor of Physics,

School of Natural Sciences, The Institute for Advanced Study.

Donald S. Fredrickson, Director, National Institutes of Health.

Gertrude S. Goldhaber, Senior Physicist, Brookhaven National Laboratory.

Michael Kasha, Director, Institute of Molecular Biophysics, Florida State University.

Daniel E. Koshland, Jr., Professor and Chairman, Department of Biochemistry, University of California, Berkeley, Chairman.

Philip Morrison, Institute Professor, Department of Physics, Massachusetts Institute of Technology.

John R. Pierce, Professor of Engineering, Steele Laboratory, California of Technology.

Alexander Rich, Sedgwick Professor of Biophysics, Massachusetts Institute of Technology.

Frederick C. Robbins, Dean, School of Medicine, Case Western Reserve University.

Lewis Thomas, President, Memorial Sloan-Kettering Cancer Center.

Alvin M. Weinberg, Director, Institute for Energy Analysis, Oak Ridge.

David A. Hamburg, President, Institute of Medicine, ex officio.

Courtland D. Perkins, President, National Academy of Engineering, ex officio.

Staff

Robert R. White, Director.

M. Virginia Davis, Staff Associate.

Betsy S. Turvene, Editor.

Marcie S. Lofgren, Administrative Secretary.

The National Academy of Sciences is a private, co-optative society of distinguished scholars in scientific and engineering research, dedicated to the furtherance of science and its use for the general welfare. Its charter, an Act of Incorporation passed by the U.S. Congress and signed by Abraham Lincoln on March 3, 1863, called upon it to serve as an official adviser, upon request and without fee, to the federal government on any question of science or technology.

The National Academy of Engineering was established in December 1964, under the charter of the National Academy of Sciences, as a parallel organization of distinguished engineers, autonomous in its administration and membership, and sharing with the NAS its responsibility for advising the federal government.

The National Research Council was organized by the National Academy of Sciences in 1916 at the request of President Woodrow Wilson. Most of the activities undertaken by the two Academies are carried out through the NRC, which is representative of the major scientific and technical societies, and whose members are derived from universities, industry, and the scientific agencies of the federal government.

The Institute of Medicine was chartered by the National Academy of Sciences in the summer of 1970 in recognition of the important and complex problems posed in the provision of adequate health services to all sectors of society. Its members are selected from all fields of health and medicine as well as from related activities in the natural, social and behavioral sciences, law, administration, government service, and engineering.

DISTRIBUTION OF ALASKA'S OIL

Mr. ABOUREZK. Mr. President, the question of how to distribute the supplies of crude oil coming down from Alaska is a pressing one. In hindsight, I am inclined to think that the environmentalists who proposed that North Slope oil be brought into this country via a pipeline across Canada were right. We would not be facing the question of what to do with additional supplies of oil in an area of the country that is well-supplied, and wondering where to get oil to replace the Canadian supplies that Midwestern refiners have historically depended on.

Since the environmentalists' position on that earlier issue seems to have been supported by developments, it might be worth while to look into their proposals for dealing with the advent of the Alaskan oil.

I ask unanimous consent that the article "Too Much, Too Soon, (Too Bad)" from Friends of the Earth be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALASKA'S OIL: TOO MUCH, TOO SOON (TOO BAD)

Trans-Alaska Pipeline Authorization Act, 1973: "The Congress finds and declares that the early development and delivery of oil and gas from Alaska's North Slope to domestic markets is in the national interest because of growing domestic shortages and increasing dependence upon insecure foreign sources."

(By Michael Storper, Laura Baker, and Mary Lou Seaver)

Now that the Alaska pipeline is nearly done, I hear the oil will be a glut on the West Coast market. How come?

"Glut" is not really the right word, although a lot of people use it. "Surplus" is better. What it means is that West Coast refineries cannot handle all the oil that the pipeline is scheduled to bring out of the the North Slope, which is 600,000 barrels a day at first, increasing to 1.2 million barrels by 1978 and 2 million barrels eventually. There are about 10 billion barrels in the ground.

But when the pipeline was authorized, wasn't it because the West Coast needed the oil?

That's what the oil companies said. Congress' idea was to reduce our dependence on foreign oil. Remember, the pipeline was authorized just a month after the OPEC oil embargo started. The oil companies said the West Coast would need the oil and could handle it. They convinced a lot of people that was true. California's Senator Alan Cranston said on the Senate floor, "I believe that the West Coast will be able to absorb the 1.5 million to 2 million barrels per day that would reach the Pacific Northwest and California. . . . California, in particular, needs the low-sulfur crude oil that will come from the North Slope field."

Unfortunately, the North Slope oil is high in sulfur.

So what?

It makes all the difference. Different refinery setups are needed for high-sulfur oil—more pollution control equipment, for one thing, but also different kinds of equipment for basic processes. Most West Coast refineries are only equipped for low-sulfur oil, which is readily available from Indonesia. (Indonesian oil averages .07 percent sulfur, while Alaskan oil averages about 1 percent.) West Coast refineries use mostly Indonesian oil now, while East Coast and Gulf Coast refineries process Middle Eastern oil. (Middle Eastern oil varies in sulfur content, but is essentially interchangeable with Alaskan crude in refinery processes.)

ARCO, one of the Alaskan pipeline partners, has built a refinery in Bellingham, Washington, that can handle Alaskan oil, and Exxon has a California refinery that can, too. But Sohio, which owns half the North Slope crude, has neither refinery nor marketing facility on the West Coast.

Consequently, there is a big question about what is to become of Sohio's share of the oil. Even ARCO and Exxon admit that later, if not right away, they too will have more oil from Alaska than they can handle on the West Coast.

Are we then worrying about Sohio's marketing problem?

Yes, essentially. We are worrying about it because the proposals to solve it affect the national interest and the environment.

Can't other West Coast refineries just buy the oil from Sohio?

Sohio has sold some, but most refiners don't want to buy. They aren't geared for it, and they have no incentive to spend a lot of money and time to change their systems. A representative of Standard Oil of California, a leading West Coast refiner, told the National Journal. "It's not our problem. It's ARCO's, Exxon's, BP's, Sohio's. If the economics are such that it's to our benefit to run North Slope crude, then I'm sure the company will give it active consideration." Meanwhile, Standard is buying low-sulfur Indonesian oil.

If the market isn't on the West Coast, then where is it? Who needs the oil?

The Midwest and the Northeast need it. Some of the chronic shortage in those areas could be relieved by conservation, but there would still be periodic shortages of fuel oil and natural gas.

Why doesn't the pipeline go there, then?

Environmentalists and a lot of people in government, Walter Mondale for one, wanted it to. But during Congressional hearings on alternative pipeline routes, the State Department said that the Canadian government was not interested in a route going through its territory to the Midwest. At the same time the Interior Department agreed with the oil companies that there would be a market on the West Coast. Only after the final House vote was cast was it revealed that attempts by Canadian officials to propose a trans-Canadian pipeline had been rebuffed and concealed.

Why the secrecy and intrigue?

Critics have maintained all along that what the oil companies wanted in the first place was to ship the Alaskan crude to Japan. They could sell it for more in a foreign market than in the price-controlled domestic market, and they could make money on shipping as well as on the oil itself. But the companies realized that there would be enormous public opposition to opening America's last great wilderness on the basis of profit alone, so they helped create an atmosphere of crisis that bore little relationship to the real energy crunch. By the end of 1973, there was so much public panic that Congress passed the pipeline authorization despite court orders against construction. The Alaskan pipeline was built instead of the Canadian one, and now we have a projected surplus on the West Coast.

We are not surprised that the oil companies now think that the federal government should determine whether export-for-import exchanges "with refiners in non-contiguous countries are considered to be in the national interest." Those words are taken from testimony given to a Senate committee by C. R. Sitter, senior Vice President of Exxon. The exchange he means is the Japanese swap, wherein the US would ship Alaskan crude to Japan in exchange for Japan's share of Middle Eastern oil, which would go to refineries on our East or Gulf Coast.

But isn't shipping the oil to Japan illegal?

Yes, at the moment. Making it illegal was the purpose of one of the provisions added to the Trans-Alaska Pipeline Authorization Act. But the Congress or the President can change that. According to the Act, the President can find that such exports will not diminish the total quantity or quality of petroleum available to the United States." Congress has reserved the right to overturn such a decision by passing a concurrent resolution of disapproval. But it could just as well approve, or it could pass legislation nullifying the prohibition. Many cynics—us for example—would say the oil companies do not let mere laws stand in their way.

Would the swap be in the national interest?

No. It would indicate that oil companies cannot be controlled (this may be true, but is not in the national interest); it would take jobs away from US maritimers, who have been counting on the West Coast shipping; it would increase the danger of massive oil spills from loosely regulated foreign-flag ships; and it would not decrease our dependence on foreign oil.

Of course, shipping Alaskan oil to Japan could have obvious environmental advantages—for California, anyway. If we sell the oil to Japan, we will not need to build pipelines and deepwater ports on our West Coast. The Middle Eastern oil the US would receive could be imported through existing facilities on the East or Gulf Coast. In fact, some critics claim that environmental opposition to handling Alaskan oil on the West Coast is the oil companies' ace-in-the-hole. Environmentalists, the argument goes, will demand that the oil be shipped to Japan rather than to California or Washington. The oil companies will nobly, yet reluctantly, acquiesce.

If we ship only to the West Coast, or only to US refineries, the oil must go in US-flag ships. But if we ship to other countries' refineries, the shippers can use bigger foreign-flag ships, which, as we've seen in late 1976 and early 1977, are not nearly safe enough. The US regulates its merchant fleet much more tightly than do Liberia and Panama. In a report issued in November 1976, the Federal Energy Administration said, "There is an obvious conflict between the export of domestic oil and the US commitment to reduced dependence on foreign oil imports."

If the oil doesn't go to Japan, what would become of it?

There have been several proposals. The one we like best is to leave the surplus in the ground as part of the government's strategic reserves. We'll talk about that idea later. The other most serious proposals would transport the oil east, one by ship and three by pipelines.

The shipping scheme would have American-flag tankers transport the oil to the Panama Canal, where they would transfer their loads to smaller ships that fit through the Canal. On the other end of the Canal, supertankers would pick up the oil and deliver it to Gulf Coast refineries, while the shuttle ships returned through the Canal for another load. In the short term, about 500,000 barrels of oil a day could be handled that way.

The advantages to this idea are that it could be implemented immediately and would not require new facilities. Disadvantages are that it would mean a lot of oil would be changing ships, therefore increasing chances of spills, and the extra handling and shipping could increase costs so much that the oil would price itself out of Gulf Coast markets, which also receive Middle Eastern oil.

The shipping scheme is not only an option on its own, however. It is also an interim marketing solution in case any of the pipeline proposals are adopted, since proposed pipelines could not be operable for some time. The only options to prevent the shuttle are to ship the oil to Japan or to leave it in the ground.

One pipeline proposal is to convert a pipeline that now carries natural gas west from Midland, Texas. The idea is to transport the oil from the West Coast to Texas, and then divert it to the Midwest. Conversion would require building a new 250-mile leg for the existing pipeline, as well as building offloading facilities at Long Beach, California, where tankers from Valdez could put in. Sohio, whose idea it is, says the pipeline could be in operation in a little more than a year, once permits were granted. The line could carry up to 500,000 barrels a day and could be expanded by converting another line.

There seems to be a widespread misconception that some existing pipelines are "idle." Not so. The total of five gas pipelines are running at 80 percent capacity. If any are converted to moving Alaskan oil, then additional pipelines will have to be constructed to bring natural gas to the West Coast—either that or the oil companies will use the lack of pipeline transportation facilities as an excuse for building a liquefied natural gas (LNG) port for Alaskan natural gas on the West Coast. That's a prospect that chills the blood of anyone familiar with the threats posed by LNG.

Advantages of the Long Beach pipeline idea are that Sohio would have the marketing setup it needs so badly, and shipping through the Panama Canal would be minimized. The disadvantages are that the offloading at Long Beach could seriously hamper, if not destroy, efforts to clean up the Los Angeles area basin. The company says only a ton of hydrocarbons a day would be emitted during offloading, but the California Air Resources Board thinks that number is more likely to be 40–69 tons a day. The state is opposed to the whole Long Beach idea.

Sohio has recognized the threat to air quality and has come up with an imaginative if bizarre solution. Sohio has offered to buy a polluting factor—and destroy it. The net amount of pollution, then, would not increase.

California's air quality is likely to go down in any event, isn't it?

Yes. Assuming that even a portion of Alaskan oil ends up there, it promises an energy boom that will attract a complex of heavy industries, a consequent bust when the oil runs out, deterioration in air and water quality, and prime agricultural land lost to food production. In addition, the petrochemical industries, being capital-intensive, provide very few jobs per dollar invested. Projects proposed to date include petrochemical plants for ARCO in Solano County, petrochemical plants in San Diego County, and an offloading facility in Long Beach for Sohio. (Exxon might go in on that last one, too.)

But we're getting off the topic a bit. A third proposal is to build a pipeline across the northern tier of states—Washington, Idaho, Montana, and North Dakota—to Minnesota. That line, which has been suggested by a consortium of seven companies (not including Sohio) in the Northern Tier Pipeline Company, could ship oil to Minnesota and Montana refineries that are looking around for crude since Canada has cut exports by 21 percent.

The Northern Tier proposal has been endorsed by Montana Senator John Melcher (D), and its chief advantage would be that it would provide a direct American connection to the Midwest. It would require construction of a port for supertankers at Port Angeles, Washington—an idea that must thrill Washington Governor Dixy Lee Ray.

The big disadvantage to that line would be that it would have to cross the Rocky Mountains. Even following developed railroad rights of way (railroads are principal partners in the pipeline company), construction would be hazardous. The Rocky Mountains are high, cold, and notoriously unforgiving. The promoters say that pipeline could be in operation two years after permits were obtained, and it could carry 600,000 barrels a day at first, with an ultimate capacity of 800,000 barrels.

The last pipeline proposal is to offload the oil at Kitimat, British Columbia, and pipe it east to Edmonton, Alberta. It would then be distributed through existing pipelines to US markets in the Midwest. That plan would involve big ships navigating narrow, rocky, winding channels in high winds along a pristine coast. It would mean building a pipeline across the Canadian Rockies in pristine country. It would be exporting our pollution problems.

Seven companies are involved in Kitimat Pipeline Ltd.; the US partners operate refineries in the Midwest that are looking for oil. The pipeline would have an initial capacity of 300,000 barrels a day, and an ultimate capacity of 800,000 barrels a day. The partners say the line could be operating by 1979. They argue that the proposal would be "totally compatible" with Sohio's Long Beach proposal, because the two pipelines would serve different markets. (Double your pipeline, double your fun.)

Do you like any of those proposals?

No. The shipping idea multiplies chances for spills. The pipelines involve time-consuming construction, unnecessary environmental intrusion and degradation, and they would all increase the cost of the oil at its destination. None would make our oil cheaper than Middle Eastern oil. Besides, we dislike playing into the hands of conniving oil companies that are either grasping for more and more money no matter what the consequences, or else are so inept at marketing they could not solve a problem they have been aware of since 1974.

Then what do you propose?

Leave the surplus in the ground. The US government has committed itself to establishing strategic reserves of crude oil in case of national emergency. Current ideas propose buying Middle Eastern oil and storing it in underground salt domes. Instead, why not buy the Alaskan oil from the oil companies and leave it in the already-developed storage area that has kept it safe for thousands of years—the North Slope?

The idea is not nearly so radical as it sounds, and in fact offers a variety of advantages that promote the national interest. Leaving the oil in the ground would eliminate the marketing headaches that are making us contemplate illegal swaps and hazardous transportation schemes. Our strategic national reserves would be established and readily available, since the Alaska pipeline would be in place. No need to find those hypothetical salt domes, no need to risk spills transporting the oil to storage. In case of national emergency, the oil could be shipped to West Coast refineries that can already handle it, or shipped through the Panama Canal. (In a national emergency, of course, the oil companies would be patriotic enough to refine strategic reserves first—the President would persuade them.) Taking this tack would dramatically reduce the projected cost of establishing strategic reserves, and no market would suffer, because the Midwest and East will end up paying Middle Eastern prices for Alaskan oil anyway, after all transportation costs are figured in.

The idea is simple and elegant. It solves several problems at once and keeps the environment as safe as possible. Only environmental groups have suggested it so far, however, because it doesn't provide extra profits for entrepreneurs or corporations.

Can I help?

Yes. Write to the President, who is asking for ideas on what he ought to be doing. His address is the White House, Washington, DC 20500. Also, write to the Administrator of the Federal Energy Administration. His address is 1200 Pennsylvania Ave. NW, Washington, DC 20041. Ask him to consider the strategic reserves option seriously. Compliment him on his wisdom and his ability to see the obvious advantages for the national interest as well as for the environment of such a sensible solution.

Do you think it will work?

It certainly won't work if you don't try it.

Proposed route, capacity, completion date, advantages, and disadvantages:

Panama Canal: 500,000 bbl/day now; immediately available; immediately available, no offloading on West Coast; increases handling, increases spill chances, increases cost.

Long Beach Pipeline: 500,000 bbl/day initially, expandable; a year after permits obtained; gets oil to established distribution lines; time lag, builds new 250-mile pipeline leg, may increase pollution in Los Angeles

basin, possible justification for LNG terminal, builds new deepwater port.

Northern Tier Pipeline: 600,000 bbl/day initially, 800,000 ultimately; two years after permits obtained; serves needy Northern Tier and Midwest refineries; new deepwater port, crosses Rocky Mountains, time lag, increases transportation cost.

Kitimat Pipeline: 300,000 bbl/day initially, 800,000 utlimately; 1979; gets oil to Northern Tier and Midwest refineries; hazardous navigation, offloading in pristine areas, time lag, increases transportation cost.

Strategic Reserve (Leave in Ground): As much as necessary (600,000,000 bbl needed); immediately available; immediately available, eliminates risks, establishes strategic reserves, minimizes costs, solves market problem; could not absorb entire surplus, reserve far from market.

Japanese Swap: Unlimited; immediately available; solves market problem, immediately available, avoids West Coast superport, saves transportation costs, minimizes risks; illegal, politically unacceptable, bad precedent.

AIRCRAFT NOISE ABATEMENT LEGISLATION

Mr. JAVITS. Mr. President, I am introducing legislation to amend the Federal Aviation Administration Act of 1958 and the Airport and Airway Development Act of 1970. This bill, entitled the Aircraft Noise Reduction Act of 1977, would establish a timely and workable program for the implementation of the recently announced regulations on aircraft noise issued by the FAA.

The bill was drafted by the former administration and sent up to the Congress by President Ford on January 18 of this year, with a message that appears in the RECORD of that day. The bill, however, has not been heretofore introduced.

Also, it will remind my colleagues that excessive aircraft noise will not just go away but it demands the urgent attention of the Congress as it affects a multitude of Americans.

The problems created by aircraft noise are not new to us. It has been almost a decade since the Congress passed the first bill dealing with aviation noise, the FAA Amendments of 1968. That legislation required that all future certificated aircraft meet prospective noise standards. But the issue was back in the Senate in 1972, when we enacted the Noise Control Act, requiring the FAA to promulgate regulations to control and abate aircraft noise from all sources within "a reasonable period of time." Finally, it was with us once again last year when I introduced an amendment—which failed—to the Airport and Airway Development Act to finance the aircraft noise retrofit program from the surplus funds of the Airport Trust Fund.

The reasonable time given the FAA had surely run by that time, but it was not until last December 28 that the FAA, in response to a directive from President Ford, issued regulations requiring a program to retrofit or replace, over the next 8 years, all civil commercial aircraft over 75,000 pounds that do not meet current FAA noise standards: known as FAR 36.

The regulation specifically requires that all two- or three-engine jet aircraft exceeding the minimum weight must meet these standards within 6 years, by January 1, 1983; one-half of these must be in compliance by the end of 4 years, January 1, 1981; and older four-engine jets have 8 years to meet the standard, but one-quarter must meet it by January 1, 1981. Additionally, those jumbo jets that were produced prior to the FAA noise standard certification requirements will have to be retrofitted within 6 years.

This is welcome relief. Today, 1,600 of the 2,100 jet aircraft in commercial service do not meet the FAR Part 36 standards. Six million people, in every city throughout the country, must put up with the daily bombardment of aircraft takeoff and landing at decibel levels considered unpleasant and unsafe. This is a problem for which a solution exists. But the FAA regulations are only the first part of that solution. A legislative response is still called for.

At the time of promulgation it was acknowledged that legislation to finance the retrofit/replacement program would be needed. Secretary Coleman held a public hearing on December 1, 1976, to consider alternative mechanisms for financing. Although the recommended method is somewhat different than the one I proposed a year ago, it is a fair, workable, and effective alternative which I support.

This legislation provides a method which will not add to the cost of airline travel, just as the proposal to finance the program from the Airport Trust Fund would not. It would establish a separate trust, for the specific purpose of noise reduction expenditures, which would be supervised by the Civil Aeronautics Board. An appointed trustee would administer the trust fund, and distribute revenues directly to airlines for retrofit or toward replacement. This trust fund would be funded by an aircraft ticket surcharge of 2 percent, that replaces a corresponding portion of the existing airline ticket tax.

The legislation also provides for authority in the Secretary of Transportation to use a portion of the existing surplus in the Airport and Airway Development Fund. It would permit use of up to $300 million of the currently existing $1.5 billion surplus, to assist in retrofitting and replacing outdated aircraft. This is no giveaway program. These revenues have been raised by the aviation industry and the flying public who must bear the costs of environmental degradation to airport neighbors. There is no reason to put the entire burden on today's traveler, although the legislation puts a substantial portion of the costs on him as well.

I believe this plan is both workable and fair. It was given great thought by the Ford administration and deserves congressional consideration. I would hope that the Aviation Subcommittee of the Science, Technology, and Commerce Committee will schedule hearings on this proposal quickly. Chairman CANNON had assured us of hearings last year, but the plan was not forthcoming until after adjournment, and I would hope that this commitment would make for prompt hearings this year. Financing is an integral part of the aircraft noise reduction program and cannot be delayed without a serious consequent delay in the entire noise abatement program.

EXPORT-IMPORT BANK FINANCING NOTIFICATION

Mr. PROXMIRE. Mr. President, I call to the attention of my colleagues a communication I have received from the Export-Import Bank pursuant to section 2(b)(3) of the Export-Import Bank Act notifying the Congress of a proposed Eximbank loan and guarantee to assist the construction of a natural gas liquefaction plant in Algeria. Section 2(b)(3) of the act requires the Bank to notify the Congress of any proposed loan, guarantee, or combination thereof in the amount of $60 million or more at least 25 days of continuous session of the Congress prior to the date of final approval. Upon expiration of this period, the Bank may give final approval to the transaction unless the Congress dictates otherwise.

In this case, the Bank proposes to extend an additional loan in the amount of $67 million to SONATRACH, an enterprise of the Algerian Government, to complete construction of a natural gas liquefaction plant presently being assisted by the Bank. Current Eximbank commitments for the project total $267.3 million in loans and guarantees. The additional $67 million is needed in order to compensate for price escalation and an accelerated work pace on the project. The loan would bear interest at the rate of 9 percent per annum and be repayable over an 8-year period commencing May 10, 1979.

I ask unanimous consent that the letter from Eximbank pertaining to this transaction be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EXPORT-IMPORT BANK
OF THE UNITED STATES,
Washington, D.C., January 28, 1977.

HON. WALTER F. MONDALE,
President of the Senate, U.S. Senate,
Washington, D.C.

DEAR MR. PRESIDENT: Pursuant to Section 2(b)(3) of the Export-Import Bank Act of 1945, as amended, Eximbank hereby submits a statement to the United States Senate with respect to the following transaction:

A. DESCRIPTION OF TRANSACTION

1. Purpose

The purpose of the Eximbank financial assistance is to provide an additional direct credit of up to $67,000,000 to Societe Nationale pour la Production, le Transport, la Transformation et la Commercialisation des Hydrocarbures (SONATRACH), state-owned enterprise of the Democratic and Popular Republic of Algeria (Algeria), to facilitate financing the increased U.S. cost being incurred due to price escalation and an accelerated work pace to maintain the construction schedule of SONATRACH'S natural gas liquefaction plant.

This plant is part of an overall project in Algeria consisting of (1) the liquefaction plant itself at Arzew on the Mediterranean coast, (2) the gas field treatment facilities at Hassi R'Mel in the Sahara desert and (3) a 315-mile gas pipeline connecting the two. In March 1973, Eximbank authorized financial support for U.S. costs of $349,800,000. At the time, Eximbank extended a direct credit of $157,400,000, a guarantee of private bank loans of $157,400,000 and a local cost guarantee of offshore lenders of $52,500,000. These U.S. costs were for U.S. goods and services for the liquefaction plant, part of the gas field facilities, and the pumping stations along the pipeline. The 1973 estimate for the

overall project cost was $882,000,000, the sum of U.S. costs, local costs and third country costs. Today the costs of just the liquefaction plant have increased from $543,000,000 to $1,085,000,000. The original U.S. cost for the liquefaction plant in March 1973 was estimated to be $263,000,000.

The total increased U.S. cost is $167,500,000. Commercial banks will finance without Eximbank's guarantee $75,375,000 of the increased U.S. cost. As in the original Eximbank financial assistance, Banque Algerienne de Developpement will guarantee the additional financial support. In addition, SONATRACH will provide from its own resources and loans funds for increased local costs and may obtain from official export credit agencies in third countries additional funds for any increased costs of goods and services from such countries.

Because of construction delays as a result of the change in the original U.S. engineering contractor for the liquefaction plant (later replaced by another U.S. engineering contractor) and inflation, costs of constructing the liquefaction plant have increased and Eximbank's assistance has been requested for financing only the additional portion of the U.S. cost. Eximbank considers the reasons for and the amount of the increased U.S. cost to be reasonable and necessary to complete construction of the liquefaction plant.

2. Identity of the parties

SONATRACH is the state-owned monopoly of Algeria charged with the responsibility for the exploitation of Algeria's oil and gas resources. It is under the jurisdiction of the Ministry of Industry and Energy.

Bank Algerienne de Developpement is the government-owned development bank which will guarantee repayment of Eximbank's additional direct credit for and on behalf of the Government of Algeria.

3. Nature and use of foods and services

The principal goods and services to be exported from the United States in connection with the increased U.S. cost are engineering and construction services, instruments, cryogenic insulation, support equipment, building equipment and start-up assistance. Major suppliers for the project are Bechtel Corporation, Air Products and Chemicals Inc., General Electric, Westinghouse, Foxboro Corporation, Ingersoll-Rand, Worthington, and Elliott Corporation (a subsidiary of the Carrier Corporation).

B. EXPLANATION OF EXIMBANK FINANCING

1. Reasons

The proposed extension of a $67,000,000 credit by Eximbank will assist in completing the project on schedule and will result in increased exports of at least $167,500,000 because of the higher prices to be paid for previously contracted U.S. goods and services. Also, the acceleration of liquefaction plant work schedule will entail the hiring of additional U.S. engineering professional and support staff. Moreover, since the liquefied natural gas from the project will be exported to the United States, the schedule of shipments for this domestically scarce commodity will be maintained; and also, completion of the project in a timely manner will prevent extensive gas receiving and processing facilities in the United States and six LNG tankers (financed by the U.S. Maritime Administration) from standing idle.

The additional direct credit will enable SONATRACH to pay the higher prices now required by the U.S. exporters and prevent the switching of orders to other industrialized countries that could provide equivalent goods and services.

In view of the magnitude of the transaction, the extent of private financing that will be available without an Eximbank guarantee, and the fact that the goods and services were originally available in other countries, Eximbank's additional direct credit is necessary to maintain this sale for United States manufacturers and contractors.

No adverse impact upon the United States economy will be cause by the export of these goods and services. Indeed, completion of the project will benefit the United States by providing natural gas to our economy.

2. The financing plan

The total increased cost associated with United States goods and services required for the gas liquefaction plant and ancillary facilities and to be purchased by the Borrower is estimated to be $167,500,000. The Borrower will make a 15% cash payment of United States costs or $25,125,000 and the balance of the United States costs will be financed by Eximbank and private financial institutions as follows:

	Maximum amount	*Percentage of aggregate purchase price*
Eximbank credit	$67,000,000	40
Private financing (without Eximbank guarantee)	75,375,000	45
Total	142,375,000	85

(a) *Eximbank Charges.*—The Eximbank Credit will bear interest at the rate of nine percent (9%) per annum payable semi-annually on outstanding balances. A commitment fee of ½ of 1% per annum will also be charged on the undisbursed portion of the Eximbank credit.

(b) *Repayment Terms.*—The total financing of $142,375,000 will be repaid by the Borrower in sixteen equal semiannual installments, the first due May 10, 1979. All of the first eight installments and part of the ninth installment will be applied to repayment of the Private Financing, and part of the ninth installment and all of the last seven installments will be applied to repayment of the Eximbank additional direct credit.

Sincerely,

STEPHEN M. DUBRUL, Jr.

TED KENNDY'S EARNED, NOT INHERITED, RESPECT

Mr. PELL. Mr. President, I draw to the attention of my colleagues an excellent and well-deserved article concerning the senior Senator from Massachusetts (Mr. KENNEDY) in today's Washington Star.

It is time that the public realized, as his colleagues long since have, that Senator KENNEDY is one of the ablest, most effective, and hardest working Senators in our body. Through his display and expression of these qualities, he has thoroughly earned the respect and regard of his colleagues. Speaking as his neighbor, I can say that the people of the Commonwealth of Massachusetts are fortunate in having him as their senior Senator.

Mr. President, I ask unanimous consent that the article may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

QUIETLY OBSERVING 45TH BIRTHDAY: TED KENNEDY'S EARNED, NOT INHERITED, RESPECT

(By Martin F. Nolan)

Edward M. Kennedy celebrates his 45th birthday today. Maybe not celebrates, but observes.

Politically, Kennedy is also adjusting to middle age. While he is forever a Kennedy, he is now becoming a force in the Senate in his own right; he enjoys clout and respect that is earned, not inherited.

Thousands of Americans have read Gail Sheehy's "Passages" about "predictable crises of adult life." Edward Kennedy, whose passage through "Catch-30" was among the most publicized in political history, faces four more "predictable crises." At the time of the 1992 presidential election, he will be 60 years old.

But, as he said in an interview, "I deal with the here and now. And the foreseeable future."

Birthdays are big events in any large family, and in 1961 one of the biggest of all took place in Boston's Commonwealth Armory as 5,000 friends gathered to honor President John F. Kennedy's 44th birthday.

At that dinner, his brother enunciated one of the central truths of the Kennedy legend. Acknowledging the presence of Robert Frost, the president remarked that the poet had visited the White House the day after the president's inauguration and said, "You're something of Irish and I suppose something of Harvard. My advice to you as president is to be Irish." As the more-Irish-than-Harvard crowd roared its approval, Kennedy added, "So we've going to do the best we can."

From a distance, the surviving Kennedy brother seems decidedly more Irish than Harvard. Glamorous, glad-handing, described fondly by his father as "the best politician in the family," the youngest Kennedy has nearly always been the favorite of professional politicians.

But Ted Kennedy may be more Harvard than Irish. He is certainly more idealistic, more liberal and probably more analytical than John or Robert Kennedy. His current Senate interests would have bored his brothers to distraction: Health insurance, changes in the tax code, macro-economics, antitrust and all the minutiae of what makes the innards of government work.

Kennedy's Senate career is becoming what that chamber has not seen probably since George W. Norris in the 1930s. He is a meticulously well-prepared and formidable gadfly.

John Culver of Iowa, Birch Bayh of Indiana, Joseph Biden of Delaware, Howard Metzenbaum of Ohio and James Abourezk of South Dakota sat down with Kennedy to discuss roadblocks to liberal legislation from new, conservative members of the committee, including the Senate's champion of the art of the filibuster, James Allen of Alabama.

The remarkable fact of the informal group is that only Bayh and Culver were longtime Kennedy allies. The others had to be recruited on current facts of political life and not on the lure of restoring Camelot. In past elections, Kennedy had been campaigning for friends whose election might have created a Kennedy "bloc" in the Senate.

But John Tunney, his law school classmate, lost his re-election bid in California, partly because of his Kennedy affiliation. Bill Green lost in Pennsylvania, as did Jimmy Symington in Missouri, and before them, Wayne Owens in Utah.

Kennedy had to build new alliances, just as he is now confronting the task of building a new staff. The normal turnover in Senate staffs has become a mass exodus from Kennedy's office for a variety of personal, political and professional reasons.

As Kennedy recruits their replacements, he will do so not as an heir-apparent presidential nominee but as a chap who might become chairman of the Judiciary Committee by the end of the decade. Kennedy has always had a reputation for "good staff" and now it remains to be seen whether he can keep it. Fellow senators think he can. One senatorial colleague explained when and why Ted Kennedy reached a sense of middle-age serenity:

"I think the big change in Teddy came in

January of '76 when he stopped the whole business of flirting with the presidency. Remember that game he played with Tip O'Neill about 'keep me alive, Tip'? There's a point at which your Senate responsibilities and your presidential ambitions conflict, and you find you're doing justice to neither. Teddy saw that happening to others, like Birch Bayh and Lloyd Bentsen. He then made a basic decision. He gave up flirting with the idea of running for the presidency. Once that decision is made, you can become a very good senator, which he is."

Kennedy himself seemed not at all eager to be interviewed on the joys of reaching 45, on his personal and political transition or any similar subject. When finally cornered and asked what he was hoping for in the years ahead, he responded by mentioning "very interesting panels" in the Office of Technology Assessment, a commission he heads, "very challenging things" on the health subcommittee and "very important opportunities" on the Joint Economic Committee, along with "opportunities for progress" on the Judiciary Committee.

"About Carter? I don't know what people are saying, but I think it will be a good relationship with the administration. Ed Muskie and I called him up on that emergency appropriation for home heating fuel and he couldn't have been more cooperative. Joe Califano told me it was the first thing that the President brought up at the Cabinet meeting the next day, so you couldn't ask for anything more than that.

Edward M. Kennedy, the youngest-born in a large Irish family, learned political skills not as a hobby but as necessary equipment for survival. With these skills came the arts of self-depreciation, which in later life one can shed. Edward Kennedy has been shedding them gradually since he waited to hear his brother speak that raucous evening at the Commonwealth Armory, May 29, 1961.

John F. Kennedy was then on his way to Europe to confront Charles de Gaulle and Nikita Khrushchev. The surviving Kennedy brother seems to face less historic tasks in his middle years, but he can still echo his brother's attitude.

"So I come back to this old city to express my thanks to all of you who are my oldest friends," said John F. Kennedy, "and I carry with me a message which is written on one of our statues by a distinguished and vigorous New Englander, William Lloyd Garrison:

" 'I am in earnest, I will not equivocate, I will not excuse, I will not retreat a single inch, and I will be heard.' "

(This concludes additional statements submitted by Senators.)

JOINT MEETING OF THE TWO HOUSES—ADDRESS BY THE PRIME MINISTER OF CANADA

The VICE PRESIDENT. The hour of 12:15 having arrived, the Senate will now stand in recess and proceed to the House of Representatives for the joint meeting to receive the Prime Minister of Canada.

Thereupon, the Senate at 12:15 p.m. took a recess, subject to the call of the Chair, and the Senate, preceded by the Vice President, its Assistant Secretary, Darrell St. Claire, its Sergeant at Arms, F. Nordy Hoffmann, and the Secretary for the Majority, J. Stanley Kimmitt, proceeded to the Hall of the House of Representatives to hear an address delivered by His Excellency Pierre E. Trudeau, the Prime Minister of Canada.

(For the address delivered by the Prime Minister of Canada see today's proceedings in the House of Representatives.)

At 1:10 p.m., the Senate, having returned to its Chamber, reassembled, and was called to order by the Presiding Officer (Mr. DECONCINI).

CONCLUSION OF MORNING BUSINESS

The PRESIDING OFFICER. Morning business is closed.

THIRD CONCURRENT RESOLUTION ON THE BUDGET, 1977

The PRESIDING OFFICER. Under the previous order, the Senate will now resume the consideration of the pending business, Senate Concurrent Resolution 10, which the clerk will state by title, on which there shall be 4 hours time limitation.

The assistant legislative clerk read as follows:

A concurrent resolution (S. Con. Res. 10) revising the Congressional budget for the United States Government for the fiscal year 1977.

The PRESIDING OFFICER. Who yields time?

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum. I ask unanimous consent that the time not be charged.

The PRESIDING OFFICER. Without objection, it is so ordered.

The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. MUSKIE. Mr. President, I am happy to yield 20 minutes to the distinguished Senator from Virginia (Mr. HARRY F. BYRD, JR.). Maybe we can yield 10 minutes on each side.

There seems to be competition to give the Senator time.

Mr. HARRY F. BYRD, JR. I thank the Senator.

Mr. HATCH. Mr. President, we are delighted to yield 10 minutes to the Senator.

The PRESIDING OFFICER. The Senator from Virginia.

THE COST OF "STIMULUS"

Mr. HARRY F. BYRD, JR. Mr. President, today the Senate is considering its third concurrent resolution on the budget for this current fiscal year of 1977.

This resolution is based upon the theory that the present pace of economic recovery is too slow. It accommodates the so-called economic stimulus package proposed by President Carter, or alternate measures of comparable magnitude.

This resolution provides for a deficit of $68.2 billion—the highest in the history of the United States—for the current year. This deficit is $17.6 billion greater than the figure established by the Congress as recently as last September 16.

When the second concurrent resolution on the budget was adopted last September, the totals therein were described as "binding." It would seem that the binding was extremely elastic.

The presentation of this new resolution now before us, boosting the deficit by nearly $18 billion, dramatizes the chief weakness of the congressional budgetary process: the lack of fiscal discipline.

The increase in the deficit results from reduced revenue and increased spending along the line recommended in the President's "stimulus" proposal.

The President's economic stimulus program calls for expenditures and tax reductions totaling $15.5 billion for the current fiscal year—$31.2 billion for this year and the next year combined. It seeks to stimulate the economy and reduce unemployment through a variety of measures including tax reductions and public works spending.

These measures include:

First. Giving almost all Americans a one time tax rebate of $50 per person.

Second. Setting the standard deduction at $2,400 for single persons and $2,800 for married couples.

Third. Increasing the investment tax credit for businesses from 10 to 12 percent or, if a business so elects, an alternative refundable 4 percent credit against income tax, based upon the payroll taxes paid for social security.

Fourth. Enlarged spending in public works, public service employment, youth training programs, and direct aid to cities and States.

The goals of the advocates of the Carter program—encouraging economic growth and reducing unemployment—are laudable. I must, however, question whether their methods will achieve these goals.

Understandably, the American people would like to have a reduction in their heavy tax burden. I would also like to have taxes reduced, but a tax rebate will do nothing to provide a long-term solution for the present high level of taxation. Nor will a tax rebate come to grips in a meaningful way with unemployment.

I should like to share with my colleagues the view of the tax rebate which was expressed to me by a Norfolk, Va., taxi driver last week.

He said that it made little sense to him for a Government deeply in debt to give a $50 bonus to nearly everyone, when it has no money to give except what it borrows.

How right he is.

The $50-per-person rebate is not a fiscally sound proposal. The Federal Government must borrow $11.4 billion to finance the rebate proposal—thus increasing the debt and the deficit. Interest on this increased debt will use up future tax dollars. So the taxpayers will be paying for years for this one-time rebate.

Furthermore, I am not convinced that stimulus is necessary for the economy at this time. Government statistics for December show a 0.9-percent increase in wholesale prices, and energy shortages and the inflationary pressures associated with these shortages are again appearing.

Indicators such as raw material prices and growth in the broadly defined money supply also show potentially inflationary trends. Only 20 percent of U.S. plant ca-

pacity is idle, and a plant-operating rate of approximately 86 percent, rather than 100 percent marks a full capacity point, according to the Council of Economic Advisers. Furthermore, final demand, an important indicator of consumer demand, increased dramatically during the last economic quarter of 1976.

The total stimulus proposal, with an estimated budget cost of $15.5 billion, this year, will provide greater inflationary pressures upon our economy. Any potential benefits resulting from President Carter's economic package could be offset by a potentially damaging inflation rate.

The more permanent tax aspects of the Carter proposal appear to be a more sensible approach to meeting the economic problems which our country faces today. Investment credits to business can encourage the necessary capital formation to insure a gradual but sustained economic recovery.

Unfortunately, permanent tax measures which would encourage business to form capital and would provide an economic base for long-term, sustained economic growth have been given the least attention in the Carter program.

There are no easy answers to the problems of unemployment and inflation. Neither problem, however, can be solved by more Government spending. Yet this is precisely what part of the Carter program seeks to do by urging public sector spending increases totaling $1.7 billion this year.

With regard to the President's proposal for vastly expanded outlays for public works jobs programs, I think it should be borne in mind that in this country we must ultimately rely upon the private sector to provide jobs.

Rather than pumping tax funds into public works, I think it would be far preferable to create the kind of economic climate that would encourage private expansion thereby assuring more meaningful and permanent employment.

Furthermore, the timing of the public works proposal is wrong. Many of the outlays that will be generated by this program will come many months hence, when recovery presumably will be well along and inflationary pressures will have increased. Thus the result of the public works program will cause added inflationary pressure.

Increases in Federal spending for public service employment are also of concern to me. This spending would provide funds for local governments, supposedly to increase the number of employees on their payrolls and thereby reduce unemployment.

There are two serious problems with the use of Federal money in this way.

First, many local government programs eligible for these funds were established chiefly to create short-term jobs and do not offer employees the possibility of meaningful training or permanent, long-term employment.

Second, the Federal grants, in many cases, may not be used to provide new employment opportunities. Instead, the funds often may go to pay the salaries of employees for whom the local government units already have allocated funds to hire without expectation of Federal aid.

Under these circumstances the spending will not result in a net increase in employment. It will be nothing more than a subsidy for local governments.

Greater Federal spending to solve economic ills has been tried time and time again. Each time this approach has been used, it has failed to provide permanent economic recovery.

Economic policymakers during the past decade have consistently favored stimulation at the expense of reducing inflation. No concern has been shown for reducing Government spending and curtailing the Federal deficit.

The result has been a "stop-go" economy. Periods of economic stimulation have been followed by periods of high inflation followed by an economic slowdown and unemployment. The solution for this slowdown has invariably been more Government deficit spending and the cycle has begun again.

The increases in Federal Government budget deficits during the past several decades are shocking.

Twenty years ago, when the spending figures for fiscal years 1955 through 1957 are combined, our Government had a net surplus of $4.2 billion.

For fiscal years 1965 through 1967, the net deficit was $14 billion.

But hold on to your hats, boys. We now come to fiscals 1975 through 1977. The combined deficit for these was a staggering $180 billion.

A $180 billion deficit in 3 years. I say, that is totally unjustified.

This alarming pattern must be reversed if our country is to enter into a period of economic growth without inflation.

Unemployment can only be reduced when businessmen and consumers regain confidence that our economy will cease to follow a course of inflation followed by economic slowdowns. As Bert Lance, Director of the Office of Management and Budget, has said, economic recovery comes down to a question of public confidence in the economy.

I contend that we must abandon gimmicks and put our finances on a sound basis if we are to achieve lasting recovery.

Instead of meeting the problems of inflation, the Carter proposals are likely to create more inflation. The Carter proposal would increase the Federal budget deficit from $51 billion to approximately $68 billion in 1977.

This increase in the Federal deficit only increases the alarming growth in Federal Government spending. Prior to World War I, the U.S. Government spent as much in a year as it now spends in a day.

In terms of taxes, in 1976, the average American taxpayer spent 3 hours of every 8-hour workday earning the money to pay his taxes. On a calendar basis, he worked from January 1 to May 15, to pay his Federal, State, and local taxes.

Each year the Federal debt continues to grow. As of January 31, 1976, the total Federal Government debt was $595,307,493,047.07. On January 31, 1977, the same debt was $664,857,702,968.33. This is an increase of $69,550,209,921.26—in one 12-month period.

Continued reckless deficit spending by the Federal Government is no economic program.

This gimmick has been tried time and again and the result has always been more inflation and later more unemployment.

My belief is that the best type of economic program to follow is to have a permanent tax cut coupled with a reduction in Government spending and a reduction in the Federal deficit.

The most important tax break that Americans could have is a cut in Government spending.

The Carter program, while providing a measure of permanent tax reduction, does nothing to reduce Government spending—in fact, it does the opposite and greatly increases Government spending.

I cannot support an economic policy which when stripped of its gimmickry, is nothing more than a continuation of outmoded programs of greater Government deficits. A fancy economic package which results in more Government spending is unwise and unsound.

President Carter has promised the American people a balanced budget.

Unfortunately, the so-called economic stimulus program makes the prospects for a balanced budget more elusive than ever. It increases the Federal deficit and makes it correspondingly more difficult to achieve a balanced budget.

I must oppose measures which increase our Government deficit.

The Nation certainly needs more jobs.

The Nation needs more capital investment and the greater supplies of energy and other materials arising from these investments.

What the Nation does not need, however, is a larger Federal deficit and the greater inflation which would surely follow.

This new budget proposal is a bonanza for politicians.

What it says is this: We can spend all we want and at the same time cut taxes, and no one need pay for it. All we need do is add it all to the debt.

That is false reasoning.

I shall vote against the pending proposal to increase deficit spending, because it is unsound and will lead to greater inflation.

And we must always bear in mind that inflation is itself a tax—a cruel and hidden tax that hits hardest those on fixed incomes and those in the middle and lower income brackets.

Those are the Americans who, as they always have, will pay the bill for Government extravagance.

In connection with my discussion of the third concurrent budget resolution and the economic stimulus proposal, I have had the opportunity to review some very interesting figures about the growth of our budget deficit and the national debt. In tabular form, I have summarized our budget surpluses and deficits from the fiscal year of 1958 through the estimates for fiscal year 1977. This table is entitled "Unified Budget Receipts, Outlays and Surplus or Deficit for Fiscal Years 1958–77, Inclusive" and shows in dramatic fashion the increasingly large size of our budget deficit.

A second table is entitled "The National Debt in the 20th Century." This table reflects the unfortunate results of

our budget deficits and depicts the approximately $700 billion rise in the total national debt from 1900 to the estimates for 1977.

The potential for increased inflation as a result of economic stimulus is discussed very convincingly in a February 16, 1977, editorial by the Wall Street Journal. This editorial concluded that the additional borrowing and spending caused by the Carter economic stimulus program provides the real likelihood for increasing inflation.

Mr. President, I ask unanimous consent that the foregoing two tables and the Wall Street Journal editorial be included in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

UNIFIED BUDGET RECEIPTS, OUTLAYS AND SURPLUS OR DEFICIT FOR FISCAL YEARS 1958-77, INCLUSIVE

[In billions of dollars]

Fiscal year	Receipts	Outlays	Surplus (+) or deficit (−)
1958	79.6	82.6	−3.0
1959	79.2	92.1	−12.9
1960	92.5	92.2	+.3
1961	94.4	97.8	−3.4
1962	99.7	106.8	−7.1

PRAY FOR A DEADLOCK

As the House Ways and Means Committee takes up President Carter's economic package today, the optimum outcome is that the Congress and the administration will deadlock over details and wind up doing nothing. For if something like the Carter package does pass, it seems increasingly likely that it would go down as the most ill-timed economic policy in a generation.

We are about to enter our third year of recovery after the sharpest recession of our postwar experience—and the most perplexing as well in that it was accompanied by, if not caused by, double-digit inflation. By now the inflation has subsided to levels that are merely troublesome, not desperate. Today more Americans are working, producing more and earning more, than ever before in our history. Margins of capacity are shrinking, and business loan demand is finally reviving. Laying aside for today our own conviction that measures in the Carter program would not in any event stimulate production, in conventional business-cycle terms this is anything but a moment to enlarge the deficit and boost public spending.

In the face of these signs of economic progress, a case for "stimulus" is argued. It is based on three legs: the unemployment rate, the assumption that inflation cannot be a problem short of full employment and a quirk in last year's GNP numbers.

THE CURRENT ECONOMY

	1973–74 peak	1975–76 trough	Latest
Real GNP (1972 dollars in millions, annual rate)	1,241	1,168	1,282
Industrial production (1967 equals 100)	125.8	111.7	132.8
Per capita GNP (1972 dollars)	5,888	5,454	5,907
Capacity utilization (FRB, percent)	87.8	70.9	80.5
Employment (Millions)	86.3	84.1	88.6
Unemployment (Percent labor force)	4.6	8.7	7.3
Employment ratio (Employed as percent of working age population)	57.4	55.1	56.2

The unemployment rate is certainly the most important, given the popular and political fixation on this single statistic. By now the rate "ought" to be lower, but the reason for this disparity with past experience and other statistical indicators is not found in general business activity. Rather, the reasons are to be found in the especially rapid growth of the labor force and the generous income support programs that allow unemployed workers to search longer for the "right" job. If either of these things is anything that needs to be cured, the cure will not be found in the demand stimulus the Carter program is intended to supply.

The sticky unemployment rate is even more perverse when fed into the assumption about capacity and inflation, for it comes out that we can forget any worry about inflation until unemployment gets down to 5 percent, or 3 percent or maybe 4 percent. First, the experience of 1974, with soaring prices, plummeting production and swelling unemployment, should have taught that the relationship between inflation and capacity is not as simple as once commonly believed. Beyond that, capacity is reached when you have employed your most scarce resource: given the labor force expansion and dearth of investment in the past few years, this is not labor but plant.

We are now operating at something like 81 percent of capacity. Our experience is that at about 88 percent on the Federal Reserve index we encounter bottlenecks, capacity restraint, and inflationary pressures. Given the likely rate of growth in production, figures in that range will be reached in somewhere between one year and two years. Or in other words, just about the time the public jobs and public works portion of the Carter "stimulus" would come on line.

The third leg of the case of "stimulus" is the progression of quarterly GNP figures during 1976. If you simply take GNP growth quarter by quarter, you have these figures: 9.2 percent, 4.5 percent, 3.9 percent and 3.0 percent. Because of the declining trend it is argued, we need to stimulate. Yet this trend is entirely an artifact of inventory adjustments. If you strip out inventories to get final demand the trend is: 3.7 percent, 4.2 percent, 4.3 percent and 4.8 percent. In any event, nearly everyone now seems to agree that the economic "pause" is over, if there ever was one.

At some point inventory accumulation will have to resume, which brings us to the timing of Mr. Carter's rebates. As Arthur Burns observed, the Treasury doesn't have the money to pay the rebates, it has to borrow

it. The rebates have in fact to be borrowed all at once. Assuming the Carter program were passed April 1, it would call for borrowing $12 billion to $16 billion in the remaining six months of the fiscal year—or increasing the deficit at an annual rate of $24 billion to $32 billion in terms of pressure on the financial markets. With business now starting to borrow to replenish inventories, and to some extent even for capital needs, this new public sector borrowing is ideally timed to crowd out private borrowing and to put new upward pressure on interest rates and the money supply.

The Carter package may not be large, but it is cleverly designed. First a left to the financial sector, with a sharp federal borrowing upsurge neatly timed to catch the upswing in private borrowing. Followed by a right to the real sector, with public jobs and public works neatly timed to come in at the peak of the cycle. In short, a perfect inflationary one-two.

Mr. HARRY F. BYRD, JR. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. BELLMON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. BELLMON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, I ask unanimous consent that the following members of the minority staff of the Committee on the Budget be allowed to remain on the floor during consideration of and votes on Senate Concurrent Resolution 10: Ted Haggart, Bill Stringer, and Barry Kinsey.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, I ask unanimous consent that the presence and use of small electronic calculators be permitted on the floor of the Senate during the consideration of Senate Concurrent Resolution 10, the third concurrent resolution on the budget.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BELLMON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. JAVITS. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Who yields time?

Mr. JAVITS. Will the Senator yield some time?

Mr. MUSKIE. I yield 5 minutes to the Senator.

Mr. JAVITS. Mr. President, there are a number of items on which I would like to comment in connection with the budget resolution.

First, I believe the committee has acted very appropriately in what it has done about public service employment. The President's objective is 725,000 jobs. My own objective, and what I believe was the objective of many members of the Budget Committee, was 1 million jobs.

We were assured last year, when the Second Concurrent Resolution was adopted, that if the pace of recovery lagged there would be an opportunity to accelerate this program, a program which is already in place, ready to be used, where persons can be enrolled within 30 days, and where experience has already demonstrated its effectiveness to provide useful training experiences, not "make work" situations or political advantage or benefit.

I am very pleased that the committee has steered an honorable middle course allowing $8.7 billion for titles II and VI, respectively, the older and newer parts of the public service job program, for fiscal year 1977 and fiscal year 1978. I believe that under present circumstances this allowance within the third budget resolution should be adequate to deal with that phase of unemployment to which CETA programs are directed.

Those who decry the need for this program must remember that we are dealing with well over 7 million unemployed. We are talking in round figures about less than 15 percent in terms of public service employment. This is a far cry from anybody winning the debate over the Government as the employer of last resort. Indeed, on an Arthur Burns basis, that is, a lower than the lowest minimum rate, I believe it is a very good case for the U.S. Government standing for the fact that nobody should be deprived of work who wishes to work in order to eat. We should not make them go on welfare for the same purpose.

More specifically, I am pleased that the committee has recommended forward funding of the fiscal year 1978 CETA public service employment program in fiscal year 1977. By appropriating $8.7 billion for titles II and VI of the Comprehensive Employment and Training Act in the upcoming Supplemental Appropriations bill, Congress will be giving the Nation an unmistakable demonstration of its earnest commitment to expand to the extent feasible the public service employment program in fiscal years 1977 and 1978.

For some time it has been my belief that the main obstacle to an orderly expansion of enrollments under CETA titles II and VI was the uncertainty of future funding levels. Some have argued that program expansion is impeded by the new eligibility criteria which we enacted in the Emergency Jobs Programs Extension Act last October, to wit: that half of the vacancies and all of the new slots must be filled by those who either have been unemployed 15 weeks or have exhausted unemployment compensation, and who are also members of low income families. I do not agree that these criteria or the project approach we adopted restrains the build-up capacity of the public employment program. These requirements enable us to target the program more directly on the structurally unemployed and to help to keep "fiscal substitution" at a minimum.

By providing budgetary authorization of $8.7 billion at this time and permitting the Labor Department to obligate these funds in fiscal year 1977, prime sponsors may begin to hire from the enormous backlog of CETA job applicants who so desperately require employment assistance. Prime sponsors can rely upon the fact that if outlays amount to $3.2 billion in fiscal year 1977, $5.5 billion will be available in fiscal year 1978, at least to maintain the 1977 program levels.

In the past, prime sponsors could not hire individuals they might have to lay off in a few weeks because of funding uncertainties. We have just witnessed in recent weeks the way funding uncertainties can restrain prime sponsors from absorbing new slots. Although sufficient budget authority was contained in the Second Concurrent Budget Resolution to fund 500,000 public service jobs under title VI, the Continuing Appropriations Resolution provided funding for only 260,000 jobs through March 31, 1977, and the Labor Department outlayed only about $1.2 billion. Amid all of this uncertainty, prime sponsors complained that they could not even maintain their June 30, 1976 levels on their shares of the $1.2 billion allocation. Thus, in many instances, prime sponsors were forced to reduce or hold down public service job slots rather than to anticipate widespread layoffs in April or May.

Mr. President, I have long been an advocate of the public service employment program. As a matter of fact, I believe we need to establish a permanent program under which Government can be the "employer of last resort" even though at very minimal compensation for the hard-core unemployed of our country.

In March 1976, when the Committee on Labor and Public Welfare met in executive session to make its recommendations to the Budget Committee for funding the programs under its jurisdiction in fiscal year 1977, I moved that we seek budget provision for one-million public service jobs. I maintained then that because of the severity of the 1974–1975 recession, unemployment which had risen to abnormally high levels, was likely to persist at those levels for several years. Our ability to drive down the unemployment rate by utilizing conventional stimulative budgetary and monetary policies was then and continues to be constrained by the danger of reigniting inflationary pressures. Nevertheless, on the basis of preliminary statistics indicating that the recovery in 1976 would be similar to the recovery phases of other post-war business cycles, reliable economic forecasts were telling us then that it was likely that the unemployment rate would decline consistently throughout 1976 and reach 7 percent by the end of the year.

However, the growth rate of real GNP declined from 9.2 percent in the first quarter to only 4.5 percent in the second and to only 3.9 and 2.4 percent respectively in the third and fourth quarters of 1976, hardly enough to make a dent in our unemployment problem. Thus, real gross national product has expanded by only 3.1 percent in the seven calendar quarters since the bottom of the recession in 1975, compared to an average of 9.9 percent over comparable periods in the five other recoveries.

Because of this disappointing performance national output did not rise rapidly enough in 1976 to generate employment of all those who had lost jobs in the recession, to say nothing of those new entrants to the labor force. The unemployment rate, which declined each month from December, 1975 to May, 1976, when it reached 7.3 percent of the labor force, began to increase again as the growth of national production paused. By November, 1976, the unemployment rate was back above 8 percent, thereby nullifying the progress that had been made from December to May. It is true that a record 4 million new jobs were added since the trough of the recession. But the nation's economic performance proved inadequate to the task of affording employment opportunities for an adequate number of job seekers.

Now, in February, 1977, we find ourselves in a position analogous to the one in February, 1976. We are being assured, on the basis of recent business statistics, that a solid and vigorous recovery is about to be underway. We are told that the economic pause has ended and that real GNP is about to accelerate to a 5½ percent annual growth rate. If this occurs, we are assured, the unemployment rate may fall to 6½ percent by the end of 1977 about where we were told last year the rate would be at the end of 1976. I hope the forecasters are correct this time.

But, Mr. President, I remind my colleagues of the fallibility of our economic forecasting techniques not so I can say "I told you so" but because I want to underscore the need for a public service employment program of 1 million jobs.

In December 1976, 21 months since the recession trough, there were 7.5 million people unemployed in our country. Of these 2.5 million were unemployed over 15 weeks and, of this number, slightly over 1 million were heads of households. I believe that a series of external and internal economic shocks since 1973 have moved our economic system into a new epoch, whose dimensions and characteristics are only now beginning to be perceived. The Arab oil embargo, double-digit inflation, soaring interest rates, the worst recession since the Great Depression, the slowest recovery in the post-World War II period, the incredible fiscal crisis that plagues our Nation's cities and other sensational economic developments both here and abroad have altered, irrevocably I am convinced, the way our system operates and responds to Federal Government actions. With specific reference to unemployment, I believe more than half our total unemployed are now out of work for noncyclical reasons. Economic recovery alone will not return us to full employment, regardless of the vigor of recovery—only structural change will do that as to them.

These 3–4 million persons are structurally unemployed, that is unemployed because of imbalances in the labor market itself. What is new about this endemic structural unemployment is the fact that it has become more intractable because of the outmigration of employers to other U.S. areas from our major cities, an accelerating pace of technological change in major manufacturing industries, a serious decline in productivity, the advent of State and local budget austerities and an increasingly inflation-prone national economy. These factors, and others, have created a vast pool of unemployed workers throughout our country who will remain unemployed even if the GNP grows at an optimum annual rate. In this new economic context, Government will have to become the employer of last resort.

I am willing to give the benefit of the doubt to those who maintain that the prime sponsor system cannot absorb more than 300,000 new public service jobs this fiscal year ending September 30, 1977. By the time Congress appropriates funds for titles II and VI of CETA only about 6 months will remain in fiscal year 1977. Since so much uncertainty has clouded this program in recent months, the prime sponsors may not be able to absorb more than 50,000 new jobs per month. If the 50,000 per month rate is maintained we should have the 725,000 level in place by December of this year. This is why the "forward funding" approach taken by the Budget Committee is so important for guaranteeing funding in fiscal year 1978.

But the 725,000 cumulative job level is not appropriate for all of fiscal 1978. Unless a remarkable decline in the unemployment rate occurs between now and early summer, I will seek in the regular Labor-HEW appropriations bill for fiscal year 1978 whatever additional appropriation is necessary to reach the 1 million public service jobs level during fiscal 1978 and to maintain that level through September 30, 1978. I believe that if need be we could reach that level no later than July 1, 1978. Had we that level in place this fiscal year, as I proposed last March, and as the National Council on Employment Policy proposed last December, the human misery endured by some of the 7.5 million unemployed persons in our country would have been relieved.

Congress missed that opportunity when we considered the first and second concurrent budget resolutions for fiscal 1977. We are about to admit that underestimate by authorizing an appropriation of $8.7 billion for fiscal 1977. It is my hope that this amount will prove to be sufficient; if it turns out that it is not, I hope we will have the courage to admit again that we have underestimated both the severity and the nature of unemployment in our country.

Mr. President, I ask unanimous consent to have printed in the RECORD of today's proceedings copies of letters I sent to Chairman MUSKIE in December 1976 and January of this year, as well as the Report of the National Council on Employment Policy, which has endorsed the call for 1 million public service jobs.

There being no objection, the materials were ordered to be printed in the RECORD, as follows:

U.S. SENATE,
Washington, D.C., December 20, 1976.

Hon. EDMUND S. MUSKIE,
U.S. Senate, Russell Office Building, Washington, D.C.

DEAR ED: The recent rise in the unemployment rate to 8.1% demonstrates that our economy cannot now be counted upon to provide sufficient job opportunities for the long term unemployed. There is a clear danger that sluggish economic growth throughout 1977 will not enable the unemployment rate to fall below 7%.

When the Senate Committee on Labor and Public Welfare held its mark-up session last March on the requests it would make to the Budget Committee for funding programs within its jurisdiction, I led the call to make provision for one-million public service jobs in fiscal year 1977. I argued that only an unusual economic recovery could generate enough jobs to obviate the need for an expanded program of public service employment. Since the summer quarter it became clear that the recovery had "paused" and it now seems clear that even with some improvement the early quarters of calendar year 1977 will not show significant enough forward movement to do what we must about unemployment; the rate is highly unlikely to fall below 7 percent of the labor force even by the end of 1977.

I believe that in Title VI of the Comprehensive Employment and Training Act we have a vehicle in place that meets both essential criteria—to put Americans back to work quickly and to target job creation in those areas hardest hit by unemployment. Also, the expressed views of President-elect Carter are thereby met.

I therefore reiterate my call of last March and urge you to ask the Budget Committee to make provision in a Third Budget Resolution for one-million Title VI public service jobs, an increase of 500,000 over and above the level contemplated in the Second Budget Resolution, when we had imminent expectation of less unemployment and earlier recovery.

I am quite cognizant of the budgetary implications of this request. With present estimates of the "absorption capacity" of prime sponsors, you might need to recommend an extra $3–4 billion for the remainder of fiscal year 1977, on the likelihood that prime sponsors could build up to an aggregate of 750,000 public jobs by October 1, 1977. But Congress must be willing to take action to create jobs as quickly as possible to maximize the impact of the fiscal stimulus package on the economy, even if—as I recognize—ultimately this may imply smaller total income tax reductions. I urge you to give top priority to the budget provision to allow of up to one-million public service jobs.

I do hope you will be able to bring my request to the attention of the members of the Budget Committee and that you will afford to me the same consideration you have always in the past.

With warmest regards,
Sincerely,

JACOB K. JAVITS.

U.S. SENATE,
Washington, D.C., January 19, 1977.

Hon. EDMUND S. MUSKIE,
U.S. Senate, Russell Office Building, Washington, D.C.

DEAR ED: In my letter to you of December 23, I urged the Budget Committee to consider making provision in an emergency, third budget resolution for an additional 500,000 public service jobs under the Comprehensive Employment and Training Act. This would bring the cumulative total of CETA public service jobs allowed for in the Function 500 ceiling to the one million level.

Since then, President-elect Carter has proposed an economic stimulus package which appears to include a public service jobs component that would accord with the level contemplated in the Second Concurrent Budget Resolution enacted last September, i.e., a cumulative 500,000 jobs. This number represents a modest addition of about 200,000 jobs over the level funded in the Continuing Appropriations Act. During Senate Labor and Public Welfare Committee hearings on his nomination to be Secretary of Labor, Dr. F.

Ray Marshall acknowledged that while he favors still significantly higher levels of public service employment, the decision to recommend no additions to the presently budgeted level was based upon his personal assessment of the capacity of CETA prime sponsors effectively to absorb additional funding.

There is considerable difference of opinion on this crucial question of prime sponsors' "absorptive capacity." I am certain that prime sponsors in areas of severe unemployment, for example, would have no difficulty absorbing significantly higher levels of public service employment. Given the wide regional disparities in unemployment that exist in our country, I believe it would be improvident and inequitable for Congress to restrain expansion of public service employment in our economically depressed areas on the ground that only some prime sponsors may not be able effectively to absorb new CETA job slots. Neither the inability of some prime sponsors' manpower systems to absorb additional funding, nor the absence of severe unemployment in some labor market areas can justify limiting the expansion of the CETA public employment program in those areas which are in desperate need of more of such help.

New York City's Commissioner of Employment, Mrs. Lucille Rose, informed a member of the Senate Manpower Subcommittee staff last Friday that, in her opinion, prime sponsors could build up to 750,000 CETA jobs by the end of fiscal year 1977 and to one million by the middle of fiscal year 1978.

In testimony before the Budget Committee on January 13, Kenneth A. Gibson of Newark, who is President of the U.S. Conference of Mayors, recommended that the CETA public service jobs level provided for in the budget be raised to a cumulative total of 750,000 by October 1, 1977. This recommendation was supported by Reginald H. Jones, Chairman and Chief Executive Officer of the General Electric Company, who concluded that, "as much as $5 billion of additional Federal funds could profitably be spent this year and next on an expanded Jobs Program . . . through the established CETA channels."

The proposal significantly to expand CETA jobs funding has also been made by the National Council on Employment Policy, which recommended on December 14, 1976, that the cumulative total of public service jobs be raised to the one million level in order to reduce unemployment to "7% or less within six months." The Council includes distinguished manpower experts such as Dr. Marshall, Charles Killingsworth, Bernard Anderson, Sar A. Levitan and Garth Mangum. Finally, and most importantly, I am informed that the staff of the Senate Budget Committee has reported to the Members of the Committee that, "It is currently believed that the Title VI program could be expanded from the presently appropriated 260,000 job level to 700,000 jobs by the end of this fiscal year and to one million by the middle of fiscal 1978." I believe this reflects estimates of the Congressional Budget Office that the public service employment programs could be increased to one million jobs in FY 1978.

In the Comprehensive Employment and Training Act we have an effective manpower delivery system to serve the cyclically and structurally unemployed. New targeting provisions in Title VI direct hiring in public service employment projects at those most in need. Half of all vacancies and all new slots must be filled by persons who have been unemployed longer than 15 weeks and who are in low income households. These new eligibility criteria tend to generate significant savings in Federal AFCE and unemployment compensation costs.

Furthermore, the CETA public service employment program incurs low per job costs, relative to public works employment and various tax reduction plans. When the savings associated with the above-mentioned eligibility criteria are taken into account, the net budget cost approximates $4,200 per job. This makes CETA by far the most efficient job creating vehicle in our arsenal of weapons to fight unemployment.

Finally, since the allocation formula in Title VI concentrates federal funds in areas of high unemployment, the program can easily be reversed if the economy improves significantly in 1977 and 1978.

On the basis of all these considerations, I urge you once again to consider raising the Function 500 ceiling to incorporate sufficient new budget authority to fund a total of 750,000 CETA public service jobs by the end of FY 1977 and a total of one million jobs by the middle of FY 1978. I understand that such provision might require additional budget authority of about $3.5 billion in FY 1977 and $3 billion in FY 1978. With unemployment so high in our cities and among minority groups, we can do no less.

With warmest wishes,

Sincerely,

JACOB K. JAVITS.

REVIVING THE RECOVERY BY DIRECT JOB CREATION

A national consensus is emerging to the effect that the economy must have some further stimulus to revive the stalled recovery. Informed discussion increasingly has been directed to the question, how, not whether, the stimulus should be applied.

The National Council on Employment Policy believes that too much of the public discussion, especially by economists, has centered on tax cuts to the exclusion of other options that are more effective for combating unemployment. We agree with President-Elect Carter, who has repeatedly emphasized that the most immediate problem facing the nation is the creation of more jobs. Recent research and experience have convinced us that direct job creation is the most effective and least expensive way to reduce unemployment.

The Congressional Budget Office recently published estimates[1] which imply that the net cost per job created by a public employment program after 24 months is $2,600 to $3,500. The comparable cost per job created by tax-cutting is $17,000 to $21,000. Thus, indirect job creation by tax-cutting is far more costly than direct job creation. The latter type of program is also much superior in terms of its inflationary impact, the time needed for maximum effect, and the degree to which the areas and persons most in need of help are directly benefited.

We recognize that reasonable arguments can be made for consideration of tax cuts on grounds other than their job-creating potential. But the nation should understand how serious the current unemployment problem is. For nearly six months, according to most economic indicators, the recovery from the recent severe recession has been stalled. The national unemployment rate has remained close to the 8 percent level, and in November the rate rose to 8.1 percent. This is the highest unemployment rate in the entire postwar period after 20 months of recovery. The November rate is higher than the highest rate at the worst point of any of the earlier postwar recessions.

The reported rates for some labor force groups, industries and geographical areas are, of course, much higher than the national average. In recent months, black teen-agers, for example, have had unemployment rates of 35 to 40 percent. The rates for construction workers have been 15 to 18 percent. Some large cities have had rates more than double the national average. Furthermore, hundreds of thousands of people have been out of work for so long, and have become so discouraged, that they are no longer actively seeking the jobs that they believe are non-existent, even though they are willing and able to work. These people are not included in the official unemployment statistics. A recent report to the Joint Economic Committee emphasizes a poorly-understood relationship between increases in unemployment and increases in stress-related illnesses such as strokes, heart attacks and mental illness. Crime rates also rise during periods of high unemployment. No industralized nation is rich enough or strong enough to bear the human and material costs of extremely high unemployment rates indefinitely.

TAX CUTS

In the belief that our most urgent need now is more jobs, we point out the weaknesses of tax cuts—in addition to excessive cost—as a means to that end.

(1) The direct benefits of tax-cutting are not likely to go to the geographical regions and the labor force groups most adversely affected by unemployment and underemployment. Indeed, even the indirect benefits of tax cuts have little effect on those worst off. Because the direct benefits of tax cuts are spread widely over the entire economy, some of the increased demand which results will go to the industries, areas and occupational groups where demand is already relatively high. Thus, tax-cutting as a means of stimulating the economy holds a greater danger of creating inflationary bottlenecks than do the alternative methods.

(2) There appears to be little likelihood that Congress could complete legislative action on a tax-cut proposal quickly. Should the cut be temporary or permanent? What proportion should go to corporations, and what proportion to individuals? How big should a tax cut be? How should it be divided between high-income and low-income taxpayers? Is a rebate on 1976 tax liabilities better than a reduction of current withholding, or should there be some combination of these? Will a tax cut now decrease the possibility of tax reforms later?

All of these, and more, are questions about which reasonable persons may differ, and the resolving of differences may consume a substantial amount of time. After legislative action is completed, the Internal Revenue Service may need more time to revise regulations, print and mail forms, await returns, and write and mail checks. Given these kinds of delays, the tax-cutting approach may produce few new jobs before midyear or even later.

(3) The initial benefits of tax cuts obviously go only to those who pay federal income taxes—and this is mainly those who already have jobs. Under most tax-cut proposals now being discussed, the largest benefits would go to those with higher incomes. Except for the few unemployed who have had some taxable earnings or other income during the year, this group gets no direct benefits from a tax cut; generally, the unemployed are benefited only indirectly as tax savings or rebates are spent by those who initially benefit from them.

(4) Slippages reduce the benefits of tax-cutting before they reach the unemployed. The taxpayer who gets a rebate or tax reduction may save most of it, at least for a while; an estimated 80 percent of the tax rebate of 1975 was saved in the quarter it was paid.[2] The producers of goods and services may simply lengthen the working hours of those already employed if the demand for their products increases modestly. Dealers in goods may choose to draw down inventories before adding to payrolls.

DIRECT JOB CREATION

The most obvious alternative to tax cuts as a means to increase the total number of jobs in the economy is an expansion of the existing programs for direct job creation. We believe that the advantages of this approach are substantial.

(1) A direct job creation program has its largest, most immediate impact on the unemployed. All of the money (except for a small percentage for materials and super-

---

Footnotes at end of article.

vision) goes immediately and directly into the pockets of newly-hired workers.

(2) The benefits of a direct job creation program can be sharply focused on geographical areas and labor force groups that are most severely affected by unemployment and underemployment. Such focusing was undertaken through the addition of amendments recently to Title VI of the Comprehensive Employment and Training Act. Additional legislative action on this point at this time is unnecessary, except to make clear that additional funding for direct job creation shall be governed by these rules that are already in the law.

(3) The ability to focus the impact of a direct job creation program greatly reduces the inflationary impact of this type of expenditure compared with other forms of economic stimulus. Newly-hired workers under such a program tend to spend a large percentage of their pay locally, and many of them will be in depressed areas with substantial amounts of unused capacity, at least in the service-producing firms. The likelihood of inflationary bottlenecks is less with a focused direct job creation program than with an unfocused income tax cut.

(4) Although the initial benefits of direct job creation occur in the public and non-profit sector of the economy, the wages paid to those newly-hired will be spent almost entirely in the private sector. This spending will create additional jobs in the private sector. A conservative estimate is that each new job in a public employment program will indirectly create one other new job on the private sector.

(5) The existing public employment program could be expanded quickly. The necessary administrative machinery is in place and functioning. Substantial numbers of workers could be hired in a few weeks, and the totality of any expansion authorized and funded could probably be carried out in less than six months. With local units of government almost everywhere cutting back on educational expenditures (in constant dollar terms) and reducing essential services, there is certainly no shortage of useful work to be done.

(6) One virtue of direct job creation is its flexibility. Jobs can be established in public schools, in non-profit enterprises, in work experience programs tied to school systems, in public works, and in many other kinds of activities as well as the conventional jobs in government offices. The variety and usefulness of the jobs will be limited only by the ingenuity of the designers of projects.

PUBLIC WORKS

A public works program ranks somewhere between direct job creation and tax cutting on most of the points discussed above—focused effect, jobs for the dollar, direct impact on the unemployed, inflationary effects, and speed of implementation. Contrary to the commonly-held view, the economic impact of public works need not be delayed. Most potential recipients of funds have projects on which the engineering work has been completed. In fact, it is reported that proposals worth about $15 billion have already been filed for the new public works program that will provide a fraction of that amount.

There is one substantial advantage of public works: Most projects have as an end result a tangible product which is a permanent addition to national wealth. The nation is still walking on sidewalks, driving on roads, and using bridges, schoolhouses and parks that were built as part of work relief projects during the Great Depression. The National Council on Employment Policy believes that a further substantial investment in public works is justified.

MANPOWER TRAINING AND OTHER SERVICES

This Council recently published a survey of the research of the past decade on the worth of manpower training programs.[3] Our finding was that the overwhelming weight of the available evidence supports the conclusion that, with few exceptions, the manpower programs of the 1960s and 1970s will repay substantially more than their costs by their private and public returns—primarily in the form of higher earnings, steadier employment, reduced welfare payments, and increased tax payments. The real cost of training is less when the trainees would otherwise be idle than when they must pass up jobs to get training, and for this reason many other nations systematically increase their training outlays when unemployment rises. While precise figures are hard to get, it seems reasonably certain that in the U.S., manpower training outlays have not increased at all during the recession or the limping recovery.

We believe that the value of the public employment and public works programs recommended above could be considerably enhanced by including in them a significant training component, and that substantial segments of the unemployed labor force could benefit from expanded manpower training and other service programs. It seems penny-wise and pound-foolish to stint on the kind of program that is likely to more than pay for itself over the long run.

CONCLUSION

(1) We repeat our recommendation of last February[4] that the present public employment program be expanded to provide a minimum of one million jobs (about 650,000 above the present level). The initial gross cost of this expansion would be approximately $5 billion per year. Taking account of the additional jobs indirectly created by this expansion, we estimate that this single action would reduce the national unemployment rate to 7 percent or less within six months.

(2) We further recommend that $2 billion be added to the public works program. The estimates of the Congressional Budget Office indicate that this expansion would initially create another 112,000 to 140,000 new jobs within 12 months, and the indirect effects of this expenditure would create an approximately equal number of jobs, for a total of roughly 250,000 jobs. Hence, these two program expansions together would bring us within striking distance of President-Elect Carter's stated goal of a reduction of 1.5 percent in the national unemployment rate in 1977. This assumes, of course, that the economy will continue to grow at a rate sufficient to absorb the growth in the size of the labor force.

(3) We also recommend the expansion of manpower training funds by at least $1 billion. Part of the total sum should be directed toward on-the-job training in private firms. This expansion of manpower training would increase the effectiveness of the public employment program if the two were coordinated, and it could make some contribution to the effectiveness of the public works program. In addition, more attention to manpower training would be a profitable investment for the future of the country and its labor force.

(4) We would not preclude consideration of a tax cut of modest size in addition to the foregoing increases in expenditure. The debate over the details of the tax cut should not be permitted to delay action on direct job creation through public employment and public works. Furthermore, if the recommended expenditure increases are made, then obviously any tax cut should be smaller than it would be if tax-cutting were the only form of economic stimulus. And we believe that any tax cut, regardless of its size, must be justified on grounds other than its direct job-creating effects. A tax cut may be structured to provide some general stimulus for private investment, for example. Expenditure increases alone may not provide all of the stimulus needed by the economy, which may be slipping into a new recession without having completely recovered from the last one. Developments in the near future will reveal the magnitude of the additional stimulus needed. But employment policy should rest on the cornerstone that more jobs can be created more quickly and at less cost by means other than tax-cutting.

[4] NCEP, *How Much Unemployment Do We Need?* (Washington, February, 1976).

Mr. JAVITS. The second point which deserves note is that the budget resolution provides the necessary allowance for an extension of the Federal supplemental benefits program for the unemployed. We are still experiencing an unemployment rate which is really intolerable and unacceptable. One of the great achievements of the previous administration, and which was joined in very strongly by the Congress, was that President Ford led in the feeling that a man who was unemployed, through no fault of his own, if we humanly can avoid it should not be made to resort to welfare in order to keep his family together, and, therefore, he was entitled to the best we could do for him in unemployment compensation where he had a feeling of dignity and which came to him as a right.

This program extended as long as 26 weeks, which we had in the Federal State program, plus an additional 26 weeks, which we had in the Federal programs, plus 13 weeks. By use of various triggers that has been brought down to a figure of roughly 52 weeks. I have introduced legislation to extend the program beyond March 31, 1977, when it expires by statute. The Budget Committee has accommodated the figures on that score and provided $508 million in the necessary budget authority and outlays.

I point out, Mr. President, that in the FSB program we are dealing with huge figures. There were 2,313,000 who drew benefits under that program in 1976. The Department of Labor's best estimate for 1977 is 1,690,000. These are people who have added responsibilities to themselves, who head families, or they are working women with families. Hence, it is a very significant factor in American life.

The last point I would like to refer to is very significant, Mr. President. The Budget Committee, realizing that at least half of our unemployment is structural unemployment, has accepted the proposition that we have to target unemployment relief programs to those who are the heaviest affected. There is no doubt, Mr. President, that the most heavily and adversely affected in this country are the youth.

Mr. President, I wish to commend the members of the Budget Committee for their foresight in including in the resolution before us provision of sufficient budget room for the startup of a youth

employment title in the Comprehensive Employment and Training Act in fiscal year 1977.

Many bills have been introduced in this session of the 95th Congress—including S. 170, the Comprehensive Youth Employment Act, introduced by Senator HUMPHREY, myself, and others; S. 503, the Youth Employment Act, introduced by Senators MCCLURE, DOMENICI, BELLMON, myself, and other Republicans; S. 1, introduced by Senator MATHIAS; S. 306, introduced by Senators STAFFORD, RANDOLPH, and others; S. 494 introduced by Senator JACKSON and others; S. 20, introduced by Senator CRANSTON and others; and S. 680, introduced by Senator SCHWEIKER.

Some of the authors are in the Chamber now. Some of the bills start at the age of 16, some of the bills start at the age of 18, but include youth, roughly speaking, up to 24 years of age. Half of our unemployed are under that age. The deplorable figures of 40- and 50-percent unemployed in the slums and ghettos of our large cities, not just New York but every large city, and I say that advisedly—every large city—are simply shocking, shocking socially and shocking governmentally and economically.

It would be very simple to have a race here in the Chamber as to whose youth plan should pick up all this money. This is no way to legislate, to leave that race to the swift or to those who might find an opportune moment to press their particular approach.

There is no question but that a consensus is emerging in the Senate to enact youth employment legislation in this session. In accordance with the provisions of the Congressional budgetary process, such a bill must be reported no later than May 15, if it is to receive an appropriation for the fiscal year commencing October 1.

I am convinced we can act expeditiously in the Committee on Human Resources to mark-up and report a bill for Senate consideration before May 15. If youth employment legislation is indeed enacted by Congress in this session, it is likely that significant start-up costs would be incurred in the remaining months of fiscal year 1977. For this reason, the action of the Budget Committee in including $300 million in Function 500 for starting up a comprehensive youth employment program is so wise and so important. Provision of budgetary authorization at this time represents the needed first step toward Senate consideration of youth employment legislation promptly.

In the coming weeks, when the Human Resources Committee makes its recommendations to the Budget Committee for funding its authorizations in fiscal 1978, I will hope to move for full funding of a CETA youth title and that the Budget Committee will continue to perceive youth unemployment as the social and economic calamity it truly is and provide sufficient availability in the fiscal year 1978 budget to build upon the foundation so wisely provided in the Resolution now before us.

The PRESIDING OFFICER. The time of the Senator has expired.

Mr. MUSKIE. Mr. President, I yield two additional minutes to the Senator.

Mr. JAVITS. I thank the Senator. Therefore, it will be my objective, Mr. President, as I am the ranking member of the committee which deals with this problem in the Labor Committee, which is organizing at 2:30 today, to seek a set of hearings by either the committee or a subcommittee concerning these youth bills, with the objective in time—and that is the critical factor—of giving to the Senate our best advice as to what ought to be the youth bill, not so much anybody's particular bill as some set of solutions, but the most opposite to the problems which we face.

Again, it is an area in which we have had great experience and it is an area in which, I believe, Mr. President, the Senate is very well capable of designing a suitable package which will be a credit to us.

I ask the chairman of the Committee on the Budget and the ranking member whether or not they would approve of this method of proceeding as being in line with the general ideas which they had in giving us this availability in the budget so that we could move within an accepted budget figure.

Mr. MUSKIE. May I say, speaking for myself, and I think for all the Committee on the Budget, not only do I approve it, I applaud it.

The distinguished Senator from New Mexico (Mr. DOMENICI) was particularly insistent upon developing new approaches to the structural unemployment represented by the youth of our country and we had considerable discussion in the Committee on the Budget. As the Senator knows, we are not a program committee. It is not for us to resolve the issues posed by the different approaches that have been suggested by, I think, some seven pieces of legislation that have been introduced in this field.

There is the Senator's own bill, which he cosponsored with Senator HUMPHREY. There is a Mathias bill, there is a Cranston-Kennedy bill. There is a Jackson-Magnuson bill—two Jackson-Magnuson bills. There is a Public Works Employment Act which is before the Committee on Public Works, sponsored by Senators RANDOLPH and STAFFORD. Then there is the McClure-Domenici-Bellmon bill. All of these pieces of legislation have elements to commend them to our attention.

I think that, in order to avoid the competition that the Senator referred to with the funds made available in the budget resolution, there ought to be a resolution of these issues in the committees which have jurisdiction over them. It seems to me that the Committee on Labor is the appropriate forum. I am most appreciative to the Senator for his interest in doing this.

I would appreciate it if my good friend from New Mexico (Mr. DOMENICI) would indicate his reaction to it.

Mr. DOMENICI. I thank my chairman.

Mr. JAVITS. He originated it.

Mr. DOMENICI. I spoke to the Senator from New York today, not here on the floor, because I understand this budget resolution is only going to accommodate a given amount—although these are only guidelines or targets—for youth unemployment, and I see three or four thrusts around, all good bills. But I certainly hope that no one tries to approach this with the notion that the bill which comes to the floor the quickest will have the only vote on it, because, to the extent that we ought to look at the total available dollars and determine which is the best approach or combination of approaches, it appears to me that leaves us all in a position, if we avoid that, to support a major thrust. Otherwise, we are going to be left with a position such that, if the first one comes here, we have to vote either yes or no or our good chairman has to say, that is all you are going to fit into the budget. Then if it passes, we have to be against youth employment.

It appears to me that the leadership here ought to take hold. That is not my prerogative. We ought to come up with a package and fit it within the target.

Mr. JAVITS. Mr. President, I believe the labor committee, in its employment subcommittee, if we cannot get a full committee hearing—and I am going to try for a full committee hearing—should be able, as we have dealt with this subject many times, to put together a suitable package. I wish to thank, because I think the Senate owes them thanks, all who have offered these bills and the Republican stimulus package if at all agreeable with the plans of President Carter, contains a tentative version of the Domenici bill, which he has with Senator BELLMON and others. So I believe we have a bipartisan approach and we shall do our best to do the job.

I think the suggestion about the leadership is excellent. I shall do my best to get Senator WILLIAMS to go to his leadership to see that our committee is permitted to follow the matter through if it acts promptly, and I am sure it will. I shall do the same with our leadership.

Mr. MUSKIE. May I add to the Senator that the new Secretary of Labor, Mr. Marshall, is intensely interested in working on structural unemployment. I think he would welcome an opportunity to work with the committee and the leadership, if the leadership responds to the suggestion, for the purpose of resolving these issues.

Mr. JAVITS. I thank my colleague. We have his full assurance that he will work with us in whatever way we wish in order to see that whatever we do is practical in terms of the problem.

I thank my colleague.

Mr. BELLMON. Will the Senator yield?

Mr. JAVITS. I yield.

Mr. BELLMON. I compliment the distinguished senior Senator from New York for the work he has done in the area of youth unemployment. It was a great deal of his guidance that went into the Youth Employment Act, which three of us joined in cosponsoring, and which I believe offers some real hope in solving this problem.

The point I want to make is that this budget resolution now before the Senate is sufficiently flexible to allow the accommodation of programs of that kind. We do not, as has been said, mandate which programs shall finally be funded, but

rather, make provisions so Congress can work its will on these programs once the programs have been proposed.

Mr. JAVITS. We think it is adequate for the purpose. Senator DOMENICI does as well, and, obviously, Senator MUSKIE does. I believe we can fashion what is needed within the parameters of what the Committee on the Budget has done. I again express my deep feeling that the Committee on the Budget has served the country unusually well in this particular matter at this particular moment. Our job will be to use the moment well.

I thank my colleagues very much for their cooperation.

The PRESIDING OFFICER (Mr. MATSUNAGA). Who yields time?

Mr. BELLMON. Mr. President, I yield myself 3 minutes.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized.

Mr. DOMENICI. Will the Senator yield for a parliamentary inquiry?

Mr. BELLMON. I yield.

Mr. DOMENICI. Mr. President, what is the time situation on the bill pending before us?

The PRESIDING OFFICER. There were 4 hours remaining when debate began today.

Mr. DOMENICI. I thank the Chair.

I thank the Senator from Oklahoma.

Mr. BELLMON. Mr. President, it is my intention to support the budget resolution, as I said in my statement yesterday. There are some points I would like to make, very briefly, in that connection.

The first is that the Committee on the Budget has, in preparing this resolution, set what I consider to be an upper limit on spending. It does not mean that those of us on that committee who voted for the budget resolution feel that we should, that Congress should spend all the money or that all this spending is even necessary. What we did was set a policy flexible enough and a figure high enough to accommodate the actions that Congress may later wish to take. I do not personally feel compelled to support all the spending initiatives which could occur under the terms of this resolution.

The Committee on the Budget has essentially recommended that efforts to stimulate the economy at this time should be primarily through tax reductions rather than through big additional Government spending programs. I think that point is important. It is one that Members should not miss. This budget does not anticipate a large increase in Federal spending; rather, it does anticipate tax reductions of one kind or another that we hope will help to stimulate the economy and get people back to work. The main hope here is that consumer purchasing will go up and business confidence will rise, and that the economy will then take on a healthier tone and maintain that tone for longer than would be the case if the level of Fedreal spending were to rise by any significant amount.

The resolution before us will accommodate a wide range of alternatives, although clearly not everything that everyone may want to do can be accommodated. There is room in this budget resolution for the proposals of the new Carter administration although, in my mind, many of those will not finally become law. If that is the case, then perhaps some of this spending authority that we make room for will not be needed.

There is an increasing amount of reservation being expressed through Congress about parts of the Carter package, and even though this resolution makes room for it, it is my judgment that entire package will never become law.

The stimulus proposal the Republicans had worked out on the Senate side would also fit under the terms of the resolution and, if the Congress decides that is the better package, that can be accommodated.

Mr. President, on my own part, I favor strongly the permanent tax reduction, rather than the temporary tax reduction, because I feel it has a far more lasting effect on the economy, and while we would not have quite the same quick kick we would get from the tax rebates, I believe the economy is better off having the permanent tax reduction than from getting a $50 rebate that Mr. Carter has proposed.

Mr. President, the experience of the Congress in dealing with the new budget process I believe has been excellent to this time. It is my intention to support this resolution primarily because I believe the budget process does deserve the support of the Congress.

Those of us who work in the budget process I believe need the support on the conclusions of the committee there.

I am going to support this resolution even though there are parts of it which give me concern.

The PRESIDING OFFICER. Who yields time?

Mr. MUSKIE. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. MUSKIE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MUSKIE. Mr. President, I ask for the yeas and nays on final passage.

The PRESIDING OFFICER. Is there a sufficient second? There is a sufficient second.

The yeas and nays were ordered.

Mr. DOMENICI. Mr. President, I wish to have some time before we vote. Is there some time left?

Mr. MUSKIE. Yes; how much time does the Senator wish?

Mr. DOMENICI. Ten minutes.

Mr. BELLMON. Mr. President, I yield 10 minutes to the Senator from New Mexico.

Mr. DOMENICI. Mr. President, I am not sure I will take the full 10 minutes.

I did not support the third concurrent resolution when it was voted out of the Budget Committee. I think our chairman and the ranking Republican know I have always been a part of the debate and discussion and I have generally found myself on the side of supporting the resolutions that we bring forth, be they first or second. Generally, I understand that I cannot expect to get exactly what I want and neither do the other members of the Budget Committee.

In fact, I think it is commendable that a number of Senators, including our chairman and our ranking member, have ended up supporting our resolutions when, as a matter of fact, throughout the markup and debate they have not always gotten their way—in that respect, specifically, I believe I should say, such is the case of our chairman. I think on a number of occasions he would have preferred other target figures, especially in some of the social programs, but when they did not come out that way he has been a staunch supporter.

This particular resolutions finds me in a little different position because we are being asked under a new system, the Budget Reform Act and our resolution approach to it, to address the issue of a lingering recession and to pass judgment on how much we ought to change our budget limits in order to accommodate a stimulus. So it is kind of a midstream adjustment.

I said yesterday in dicussing this with our chairman that I do not argue about the need for a stimulus package. But in this particular instance I am going to again vote "no" on the floor as I voted "no" in a committee vote on the resolution itself. I wish to explain to Senators and for the record why.

First of all, it has been said that this particular resolution and the changes in the figures by function and in the revenue estimates are not programmatic—and they are not—and that there merely is a flexibility here for a number of different courses and solutions.

I am not going to go into the figures that address the specific functions because I think basically there are probably just different programs that I might have in mind versus what we come up with or what people might think this particular resolution is going to accommodate.

But as one reason for not supporting it, let me just address the total revenue figure.

I think it has already been said that most of this stimulus package for fiscal year 1977 is going to be accomplished by adjusting the revenue figures. I say right now that I do not support the proposal to rebate to Americans $50 each.

I may end up supporting it for older Americans and for fixed income Americans, but we do not find that in the revenue figures. That is found in a functional area because that is included as a payment rather than a reduction in taxes.

But within the reduction in revenues estimate, my recollections are these: The second budget resolution had a revenue figure of $362.5 billion and as we looked at this in preparation for a third concurrent resolution we found that we have underestimated there and we have had to reduce that by $6 billion. So we went into these hearings with a revenue estimate of $356.5 billion. It is from that figure that I will just give my example.

What we have basically done is to reduce that figure of revenue expectation from $356.5 billion by $12 billion. Then

we have estimated that there would be a reflow back through of $2.3 billion, meaning that whatever we do with that reduction by leaving it out there among Americans, some way or another, we follow pretty good economic modeling and yet we will bring back $2.3 billion. That is what I mean by reflow.

So that the net revenue figure we are setting in this resolution is $346.8 billion.

Mr. President, I believe that the reduction of revenues by $12 billion is too much flexibility for what we need for economic adjustment. It is basically used up by the $50 rebate approach to most Americans, other than those on social security and SSI who are taken care of on the spending side of the budget.

I am firmly convinced that we need not provide that much flexibility because that would permit, on the one hand, more stimulus than we need and, on the other hand, it probably is going to be construed to accommodate the $50 rebate package. I am convinced we could get by and do a better job with a permanent tax cut.

Yes, I would say even if we made that permanent tax cut retroactive to January 1, we would basically cut the deficit by about $2 billion because we could get by with a reduction of revenues of at least $2 billion less than what we will do in this third concurrent resolution.

So, by way of making my views felt, I must vote "no": because I am convinced that we do not need the package with the outside limits that will fit this resolution. The only way I have of saying that I do not think the outside limit on revenues is anywhere near the best, anywhere near the most effective, is by voting no and in the RECORD explaining as I have that we could get by and do a better job with a smaller deficit. I would like to set the parameters at less so that we do not accommodate that package, which I think is far from the best.

Having said that, I also wish to make one other observation.

This Senator understands this resolution and the report to indicate that most of the things we have changed in this third concurrent resolution have been changed in response to the need for a stimulus package. I hope that, to the extent that we do not, programmatically and by changes in our law, use up the added amounts in the functions or use up the reductions in revenues, we will all understand that they were not intended to be there to float around in the event we do not use them in a stimulus package to be taken up by other programs that we might dream up or add to, because clearly that was not the purpose of the third concurrent resolution.

We principally began this discussion weeks ago and bring it to the floor now to accommodate a stimulus package, not as a way of finding money for programs that we already have passed upon, or casual modification of our second concurrent resolution. I, for one, will be watching that, as I know the other members of the committee will be doing. I hope that we do not think we have given ourselves a great deal of latitude to add things we have heretofore said we could not afford, under the guise of stimulus, because that was not our intention.

Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. Who yields time?

Mr. MUSKIE. Mr. President, I should like to make a few observations, and then I will yield to the distinguished Senator from California.

The Senator from New Mexico and I discussed at some length yesterday the issues he has raised today to underscore his decision to vote against the concurrent resolution. I certainly am not going to depart from the attitude I expressed yesterday.

I understand, of course, that Members often have difficulty balancing judgments to make in deciding whether or not to support the budget resolution, whatever their reservations, or to oppose it because of their reservations. Often, it is a very close question. But when one considers this budget resolution, one should consider these basic questions:

First, how much stimulus do we need? The answer to that question is not scientific. It is pretty difficult to come up with an answer with precision.

The President's stimulus package was, roughtly, $31 billion divided between fiscal years 1977 and 1978. The Republican package, as I recall it, was something like $26 billion. I think the Senator from New Mexico yesterday said that his quarrel was not really so much with the total amounts of the stimulus package as it was as to its makeup.

So I suspect that we are talking not about the differences in the amount of stimulus, but, rather, the details of the program that make it up.

The second question that one needs to answer is, How much of this stimulus should take the form of tax cuts or rebates or reductions of one kind or another, and how much should take the form of direct spending programs to deal with unemployment?

On the tax feature, this bill provides for $12 billion of reductions in fiscal 1977, without specifying—I emphasize this—the kind of tax policy that should be accepted by Congress when the tax writing committees are finished doing their job. So we are talking about $12 billion as stimulus by way of the tax code, leaving the details to be decided later by each House of Congress when the tax writing committees have made their recommendations.

Do we need $12 billion of stimulation through the tax code in fiscal 1977? I happen to think we do. I happen to believe that the people of the country are looking for some indication now that we think the economic conditions which have created problems for them require action now.

No specific proposal is offered to the Budget Committee as to any other way of getting that amount of stimulus through the tax code now. If one concludes that that much stimulus through the tax code now is unnecessary or that it is counterbalanced by a longer term need for the kind of response from the economy that a permanent tax reduction would produce, then you come down with the answer of the distinguished Senator from New Mexico with respect to the budget resolution.

I certainly would not quarrel with the committees. There are arguments on both sides. But I happen to believe that we need the stimulus now. We need the continuity of a 2-year program, and this is the rationale of the Carter administration.

So, beginning with that stimulus now, the administration package follows with a permanent tax reduction package at a $4 billion annual rate, in the form of an increase in the standard deduction, and a smaller optional business tax reduction feature relating to taxes on wages and the investment credit.

Finally, of course, one has to ask this question: Do we, in addition to the stimulus provided through the Tax Code, require some action by way of direct spending programs to create public sector jobs when in the private sector we are facing unemployment on the order of 7 to 8 million people, or 7.5 percent, roughly? I think that both sides of this issue which has been raised by the distinguished Senator from New Mexico agree that we do need some direct spending programs.

So that what we are talking about, really, are questions that cannot be and are not finally resolved in the budget resolution. What we are talking about are questions the resolution of which can be accommodated by the budget resolution. The amount of dollars that would shift, depending upon which way the issues raised by the distinguished Senator from New Mexico are resolved, is not all that much in terms of the totals with which we are dealing.

So I think that, as in the past, this budget resolution accommodates a wide range of views as to what needs to be done and, as such, is an appropriate vehicle for the Senate and the House to begin the debate and the dialog on precisely what tax programs and what job creating programs we will put in place.

That is all a budget resolution can ever be. No budget resolution we have ever adopted can resolve finally all of the programmatic decisions the Congress makes in the course of a session, and this one does not. It does not presume to do so, and it should not.

It is for that reason that I think really the view of the Senator from New Mexico and the view of the Senator from Maine are equally accommodated under this budget resolution. His might involve somewhat less by way of dollars on the revenue side, and that is significant to him, and it should be significant to him because he believes it.

But I thought it would be helpful to put in the RECORD, following his observations, this analysis of the committee position, at least the position of a majority of the committee, and I am happy to yield to my friend from New Mexico.

Mr. DOMENICI. I thank the Senator from Maine.

Let me say I do not disagree with most of what the Senator said except that I would like to make sure what I have been talking about is not categorized as being a future stimulus and that the Senator

from Maine has been talking about a more present stimulus. I think the Senator from Maine knows I have been saying a permanent tax cut plus even a retroactive tax cut, and I think all of that could be accommodated and still be more effective and less costly than the rebate proposition.

What I am arguing about is I do not think we need $11.4 billion of the $12 billion revenue reduction by way of rebates. I just do not think that much is needed. I think we can have a present stimulus which will be just as effective, with more confidence building and more longevity built into it, less potential for a spurt and more potential for some strong, durable thrust, less opportunity for people to put this money in the bank and more opportunity for them to spend it on things they need if it is permanent and comes with everyone's check rather than a $50 rebate.

I have tried to put that philosophical difference into the record by way of justifying a serious difference, although it is only about $2 billion in the amount of revenue reduction that we ought to try to accommodate in the revenue reduction aspect of the third concurrent resolution.

I thank the Senator from Maine.

Mr. MUSKIE. Mr. President, I ask unanimous consent to have printed in the RECORD a table which shows the revenue effects of the tax reductions which Congress produced in 1975–76.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

REVENUE EFFECTS OF 1975–76 TAX REDUCTIONS

[In billions of dollars]

	Fiscal year 1975	Fiscal year 1976	Transition quarter	Fiscal 1977
TAX REDUCTION ACT OF 1975				
Individual:				
Refund of 1974 income taxes	−8.2	−0.2		
Increase in standard deduction	−.5	−2.0		
General tax credit	−1.0	−4.3		
Earned income credit		−1.2	−0.1	
Home purchase credit		−.6		−0.1
Other		−.4	(1)	−.4
Subtotal, individual	[2] −9.7	−8.7	−.1	−.5
Corporation:				
Investment credit	−.8	−2.8	−.5	−1.8
Corporate rate reductions	−.4	−1.1		
Percentage depletion	+.5	+1.7	+.3	+2.2
Other		+.2		+.6
Subtotal, corporation	−.8	−2.0	−.2	+1.0
Total	[1] −0.5	−0.7	−.2	+.5
REVENUE ADJUSTMENT ACT OF 1975				
Individual:				
Increase in standard deduction		−.5	−.2	−.1
General tax credit		−4.1	−.6	−.3
Earned income credit				−.7
Subtotal, individual		−5.5	−.8	−1.1
Corporate rate reductions		.6		−.4
Total		−6.1	−.8	−1.5
TAX REFORM ACT OF 1976				
Individual:				
Increase in standard deduction			.8	−4.1
General tax credit			−1.7	−9.5
Earned income credit				−.7
Subtotal, individual			−2.5	−14.4
Corporation:				
Investment credit				−1.3
Corporate rate, reduction				−1.7
Subtotal, corporation				−3.0
Total			−2.5	[3] −17.3
Grand total	[1] −10.5	−16.8	−3.5	−18.3

[1] Less than $50 million.

[2] In addition, the Tax Reduction Act of 1975 included a 1-time payment of $50 to each social security, SSI or railroad retirement beneficiary (at a cost of $1.7 billion) and a temporary extension of emergency unemployment compensation payments (at a cost of $200 million).

[3] The Tax Reform Act of 1976 also included revenue increases from tax reform of $1.6 billion in fiscal year 1977.

Note: Details may not add to totals due to rounding.

Mr. MUSKIE. The Tax Reduction Act of 1975, for example, included a refund of 1974 income taxes which reduced revenues $8.2 billion. That compares to the present proposed rebate of 1976 income taxes of $9.6 billion. So the tax program of 1975 was comparable to the one proposed here to that extent.

It was just as temporary as the temporary one we are considering now. It had no effect beyond fiscal 1976.

I have put the whole table in and I would like to refer to other items.

There was an increase in the standard deduction in that program of $500 million for fiscal year 1975, and $2 billion in fiscal 1976; there were no fiscal 1977 effects, so, as enacted in March 1975, it was temporary.

There was a general tax credit of $1 billion net in fiscal 1975, which had a $4.3 billion fiscal effect in fiscal 1976, and, as enacted in March 1975, no effect in fiscal 1977.

There was an earned income credit which, as enacted in early 1975, had a fiscal effect in 1976 of $1.2 billion, an effect of $100 million in the transition quarter, and no fiscal effect in 1977. So all those items were temporary tax reductions.

Then there were others which will appear in the table. I will not go through all of them in this oral presentation.

These are the tax policies we relied on in Congress over the last 2 years to stimulate the recovery which has taken place since the spring of 1975, largely in response to that tax policy, and which many people on this floor think is proceeding so well—you have heard at least one speech to that point today—that additional stimulus is not needed, and there are some outside Congress who believe that additional stimulus is not needed.

So on the question of whether or not temporary tax cuts, including tax rebates, do have a stimulative effect, and a healthy stimulative effect, on the economy, this record, of course, speaks to that point. It is for that reason I have asked that this table be included in the RECORD, and I appreciate the opportunity to do so.

Mr. President, I am happy to yield to the distinguished Senator from California for 7 minutes.

The PRESIDING OFFICER. The Senator from California is recognized for 7 minutes.

Mr. CRANSTON. Mr. President, I want to thank the good chairman of this committee once again for his excellent work in guiding the committee on the budget resolution; also the distinguished Senator from Oklahoma (Mr. BELLMON), and the other members of this committee.

We are here once again testing for the first time one more part of the congressional budget process.

We are faced with new and mounting evidence that recovery from the throes of deep recession is well behind the schedule we set in adopting the second budget resolution for fiscal year 1977 last September.

The newest data shows that the economy grew by less than 3 percent during the final quarter of calendar 1977—even before the full impact of this terrible winter has been recorded and the effect of the drought out in the West, in California, and elsewhere.

Mr. President, that growth is not enough.

It is not enough to achieve our modest goal of reducing the unemployment rate to 6 percent by the end of 1977.

It is not enough to reduce unemployment at all.

It is not even enough to sustain the slight reduction of unemployment we had previously accomplished.

Our target in adopting the second budget resolution was to maintain an economic growth rate of 6 percent during 1977—that is the key to reducing unemployment.

Obviously, we are far from hitting that target.

Even at the time that we adopted the second budget resolution, we recognized grounds for concern:

The recovery was slowing down.

Unemployment had risen for 3 consecutive months.

And we recognized that our economic projections might prove overly optimistic and require stronger Federal action to alleviate the problems of extended unemployment.

Now the time has come to take that action through the corrective mechanism of a third budget resolution, designed to stimulate the economy and get recovery moving forward again.

Mr. President, the Budget Committee, under the able leadership of the Senator from Maine (Mr. MUSKIE) and with the outstanding cooperation of the Senator from Oklahoma (Mr. BELLMON), has produced just such a resolution.

I am happy to rise in its support.

The committee has come forth with adjustments in the budget resolution that will permit the adoption of the entire stimulus package recommended by the Carter administration:

This resolution would lower the revenue floor sufficiently to permit the adoption of the $12 billion tax reduction proposed by President Carter in addition to accounting for the lowered revenue estimates resulting from higher than expected unemployment.

The committee proposal also makes adequate provision for all of the $1.7 billion in Carter administration proposals for outlay increases to stimulate the economy.

But the actions of the Budget Committee—faced for the first time with recommendations from a Democratic President—do not permit the interpretation that the committee has become a rubberstamp for the White House.

That would defeat one purpose for which the congressional budget process was established.

Instead—after hearing a consensus of witnesses that the economy required and could stand, without adverse consequences, slightly more stimulus than the administration request provided, the committee added $1.7 billion in outlays to the package.

In fairness to President Carter, it should be noted that some of these additional funds are expected to be supported by the new administration even though its requests have not yet reached the Congress.

The additional expenditures permitted under this resolution will be targeted into those programs where they will have the maximum positive effect on job creation and on alleviating the suffering of those most adversely affected by our current economic distress:

It will permit the increase of public service employment from the current level of 310,000 jobs to 600,000 jobs—50,000 more than the 550,000 jobs contemplated by the Second Concurrent Resolution, with the vast majority of the new jobs targeted on long-term unemployed heads of needy households, under legislation I authored last year.

It provides room—for the first time—for forward funding of both the CETA programs and the Older Americans Act, so that the major uncertainties of funding which have greatly handicapped the planning process in these programs can be alleviated.

It provides $1.5 billion in new budget authority and $600 million in new outlays for expansion of programs to deal with youth unemployment problems.

Let me say that those of us who have traditionally worked at finding legislative solutions to the problem of structural unemployment among young people—particularly those in minority communities—certainly welcome the expansion of attention this problem has received in recent weeks.

No fewer than seven new bills on this subject—one of them, S. 20, my own—have already been introduced in the Senate this year.

The Carter administration proposes to use these supplemental fiscal year 1977 funds for youth programs under the existing CETA authority utilizing the prime sponsor delivery mechanism—an approach I support. It is a low-cost-per-job approach that can begin to be implemented as soon as appropriations are made available.

This approach eliminates the need to create and make operative a new delivery mechanism—in place of CETA prime sponsors—at this time. In this way we can put the greatest number of youth to work in the least possible time and maximize the impact of the expenditure for the balance of this fiscal year.

This administration initiative should lead to the approach, program expansion, and local decisionmaking responsibilities proposed in S. 20, which, if enacted, will be effective in fiscal year 1978.

I believe that S. 20's flexibility and decentralization offer the most promising way of combating the enormous social and economic consequences of the Nation's grave youth unemployment problem.

When the second budget resolution was adopted, the committee recognized that extension of the emergency unemployment Federal supplemental benefits program might become necessary. That necessity has now arisen, and the third budget resolution proposed by the committee takes it into account.

This resolution has provided additional funds for local public works, countercyclical revenue sharing, EPA construction grants, railroad and highway construction, and improvement in recreational facilities as part of a mixed economic stimulus package approach.

Finally, the committee made provision for the President's request of $1.8 billion for direct payment to social security recipients, and other retirees and for Federal assistance to low- and moderate-income families to help them meet the geatly increased fuel costs resulting from the winter emergency.

The committee now believes that with the adoption of this resolution—followed by further supportive action in fiscal year 1978—we can reach 6 percent unemployment by the end of 1978—1 year later than originally planned, by sustaining the growth of the economy at a rate of 5½ to 6 percent during the next 2 years.

We must do at least this much. Frankly, I will be looking for ways of doing more, without overheating the economy, for we certainly must remain vigilant about inflation as we consider expenditures for fiscal year 1978.

So, for all these reasons and many more, I urge the adoption of this resolution, as a prudent beginning toward economic recovery.

Once again, I thank the chairman and the ranking minority member for their very fine work on this matter.

Mr. MUSKIE. Mr. President, I thank my good friend from California.

May I express a note of personal regret that the distinguished Senator, because of new duties elsewhere in the Senate establishment, has chosen to relinquish his seat on the Committee on the Budget. I use the word "chosen" because I suspect he would have preferred to stay, but he has to divide his time in accordance with the role of priorities.

I appreciate the work and dedication that he has given to this committee, and I do deeply regret the fact that he is soon going to leave all of that education, painfully acquired, to lie fallow.

Mr. CRANSTON. I thank the chairman very much. It has been great to work with him. It has been a very rewarding and rich experience. I regretted terribly the choice I had to make, and I am glad that I have not had to leave the committee yet.

Mr. MUSKIE. I thank the Senator.

Mr. BELLMON. Mr. President, I yield 5 minutes to the Senator from New Mexico.

Mr. SCHMITT. I thank the Senator.

Mr. President, I simply wish to very briefly associate myself with the remarks of the distinguished Senator from Oklahoma which he made yesterday and also referred to again today.

I think it is important to continue to ask ourselves the question, as we discuss this resolution and discuss specific legislative packages over the course of this session of Congress, as to whether or not a stimulus is actually needed. I think there is still considerable question about that. It is not that there are not specific activities required in order to help groups of individuals with specific problems in this country. But whether or not the economy truly needs a stimulus is a question I hope that we will continue to ask ourselves.

I also think that the budget resolution should have, as it does, left open the option for economic stimulus and other activities related to it. But I would much have preferred to see the resolution adjusted to the more historically realistic package that has been sponsored by this side of the aisle and has been made known to most Senators.

In particular, the emphasis in that package on a permanent tax cut rather than a rebate certainly is more historically relevant, and I think as we consider the specific pieces of the President's economic package, as modified, we should make sure that we keep history in mind.

It would be a disservice, I think, to the American people not to remember that we have tried most, if not all, of these things in the past, and we have a fairly clear record of what works and what does not work.

But one thing that does not seem to work in terms of total permanent stimulus to the economy is a tax rebate. On the other hand, a permanent tax cut is very clearly effective, not only in permitting individuals and businesses to look ahead into the future and plan for greater expenditures and, therefore, greater stimulus in the economy and in employment, but also a permanent tax cut historically produces far more revenues over the long run than it does deplete revenues in the short term.

I am planning to vote against the resolution not because I think the Senate should be left without the flexibility of working legislation that relates to the economy and to stimulus, if indeed that is required, but because I think we have picked the wrong levels. We have given

the wrong signal to the American people about our understanding of the history of economic activity in this country.

I hope that, as we proceed to look at each piece of the President's package and of alternatives that are proposed by individuals in this body, we will evaluate each very carefully and make sure that not only history is considered but that the best interests of all Americans are considered as we do so.

I thank the Senator, and I yield back the remainder of my time.

The PRESIDING OFFICER. The Senator has yielded back his time.

The Senator from Oklahoma.

Mr. BELLMON. Mr. President, I yield myself 2 minutes.

The PRESIDING OFFICER. The Senator from Oklahoma is recognized for 2 minutes.

Mr. BELLMON. Mr. President, I have before me a budget summary which has been prepared by the staff of the Committee on the Budget. It compares the third budget resolution with President Carter's proposal, and I believe it will be helpful to Members of the Senate to have this information as we complete our action on the budget resolution and prepare for consideration of the various bills that this resolution will make possible.

Mr. President, I ask unanimous consent that this budget summary be printed in the RECORD.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

ADMINISTRATION BUDGET PROPOSALS FOR FY 1977 COMPARED TO THIRD BUDGET RESOLUTION

Budget Summary

The Administration proposals for FY 1977 are revenues of $349.4 billion and outlays of $417.4 billion, for a deficit of $68.0 billion. Budget authority is $464.0 billion. These revenue, outlay, and budget authority totals treat the existing earned income credit and the proposed rebate to taxpayers in excess of tax liability as spending items rather than revenue offsets, which is different from Senate practice. When adjusted to the Senate basis, the Administration budget totals are very close to the Senate Budget Committee Third Budget Resolution.

FISCAL YEAR 1977 BUDGET SUMMARY

[In billions of dollars]

	Administration proposal	Adjustment to Senate basis [1]	Administration proposal adjusted	SBC 3d budget resolution
Revenues	349.4	−2.2	347.2	346.8
Outlays	417.4	−2.2	415.2	415.0
Deficit	68.0	----------	68.0	68.2
Budget authority	464.0	−2.2	461.8	467.0

[1] Earned income credit, $856,000,000; rebate to taxpayers in excess of tax liability, $1,363,000,000.

MAJOR SPENDING DIFFERENCES

As noted above, total budget authority and outlays in the Administration budget are very close to the proposed Senate Budget Committee Third Budget Resolution. Within the totals, however, there are some differences. The major ones are as follows:

	Fiscal year 1977 BEA	Fiscal year 1977 Outlays
Administration budget proposal	464.0	417.4
Adjustment to put Administration proposals on the Senate basis	−2.2	−2.2
Administration budget proposal adjusted	461.8	415.2
Shipbuilding rescission—assumed by Administration, not assumed by SBC (function 050)	+0.7	----
EPA construction grants—SBC is higher than Administration (function 300)	+0.5	----
Emergency fuel bill assistance—included by SBC, not included by Administration (function 300)	+0.3	+0.3
Additional GNMA mortgage purchase assistance—none assumed by Administration, $2 billion assumed by SBC (function 400)	+2.0	----
Surface Transportation—SBC assumes a higher level for supplementals with job stimulus potential than Administration (function 400)	+0.3	+0.1
Housing finance—Administration assumes a higher level of loan repayments for the Federal Home Loan Mortgage Corporation than assumed by SBC; this makes SBC outlays higher (function 400)	----	+0.4
Local public works—Administration assumed an additional $2 billion, SBC as- 450)	+2.0	+0.2
Additional countercyclical revenue sharing—SBC is lower than administration function 450)	−0.3	−0.3
CETA public service jobs—Administration did not assume forward funding of the FY 1978 program, as assumed by SBC (function 500)	+5.6	--
Education supplemental—SBC assumes higher outlays than administration (function 500)	--	+0.4
Health programs supplemental—SBC assumes higher levels than administration (function 550)	+0.2	+0.2
Supplemental for subsidized housing—SBC assumed less than administration (function 600)	−6.0	--
Veterans benefits—SBC assumes somewhat lower estimates for various entitlement programs than administration (function 700)	−0.2	−0.3
Interest on the public debt—SBC assumption is slightly lower than administration (function 900)	−0.3	−0.3
Undistributed offsetting receipts—Administration assumes lower OCS receipts and less trust fund interest than SBC (function 950)	−1.0	−1.0
All other differences, net	+1.4	+0.1
Senate Budget Committee Third Budget Resolution	467.0	415.0

Mr. LONG. Mr. President, when the Committee on the Budget of the House of Representatives issued its report on the third budget resolution for fiscal year 1977, it incorporated in the report a significant and undesirable change in the congressional budget process. This change affects the treatment of refundable tax credits. Up to now, Congress has always treated the total impact of a tax credit as a reduction in revenues. Under the change proposed by the House Committee on the Budget, any part of a tax credit which is refundable—in other words, the extent to which the credit exceeds the taxpayer's liability—would be treated as an expenditure.

I am pleased to note that the Senate Committee on the Budget has not gone along with this change made by the House and has continued to account refundable tax credits as revenue reductions. I strongly urge that this Senate position be maintained in conference.

The change proposed by the House Committee on the Budget is an unnecessary one. It accomplishes nothing substantively. It does not enhance the intelligibility of the budget process. On the contrary, it makes the budget process somewhat more difficult to follow. It accounts for refundable tax credits for budget purposes in a way quite different from the way in which Congress deals with these credits legislatively. Beyond this, the treatment of the refundable portion of such tax credits as outlays would involve significant problems of an administrative and procedural nature.

The earned income credit is a refundable tax credit for low-income families with children. It is equal to 10 percent of earned income up to a maximum credit of $400. This credit is available to offset any tax liability or, to the extent that the individual's tax liability is less than $400, it is paid as a refund. This provision was first enacted in 1975 and has been extended twice—each time as part of a major tax bill. The credit is authorized by a provision in the Internal Revenue Code. It is quite clear that the Congress has wanted to treat this provision as a part of the revenue system.

Changing the accounting for this type of provision in the budget process to treat the refundable part of the credit as an outlay would be inconsistent with the way Congress has actually dealt with it.

Nor can it be argued that this change would better illustrate the impact of such refundable tax credits. The congressional budget process addresses revenues as well as expenditures, and also the deficit or surplus which results from their interaction. A refundable tax credit costs exactly the same and has exactly the same impact on the deficit or surplus whether it is considered an outlay increase or a revenue reduction. If anything, the total budgetary impact of a refundable tax credit would be obscured by treating the refundable part as an outlay and the nonrefundable part as a revenue reduction.

While the change to accounting for refundable credits as outlays rather than as revenue reductions would not substantively affect the merits of such proposals, it would present significant procedural and administrative problems. It would increase the accounting task since a single provision would have to be carried in two separate accounts—a revenue account for the nonrefundable part of the credit and an outlay account for the

refundable part. This could have substantial practical implications for the Treasury Department in administering the credit, since it would have to be able to determine which portion of a given individual's credit was chargeable to which account. For example, if an individual had a tax liability of $200 and an earned income credit of $300, two-thirds of his credit would be accounted as a revenue reduction and one-third as an outlay.

Even more important is the impact of such an accounting change on the budget process itself. Since refundable tax credits are legislatively treated as tax provisions by the Congress, they have been most appropriately included within the revenue totals in the budget resolution.

A good example is the situation in which we now find ourselves, where Congress is considering a tax cut package for economic stimulus purposes. The revenue level which the Congress will adopt in this third budget resolution for 1977 will set the limits of what the Finance Committee and the Senate can do in the way of immediate tax reductions.

When we get down to actually considering the legislation, however, we will want to consider not only the overall total of the tax reduction package, but also how it benefits different categories of individuals. The use of refundable tax credits makes it possible to provide more relief to certain categories of low-income individuals than would be possible if we were limited to only nonrefundable credits. By accounting for these refundable credits against the budget resolution's revenue totals we get a valid picture of the total impact of the tax cuts. If we count refundable credits as outlays, however, the budgetary view of what we are trying to accomplish is distorted.

It is possible, however, that treating refundable credits as outlays rather than as revenues could create a procedural barrier to considering credits for low-income persons as part of a tax package. If a budget resolution allowed for a tax reduction, but contained no allowance for increased outlays, it would be out of order to consider a refundable tax credit—even if the Congress should decide that some portion of the total tax cut ought to go to low-income workers who bear the heaviest weight of payroll and sales taxes, though they have no income tax liability.

Even tax legislation not dealing with refundable credits directly could become subject to a point of order in similar circumstances. For example, suppose the Senate wants to increase the minimum standard deduction. For many low-income taxpayers, tax liability would be decreased by a certain amount while the refundable portion of their earned income credit would be increased by exactly the same amount. As long as the budget process treats tax cuts and refundable credits as revenues, there is no problem. But if refundable credits were to be considered outlays, the Congress might find itself in the position of having to avoid any tax relief to low-income individuals in order not to run afoul of the budget process.

I really think that, in such circumstances, Congress would find a way to work its will. But I do not see any reason why we should set up this sort of procedural barrier to Congress' ability to provide the type of balanced tax relief which it determines best meets the country's needs.

When the Congressional Budget Act was passed in 1974, there were some who questioned whether Congress, with its already tight schedule, would be able to meet the various deadlines and other procedural requirements necessary to implement a legislative budget process. I think those fears have been substantially allayed by the general smoothness with which the process has operated over the past 2 fiscal years.

I think much of the credit for this success is due to the fact that the Senate Committee on the Budget has demonstrated its awareness that the true purpose of the budget process is not to place procedural and technical roadblocks in the way of spending and revenue legislation. Rather, the congressional budget process is intended to enable Congress to develop an overall budgetary framework which will enhance its ability to deal responsibly with legislation and appropriations. There have been some difficult procedural problems, and some debate as to what does or does not properly fall within the realm of the budget process. But I think the Committee on the Budget in its role of overseeing the budget process, has done an admirable job of keeping things in perspective so that the process does not overshadow the goals. Consequently, the budget process, in the Senate at least, has operated well and with a minimum amount of limitation on the ability of the Senate to work its will on legislation.

I think the change in accounting procedures proposed by the House Committee on the Budget for the refundable part of tax credits is a step in exactly the wrong direction. It may be a more pleasing methodology for some theoreticians, but it makes no improvement in the operations or intelligibility of the congressional budget process, and it places an unnecessary procedural constraint on the flexibility of the Congress in considering revenue measures benefitting low-income persons.

Mr. MUSKIE. Mr. President, will the Senator yield?

Mr. LONG. I yield.

Mr. MUSKIE. Mr. President, I express my appreciation to the distinguished chairman of the Committee on Finance for making the record on this point. The Senator had submitted a letter to the Committee on the Budget on this same point. We found ourselves in agreement with the distinguished chairman, and I think that any matter on which the Committee on the Budget and the Committee on Finance agree ought to be given a very visible published record. It is for that reason that I stand to express my appreciation to my good friend from Louisiana and to welcome this addition to the Record.

As the Senator knows, the Carter administration has taken a different approach. The House Committee on the Budget has taken a different approach, so we are going to need some assistance in the conference. I am most grateful to my good friend for making this RECORD.

Mr. LONG. I thank the distinguished chairman.

I agree with him that any time the Finance Committee can agree wholeheartedly with the Budget Committee, there is no doubt about it, they are necessarily right.

I thank the distinguished Senator.

ADDITIONAL STATEMENTS SUBMITTED ON SENATE CONCURRENT RESOLUTION 10

Mr. ANDERSON. Mr. President, the third concurrent resolution on the budget was fashioned to accommodate a vitally needed stimulus to an economy that has failed to grow at a rate anticipated when the Congressional budget was adopted last Fall. The levels of unemployment have been unacceptably high and the economic forecasts unacceptably dismal. Congress must take action to assure that the goal of recovery envisioned upon the adoption of the second resolution on the budget is reached. The adoption of the third budget resolution will assure the Congress the flexibility it needs to enact legislation designed to stimulate the economy and prevent the hardships of the winter of 1977 from undermining any gains made.

The Committee on the Budget, in the third budget resolution, considered both the general requirement for a prompt and sufficient economic stimulus and the need to offset increased consumer fuel and food costs attributable to the exceptionally harsh winter. By adopting the levels in the Resolution, the Congress would permit enactment of up to $12 billion in tax relief and the enactment of up to $5.2 billion in spending designed to produce jobs and assistance to those hardest hit by the harsh winter.

It is my belief, Mr. President, that there has been ample evidence that such a stimulus package is badly needed and that Congress must respond judiciously but adequately to the pressing demands being made on the Nation. To fail to adopt budget ceilings and a revenue floor that would be responsive to obvious needs would be rigid and foolhardy on our parts.

It is important to assure effective congressional control of the budget, and I believe that adoption of the third budget resolution will demonstrate an exercise of that control.

Mr. CRANSTON. Will the Senator yield to help me clarify a point?

Mr. MUSKIE. Certainly.

Mr. CRANSTON. As the distinguished chairman of the Committee on the Budget knows, I was unable to attend much of the session of the Committee on the Budget, during which actions were taken on some of the budget functions. I wonder if the Senator from Maine will help me clarify the meaning of the third budget resolution, with respect to one function in which I have a particular interest.

Mr. MUSKIE. I would be happy to.

Mr. CRANSTON. In function 250—general science, space, and technology—the second concurrent budget resolution for fiscal year 1977 provided budget au-

thority of $4.6 billion and outlays of $4.5 billion; is that not correct

Mr. MUSKIE. The Senator from California is correct.

Mr. CRANSTON. And that ceiling was sufficient to permit funding of the pending earthquake research and development program, as well as the full level of congressionally approved funding for the civilian space program, and some other items; is that not correct?

Mr. MUSKIE. Again, the Senator is correct. Those two programs were mentioned in the committee report.

Mr. CRANSTON. Now, I believe that while the Committee on the Budget reduced the amount assumed in the third budget resolution for function 250 by $100 million in budget authority and outlays, the committee assumed that no policy changes were being made from the second budget resolution—am I correct?

Mr. MUSKIE. Yes; the committee acted on the basis of the markup documents prepared by the staff and CBO that indicated that $4.468 billion in budget authority had been appropriated to date, which would result in outlays during the fiscal year of $4.406 billion. When these amounts in fuctions 250 are rounded to the nearest hundred million, which is our usual practice, the results are $4.5 billion in budget authority and $4.4 billion in outlays. The committee also acted on the basis that no new major supplemental appropriations were likely to be enacted in function 250.

Mr. CRANSTON. The Senator from Maine will recall that the earthquake hazard reduction program passed the Senate by voice vote on May 24, 1976. It would authorize $40 million in fiscal 1977 expenditures, of which $15 million for the National Science Foundation affects function 250. The bill failed to achieve a suspension of the rules in the closing hours of the House session last year. Since that time, earthquake research has received administration support. I have reintroduced the bill this session, but we now do not anticipate appropriations for it prior to fiscal year 1978. Does the third budget resolution assume the enactment of this program?

Mr. MUSKIE. The ceiling set for function 250 in the third budget resolution could accommodate funding for this program, if a fiscal year 1977 appropriation were approximately $15 million and no other unanticipated supplemental intervened. As the Senator knows, the reduction in the functional ceiling was due to a technical reclassification of ERDA research funds, from function 250 to 300. The third budget resolution thus continues to be consistent with the assumption made in the second resolution that there is room for a $15 million expenditure in function 250 for the earthquake program, assuming no new unanticipated items threaten the functional ceiling.

Mr. CRANSTON. As I understand the functional allocations of the budget, the Committee on the Budget assumptions as to particular line items are not attempts to bind the authorizing and appropriating committees or the Senate, provided the budget total and the distribution of priorities are maintained.

Mr. MUSKIE. That is correct. Reallocation among line items which does not violate the budget ceiling is an appropriate exercise of the jurisdiction of the authorizing and appropriating committees of the Senate, or of the Senate itself.

Mr. CRANSTON. I am pleased to hear the Senator confirm my understanding, because I am going to suggest just such a reallocation, which I believe conforms with the intent of the Committee on the Budget, both with respect to this particular function and with the overall economic policy intended by the third budget resolution. Will the Senator yield to me a moment longer, so that I can get his advice as to whether my proposal would be appropriate with respect to this third budget resolution?

Mr. MUSKIE. Certainly.

Mr. CRANSTON. It has come to my attention that the work force currently employed in the research, development, testing, and evaluation phase of the Space Shuttle will be cut back by 9,000 jobs during fiscal year 1977. Some of these jobs are a result of a planned phasedown as the project nears its end. But about 2,800 of these lost jobs are a result of a lack of funds for the fiscal year. The layoffs will occur beginning in February and March. Then in October, after next year's funds become available, the program would rehire 2,800 people, to continue work on this phase of the Space Shuttle program. With the continuing influence of inflation, the costs involved for both labor and materials will be substantially higher after the delay.

In addition, the Federal Government will be required to pay a substantial amount of unemployment compensation to tide over these highly skilled workers, most of whom would then be rehired in October. The California unemployment rate has continually exceeded the national average. At a time when we are trying to stimulate the economy, this state of events has me seriously concerned—it seems to make no sense. I understand that a $50 million supplemental appropriation could be constructively and efficiently used to keep these 2,800 people scheduled for layoffs in this program. I would ask the distinguished chairman of the Budget Committee whether such an appropriation, all within function 250 could be accommodated within the third budget resolution, as reported by the committee?

Mr. MUSKIE. An addition of $50 million in budget authority to function 250 would appear not to breach the functional ceiling, provided, of course, that no other supplemental appropriation affecting this function is adopted. $50 million in budget authority would bring the function 250 budget authority totals to $4.518 billion, an amount, due to rounding, that appears to be consistent with the resolution.

With respect to outlays, it is reasonable to assume that the outlay effect would be somewhat less than $50 million because of the potential enactment date. In addition, the outlay effect presumably would to a slight degree be offset by reducing the need for unemployment compensation. While this amount would certainly use up any room remaining under the outlay ceiling in this function, it would not appear to exceed the outlay ceiling for this function, although we would need to have the specific supplemental before us and, of course, we would need to check the specific outlay effect with the Congressional Budget Office.

Mr. CRANSTON. I remind the chairman that the committee in my absence reduced both budget authority and outlays in this function on the assumption that no further appropriations would be forthcoming. Clearly, the amount we are talking about would have been within the function 250 totals of the second budget resolution, which are now $100 million lower.

Mr. MUSKIE. Yes, that is so.

Mr. CRANSTON. And, I hope the Senator from Maine would agree with me that it makes no budgetary sense to lay off these private sector workers unnecessarily, while we are adding in more money to create jobs to put other people to work. I thank the Senator. I expect to try to make the necessary funds available to prevent these layoffs.

Mr. DOLE. Mr. President, everyone in this chamber is concerned about the state of the American economy. We know that too many people who want to work cannot find work. We know that inflation, which moderated considerably last year, is threatening to escalate once again. And, we know that our economy is simply not growing as fast as we would like.

Because of these factors, there is an emerging consensus that something must be done to stimulate domestic economic growth, that Federal fiscal tools must be employed to accelerate economic recovery. And I agree.

But I have concluded that the mix of spending and tax policies recommended by the Budget Committee in Senate Concurrent Resolution 10 is not appropriate. Primarily, I find myself in disagreement with the committee's decision to recommend a $3.4 billion increase in Government outlays for fiscal year 1977. Although I could support some additional spending, focused on structural unemployment, I do not believe that such a large increase in Federal outlays, which will be used to finance new public works and public service jobs programs, is advisable.

I am aware, of course, that the revenue and outlay levels recommended do not endorse any specific stimulus program or a specific package. Nevertheless, because I believe that large-scale Federal public works and pubic service jobs programs only temporarily treat the unemploment problem while risking renewed inflation, I feel that I must cast my vote against the third concurrent budget resolution.

I do support the decision of the Budget Committee to reduce the revenue floor, thus allowing enactment of up to $12 billion in stimulative and equitable tax reductions. And if additional fiscal stimulus is called for, I would hope that the tax-writing committees would broaden the employment tax credit concept which has already been agreed to by the Ways and Means Committee, a more

expansive version of which I have introduced in the Senate.

I am confident that Senate Concurrent Resolution 10 will be passed by the Senate despite my objection. And I should emphasize that I do not think that the Budget Committee's recommendations on Senate Concurrent Resolution 10 are far from the target. I do support individual tax reductions and Government jobs creation incentives. And I commend the committee for recognizing in the report that the revenue floor estabilshed in the resoluton "would permit postponement until calendar year 1977 of the stricter tax treatment of sick pay benefits enacted retroactively for 1976 in the recent tax reform act."

PERMANENT TAX CUTS NEEDED

Mr. ROTH. Mr. President, the third budget resolution the Senate is considering today revises the fiscal 1977 spending and revenue levels to permit the enactment of measures to stimulate the economy. And while the revised revenue floor would permit the adoption of any type of tax relief measures, I regret that this resolution endorses temporary tax rebates and increased Federal spending instead of permanent tax reductions for our overburdened taxpayers.

The U.S. economy has slowed down, with unemployment rates still too high and with inflation again on the rise. Most importantly, the economy is not growing fast enough to inspire the Nation's confidence in the future.

While Americans have traditionally anticipated that hard work and perseverance would produce upward mobility, the inflation, unemployment, and higher taxes of the past few years have increased the prospects of downward mobility for too many Americans.

Congress must develop policies to assure taxpayers that their incomes will grow, that more and more of their income will not be swallowed up by inflation and higher taxes, and that their jobs will not be eliminated.

A $50 tax rebate will not increase anyone's confidence in the future, and it will not inspire business to increase production and create new jobs. The economic problems we are facing are long-term and we need a long-term solution, not a temporary shot in the arm.

That is why it is so important to enact permanent tax cuts that are not biased against middle-income taxpayers.

The tax rebate scheme approved last week by the House Ways and Means Committee is an ineffective gimmick that is an insult to every taxpayer.

First of all, there is considerable doubt whether the tax rebates will provide the type of economic growth needed to offset inflation and reduce unemployment. The Congressional Budget Office, the Joint Economic Committee, and a substantial body of economic experts all believe that tax rebates are not as effective as permanent tax cuts in stimulating the economy.

The $50 tax rebate will barely offset the impact of the recent home heating cost increases, and it will do little to offset the inflation-induced tax increases of the past 5 years. This increased tax burden has put a heavy drag on the economy, and is primarily responsible for our sluggish economic growth and high rates of unemployment.

Permanent tax cuts, combined with restraints on the growth of Federal spending, will immediately increase every worker's take-home pay, increase consumer purchasing power, and stimulate the type of business production needed to create permanent new jobs.

It is also important to insure that these permanent tax cuts provide relief to middle-income taxpayers, the most ignored men and women in America.

The tax package approved last week by the House Ways and Means Committee guts the middle class and is a slap in the face to the people of this country who pay most of the taxes.

The tax rebates and the increased standard deduction approved by the committee concentrate relief on lower-income people and provide virtually no relief for middle-income taxpayers. I believe special attention should be given to lower income people and senior citizens on fixed incomes, the ones who are most affected by the higher fuel prices and the ones least able to afford suddenly higher bills.

But it is a mistake to believe that the only way to provide relief to lower income people is to penalize middle-income taxpayers.

Approximately 78 percent of all individual income taxes are paid by people earning more than $15,000, yet nearly 90 percent of the tax relief provided by the new standard deduction will go to people with incomes under $15,000. Taxpayers who itemize their deductions, such as those who own a house or have large medical expenses, will receive no tax relief at all from this provision.

These taxpayers, particularly those families where both the husband and wife work, should not be denied tax relief.

Congress should reject the tax rebate gimmick and enact permanent tax cuts for individuals and businesses. A significant cut in taxes will reduce the tax burden on the economy, stimulate consumer and business spending, and create permanent, taxpaying jobs. These permanent tax cuts will restore the Nation's confidence in the economy and the future, and stimulate the long-term economic expansion needed to assure upward mobility for all Americans.

Mr. ROBERT C. BYRD. Mr. President, we are today considering the third concurrent resolution on the budget. This is a part of the congressional budget process provided by the Congressional Budget Act of 1974.

In preparing this third—and final—concurrent resolution on the budget of the United States for 1977, the Senate Budget Committee has done an outstanding job, and I wish to take this opportunity to commend the chairman, the ranking member and other members, and the staff of that committee. They have worked quickly under very severe pressures, and I believe they have prepared an excellent piece of legislation for our consideration.

The changes provided in today's legislation will accommodate the economic stimulus package which the administration has proposed. The resolution also reflects the general concern in Congress that more has to be done and, indeed, can be done, in the area of jobs creation. This resolution doubles the size of the portion of the administration's stimulus package that deals with jobs, in order to permit the administration to move faster in bringing down the unemployment rate. In addition, the increased emphasis on jobs creation in the third concurrent budget resolution should serve to indicate to the administration the resolve of Congress for faster action on employment-generating measures to assure the return to work of the many millions of jobless Americans.

The stimulus-related changes made in the congressional budget for the U.S. Government for the current fiscal year are required by the present troubled state of the economy. The committee recognized—as did the administration, the Congress, and the many employer and labor groups which testified—that there is a need for immediate fiscal action to facilitate the Nation's economic recovery. The sluggish state of the economy endangers our economic growth and employment goals and further delays the achievement of a balanced budget. It has been estimated by the Congressional Budget Office that "each additional percentage point of unemployment loses $50 to $60 billion of output which might have been used for private or public purposes and adds $17 to $21 billion to the Federal deficit."

Recent readings of some of the basic indicators point up the seriousness of our economic situation. The rise in gross national product was only 2.4 percent in the fourth quarter of 1976. This was the smallest quarterly gain since the fourth quarter of 1975 and the second consecutive quarter in which the rate was below the level necessary to keep unemployment from increasing. This decline in growth is a clear danger. Another indication of the slowdown in the economic recovery was the reduced rate of growth in personal income in January. It was up only 0.3 percent, compared with a gain of 1.3 percent in December.

The economic stimulus program will be accommodated in the third concurrent resolution through an increase in outlays to $415 billion and a decrease in revenue to $346.8 billion. While the deficit rises to $68.2 billion from $50.6 billion, the assumption is made that the stimulus package will increase real growth and reduce unemployment, and result in increased revenues as the economy recovers. The size of the stimulus program approved by this budget—$17.2 billion—approximates that proposed by the administration, $15.5 billion. They differ most significantly, I believe, in how much each proposes to do immediately in the area of jobs creation. The Senate resolution would increase the jobs portion of the stimulus to 18 percent of the total stimulus, from only 11 percent called for by the administration's program.

This action can be viewed as a partial refocusing of the administration's economic stimulus. It would reflect, I believe, that we in Congress are beginning to recognize the changing nature of unemployment in America—which con-

tinues to be the most serious problem facing the economy—and the changing strategies that we need to adopt to confront it.

We know from experience that the tax rebate, by stimulating consumer demand, will serve as an accelerator—that is, lead the economy forward, increasing personal income and jobs. However, the tax rebate—even when supplemented by the tax cut in fiscal year 1978—can only partially deal with the high jobless rate. This is the case because the jobless rate is the product not only of inadequate aggregate demand, but also of structural factors, such as the increased labor force participation rate of women and young people, declining economies in some regions, and decreasing demand for low-skilled workers. There is a need for selective job and job-training programs targeted to such sectors of the civilian labor force experiencing employment difficulties.

The unemployment situation, which the jobs portion of the stimulus confronts, is serious. Some 7.3 percent of the civilian labor force population was reported as unemployed in January 1977, and this statistic was tabulated prior to the period of exceptionally cold weather, the jobs impact of which is sure to be reflected in the unemployment rate in February more than in January. Some 6,958,000 workers are jobless, not taking into account the large numbers of Americans who were not in the labor force because they thought that they could not get a job. Nor does the rate include the millions of Americans who involuntarily were working only part time in January.

The jobless rate is considerably higher, it should be noted, among certain demographic groups. For instance, the rate for youths 16 to 19 years of age who are in the civilian labor force was 18.7 percent. Teenagers accounted for almost one quarter of the unemployed in January, although they composed less than one-tenth of the civilian labor force.

To deal with the high overall jobless rate and the even higher rates among some demographic groups, the third budget resolution calls for increases in the outlays for various jobs and job training programs proposed by the administration. Additional funds are provided for significant expansion in jobs and job training programs directed toward youth and older Americans, for local public works programs, and for a revised countercyclical revenue sharing program more responsive to changing levels of unemployment at the local level. Additional funds are also provided for Environmental Protection Agency grants, railroad and highway construction, and labor-intensive projects to improve Federal recreation lands. All of these funds can be put to immediate use to increase employment at the State and local government levels.

What about the inflationary impact of the stimulus? I believe that it will be limited by the current excess in industrial capacity and the high rate of unemployment. Nonetheless, as the economy begins to pick up, inflation will become more of a danger. This issue should and will be receiving increasing attention from us in Congress in future months.

Let me say in closing that the budget proposed in this resolution provides a balanced approach to a serious and immediate problem. I am of the belief that it will give the Congress and the administration the necessary means to restore health to the Nation's economy.

(This concludes additional statements submitted on Senate Concurrent Resolution 10.)

Mr. MUSKIE. Mr. President, if the Senator from Oklahoma is ready to yield back the remainder of his time, I am ready to do so.

Mr. BELLMON. Mr. President, I yield back the remainder of my time.

Mr. MUSKIE. Mr. President, I yield back the remainder of my time.

The PRESIDING OFFICER. All time has been yielded back. The question is on agreeing to the concurrent resolution. The yeas and nays have been ordered and the clerk will call the roll.

The legislative clerk called the roll.

Mr. CRANSTON. I announce that the Senator from Idaho (Mr. CHURCH), the Senator from Mississippi (Mr. EASTLAND), and the Senator from Washington (Mr. MAGNUSON) are necessarily absent.

I also announce that the Senator from Iowa (Mr. CULVER) is absent because of illness.

I further announce that, if present and voting, the Senator from Washington (Mr. MAGNUSON) and the Senator from Iowa (Mr. CULVER) would each vote "yea."

Mr. STEVENS. I announce that the Senator from Wyoming (Mr. HANSEN), the Senator from Oregon (Mr. HATFIELD), the Senator from Idaho (Mr. MCCLURE), and the Senator from Virginia (Mr. SCOTT) are necessarily absent.

I further announce that, if present and voting, the Senator from Oregon (Mr. HATFIELD) and the Senator from Wyoming (Mr. HANSEN) would each vote "nay."

The result was announced—yeas 72, nays 20, as follows:

[Rollcall Vote No. 38 Leg.]

YEAS—72

Abourezk	Haskell	Muskie

So the concurrent resolution (S. Con. Res. 10) was agreed to.

S. CON. RES. 10

Resolved by the Senate (the House of Representatives concurring), That the Congress hereby determines and declares, pursuant to section 304 of the Congressional Budget Act of 1974, that for the fiscal year beginning on October 1, 1976—

(1) the recommended level of Federal revenues is $346,800,000,000 and the amount by which the aggregate level of Federal revenues should be decreased is $9,700,000,000;

(2) the appropriate level of total new budget authority is $467,000,000,000;

(3) the appropriate level of total budget outlays is $415,000,000,000;

(4) the amount of the deficit in the budget which is appropriate in light of economic conditions and all other relevant factors is $68,200,000,000; and

(5) the appropriate level of the public debt is $718,300,000,000.

SEC. 2. Based on allocations of the appropriate level of total new budget authority and of total budget outlays as set forth in paragraphs (2) and (3) of the first section of this resolution, the Congress hereby determines and declares, pursuant to section 304 of the Congressional Budget Act of 1974 that, for the fiscal year beginning on October 1, 1976, the appropriate level of new budget authority and the estimated budget outlays for each major functional category are as follows:

(1) National Defense (050):
(A) New budget authority, $109,200,000,000.
(B) Outlays, $100,100,000,000.
(2) International Affairs (150):
(A) New budget authority, $7,900,000,000.
(B) Outlays, $6,800,000,000.
(3) General Science, Space, and Technology (250):
(A) New budget authority, $4,500,000,000.
(B) Outlays, $4,400,000,000.
(4) Natural Resources, Environment, and Energy (300):
(A) New budget authority, $18,800,000,000.
(B) Outlays, $17,200,000,000.
(5) Agriculture (350):
(A) New budget authority, $1,600,000,000.
(B) Outlays, $3,000,000,000.
(6) Commerce and Transportation (400):
(A) New budget authority, $17,300,000,000.
(B) Outlays, $16,000,000,000.
(7) Community and Regional Development (450):
(A) New budget authority, $14,300,000,000.
(B) Outlays, $10,000,000,000.
(8) Education, Training, Employment, and Social Services (500):
(A) New budget authority, $30,400,000,000.
(B) Outlays, $23,200,000,000.
(9) Health (550):
(A) New budget authority, $40,600,000,000.
(B) Outlays, $39,500,000,000.
(10) Income Security (600):
(A) New budget authority, $166,300,000,000.
(B) Outlays, $139,300,000,000.
(11) Veterans Benefits and Services (700):
(A) New budget authority, $18,900,000,000.
(B) Outlays, $18,100,000,000.
(12) Law Enforcement and Justice (750):
(A) New budget authority, $3,500,000,000.
(B) Outlays, $3,600,000,000.
(13) General Government (800):
(A) New budget authority, $3,500,000,000.
(B) Outlays, $3,500,000,000.
(14) Revenue Sharing and General Purpose Fiscal Assistance (850):
(A) New budget authority, $7,600,000,000.
(B) Outlays, $7,700,000,000.
(15) Interest (900):
(A) New budget authority, $37,900,000,000.
(B) Outlays, $37,900,000,000.

(16) Allowances:
(A) New budget authority, $800,000,000.
(B) Outlays, $800,000,000.
(17) Undistributed Offsetting Receipts (950):
(A) New budget authority. —$16,100,000,000.
(B) Outlays, —$16,100,000,000.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the resolution was agreed to.

Mr. LONG. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ROUTINE MORNING BUSINESS

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that there now be a period for the transaction of routine morning business of not to exceed 1 hour.

The PRESIDING OFFICER. Without objection, it is so ordered.

Is there further morning business?

Mr. CRANSTON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

SBA PROGRAM CEILINGS FOR 1977

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 5 (S. 243).

The PRESIDING OFFICER. Without objection, it is so ordered. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 243) to amend the Small Business Act and the Small Business Investment Act of 1958.

The PRESIDING OFFICER. Without objection, the Senate will proceed to its immediate consideration.

Mr. NELSON. Mr. President, I ask that the Senate consider this bill to amend the Small Business Act and the Small Business Investment Act of 1958. It raises three Small Business Administration program authorization ceilings for fiscal year 1977. The bill increases the ceiling governing the Business Loan and Investment Fund which includes the regular business loan, displaced business loan, trade adjustment assistance loan (import protection), handicapped assistance loan, economic opportunity loan, 8(a) procurement, development company loan, and small business investment company loan programs from $6 billion to $6.8 billion. The subceiling governing the small business investment company program is increased from $725 million to $775 million. The authorization for the surety bond guaranty program is increased from $56.5 million to $68.5 million.

Immediate action is necessary on this bill to prevent the SBA from having to curtail loan and guaranty activity by over one half as a result of reaching its program ceilings.

For two primary reasons, the Small Business Committee has decided to authorize SBA ceiling increases for fiscal year 1977 only. First, since there is a new Administration, it should be given a chance to set new agency goals and priorities and to request a budget specifically designed to meet them. A single year authorization, therefore, allows the newly appointed Administrator to present his own budget in fiscal year 1978. He will not have to wait for the agency to reach multi-year program ceilings in fiscal year 1978 or even 1980 before implementing a new budget and its programs.

Second, if the Small Business Committee authorizes SBA program ceilings for two or more fiscal years at this time, its efforts to authorize SBA program activity by line items would be impaired severely. Since the committee has had legislative authority over the Small Business Administration only since January 4, 1977, it has not had time to determine proper line item authorizations in the few weeks provided for it to act before the SBA must reduce its program activity.

I, therefore, urge that the Senate adopt this bill.

The bill was ordered to be engrossed for a third reading and read the third time.

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate proceed to the consideration of Calendar Order No. 14 (H.R. 2647).

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (H.R. 2647) to amend the Small Business Act and the Small Business Investment Act of 1958, to increase loan limitations and to increase surety bond authorizations.

The PRESIDING OFFICER. Is there obection to the motion of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill.

Mr. ROBERT C. BYRD. Mr. President, I move that all after the enacting clause be stricken, that the language of S. 243 be inserted in lieu thereof, that H.R. 2647 be considered as having been read the third time and passed, as amended, and that the motion to reconsider be laid on the table.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

The bill, as amended, reads as follows:

S. 243 [REPORT No. 95-3]

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. Subparagraph 4(A) of section 4(c) of the Small Business Act is amended by striking out "$6,000,000,000" and inserting in lieu thereof "$6,800,000,000".

SEC. 2. Subparagraph 4(B) of section 4(c) of the Small Business Act is amended by striking out "$725,000,000" and inserting in lieu thereof "$775,000,000".

SEC. 3. Section 412 of the Small Business Investment Act of 1958 is amended by striking out "$56,500,000" and inserting in lieu thereof "$68,500,000".

Mr. ROBERT C. BYRD. Mr. President, I move that the Senate insist upon its amendment and request a conference with the House of Representatives on the disagreeing votes of the two Houses on H.R. 2647, and that the Chair be authorized to appoint the conferees on the part of the Senate.

The motion was agreed to; and the Presiding Officer appointed Mr. NELSON, Mr. MCINTYRE, Mr. NUNN, Mr. HATHAWAY, Mr. HASKELL, Mr. CULVER, Mr. JAVITS, Mr. WEICKER, Mr. PACKWOOD, Mr. BARTLETT, and Mr. LAXALT conferees on the part of the Senate.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the title of H.R. 2647 be appropriately amended.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that S. 243 be indefinitely postponed.

The PRESIDING OFFICER. Without objection, it is so ordered.

QUORUM CALL

Mr. BAKER. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER Without objection, it is so ordered.

ORDER FOR RECESS UNTIL 1 P.M. ON THURSDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that when the Senate completes its business today, it stand in recess until 1 p.m. on Thursday next.

The PRESIDING OFFICER. Without objection, it is so ordered.

ORDER FOR RECOGNITION OF SENATORS ON THURSDAY NEXT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that on Thursday next, after the recognition of Mr. DECONCINI under the order previously entered, the following Senators be recognized, each for not to exceed 15 minutes: Messrs. DANFORTH, WALLOP, SCHMITT, and PERCY.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PERCY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER (Mr. CHILES). Without objection, it is so ordered.

LIST OF ASSETS

Mr. PERCY. Mr. President, at the end of 1975, by notification in the RECORD, I indicated my intention to terminate, on

January 1, 1976, the blind trust in which my securities were maintained and gave the reasons for so doing. I did so, and subsequently published in the RECORD last year the list of securities in the blind trust as of January 1, 1976.

In virtually all cases, investment decisions are made by my investment counsel, Stein Roe & Farnham of Chicago, which has been instructed to avoid investments that would present any probability of conflict of interest with my duties as a U.S. Senator. All of Mrs. Percy's and my securities are held in custodian accounts by the Harris Trust & Savings Bank of Chicago. Each year since I entered the Senate, all income tax returns have been prepared by Arthur Andersen & Co., certified public accountants.

The fundamental purpose of financial disclosure is to insure that a public official does not use his position of trust for personal financial gain. Since assuming public office in January 1967, through December 31, 1975, Mrs. Percy's and my total net worth has declined 24.5 percent versus a decline in the same period of 5.85 percent in the Dow-Jones average. The decline is attributable primarily to capital gains taxes paid to the Federal Government on sales of securities held for a long period of time, Senate and other business expenses such as professional fees and services, and charitable and personal gifts.

Another legitimate question that may be put to a public official is whether he is paying a fair share of Federal, State, and local taxes. According to figures developed by Arthur Andersen & Co., since assuming public office in 1967, through December 31, 1975, we have paid taxes equal to 35 percent of total gross income—including capital gains, and slightly more than 50 percent on total taxable income.

A third inquiry could be made as to whether a public official has borne his fair share of charitable contributions to support religious and philanthropic enterprises. Since assuming office in 1967, through December 31, 1975, Mrs. Percy and I have made charitable contributions equal to 8.5 percent of our total gross income.

Following is a list of securities, other investments, and other assets held by Mrs. Percy and myself as of January 1, 1977. We have no minor children. Also included in the list are securities in the Percy family trust, the sole beneficiary of which is Mrs. E. H. Percy, my mother.

Mr. President, I ask unanimous consent that the list be printed in the RECORD.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

LIST OF ASSETS

BILLS, NOTES, BONDS, DEBENTURES

U.S. Treasury.
American Sugar Company.
American Telephone and Telegraph Company.
Chase Manhattan Bank New York.
Chesapeake and Potomac Telephone Co.
Continental Air Lines, Inc.
Crossett Ark. Industrial Development Revenue.
Crown Zellerbach Corp.
Duquesne Light Company 1st Mortgage.
Enserch Corporation.
Harris-Intertype Corporation.
Lone Star Cement Corporation.
Michigan Wisconsin Pipeline Company.
Montgomery Ward & Co.
Nu Trek Inc.
Oklahoma State Turnpike Auth. Revenue.

Times-Mirror Company.
Xerox Corporation.

PARTNERSHIPS

Michigan City Enterprises.

OTHER ASSETS

One residence in Wilmette, Illinois.
One residence in Washington, D.C.
One farm in Iowa, shared 50/50 with operator and managed by Farmers National Company, Omaha, Nebraska.
Two farms and one now non-arable river site in Illinois, owned jointly by Mrs. Percy and her two brothers and shared 50/50 with operator.
Automobiles.
Personal effects.

Mr. PERCY. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The second assistant legislative clerk proceeded to call the roll.

Mr. PERCY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

INTELLIGENT ANALYSIS OF THE DEATH PENALTY

Mr. PERCY. Mr. President, there has been a great deal of emotion and public debate on the subject of capital punishment in recent years. I think—and I would hope—that as we approach this very emotional problem we would do so with as much rationality, as much forethought, as much analysis and attention as we can give to any single problem.

The taking of a human life is an extraordinarily important matter particularly when that human life is taken by society itself.

Mr. President, Roger N. Johnson, an associate professor of psychology at Ramapo College, has written a very fine article entitled "Death Penalty's Overlooked Costs" for the December 8, 1976, edition of the Christian Science Monitor. The article rationally discusses aspects of the death penalty which often go unnoticed.

As Professor Johnson points out, historically, societies have prescribed the death penalty for fewer and fewer classes of crimes as their civilization matures. Today, most of the nations which retain capital punishment in practice are totalitarian or Communist.

Today we have had an outstanding address by the Prime Minister of Canada. The Committee on International Relations of the House and the Committee on Foreign Relations of the Senate have had an opportunity to meet with and question the Prime Minister at luncheon today.

I would like to point out that our neighbor to the north, for which we have the highest regard, and whose judgment on many, many issues has established an outstanding example to the world, has only very recently in its House of Commons voted to abolish capital punishment for all civilian crimes.

Social learning theory in psychology tells us that people model their actions after observed behavior. Are we providing a bad example when society orders death? What is the effect on impressionable children who see that we kill those who are troublesome to society? Will these children resolve to take similar action against persons who are troublesome to them?

Indeed, are executions downright counterproductive in view of the fact that juries may refuse to convict when they know death will be the sentence?

I think this is the point that Senator HUGHES and I discussed at great length last year when discussing the death penalty, as to whether or not in many cases a death penalty might be too easy for someone who has committed a heinous crime or a person who has committed such a crime might even be freed if it is necessary for 12 men and women to determine and, by their judgment, put that person to death when the possibility could have existed that an error could have been made, as has been proven in many cases. So that in many respects the death penalty in some instances seems to actually favor the convict when a jury knows that death will be the sentence they will be rendering.

On balance, it seems the death penalty's costs outweigh its benefits except, perhaps, in cases of the most extreme nature.

If we are to move forward in the field of human rights, we will have to put the days of capital punishment behind us. I have on previous occasions discussed some rare instances that I do consider circumstances extreme in nature. Its continued use in modern society is an anachronism we cannot tolerate.

As Professor Johnson has stated:

Many years ago Dostoevski remarked that a society can be judged by the humanity it shows toward its outcasts. Are we to engage in the same behavior we condemn in them? Who can benefit from the taking of human life, and who will rejoice when the corpses are carted away? Each small step toward capital punishment is a giant leap backward for mankind.

Mr. President, I commend Roger Johnson for his perceptive article and ask unanimous consent that it may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEATH PENALTY'S OVERLOOKED COSTS

(By Roger N. Johnson)

The Utah case of Gary Gilmore has dramatized the drive for restoration of capital punishment in the United States as authorized by the Supreme Court. But, in the course of history, there is a very clear trend away from using the death penalty.

In ancient Babylonia, people were put to death for adulterating beer, and in Persia the same fate awaited anyone who accidentally sat on the king's throne. At the time of the American Revolution, there were still over 350 capital offenses on the books in England, but only a few frivolous ones, such as witchcraft, idolatry, perjury, and adultery, were actually enforced.

Today, virtually all Western industrial nations have completely eliminated capital punishment in practice if not in law. It is mainly communist countries and totalitarian regimes which continue to execute citizens, and most Americans consider such events repugnant. It is an ironic coincidence that at the same time the U.S. Supreme Court was paving the way for executions, Canada's House of Commons voted to abolish capital punishment for all civilian crimes.

One important factor which is often overlooked in this highly emotional controversy is the psychological impact on the general population. We know that in fact violence does breed more violence, and very often the aftermath of a sensational crime is an attempt to repeat it somewhere else. Social scientists have now gathered mountains of evidence on social learning and modeling behavior, and it is reckless to ignore the brutalizing consequences of waves of gassings, hangings, electrocutions, and shootings. The effect on millions who are already disturbed or highly impressionable is unpredictable, and the rest may only become more jaded and insensitive to human suffering.

What will be the psychological effect of such official killings upon hundreds of millions who will follow these events closely? Will people learn that violence is the civilized way to deal with problems, or that vengeance is sometimes commendable? Will people learn that killing is becoming more and more commonplace in our society, and that we simply have to learn to look the other way when someone is killed? Will people learn that whether or not human life is sacred depends on what is in vogue with the current politicians? Will many simply conclude that America is a violent country, and that black activist H. Rap Brown was right after all when he said that violence was as American as cherry pie?

Thus, it is not at all clear that capital punishment will benefit society, and instead there is a very real possibility that it may actually have the *opposite* effect. In addition, proponents must consider that many brutal and senseless crimes are committed by emotionally disturbed individuals who have latent suicidal tendencies, and sometimes their main purpose is to commit a crime so horrible that they will have to be severely punished or executed. Some have speculated that this is the root cause of Gilmore's crimes.

Criminal justice experts also know that juries sometimes acquit known killers because they could not stand to see the death penalty imposed. It may be that capital punishment is a soft, cowardly, and simplistic approach rather than a "tough" approach, and in the long run it may create more problems than it solves.

One of the greatest failings of the American ethos in recent years is the assumption that the solution to violence is more violence. A society which embraces and becomes an active participant in acts of violence is undermining important, civilized values.

Many years ago Dostoevski remarked that a society can be judged by the humanity it shows toward its outcasts. Are we to engage in the same behavior we condemn in them? Who can benefit from the taking of human life, and who will rejoice when the corpses are carted away? Each small step toward capital punishment is a giant leap backward for mankind.

Mr. PERCY. Mr. President, I do say this with full recognition that on this issue, as on many issues, people of good will appear and argue on both sides of the issue. But I hope that the dialog will continue, and I hope that we will not reach any precipitate or emotional decision.

I hope we will only reach a decision after the most careful, rational, and analytical thought on the part of legislators who have this awesome power in their hands today.

NATIONAL MEALS ON WHEELS ACT OF 1977

Mr. PERCY. Mr. President, I was pleased to join the distinguished Senator from South Dakota and Senators DOLE and KENNEDY in introducing the National Meals-on-Wheels Act of 1977.

The title VII elderly nutrition program currently provides nutritious meals to many of our elderly in a communal setting. I was an early proponent and supporter of this program in its research and demonstration stage and was active in the establishment of the current title VII program which Congress enacted in 1972.

I recognize the positive role that title VII plays in providing meals to the elderly in a congregate setting but there are more than three million elderly Americans who are homebound and unable to prepare their own meals or attend a nutrition center. Of these three million homebound elderly citizens, less than 60,000 presently receive home-delivered meals. Homebound elderly citizens, especially those living in rural areas, often become isolated, lonely, and malnourished. The National Meals-on-Wheels Act of 1977 introduced today would alleviate some of these problems by providing hot nutritious meals and companionship to the homebound elderly and also to a number of handicapped persons who are not elderly. I saw for myself the immense impact these meals have on the lives of recipients when I spent one day in Chicago delivering meals with a volunteer driver.

In the past, hundreds of private groups throughout the Nation have been delivering a limited number of meals to the homebound. These dedicated groups have been utilizing whatever funds and volunteer assistance they can get, but their success has been limited by lack of money and their inability to reach more than a very small portion of those in need.

A national meals-on-wheels program would not only provide hot nutritious meals and companionship to the homebound, it would serve as a preventive health care measure. The program would play a positive role in the prevention of disease and disability and at the same time bring substantial fiscal savings to the Government through decreased institutionalization of our elderly.

In 1975, public outlays for nursing homes were over $5 billion, 60 percent of which was paid by the Federal Government. Studies conducted by gerontologists have consistently shown that 10 to 40 percent of nursing home residents are not in need of institutional care; many are there simply because they cannot cook for themselves. The cost of a nursing home is over $20 per day—a home delivered meal costs under $2. With an initial $80 million investment, we could receive a return of $200 to $400 million per year beyond the cost of the national meals-on-wheels program.

The Federal Government has made a strong commitment to the elderly and the handicapped through such programs as social security, SSI, Older Americans Act, and the food stamp program. Our elderly and handicapped suffer from a variety of unique problems which we cannot ignore. We all get older every day and eventually we will experience some of the various problems which affect elderly persons.

The National Meals-on-Wheels Act is a model program; by combining local initiatives, volunteers, and Federal assistance, it can demonstrate the potential impact of an effective social policy. This bill is well worth our investment and deserves immediate attention and support of all of us in Congress.

Mr. President, let us not forget that it was not too long ago that Congress, year after year after year for three decades, was appropriating up to $5 billion a year to pay farmers to not grow crops, for price support programs, and for surplus purchases, where we were storing away grain, and the farmers, for the most part, were not even earning enough return on the investment to equalize what they could get if they would buy Government bonds at that time. Their labor, their effort, and their energy was fruitless in many cases because of Government intervention in these programs.

Since then we have had the wisdom to remove ourselves from this type program, to let the market set the price and to let farmers plant from fence post to fence post, and farmers, for the most

part, are in far better condition today, agriculture is much healthier, and farm values are much higher as a result of these programs.

I said at the time year after year after year what we ought to be doing, instead of paying farmers for not growing food, is to take Federal funds and buy food for the malnourished and those who need it.

Here is a cost-effective program.

The day that I spent delivering these meals to a woman in a backroom on Lawrence Avenue in an apartment-hotel, living in one room, I said:

What do these meals that this young man and I are delivering to you mean?

She said:

You know, they mean the difference as to whether I am able to stay in this apartment and look at TV, listen to radio, and visit with my friends that live in this apartment building or whether I have to go to a nursing home. I am eligible to go. I have a broken hip. I can't stand at the stove. I can't cook my meals until this heals, and it looks like it is going to take a long time.

But it seems to me it is a lot cheaper for the Government to be providing volunteer help, service, and stimulating this program for me than for me to be costing the Government $500 a month that it would cost at a nursing home where they would be serving me three meals a day in bed and providing my bed and board and everything. I can afford the cost of this room, but I simply can't fix my meals.

That was one out of many cases.

That was a case I reiterated to some of our colleagues at the time Senator KENNEDY, Senator MCGOVERN, Senator DOLE and I were fighting for an extension of this program.

Once again I most enthusiastically support this program.

RURAL ELECTRIFICATION

Mr. PERCY. Mr. President, this morning I had the great opportunity and privilege of addressing the National Rural Electrification Cooperative Association at their annual meeting in Atlanta, Ga. Some 12,000 people from all over rural America, from every State in the Union, were present at that meeting.

Our distinguished colleague, FRITZ HOLLINGS, will be addressing them tomorrow morning. Certainly many people were there who have helped build a stronger and better America by building and providing electrification service to everyone in this country regardless of where he lives.

I spoke on the problem of energy, and I am happy to say that the two distinguished colleagues from the State that I was in, both Senator TALMADGE and Senator NUNN, are members of the advisory board of the newly created Alliance to Save Energy.

I am honored indeed, and Senator HUMPHREY, the cochairman of the Alliance to Save Energy, and I are pleased indeed to announce that as of now some 35 U.S. Senators have become members of the honorary advisory board, the chairman of which is former Secretary Henry Kissinger, and have agreed to work with their governors in setting up programs for saving energy in their own State.

This is not conservation; this is conservation energy, because the greatest form of energy we have available to us is to conserve and stop wasting what we are now wasting and consuming in unnecessary quantities.

Mr. President, I ask unanimous consent that the speech I gave this morning before this outstanding group of Americans be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

THE ENERGY CROSSROADS: CONSERVATION OR SUPPLY

(Address by Senator Charles H. Percy, National Rural Electric Cooperative Association Annual Meeting)

Ray Rusteberg, Illinois director of NRECA; Bob Partridge, general manager of the National Cooperative Association; officers of the Board and distinguished leaders of the Rural Electrification Cooperatives:

This meeting comes at an important and critical time because the rising cost of energy affects the cost of your own products.

As we consider the nation's energy crisis, let us project ourselves into the future. Imagine that it is 1987. The energy crisis has not been resolved and our national energy policy has continued to emphasize supply. The dismal picture painted for us in 1977 about disappearing energy resources has become reality. Prices have skyrocketed as world oil and gas supplies dwindle, causing crippling inflation on a global scale. Long lines at gas stations and severe shortages of energy for heating and cooling our homes and operating factories and farms are common. Equally important, our land, water and air have suffered irreversible damage because of energy pollution.

This depressing condition is strictly a projection, but it could easily become a reality if we do not do something now about the energy crisis. Summer will be here soon. The severe winter we have just experienced may only be a memory that we will relate to our grandchildren. Our attention span is short, which is exemplified by how easily we have forgotten the Arab oil embargo of 1973.

The natural gas shortage of crisis proportions this winter and the Arab oil embargo in 1973 brought the energy crisis to the forefront. Individual consumers felt the impact directly. Between those two events, we ignored the energy problem at our own peril.

We are at the crossroads of our energy problem. In January of this year, for the first time, we imported more than 50 per cent of the oil burned in America. Americans have been greedy with the world's energy supply. West Germany is a good example of a country that has flourished and still conserves energy. Germans enjoy a standard of living comparable to ours, but they use energy 50 per cent more effectively than we do.

Electricity should be priced at its long-run incremental cost. For example, accurate peak pricing is one way of translating certain marginal costs of production into price signals to the consumer. We should eliminate volume discounts to encourage conservation and penalize waste, while maintaining the financial integrity of utility companies.

There are scores of ways to save on energy without drastically changing our daily lifestyles. For example, many cars use only 10 per cent of fuel consumption for actual propulsion. We must redesign cars to have more efficient auto engines.

We also need to develop more efficient industrial processes. Wasted heat from utilities and industrial plants can be captured and used for heating purposes which could save up to 500,000 barrels of oil daily. An equal amount of energy could be saved if urban trash was burned to produce electricity.

Improvements in these areas would noticeably cut down on pollution. Architects could once again design buildings with windows that open and close to control temperature by nature as well as by thermostat. We overheat buildings in the winter and overcool them in the summer when that occasionally could be remedied by turning everything off and letting in some fresh air.

Presently, we waste more energy than we produce. Energy use could be cut anywhere from 15 to 40 per cent if we put in insulation and storm windows and doors.

Not only would it be easy to do these things, but there are economic advantages too. There is an initial investment in all of these methods, but the returns will actually save money in the long-run.

Our objectives should be to keep our energy growth to replacement levels. For the past 25 years, energy demand has been growing at about four per cent a year, close to the same rate as our economy. Economic growth and energy growth do not need to proceed in lockstep. There must be a greater public awareness of this fact. By creating new sources a goal of zero energy growth by 1985 can be a reality strictly through conservation.

We can proceed unwittingly as we have in the past by concentrating on energy supply to meet our national demands and pray that a miraculously new energy source will fall upon us before we run out of oil and natural gas. Or, we can conserve what we do have and continue development of alternate sources. The choice is clear and we must act now.

New sources such as solar power, clean-burning coal and fusion should still be developed, but they cannot relieve our energy problem for years to come.

The best solution—today and in the long run—is conservation. We can tap a new energy source—"conservation energy"—that can reduce our dependence on expensive foreign oil and dwindling domestic supplies.

"Conservation energy" is the energy derived by replacement of wasteful habits and technology with more efficient ones in our daily lives. I believe that the equivalent of about 16 million barrels of oil a day can be "produced" through "conservation energy" by 1985.

We must convince every American—business executives, labor union leaders and government officials, as well as homeowners, apartment-dwellers and motorists—that it is actually far less expensive in the long-run to invest to save energy than it is to purchase energy.

Senator Hubert Humphrey and I launched a private, non-profit organization called the Alliance to Save Energy which will promote "conservation energy" as an alternate source. I am very excited about the prospects of this new organization and the cooperation I have received in organizing it.

If we are to have an effective national energy conservation effort, there must be a different approach and a new definition, one which could capture widespread popular support.

Former President Gerald Ford and Vice President Walter Mondale will serve as Honorary Chairmen. Dr. James Schlesinger will serve as the Honorary Advisor.

Senator Humphrey and I are the Chairman and Co-Chairman of the Board of Directors.

Dr. Henry Kissinger will serve as Chairman of the Advisory Board. The Honorary Vice-Chairpersons will be Secretary Patricia Harris for housing, Secretary Juanita Kreps for industry, Secretary Ray Marshall for labor and Secretary Brock Adams for transportation.

The activities of ASE will be determined by a Board of Directors in consultation with an Advisory Board. The Board of Directors will elect an Executive Committee from their members to implement policy.

The Advisory Board will be made up of individuals from all sectors of American life. It will also include 10 regional Chairpersons, coinciding with the 10 Federal regions, who will oversee the programs of the 50 State Chairpersons.

Because the Alliance to Save Energy will reach down to the state and local levels, local rural electric cooperatives can play an integral part in the organization's activities. In fact, we welcome any input you may have in making conservation a national effort.

Rural electric systems have the capacity and opportunity to take the lead in the new source, "conservation energy." There are many incentives you can give to your members to save on energy.

First, you can educate them on how to conserve. If they are going to buy new appliances, encourage them to buy energy efficient ones. The initial cost may be higher, but the money saved in the long-run makes it worthwhile. You could even rent out energy efficient appliances yourselves.

There are many easy ways for all of us to conserve: turn out the lights when you leave the room, turn off the television when it is not in use, take showers instead of baths and use manpower instead of power tools.

In the Senate we are putting together an economic stimulus proposal that would also help the energy problem by giving tax credits for using insulation, storm windows and doors and installing clock thermostats. You can encourage your members to take such actions to conserve by giving them deductions from their utility rates.

Every aspect of American society is going to have to do its part in encouraging consumers to conserve. There can be a great movement, and you have the chance to be in the lead. Pulling from the grassroots, like you are capable of doing, will build a firm foundation for conservation energy.

So far you have all done a magnificent job of fulfilling the power demands in the rural areas. In fact, only a small percentage of the American population knows what it is like to go without electricity and very few people have ever experienced prolonged blackouts. You are to be commended for such good service.

Now you can help solve our nation's energy problem by helping to promote conservation. We all have done a lot of talking about our energy problem. We have finally come to the crossroads and if no action is taken, our options will slip away and the chance of ever catching up with our runaway supply of energy will be gone. We do not want a situation in 1987 as I described earlier—severe shortages, raging inflation and energy prices that only a king could afford.

I believe we can all work together to solve our national energy problem. I am confident that the new Administration and Congress will face the energy crisis and act. But, the implementation and success of this effort to save energy depends on every American.

Thank you.

SENATE RESOLUTION 90—APPOINTMENT OF MINORITY MEMBERSHIP ON STANDING, SELECT, AND SPECIAL COMMITTEES

Mr. BAKER. Mr. President, I send to the desk a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated by title.

The assistant legislative clerk read as follows:

A resolution (S. Res. 90) appointing the minority party's membership on the standing committees, the Select Committee on Small Business, and the Special Committee on Aging of the Senate for the 95th Congress.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the Senate proceeded to consider the resolution.

Mr. BAKER. Mr. President, I ask unanimous consent that the appointments contained in the resolution be considered en bloc.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BAKER. Mr. President, I ask unanimous consent that rule XXIV requiring the ballot for the appointment of committee members be waived.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the resolution.

The resolution (S. Res. 90) was agreed to, as follows:

S. RES. 90

Resolved, That the following shall constitute the Minority party's membership on the standing committees, the Select Committee on Small Business, and the Special Committee on Aging of the Senate for the Ninety-fifth Congress:

Committee on Agriculture, Nutrition, and Forestry: Mr. Dole, Mr. Young, Mr. Curtis, Mr. Bellmon, Mr. Helms, Mr. Hayakawa, Mr. Lugar.

Committee on Appropriations: Mr. Young, Mr. Case, Mr. Brooke, Mr. Hatfield, Mr. Stevens, Mr. Mathias, Mr. Schweiker, Mr. Bellmon, Mr. Weicker.

Committee on Armed Services: Mr. Tower, Mr. Thurmond, Mr. Goldwater, Mr. Scott, Mr. Bartlett, Mr. Helms, Mr. Garn.

Committee on Banking, Housing, and Urban Affairs: Mr. Brooke, Mr. Tower, Mr. Garn, Mr. Heinz, Mr. Lugar, Mr. Schmitt.

Committee on Commerce, Science, and Transportation: Mr. Pearson, Mr. Griffin, Mr. Stevens, Mr. Goldwater, Mr. Packwood, Mr. Schmitt, Mr. Danforth.

Committee on Energy and Natural Resources: Mr. Hansen, Mr. Hatfield, Mr. McClure, Mr. Bartlett, Mr. Weicker, Mr. Domenici, Mr. Laxalt.

Committee on Environment and Public Works: Mr. Stafford, Mr. Baker, Mr. McClure, Mr. Domenici, Mr. Chaffee, Mr. Wallop.

Committee on Finance: Mr. Curtis, Mr. Hansen, Mr. Dole, Mr. Packwood, Mr. Roth, Mr. Laxalt, Mr. Danforth.

Committee on Foreign Relations: Mr. Case, Mr. Javits, Mr. Pearson, Mr. Percy, Mr. Griffin, Mr. Baker.

Committee on Governmental Affairs: Mr. Percy, Mr. Javits, Mr. Roth, Mr. Stevens, Mr. Mathias, Mr. Danforth, Mr. Heinz.

Committee on Human Resources: Mr. Javits, Mr. Schweiker, Mr. Stafford, Mr. Hatch, Mr. Chafee, Mr. Hayakawa.

Committee on Judiciary: Mr. Thurmond, Mr. Mathias, Mr. Scott, Mr. Laxalt, Mr. Hatch, Mr. Wallop.

Committee on Rules and Administration: Mr. Hatfield, Mr. Griffin, Mr. Baker.

Committee on the Budget: Mr. Bellmon, Mr. Dole, Mr. McClure, Mr. Domenici, Mr. Hayakawa, Mr. Heinz.

Committee on Veterans Affairs: Mr. Stafford, Mr. Thurmond, Mr. Hansen.

Select Committee on Small Business: Senator Weicker, Mr. Bartlett, Mr. Packwood.

Special Committee on Aging: Mr. Domenici, Mr. Brooke, Mr. Percy.

RECESS UNTIL 1 P.M., THURSDAY, FEBRUARY 24, 1977

Mr. CRANSTON. Mr. President, if there be no further business to come before the Senate, and I gather there is not, I move, in accordance with the previous order, that the Senate stand in recess until 1 p.m. Thursday.

The motion was agreed to; and at 3:51 p.m. the Senate recessed until Thursday, February 24, 1977, at 1 p.m.

NOMINATIONS

Executive nominations received by the Senate February 22, 1977:

LAW OF THE SEA CONFERENCE REPRESENTATIVE

Elliot L. Richardson, of Massachusetts, to be an Ambassador at Large and the Special Representative of the President of the United States for the Law of the Sea Conference and Chief of Delegation.

DEPARTMENT OF STATE

The following-named Foreign Service officers for promotion from class 1 to the class of Career Minister:

Harry G. Barnes, Jr., of Maryland.
Robert A. Hurwitch, of Illinois.
Richard B. Parker, of Kansas.
Thomas R. Pickering, of New Jersey.
Harry W. Shlaudeman, of California.
Ronald I. Spiers, of Vermont.
Christopher Van Hollen, of Virginia.

HOUSE OF REPRESENTATIVES—*Tuesday, February 22, 1977*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

Search me, O God, and know my heart; try me and know my thoughts; and see if there be any wicked way in me and lead me in the way everlasting.—Psalms 139: 23, 24.

O God, our Father, in the quiet of this sacred moment grant us grace to worship Thee in spirit and in truth, for the strengthening of our spirits and the upbuilding of every good purpose and every wholesome desire.

As we enter the season of Lent we acknowledge our shortcomings and our sins. Have mercy upon us, O Lord, and forgive us. Help us to accept Thy forgiveness and to receive Thy Spirit that we may think better, speak better, and do better than ever before.

Bless Thou our President, our Speaker, the Members of this House, and all who labor with them. Give them the assurance that with Thee all great and good things are possible. Thus with faith renewed, hope restored, and good will revived we face the tasks of this day.

In the spirit of Him who went about doing good we pray. Amen.

THE JOURNAL

The SPEAKER. The Chair has examined the Journal of the last day's proceedings and announces to the House his approval thereof.

Without objection, the Journal stands approved.

There was no objection.

MESSAGES FROM THE PRESIDENT

Sundry messages in writing from the President of the United States were communicated to the House by Mr. Marks,

one of his secretaries, who also informed the House that on the following date the President approved and signed a joint resolution of the House of the following title:

On February 21, 1977:

H.J. Res. 240. Joint resolution to give congressional approval to certain governing international fishery agreements negotiated in accordance with the Fishery Conservation and Management Act of 1976, and for other purposes.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate had passed concurrent resolutions of the following titles, in which the concurrence of the House is requested:

S. Con. Res. 2. Concurrent resolution relative to military personnel missing in action or killed in action and body not recovered in Southeast Asia; and

S. Con. Res. 3. Concurrent resolution to reaffirm the honor of those who served in Southeast Asia and to urge establishment of a Presidential Task Force on Prisoners of War and Missing in Action.

WILLIAM STARR CARTER

(Mr. HUBBARD asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. HUBBARD. Mr. Speaker, yesterday I attended the funeral in Tompkinsville, Ky., of William Starr Carter, the 22-year-old son and only child of our House colleague, Dr. TIM LEE CARTER, and his wife, Kathleen. As I learned yesterday in the First United Methodist Church in Tompkinsville, it is difficult to appropriately eulogize this outstanding young man who lost his valiant, 4-year struggle with acute undifferentiated leukemia last Saturday.

I would like to include in the RECORD a news article about Starr which appeared in the February 20, 1977, edition of the Louisville Courier-Journal and Times, written by the papers' Washington bureau chief, Ward Sinclair:

WASHINGTON.—William Starr Carter came to terms with life before most young men his age know what it's all about.

He took each day as it came and gave special thanks for it, he once told his father, U.S. Rep. Tim Lee Carter, because he knew there might be no more.

Starr was 18 when he learned that he had acute leukemia, a cancerous disease that attacks the bone marrow. But life must go on, so Starr went on.

He enrolled at Western Kentucky University in 1973. That was a logical place because the family farms that he loved in Monroe County would be near.

Young Carter kept up his studies at Bowling Green, but it was on the farm his father turned over to him that he found expansion and meaning.

When others were just stirring in the dorms at Western, Starr would be over in Monroe County, rustling around in the early morning cold and worrying about the cattle and the plowing that were his obsession.

He wanted everything just right, and, to get it that way, he knew he had to have proper equipment. One thing the farm needed was a new truck, so last Christmas Rep. Carter gave in and bought the truck.

It was a beautiful truck and when the congressman found out it would do all the things Starr had told him it would do, he was sorry he hadn't bought it before.

Starr took meticulous care of the truck, but he had a problem. He feared the heavy, dirty work on the farm would soon mar the shiny new vehicle.

Young Carter petitioned his father for a second truck—not a new one, understand—that could handle the messy tasks and leave the new truck in its immaculate state.

Rep. Carter didn't bow to that request, but he probably would have if time hadn't run out for Starr.

William Starr Carter, 22, died yesterday morning at Vanderbilt University Hospital in Nashville. He was at home in Tompkinsville with his parents when he became ill Friday and was rushed to Nashville.

Starr Carter's illness was detected in May 1973 when he was a student at Culver Military Academy in Culver, Ind. His parents flew him to Nashville, where doctors positively diagnosed acute undifferentiated leukemia.

The boy was then moved to the M. D. Anderson Hospital and Tumor Institute in Houston, Tex., for treatment. The disease was arrested and by August, with the leukemia in remission, he had returned to Monroe County to work on the farm.

That fall he entered Western. He continued in school and worked on the farm until last September, when he suffered a relapse. He was treated again in Houston and then released.

Starr Carter was born Aug. 12, 1954, at Glasgow, Ky. As a student at Culver, he was a member of the school's famed Black Horse Troop that rode at the head of the 1973 presidential inaugural parade in Washington.

Although his father has been the 5th District congressman since 1965 and the Carter family has dominated Republican politics in Monroe County for years, young Starr only dabbled in it.

He worked one summer in Washington for former Sen. Marlow Cook, R-Ky., and later was involved peripherally in several campaigns. He also was a director of the People's Bank of Tompkinsville.

In addition to his parents, survivors include a grandmother, Mrs. Cloe Bradshaw.

The funeral will be at 2 p.m. tomorrow at the First Methodist Church in Tompkinsville, with burial in the Carter family plot in the Evans' Oak Hill Cemetery there.

The family requests that expressions of sympathy take the form of contributions to the American Cancer Society.

PROPOSED AMENDMENT TO H.R. 11

(Mr. COCHRAN asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. COCHRAN. Mr. Speaker, when H.R. 11, the bill to increase the authorization for the Local Public Works Capital Development and Investment Act of 1976, comes before the House later this week, I plan to offer an amendment to correct a deficiency in the legislation as reported by the Committee on Public Works and Transportation.

My amendment would simply prohibit the awarding of any grant to any applicant in a State where the amount sought by the applicant would exceed 10 percent of the total amount of funds allocated to that State.

Without my amendment, I am afraid there might be a reoccurence of the type of funds distribution that proved unfair to a majority of the applicants in my State under the first round of funding.

Mississippi was allocated only $10 million along with 21 other States and territories which were fortunate enough not to have a high rate of unemployment. Our local EDA representative encouraged applicants to keep their requests to around $250,000 or $300,000 so the funds could be spread around more or less evenly through all areas of the State.

In spite of this effort, we had a small town with a population of 2,100 people apply for and receive a grant amounting to $4.9 million or 49 percent of the total State allocation.

It may be that under the committee's bill there is language prohibiting the counting of unemployed persons in adjacent areas when calculating unemployment in a project area; but nonetheless, it is very difficult to sell the people of a small State on the idea that a town of 2,100 people really needs almost half of the State's total allocation of funds, particularly when other towns and counties throughout the State have requested substantially smaller grants to be used for the same types of projects.

I know that the approval of one application does not represent the intent of the act; but to be sure that sort of thing does not occur again, I think my amendment should be adopted.

WILLIAM STARR CARTER

(Mr. ALLEN asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. ALLEN. Mr. Speaker, I, too, attended the funeral of the son of our beloved colleague, Dr. TIM LEE CARTER. Certainly there is no Member of this House who is more beloved and who is more considerate and kind than is Dr. TIM LEE CARTER. He lost his only son. It was for both Dr. CARTER and Mrs. Carter a sad, sad occasion.

If it is not out of order, Mr. Speaker, I ask that the House stand in silent prayer for just a moment as an expression of our condolence to Dr. TIM LEE CARTER and his wife upon their grievous loss.

The SPEAKER. The Chair joins in sympathy at the loss of the son of our very, very dear colleague, but the gentleman is making an unusual request, and the House is about to recess for the joint meeting to receive the Prime Minster of Canada, so the Chair does not recognize the gentleman for that purpose. However, the gentleman should ask unanimous consent that all Members may have 5 legislative days to express their sentiments on this matter?

Mr. SNYDER. Mr. Speaker, I want to express the sincere sympathy of our family to TIM LEE CARTER and his gracious wife upon the loss of their son, Starr. Everyone who knows this wonderful couple knows of the love which they have for their son—and of the dedication and care which they have exhibited toward him during his prolonged illness.

There is nothing that can be said which will alleviate their sorrow. We do know one thing though—and that is—that the faith of these wonderful parents in their God and His wisdom will be sufficient to help them through this difficult period in their lives.

For now we see through a glass

darkly, but then face to face—for now we know in part, but then we know even as we are known.

I know all of us will remember the Carters in our prayers.

GENERAL LEAVE

Mr. ALLEN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the death of William Starr Carter.

The SPEAKER. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

COUNTERCYCLICAL AID

(Mr. BROOKS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROOKS. Mr. Speaker, I am today introducing a bill to increase the amount of money available to State and local governments under the countercyclical revenue sharing program passed by Congress last year.

The bill, which is part of President Carter's economic recovery package, could add $1 billion to the program during the current fiscal year, boosting the total funds available to $2.5 billion. It would also extend the program, which is due to expire September 30, for 5 years. Another provision in the bill would change the formula for distributing the money to make it more responsive to fluctuations in the unemployment rate.

Mr. Speaker, countercyclical aid which is geared to the national unemployment rate is not a panacea for resolving economic problems of State and local governments, but it does provide a quick way for the Federal Government to come to the aid of areas with high unemployment. My introduction of this legislation in no way modifies my longstanding opposition to general revenue sharing. Recognizing, however, that we must use existing programs despite some obvious shortcomings to meet an economic crisis, I am introducing the legislation to extend countercyclical assistance at the present time.

While the Government Operations Committee will undoubtedly want to review this program carefully, I anticipate that we will move it expeditiously.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER. The Chair desires to make an announcement.

The Chair announces that during the special meeting today to hear the Prime Minister of Canada, Mr. Trudeau, only the doors immediately opposite the speaker, those on his left and those on his right, will be open.

RECESS

The SPEAKER. Pursuant to the order of the House on Monday, January 31, 1977, the House will stand in recess subject to the call of the Chair.

Accordingly (at 12 o'clock and 11 minutes p.m.), the House stood in recess subject to the call of the Chair.

JOINT MEETING OF THE HOUSE AND SENATE TO HEAR AN ADDRESS BY THE PRIME MINISTER OF CANADA

The SPEAKER of the House presided.

The Doorkeeper, Honorable James P. Molloy, announced the Vice President and Members of the U.S. Senate, who entered the Hall of the House of Representatives, the Vice President taking the chair at the right of the Speaker, and the Members of the Senate the seats reserved for them.

The SPEAKER. The Chair appoints as Members of the Committee on the Part of the House To Escort the Prime Minister of Canada Into the Chamber the gentleman from Texas (Mr. WRIGHT); the gentleman from Indiana (Mr. BRADEMAS); the gentleman from Washington (Mr. FOLEY); the gentleman from Wisconsin (Mr. ZABLOCKI); the gentleman from Florida (Mr. FASCELL); the gentleman from South Carolina (Mr. JENRETTE); the gentleman from Arizona (Mr. RHODES); the gentleman from Illinois (Mr. MICHEL); the gentleman from Illinois (Mr. ANDERSON); and the gentleman from Michigan (Mr. BROOMFIELD).

The VICE PRESIDENT. On the part of the Senate, the Chair appoints as members of the Committee on the Part of the Senate To Escort the Prime Minister of Canada into the Chamber the Senator from West Virginia (Mr. ROBERT C. BYRD); the Senator from Minnesota (Mr. HUMPHREY); the Senator from Hawaii (Mr. INOUYE); the Senator from Alabama (Mr. SPARKMAN); the Senator from North Dakota (Mr. YOUNG); and the Senator from New Jersey (Mr. CASE).

The Doorkeeper announced the Ambassadors, Ministers, and Chargés d'Affaires of foreign governments.

The Ambassadors, Ministers, and Chargés d'Affaires of foreign governments entered the Hall of the House of Representatives and took the seats reserved for them.

The Doorkeeper announced the Cabinet of the President of the United States.

The members of the Cabinet of the President of the United States entered the Hall of the House of Representatives and took the seats reserved for them in front of the Speaker's rostrum.

At 12 o'clock and 34 minutes p.m., the Doorkeeper announced the Prime Minister of Canada, His Excellency, Pierre Elliott Trudeau.

The Prime Minister of Canada, escorted by the committee of Senators and Representatives, entered the Hall of the House of Representatives and stood at the Clerk's desk.

[Applause, the Members rising.]

The SPEAKER. Members of Congress, it is my great privilege, and I deem it a high personal honor and a pleasure, to present to you His Excellency, Pierre Elliott Trudeau, Prime Minister of Canada.

[Applause, the Members rising.]

Prime Minister TRUDEAU. Mr. Speaker, Mr. President, Members of the Congress:

For much more than a century, individual Canadians, in countless ways and on countless occasions, have expressed to Americans their friendship. Today, as Prime Minister I am given the opportunity to express those feelings collectively before the elected representatives of the American people.

I do so with pride, and with conviction.

Je me réjouis, comme parlementaire, d'avoir l'occasion de prendre la parole en cette enceinte historique, où tant de vos grands hommes d'Etat se sont illustrés. J'en suis avec tous les Canadiens très honoré et je vous apporte leur plus cordial salut. Votre accueil si chaleureux confirme ce que j'ai toujours senti, que le Canadien aux Etats-Unis est chez des amis.

The friendship between our two countries is so basic that it has long since been regarded by others as the standard for enlightened international relations. No Canadian leader would be permitted by his electorate consciously to weaken it. Indeed, no Canadian leader would wish to, and certainly not this one.

Simply stated, our histories record that for more than a century millions upon millions of Canadians and Americans have known one another, liked one another, and trusted one another.

Canadians are not capable of living in isolation from you anymore than we are desirous of doing so. We have benefitted from your stimulus; we have profited from your vitality.

Throughout your history, you have been inspired by a remarkably large number of gifted leaders who have displayed stunning foresight, ofttimes in the face of then popular sentiments. In this city which bears his name, on the anniversary of his birthday, George Washington's words bear remembering. In a message familiar to all of you in this Chamber, he said: "It is of infinite moment that you should properly estimate the immense value of your national union to your collective and individual happiness."

At a moment in the history of mankind when men and women cannot escape from the knowledge that the only hope for humanity is the willingness of peoples of differing complexions and cultures and beliefs to live peaceably together, you have not forgotten Washington's high standards. You have chosen to declare your beliefs in the protection of minorities, in the richness of diversity, in the necessity of accommodation. You have contributed new fibre to that seamless fabric we call the history of mankind—that stumbling, incoherent quest by individuals and by nations for freedom and dignity.

Liberty and the pursuit of happiness have not been theoretical concepts for Americans, nor have they been regarded as elusive goals. You have sought each with vigour, and shared with all mankind the joy and the creativity which are the products of freedom. You have illustrated throughout your history the resilience, the dedication and the inherent decency of American society.

The United States achievement in recent years of conducting a great social revolution—overcoming difficulties of immense complication and obdurateness,

and doing so through the democratic process—is surely a model for all nations devoted to the dignity of the human condition. Freedom-loving men and women everywhere are the beneficiaries of your example. Not the least among them are Canadians, for whom the United States has long since been the single most important external influence—the weather only excepted.

We in Canada, facing internal tensions with roots extending back to the 17th century, have much to gain from the wisdom and discipline and patience which you, in this country, in this generation have brought to bear to reduce racial tensions, to broaden legal rights, and to provide opportunity to all.

Canadians long ago determined to govern themselves by a parliamentary system which favours the flowering of basic aspirations—for freedom, for justice, for individual dignity. The rule of law, sovereignty of parliament, a broad sharing of power with the provinces, and official support of the pluralistic nature of Canadian society have combined to create in Canada a community where freedom thrives to an extent not exceeded anywhere else, a community where equality of opportunity between people and between regions is a constant goal.

The success of our efforts in the first century following confederation was great, but by no means complete. We created a society of individual liberty and of respect for human rights. We produced an economic standard of living which approaches your own. We have not yet, however, created a condition in which French-speaking Canadians have felt they were fully equal or could fully develop the richness of the culture they had inherited. And therein is the source of our central problem today. That is why a small minority of the people of Quebec feel they should leave Canada and strike out in a country of their own. The newly elected government of that province asserts a policy that reflects that minority view despite the fact that during the election campaign it sought a mandate for good government, and not a mandate for the separation from Canada.

The accommodation of two vigorous language groups has been, in varying fashion, the policy of every Canadian government since Confederation. The reason is clear. Within Quebec, over 80 percent of the population speak French as their first or only language. In Canada as a whole, nearly one-fifth of the people speak no language but French. Thus from generation to generation there has been handed down the belief that a country could be built in freedom and equality with two languages and a multitude of cultures.

I am confident it can be done. I say to you with all the certainty I can command that Canada's unity will not be fractured. Revisions will take place. Accommodations will be made; We shall succeed.

There will have to be changes in some of our attitudes; there will have to be a greater comprehension of one another across the barrier of language difference. Both English-speaking and French-speaking Canadians will have to become more aware of the richness that diversity brings and less irritated by the problems it presents. We may have to revise some aspects of our constitution so that the Canadian federation can be seen by six and a half million French-speaking Canadians to be the strongest bulwark against submersion by some 220 million English-speaking North Americans.

These very figures illustrate dramatically the sense of insecurity of French Canada. But separation would not alter the arithmetic; it would merely increase the exposure.

Nor would the separation of Quebec contribute in any fashion to the confidence of the many cultural minorities of various origins who dwell throughout Canada. These communities have been encouraged for decades to retain their own identities and to preserve their own cultures. They have done so and flourished, nowhere more spectacularly than in the prairie provinces of Alberta, Saskatchewan and Manitoba. The sudden departure of Quebec would signify the tragic failure of our pluralist dream, the fracturing of our cultural mosaic, and would likely remove much of the determination of Canadians to protect their cultural minorities.

Problems of this magnitude cannot be wished away. They can be solved, however, by the institutions we have created for our own governance. Those institutions belong to all Canadians, to me as a Quebecker as much as to my fellow citizens from the other provinces. And because those institutions are democratically structured, because their members are freely elected, they are capable of reflecting changes and of responding to the popular will.

I am confident that we in Canada are well along in the course of devising a society as free of prejudice and fear as full of understanding and generosity, as respectful of individuality and beauty, as receptive to change and innovation, as exists anywhere.

Our nation is the very encounter of two of the most important cultures of western civilization, to which countless other strains are being added. Most Canadians understand that the rupture of their country would be an aberrant departure from the norms they themselves have set, a crime against the history of mankind; for I am immodest enough to suggest that a failure of this always-varied, often-illustrious Canadian experiment would create shock waves of disbelief among those all over the world who are committed to the proposition that among man's noblest endeavours are those communities in which persons of diverse origins live, love, work, and find mutual benefit.

Canadians are conscious of the effort required of them to maintain in healthy working order not only their own nation but as well the North American neighborhood in which they flourish. A wholesome relationship with our mutual friend Mexico and a robust partnership with the United States are both, in our eyes, highly desirable. To those ends we have contributed much energy. And you in this country have reciprocated to the point where our relationship forms a model admired by much of the world—one moulded from the elements of mutual respect and supported by the vigour of disciplined cooperation.

We have built together one of the world's largest and most efficient transportation and power generating systems in the form of the St. Lawrence Seaway. We have conceived and established the world's oldest, continuously functioning, binational arbitral tribunal—the International Joint Commission. We have joined together in many parts of the world in the defense of freedom and in the relief of want. We have created oft-times original techniques of environmental management, of emergency and disaster assistance, of air and sea traffic control, of movements of people, goods and services—the latter so successfully that the value of our trade and the volume of visitors back and forth exceeds several times over that of any other two countries in the world. It is no wonder that we are each so interested in the continued social stability and economic prosperity of the other.

Nor should we be surprised that the desire of the American and Canadian peoples to understand and help one another sometimes adopts unusual forms. In what other two countries in the world could there be reproduced the scene of tens of thousands of people in a Montreal baseball park identifying totally with one team against the other, forgetting all the while that every single player on each is American, and a similar scene in the Washington hockey arena where thousands of spectators identify totally with one team against another, forgetting that virtually every player on the ice is Canadian.

Thus do the images blur, and sometimes do they lead to chafing. Yet how civilized are the responses! How temperate the replies! We threaten to black out your television commercials? You fire volleys of antitrust proceedings! Such admirable substitutes for hostility!

More important than the occasional incident of disagreement is the continuing process of management which we have successfully incorporated into our relationship. It is a process which succeeds through careful attention, through consultation, and through awareness on both sides of the border that problems can arise which are attributable neither to intent nor neglect, but to the disproportionate size of our two populations and the resulting imbalance of our economic strength.

Those differences will likely always lead us in Canada to attempt to ensure that there be maintained a climate for the expression of Canadian culture. We will surely also be sensitive to the need for the domestic control of our economic environment. As well, in a country visited annually by extreme cold over its entire land mass—I just met the Representative from Florida and I hear it also happens in your country—but in our country, a country so far-flung that transportation has always posed almost insuperable problems, the wise conservation of our energy resources assumes a compelling dimension. And for a people devoted throughout their history to accommodating themselves with the harshness, as well as the beauty, of their natural surroundings, we will respond with vigour to any threat of pollution or des-

poliation be it from an indigenous or from an external source.

Our continent, however, is not the world. Increasingly it is evident that the same sense of neighbourhood which has served so well our North American interests must be extended to all parts of the globe and to all members of the human race. Increasingly, the welfare and the dignity of others will be the measurement of our own condition. I share with President Carter his belief that in this activity also we will achieve success.

However, even as we have moved away from the cold war era of political and military confrontation, there exists another danger: one of rigidity in our response to the current challenges of poverty, hunger, environmental degradation, and nuclear proliferation. Our ability to respond adequately to these issues will in some measure be determined by our willingness to recognize them as the new obstacles to peace. Yet, sadly, our pursuit of peace in these respects has all too often been little more imaginative than was our sometimes blind grappling with absolutes in the international political sphere. Moreover, we have failed to mobilize adequately the full support of our electorates for the construction of a new world order.

The reasons are not hard to find. In these struggles there is no single tyrant, no simple ideological contest. We are engaged in a complex of issues of overwhelming proportions yet with few identifiable labels. Who, after all, feels stirred to oratorical heights at the mention of commodity price stabilization or of full fuel cycle nuclear safeguards or of special drawing rights? Yet these are the kind of issues that will determine the stability of tomorrow's world. They will require imaginative solutions and cooperative endeavour, for these struggles are not against human beings: they are struggles with and for human beings, in a common cause of global dimensions.

It is to the United States that the world looks for leadership in these vital activities. It has been in large measure your fervour and your direction that has inspired a quarter century of far-flung accomplishment in political organization, industrial development and international trade. Without your dedicated participation, the many constructive activities now in one stage or another in the several fields of energy, economics, trade, disarmament, development, these activities will not flourish as they must.

My message today is not a solicitous plea for continued United States involvement. It is an enthusiastic pledge of spirited Canadian support in the pursuit of those causes in which we both believe. It is as well an encouragement to our mutual rededication at this important moment in our histories to a global ethic of confidence in our fellow man.

Mr. Speaker, Mr. President, in that same address to which I referred some minutes ago, George Washington warned against "the insidious wiles of foreign influence" and the desirability of steering "clear of permanent alliances with any portion of the foreign world." Yet here I stand, ladies and gentlemen, a foreigner, endeavouring—whether insidiously or not you will have to judge—to urge the United States ever more permanently into new alliances. That I dare do so is a measure not only of the bond which links Canadians to you, but as well of the spirit of America. Thom. Paine's words of two centuries ago are as valid today as when he uttered them: "My country is the world, and my religion is to do good."

In your continued quest of those ideals, ladies and gentlemen, all Canadians wish you Godspeed.

[Applause, the Members rising.]

At 12 o'clock and 58 minutes p.m., His Excellency, Pierre Elliott Trudeau, the Prime Minister of Canada, accompanied by the committee of escort, retired from the Hall of the House of Representatives.

The Doorkeeper, Hon. James T. Molloy, escorted the invited guests from the Chamber in the following order: The members of the President's Cabinet and the Ambassadors, Ministers, and Chargés d'Affaires of foreign governments.

JOINT MEETING DISSOLVED

The SPEAKER. The purpose of the joint meeting having been completed, the Chair declares the joint meeting of the two Houses now dissolved.

Accordingly (at 1 o'clock and 2 minutes p.m.), the joint meeting of the two Houses was dissolved.

The Members of the Senate retired to their Chamber.

The SPEAKER. The House will continue in recess until approximately 1 o'clock and 20 minutes p.m. today.

AFTER RECESS

The recess having expired, the House was called to order by the Speaker pro tempore (Mr. MEEDS) at 1 o'clock and 22 minutes p.m.

PROPOSED CHANGES IN 1978 BUDGET—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–77)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Appropriations and ordered to be printed with illustrations:

To the Congress of the United States:

I am presenting today proposed changes in the 1978 budget.

Although I have not been able to analyze this budget in depth, these proposals do differ significantly from those of the previous administration.

Proposals have been rejected that would have needlessly added to the burden on the elderly and those who depend upon medicare, medicaid, and food programs.

I have withdrawn proposals that would have placed further financial strain on State and local governments.

Changes are included that will help us move more quickly to meet our commitments in such vital areas as the environment, education, and housing; and I am introducing measures that will help us control unacceptable inflation in medical costs.

The planned increase in defense spending, has been reduced while our real military strength is enhanced.

Revisions have been made that reflect new priorities for water resources development and also for energy, placing greater emphasis on conservation, development of non-nuclear power sources, and expanding our petroleum storage program. Later in the spring, work with the Congress will be completed on a comprehensive, long-range national energy policy.

This budget includes the economic stimulus package, which will reduce unemployment and promote steady, balanced economic growth. The package, which has been slightly changed since it was first presented to the Congress last month, provides for $15.7 billion in tax reductions and increased outlays in 1977 and $15.9 billion in 1978. It includes a $50 per capita rebate on personal income taxes; an increase in the standard deduction; reduction in business taxes to stimulate employment and provide incentives for investment; expansion in training and employment programs; increases in public works funding; and additional money for countercyclical revenue sharing grants to State and local governments.

I am also asking the Congress to extend the supplemental payments program, which is now expiring, so that unemployed workers will be able to qualify through the end of this year for up to 52 weeks of unemployment benefits.

There are several important goals which these revisions do not reflect, because my administration has not yet had time to review all current tax and spending programs or fully prepare our own proposals. The 1978 budget is essentially still President Ford's budget, with only such limited revisions as my administration has had time to make. But these revisions do reflect our careful choices among many possible options; they are important first steps toward a Federal Government that is more effective and responsive to our people's needs.

Last year, spending estimates were too high, and economic policymaking was adversely affected. Because time did not permit detailed review of the current estimates, I have instructed the Office of Management and Budget to make a thorough review of these estimates. The Congress will be informed of any resulting revisions.

The revised budget outlined in this document continues to reflect the current overlapping and unwieldy structure of the Federal Government—a structure I intend, with the help of the Congress, to simplify and improve.

Although it has not been possible in these revisions to the 1978 budget, future budgets will reflect detailed, zero-based reviews of Federal spending programs, comprehensive reform of the tax system, and fundamental reorganization of the Government.

JIMMY CARTER.

FEBRUARY 22, 1977.

WATER PROJECTS DELETED FROM FISCAL YEAR 1978 BUDGET—MESSAGE FROM THE PRESIDENT OF THE UNITED STATES (H. DOC. NO. 95–84)

The SPEAKER pro tempore laid before the House the following message from the President of the United States; which was read and, together with the accompanying papers, without objection, referred to the Committee on Appropriations and ordered to be printed:

To the Congress of the United States:

During the campaign I committed myself to a prudent and responsible use of the taxpayers' money and to protection of the environment. Today I am announcing a major review of water resource projects which will further both commitments.

Water development projects have played a critical role in developing the economy of this nation. But many of the 320 current projects approved in the past under different economic circumstances and at time of lower interest rates are of doubtful necessity now, in light of new economic conditions and environmental policies. At this point, based upon information thus far developed by the Council on Environmental Quality, the Office of Management and Budget and the Interior Department, I have identified 19 projects which now appear unsupportable on economic, environmental, and/or safety grounds. I have attached a list of these projects. I am recommending at this time that no funds be provided for these projects in FY 1978.

I am instructing Secretary of the Interior Andrus and Secretary of the Army Alexander, working together with the Office of Management and Budget and the Council on Environmental Quality, to carry out a complete evaluation of these 19 projects and of all other water resource projects and to develop comprehensive policy reforms in this critical area. They will report back to me and to the Congress by April 15.

This review will give us the necessary facts upon which to make certain that only projects which are economically and environmentally sound will receive final approval. The FY 1978 budget reductions for the deleted projects amount to $289 million. Total potential savings from these deleted projects would amount to $5.1 billion.

I look forward to working closely with the Congress to develop a coherent water resource policy.

We must work together to achieve our national goals of adequate water supplies, a sound transportation system and needed flood protection. In doing so, we must make certain that our investments are cost-effective, that the cost burdens are equitably borne, and that the environment is protected.

JIMMY CARTER.

THE WHITE HOUSE, *February 21, 1977.*

PRINTING OF PROCEEDINGS HAD DURING RECESS

Mr. OTTINGER. Mr. Speaker, I ask unanimous consent that the proceedings had during the recess be printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER

The SPEAKER pro tempore. Pursuant to the provisions of clause 3(b) of rule XXVII, the Chair announces that he will postpone further proceedings today on each motion to suspend the rules on which a recorded vote or the yeas and nays are ordered, or on which the vote is objected to under clause 4 of rule XV.

After all motions to suspend the rules have been entertained and debated and after those motions to be determined by "nonrecord" votes have been disposed of, the Chair will then put the question on each motion on which the further proceedings were postponed.

FEDERAL AVIATION ACT TARIFF CHANGES

Mr. ANDERSON of California. Mr. Spaker, I move to suspend the rules and pass the bill (H.R. 26) to amend the Federal Aviation Act of 1958 to provide improved notice to the public of changes in air carrier fares, as amended.

The Clerk read as follows:

H.R. 26

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the first sentence of section 403(c) of the Federal Aviation Act of 1958 (49 U.S.C. 1373) is amended to read as follows: "No change shall be made in any rate, fare, or charge, or any classification, rule, regulation, or practice affecting such rate, fare, or charge, or the value of the service thereunder, specified in any effective tariff—

"(1) of any air carrier, or foreign air carrier, directly engaged in the operation of aircraft if such rate, fare, or charge is for the carriage of property in air transportation, except after sixty days' notice of the proposed change filed, posted, and published in accordance with subsection (a) of this section; and

"(2)(A) of any air carrier, or foreign air carrier, if such rate, fare, or charge is for the carriage of persons in air transportation, or (B) of any air carrier, or foreign air carrier, not directly engaged in the operation of aircraft if such rate, fare, or charge is for the carriage of property in air transportation, except after forty-five days' notice of the proposed change filed, posted, and published in accordance with subsection (a) of this section.".

(b) The first sentence of section 1002(g) of such Act (49 U.S.C. 1482) is amended by inserting "at least fifteen days before the day on which such tariff would otherwise go into effect" immediately after "and delivering to the air carrier affected thereby".

SEC. 2. (a) The amendment made by subsection (a) of the first section of this Act shall apply to any tariff change filed by any air carrier or foreign air carrier in accordance with section 403(c) of the Federal Aviation Act of 1958 after the thirtieth day after the date of enactment of this Act.

(b) The amendment made by subsection (b) of the first section of this Act shall apply to any tariff change filed by any air carrier for interstate or overseas air transportation in accordance with section 403(c) of the Federal Aviation Act of 1958 after the thirtieth day after the date of enactment of this Act.

SEC. 3. (a) Section 406(b) of the Federal Aviation Act of 1958 (49 U.S.C. 1376(b)) is amended by adding at the end thereof the following new sentence: "In determining compensation for any local service air carrier for the year 1966 in accordance with the provisions of this subsection, the Board shall apply Local Service Class Subsidy Rate III–A as set forth in Board order E–23850 (44 CAB 637 et seq.), except that the Board shall not apply that part of such order which requires the Board to take into account any decrease in the Federal income tax liability of such carrier for such year resulting from any net operating loss carryback pursuant to section 172 of the Internal Revenue Code of 1954.".

(b) In the event that the Civil Aeronautics Board in determining the amount of compensation to be paid to any local service air carrier for the year 1966 in accordance with the provisions of section 406(b) of the Federal Aviation Act of 1958 took into account any decrease in the Federal income tax liability for such air carrier for such year resulting from any net operating loss carryback pursuant to section 172 of the Internal Revenue Code of 1954, the Board shall redetermine the compensation to be paid to such air carrier in accordance with section 406(b) as amended by this Act, and shall make payment to such air carrier of any amount owed to such carrier as provided in such redetermination.

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. ANDERSON) will be recognized for 20 minutes and the gentleman from Kentucky (Mr. SNYDER) will be recognized for 20 minutes.

The Chair recognizes the gentleman from California.

Mr. ANDERSON of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 26 is designed to insure that customers of airlines receive adequate notice of changes in airline

fares, and to correct an inequity in the subsidy program for local service air carriers.

Under present law, the CAB is permitted to issue its decision on fare changes any time before the effective date of a change. The Board has frequently waited until the last minute to issue its decision, and this has led to public confusion and a need for extra payments or refunds from passengers who purchased tickets in advance.

H.R. 26 would help avoid these problems by requiring the CAB to issue its decision on fare changes at least 15 days before the effective date of a change.

To insure adequate public notice and adequate time for CAB review, H.R. 26 would also extend the date for air carriers to file proposed rate changes with the CAB.

The present law requires changes to be filed 30 days before the effective date. H.R. 26 would require air carriers to file changes in passenger rates 45 days in advance of the effective date. For freight rates, H.R. 26 would require direct air carriers to file 60 days in advance of the effective date. Indirect air carriers, who consolidate goods and ship on direct air carriers, would be required to file their rate changes 45 days in advance. The rates of indirect air carriers are largely based on the rates of direct air carriers and the 15-day lag would permit the indirect carriers to respond to changes in direct carrier rates.

H.R. 26 is also designed to correct an inequity in the CAB's 1966 subsidy program for local service air carriers. As a result of a series of administrative and judicial decisions two local service carriers were required to make subsidy refunds, because they received tax loss carrybacks while six other local service carriers which also had tax loss carrybacks were not required to make subsidy refunds. There are no judicial or administrative remedies now open to the two carriers which were required make subsidy refunds.

H.R. 26, as reported, is designed to correct the inequitable results of the CAB's 1966 subsidy program. In its report, the committee agreed with the following description of the 1966 program by the U.S. Court of Appeals for the Ninth Circuit:

> Whether a carrier would be forced to return or allowed to keep hundreds of thousands of dollars would turn on fortuitous circumstances, including the order in which the CAB decided to process paper work and the dispatch with which it was processed. The facts of this case failed to demonstrate any reasonable justification for continued adherence to a procedure which did not treat all members of the class equally.

H.R. 26, as reported, eliminates the inequitable 1966 results by directing CAB to refund subsidies to the carriers which were required to make repayments. The effect of the bill is to provide that Texas International Airlines would be entitled to a refund of $296,000, while Ozark Air Lines would be entitled to a refund of $148,000.

The bill would not create a precedent for similar legislation for the years after 1966, since profit-sharing provisions were not used by the CAB after 1966.

Mr. Speaker, legislation including all of the provisions of H.R. 26 passed the House by voice vote late in the last Congress, on September 30, 1976. I urge passage of this needed legislation.

Mr. SNYDER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I join the gentleman from California in supporting the pending bill, H.R. 26, first, to provide advance public notice of air passenger fare and air freight rate changes, and second, to authorize adjustments in the 1966 subsidies for Ozark Airlines and Texas International Airlines. This legislation was ordered reported by the Committee on Public Works and Transportation on February 9, 1977, without dissent.

During the 2d session of the 94th Congress, both provisions of this legislation were reported by our committee and passed by the House. Regrettably, however, due to House-Senate disagreement over an unrelated matter—Federal express—both failed of enactment.

So, once again, Mr. Speaker, we are attempting to move this legislation. Provision No. 1 is a sound and simple proposition. It provides 15 days advance public notice before new air passenger fares and air freight rates can go into effect. This is the type of reform which all of us should support because I am sure we all have had occasion to complain about inadequate notice of air fare changes—either from personal experience or from constituents who have encountered problems arising from lack of timely notice.

Provision No. 2 involves a situation where simple justice dictates that we act. The two affected local service carriers—Ozark and Texas International—were accorded unfair treatment by the Civil Aeronautics Board in connection with their subsidy payments for 1966—and subsequent conflicting court decisions in different jurisdictions then served to compound the problem.

This was amply demonstrated during our hearings last year when the CAB witness simply could not justify requiring the carriers in question to refund portions of their 1966 subsidies, because of the circumstance that they received tax loss carrybacks—while six other carriers in the same situation were not required to do so. The provision we have included in the bill would preclude CAB from taking into account any decrease in 1966 Federal income tax liability for purposes of computing subsidy payments for that year.

The record in this case clearly demonstrates the need to correct an error by the responsible regulatory agency—with the added complication of contradictory adjudication of the issue by the judiciary.

Mr. Speaker, I urge my colleagues to support the pending bill.

Mr. Speaker, I yield to the gentleman from Missouri (Mr. TAYLOR) such time as he may consume.

Mr. TAYLOR. Mr. Speaker, I rise in support of the four aviation bills we are considering today. It was evident during our Aviation Subcommittee hearings that these proposals have merit—and the fact that all were passed twice by the House last year with little or no dissent is indicative that they have broad support.

Mr. Speaker, I would like to direct the attention of my colleagues to the second provision of H.R. 26. This provision is identical to a bill which I introduced last year (H.R. 12349) along with several of my colleagues—Mr. PICKLE, Mr. ICHORD, Mr. Symington, and Mr. WRIGHT. We reintroduced the legislation this year—as H.R. 2936, and the chairman of our Aviation Subcommittee decided that the most expeditious way to proceed would be to add the language of my bill to H.R. 26—the bill to provide 15 days advance public notice of changes in air passenger fares and air freight rates.

Very simply, Mr. Speaker, this provision would correct an anomaly in the administration and adjudication of the 1966 subsidy payments for two local service air carriers—Ozark Air Lines and Texas International Airlines. The Civil Aeronautics Board required the two carriers to refund portions of their 1966 subsidies, because they received tax loss carrybacks for that year—but the same requirement was not imposed on six other local service carriers. Subsequently, conflicting court decisions further clouded the issue.

Mr. Speaker, the provision in the bill stipulates that CAB shall not include a reduction in 1966 Federal income tax liability in determining the 1966 subsidy payments for the two carriers in question. The equity of this provision is clear—and I hope my colleagues will support its enactment—as they did last year.

Mr. SNYDER. Mr. Speaker, I have no further requests for time.

Mr. ANDERSON of California. Mr. Speaker, I yield to the gentleman from California (Mr. JOHNSON) such time as he may consume.

Mr. JOHNSON of California. Mr. Speaker, I rise in support of H.R. 26.

Although the subject matter of the bill is technical and complex, the problem it addresses is a real source of annoyance to millions of airline passengers and shippers. Under the present procedures, passengers and shippers frequently have to wait until the last minute to learn whether fare changes proposed by the airlines will take effect. When a proposed change does not take effect, passengers may have to make extra payments at the gate or file for refunds. H.R. 26 will insure that the Civil Aeronautics Board decides whether to allow a fare charge no later than 15 days in advance of the change. This period of advance notice should reduce considerably the last minute confusion which occurs under the present system.

H.R. 26 will also eliminate an inequitable situation in the CAB's 1966 subsidy program for local service airlines. Because of the order in which CAB processed cases, two carriers were re-

quired to make subsidy refunds while six similarly situated carriers were not. H.R. 26 will eliminate this inequity by restoring the refund to the two disadvantaged air carriers.

Mr. Speaker, I urge passage of H.R. 26.

Mr. PICKLE. Mr. Speaker, I stood here on September 21, 1976, discussing the second section of H.R. 26, which was then a separate bill, H.R. 12349. I do not need to repeat my points.

I will state that this bill passed the Senate last year attached to another bill. Unfortunately we in the House were at the end of the session, and there was not time to move into a conference committee on the different bill passed by the Senate. The important thing is that last year, both Houses of Congress passed the section of H.R. 26 dealing with the airline subsidy foulup of 1966.

Also, I support the first part of this year's bill. By changing the time for which changes in air tariffs are to be filed, the Public Works Committee has addressed a major problem of making sure the public has notice of air fare changes.

The Aviation Subcommittee has worked on this bill in a bipartisan manner, and has done so in a most serious, and logical manner. I want to commend both the chairman of the subcommittee, Mr. ANDERSON of California, and the ranking minority member, GENE TAYLOR of Missouri.

Both have been most courteous to me and my staff in working on this legislation so that equity can be given. I thank them.

Since the arguments are the same as last year, I include my remarks from September 21 of last year in the RECORD at this point:

In 1966 the CAB gave subsidies to regional carriers based on their profits and expenses. The money was paid monthly subject to post-fiscal year audits. Under this system income taxes were viewed as an expense in computing whether or not an airline company had excess profits.

Due to administrative hang-ups, slowness, or whatever, the CAB took more than four years to audit Texas International, Ozark, Allegheny, Airwest, and Piedmont Airlines. The other six airline companies had their 1966 subsidies settled and closed.

Meanwhile, in the intervening four years, a recession had set in, the CAB was using a new subsidy payment system, and the local air carriers were losing money hand over fist.

As we all know, when a company loses money it can carry back the losses on its income tax returns.

When the five companies did that, the CAB jumped up and said, "Aha—your profits for 1966 are now excessive since your income taxes are lower, and since we have not closed the books on 1966, please give us our subsidies back."

I do not deny the loss carryback helped the money situation of the carriers. On the other hand, the CAB caused the losses, and the CAB had already settled the 1966 subsidies for six carriers.

In any event, the CAB billed four of the remaining five for their 1966 subsidies in the early 70's. With justification, the four airline companies went to court. Since the decision involved a regulatory agency, the cases were heard in Federal Circuit Courts. Each airline filed in a different circuit. Texas International filed in the D.C. Circuit. Ozark filed in the 8th Circuit. In both of these cases the airlines lost. In other words, the Federal Courts said, "Pay up."

Texas International did not appeal to the Supreme Court. Ozark did, but was denied *certiorari*.

If the matter had ended there, neither I nor anyone else would be here pleading the case. Unfortunately for a logical regulatory process, the controversy did not end there.

Allegheny and Airwest went ahead and pursued their court cases. Allegheny, in the Fourth Circuit, and Airwest, in the Ninth, won their cases. The Circuit Courts stated firmly that the regulatory process would be shambles if members in the same class were differently treated in an arbitrary manner.

The CAB's claim against Allegheny and Airwest was nearly $2 million, while the claims against Texas International and Ozark amounted to around a half-million dollars.

Based on the money figures alone, one would think the CAB would appeal the Allegheny and Airwest decisions to the Supreme Court. The CAE instead chose to ignore the dichotomy among the circuits and allowed Allegheny and Airwest to keep their money.

The fifth airline, Piedmont, finally settled its 1966 subsidy problem in 1974. The CAB treated Piedmont as it had to treat Allegheny and Airwest. It is interesting to note that the CAB would have taken the same line against Piedmont as it used against Texas International and Ozark; but the CAB did not.

So, today we are looking at a 1966 subsidy program that treated nine airlines one way, and two another way.

One would normally presume the CAB would administratively correct this inequity. One, the CAB doesn't want to; second, there is legal theory holding that the CAB cannot unilaterally nor legally reverse final orders. Since the orders against TI and Ozark were final orders, the CAB cannot reverse them.

Also, the CAB has maintained that the way the 1966 subsidies were paid and figured is correct, and still stands by this.

The bill before us, H.R. 12349, does not order the CAB to drop its claim against Ozark and TI. Such a bill would not cure the policy error of the CAB. The bill goes right to the heart of the matter, and legislatively expresses Congress' sentiment on using operating loss carrybacks.

In talking to people about this, they have asked me why TI and Ozark don't appeal to the Supreme Court since Allegheny and Airwest beat the CAB. Unfortunately, the time for appeal passed by before the Airwest and Allegheny cases were decided.

In the final analysis, H.R. 12349 is designed to bring logic to a chaotic situation. The CAB totally missed the mark in figuring the 1966 subsidies.

When I served on the Commerce Committee, I was always very leary of Congressional action correcting an administrative wrong by an independent regulatory agency. At the same time, some agency actions become so overwhelming in their wrongness that we have to set aside our general rule to bring about specific justice.

This is my appeal here today. H.R. 12349 brings logic out of chaos, and simple justice where legal injustice now resides.

I urge passage of H.R. 12349.

Mr. ANDERSON of California. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

The SPEAKER. The question is on the motion offered by the gentleman from California (Mr. ANDERSON) that the House suspend the rules and pass the bill H.R. 26, as amended.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill, as amended, was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the subject of this bill, H.R. 26, just passed.

The SPEAKER pro tempore (Mr. MEEDS). Is there objection to the request of the gentleman from California?

There was no objection.

AMENDMENT TO FEDERAL AVIATION ACT OF 1958

Mr. ANDERSON of California. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 27) to amend the Federal Aviation Act of 1958 to authorize reduced fare transportation on a space-available basis for elderly persons and handicapped persons, and for other purposes, as amended.

The Clerk read as follows:

H.R. 27

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 403(b)(1) of the Federal Aviation Act of 1958 (49 U.S.C. 1373(b)(1)) is amended by striking out "to ministers of religion on a space available basis," and inserting in lieu thereof "on a space-available basis to any minister of religion, any person who is sixty years of age or older and retired, any person who is sixty-five years of age or older, and to any handicapped person and any attendant required by such handicapped person. For the purposes of this subsection, the term 'handicapped person' means any person who has severely impaired vision or hearing, and any other physically or mentally handicapped person, as defined by the Board. For purposes of this subsection, the term 'retired' means no longer gainfully employed as defined by the Board.".

(b) Within six months after the date of enactment of this Act, the Board shall study and report to Congress on the feasibility and economic impact of air carriers and foreign air carriers providing reduced-rate transportation on a space-available basis to persons twenty-one years of age or younger.

SEC. 2. Section 401(d) of the Federal Aviation Act of 1958 (49 U.S.C. 1371(d)) is amended by adding at the end thereof the following new paragraph:

"(4)(A) Notwithstanding any other provision of this Act, any citizen of the United States who undertakes, within the State of California, the carriage of persons or property as a common carrier for compensation or hire with aircraft capable of carrying thirty or more persons pursuant to authority granted by the public utilities commission of such State is authorized—

"(i) to establish service for persons and property which includes transportation by such citizen over its routes in California and transportation by an air carrier or foreign air carrier in air transportation; and

"(ii) subject to the requirements of section 412 of this title, to enter into an agreement with any air carrier or foreign air carrier for the establishment of joint fares, rates, and services for such through service.

"(B) The joint fares or rates established under clause (ii) of subparagraph (A) of this paragraph shall be the lowest of—

"(i) the sum of the applicable fare or rate for service in California approved by such Public Utilities Commission and the

applicable fare or rate for that part of the through service provided by the air carrier or foreign air carrier;

"(ii) a joint fare or rate established and filed in accordance with section 403 of this Act; or

"(iii) a joint fare or rate established by the Board in accordance with section 1002 of this Act.".

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. ANDERSON) will be recognized for 20 minutes, and the gentleman from Kentucky (Mr. SNYDER) will be recognized for 20 minutes.

The Chair now recognizes the gentleman from California (Mr. ANDERSON).

Mr. ANDERSON of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, H.R. 27 is designed to increase the availability of air service for the elderly and handicapped, and to improve air service for passengers using intrastate air carriers in California.

The bill would permit CAB to approve reduced air fares on a standby basis for persons who are over 60 and retired or over 65, and for the handicapped. The bill also requires CAB to study the economic feasibility of reduced fares for youth.

These provisions would make air transportation more widely available to the public. Every citizen needs the mobility which air transportation affords. Unfortunately, however, inflation has placed air transportation well beyond the reach of many consumers. The problem is particularly severe for the elderly and the handicapped. Members of these groups tend to have below-average incomes and, in many cases they are particularly dependent upon public transportation because they are unable to drive private automobiles.

The fares now charged for air transportation tend to exclude the elderly and the handicapped. For example, a survey by United Airlines showed that only 5 percent of its passengers were 65 years of age or over, while persons in this age bracket make up 10 percent of the general population. This disparity is largely attributable to the low-income levels of many of the elderly. For example, in 1973 the median income for elderly households in 1973 was under $4,600, compared to the national average of $10,500. Similar problems are faced by the handicapped.

An excellent report on the transportation needs of our senior citizens has been issued by the Subcommittee on Federal, State, and Community Services of the Select Committee on Aging, under the chairmanship of Congressman SPARK M. MATSUNAGA. The report points out that a number of Federal programs, such as the urban mass transportation program, include special provisions designed to make transportation more widely available to the elderly. In air transportation there are no programs of this nature, and under existing law the Civil Aeronautics Board is limited in its ability to authorize reduced fare transportation for deserving groups. As a consequence, there are no reduced fare programs currently in effect for the elderly.

Chairman MATSUNAGA's report also suggests that well designed reduced fare programs for the elderly have been highly successful. For example:

Inter-island carriers in Hawaii . . . instituted a half-fare for persons aged 65 and over in 1967, which remained in effect until 1974. During that time one of the carriers, Hawaiian Airlines, reported a 340-percent increase in the number of senior citizens taking advantage of the fare reduction. Moreover, since the seniors were accommodated on a space-available basis, the half-fares charged more than covered the extra costs of carrying them, and returned substantial increased revenues to the carriers.

The report recommends that Congress reaffirm the power of the Civil Aeronautics Board to permit discount standby air fares for the elderly.

This bill is designed to meet these needs, and to insure that similar reduced fare standby service will be available for the handicapped.

H.R. 27 should also result in improved air service for those members of the traveling public who use intrastate air carriers in California. Under present law intrastate carriers are not permitted to offer through ticketing and baggage service for passeners who connect with interstate carriers. For example, Pacific Southwest Airline, an intrastate air carrier, is the only carrier now serving Long Beach. If a passenger wishes to travel on PSA to San Francisco and then connect to Western Airlines to travel to Seattle, the passenger must purchase separate tickets from PSA and Western, and he must transfer his own baggage at San Francisco.

This bill would permit PSA and Western to enter into an agreement which would permit the Long Beach-Seattle passenger to purchase a single ticket at a joint fare. The agreement could also provide baggage transfer service.

Mr. Speaker, both of these measures passed the House last year, but did not reach the White House. This is important consumer legislation and I urge its passage.

Mr. GLICKMAN. Mr. Speaker, will the gentleman yield?

Mr. ANDERSON of California. I yield to the gentleman from Kansas.

Mr. GLICKMAN. Mr. Speaker, I just have a question that the gentleman from California may be able to answer, that is on retired persons 60 years of age and older. Will that present some sort of enforcement problem from the airlines or some mechanism to enforce; how is that going to be determined; are they going to get a retired card, like some get a youth card?

Mr. ANDERSON of California. The Civil Areonautics Board would establish the regulations under which the airlines would act. There would be no enforcement problem. Originally, it was 60 years of age and older, period. Then, there was some concern that there might be people who could afford to pay the full fare, as they were working. So we increased the eligibility age to 65 for everyone; but 60 years of age and older for those who are retired. We require the Board, the CAB, to determine by regulation the definition of a retired person so there will be no misunderstanding.

Mr. GLICKMAN. Mr. Speaker, if the gentleman will yield further, it is clear that is just applicable to those 60 years of age and older?

Mr. ANDERSON of California. Sixty years and older and retired, yes; or, 65 and over.

Mr. ANDERSON of California. Mr. Speaker, I have no further requests for time.

Mr. SNYDER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, here again we have a bill which the Committee on Public Works and Transportation reported last year—as H.R. 15026—and which passed the House—this one on a rollcall vote of 400 to 1. Late in the session, the House again passed the language of H.R. 15026 in a package of miscellaneous aviation legislation which failed of enactment due to House-Senate disagreement over another issue—Federal express.

The first provision of H.R. 27 would authorize reduced air fares for the elderly and handicapped—as the chairman of the Aviation Subcommittee has just explained. There can be no doubt as to the merits of this legislation.

During our hearings last year, we heard a variety of viewpoints on the question of authorizing reduced air fares for the elderly, handicapped, and youth. After careful consideration, we decided that there is ample justification for authorizing reduced air fares for the elderly and handicapped. As for reduced fares for those under 21, substantive questions remain unanswered, so we thought it best to mandate a 6-month study of the question by CAB. The bill before us contains these provisions, and it seems to me that we have a special obligation to move in this area because upward of 45 percent of available airline seats go unoccupied—on the average.

The second provision of H.R. 27 would permit intrastate air carriers in California to interline both baggage and tickets—thereby enabling passengers who plan to continue their trips aboard interstate air carriers to check their baggage and purchase their tickets all the way through.

This seems to me to be an entirely reasonable proposal—which I fully support and which also was the subject of hearings last year. As was the case with the reduced-fares provision, the House passed the interline provision, the House passed the interline provision on two occasions last year.

Mr. Speaker, I urge my colleagues to support the pending bill.

Mr. SNYDER. Mr. Speaker, I yield such time as he may consume to the gen-

tleman from California (Mr. DON H. CLAUSEN).

Mr. DON H. CLAUSEN. Mr. Speaker, I rise in support of this legislation and to commend the committee for moving with such dispatch this year on what I think is very important legislation for senior citizens.

I rise in support of legislation which would authorize reduced air fare transportation on a space-available basis for elderly persons and the handicapped, which would mandate a study on the economic feasibility of reduced air fares for our young people, and would permit California intrastate air carriers to offer through-ticket and baggage service in cooperation with interstate and foreign lines.

Proposals for reduced air fare have been before the Congress for many years. As you may remember, the other body has passed such bills, but they invariably have died in the House. I, as one of the bill's cosponsor, have been working for the enactment of such legislation for years and am pleased to see that through the hard work of our Public Works and Transportation Committee we are able to follow up on our actions of last year and bring this measure before the full House for early consideration.

What we are proposing here is a rather simple proposition. We are saying to the airlines that they may provide air transportation at reduced rates to those over 65, or those retired persons over 60, and to the handicapped. This is permissive legislation. It does not mandate that reduced fares shall be granted. Nor does it mandate the amount of any reduced fare which may be offered.

Mr. Speaker, I firmly believe this is a reasonable and responsible approach to this legislation. It allows the CAB flexibility to set the rates according to the current market pressures and allows our airlines a method by which they can fill otherwise empty seats. In fact, an average 45 percent of the seats on major airlines go unoccupied. The experience in Hawaii, where intrastate air lines offered reduced rates to senior citizens was an overwhelming success. While Hawaiian Airlines' overall traffic grew by about 80 percent between 1968 and 1973, senior citizen air traffic grew 338 percent, or more than four times faster than the overall growth rate. These reduced rates generated more than $250,000 for Hawaiian Airlines, of which only about $70,000—less than 30 percent—was needed to meet the actual additional costs of carrying these new passengers. More than $180,000—or some 70 percent—was available to offset overhead costs as well.

This new rate structure will allow these senior citizens, many who must live on limited fixed incomes and are deprived of the opportunity to travel, a new mobility. It will help the handicapped who, as a group, do not have anywhere near the earning capacity of those not similarly afflicted. Except for a relatively few they cannot operate motor vehicles and must depend solely on public transportation or stay at home. We have charted the way for the handicapped in the Urban Mass Transit Act and I am convinced that we must move in this direction in the case of air transportation.

Finally, Mr. Speaker, this measure before us today will begin a new experiment in through-ticket and baggage service in California. This service, which will serve as an example to other State air traffic, will greatly aid in the convenience of the travelling public by allowing them to check their baggage through and purchase their ticket through intrastate and interstate airlines.

In sum, Mr. Chairman, I support this legislation and hope that my colleagues will do the same.

Mr. SNYDER. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. WALSH).

Mr. WALSH. Mr. Speaker, I rise in support of H.R. 27, the bill presently under consideration which would permit reduced air fares on a space-available basis for elderly and handicapped persons, and would require the Civil Aeronautics Board to study the economic feasibility of reduced fares for youth.

The majority of our senior citizens by far lives on some type of fixed income, whether it be social security, veterans' pension, private pension, or other limited source of monthly support, and they are, in many cases, unable to afford the luxury of airline travel. For most of us, airline travel is not a luxury which we can ill afford, but a convenience service which is competitive with other modes of transportation.

H.R. 27 would allow our elderly and handicapped to travel at a fare more easily affordable on their reduced income without denying priority booking to full-revenue passengers. Many of our senior citizens were busy holding down a full-time job and raising children and had no opportunity to travel when they had the benefit of a full salary; now they are forced to live on a fixed amount and cannot afford to travel. H.R. 27 would give our elderly and disabled an opportunity to bring some diversity into their often dull lives through the medium of travel, and I would urge my colleagues to give this measure their full support.

Mr. SNYDER. Mr. Speaker, I yield such time as he may consume to the gentleman from Virginia (Mr. WAMPLER).

Mr. WAMPLER. Mr. Speaker, I am pleased to express my support for H.R. 27, which will permit the Civil Aeronautics Board to approve reduced air fares on a space-available basis for retired persons over age 60, for all persons over age 65 and for handicapped persons and their attendants. This legislation also requires the CAB to study the economic feasibility of reduced youth air fares.

During the 94th Congress, I cosponsored H.R. 15091 and H.R. 15183, which contain provisions we are considering today. It is my pleasure to join the chairman of the Select Committee on Aging (Mr. PEPPER) and my colleagues on the committee in support of the Subcommittee on Aviation of the Committee on Public Works and Transportation in their outstanding efforts toward eliminating immobility and isolation of the elderly and handicapped.

Transportation represents the third largest expenditure for older persons, according to the Bureau of Labor Statistics retired couples budget. As a result of rising costs in all means of transportation, it has become especially difficult for low-income older people to utilize mass transportation services, own automobiles and afford the cost of air travel. Transportation in rural areas, where isolation is most prevalent, is often inaccessible. In 1975, 50 percent of all older families had incomes below $8,057 and 50 percent of individuals aged 65 and over had incomes below $3,311. Sixteen percent of persons aged 65 and over were living below the poverty threshold of $3,232 for couples and $2,572 for older individuals, which renders many unable to purchase such services as long distance travel at regular rates.

I trust that the Civil Aeronautics Board will carefully study the economic feasibility of reduced youth air fares, specified in H.R. 27, as our working youth and college students are also in need of additional opportunities for long distance travel.

The Select Committee on Aging's report, "Senior Transportation: Ticket to Dignity" recommends reduced air fares for the elderly on a space available basis and cites the cost effectiveness of this program in Hawaii from 1967 to 1974. The report cites this provision as only one of the means by which Congress should promote the use of existing resources for additional transportation services for the elderly. It is our responsibility today, to clarify existing laws when regulations and redtape prevent the elderly and handicapped from the cost-effective use of public transportation.

I urge the adoption of H.R. 27, as an initial step to providing the elderly and handicapped with accessibility to the mainstream of society and as an indication that the 95th Congress is committed toward making their needs a priority.

Mr. ANDERSON of California. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. JOHNSON).

Mr. JOHNSON of California. Mr. Speaker, I rise in support of H.R. 27.

The bill will provide improved access to air transportation for elderly and handicapped persons whose lives are confined by low income and the lack of mobility.

In addition to benefiting the elderly and the handicapped, the bill will help provide improved air service for those members of the travelling public who use intrastate air carriers.

The intrastate air carriers such as Pacific Southwest Airlines and Air California, are now providing valuable service to the traveling public. In some markets, intrastate carriers provide the only service, and in other markets they provide important competitive service. The intrastate carriers operate modern jet and turboprop equipment, and frequently provide service at fares below those generally offered by interstate carriers.

Because the intrastate carriers do not hold authority from the CAB, they are unable to offer through ticketing and baggage service for passengers who wish to connect from an intrastate carrier to an interstate carrier. Passengers wishing

to connect to an intrastate carrier must purchase a separate ticket, generally at the airport.

Two of the intrastate carriers previously applied to the CAB for authority to enter into interline agreements, but the Board denied their application.

Mr. ANDERSON of California. Mr. Speaker, I yield such time as he may consume to the gentleman from Florida (Mr. LEHMAN).

Mr. LEHMAN. Mr. Speaker, I rise in support of H.R. 27, which authorizes reduced-fare air transportation on a space-available basis for the elderly and handicapped. The primary purpose of this legislation is indeed praiseworthy. At this time, however, I would like to address the particular section of the bill which authorizes interlining for California's intrastate airlines.

I wish to point out to my colleagues that this provision could also be applied to the State of Florida. My State has a very active intrastate airline which would qualify under the terms of this legislation. Thousands of persons from all over the United States come to Florida each month to enjoy the warm weather and other attractions of the State. Interlining would provide these visitors with the added convenience of through-ticketing and baggage transfer when they choose to fly Air Florida to a different Florida destination.

When the House passed this legislation by a vote of 400 to 1 in the 94th Congress, the chairman of the Aviation Subcommittee, Mr. ANDERSON, expressed his agreement that this provision would benefit the State of Florida. In addition, he stated his willingness to include Florida in future legislation.

While I am prevented from offering an amendment to include Florida now, due to consideration of this bill under suspension of the rules, my Florida colleagues and I have introduced a bill this very day which seeks to remedy this oversight. I trust the subcommittee will give it early consideration, and I would welcome any comments the subcommittee chairman would care to make on this proposal.

Mr. ANDERSON of California. Mr. Speaker, I appreciate the gentleman's concern, and agree that interline service should benefit the consumer. California has the most sophisticated intrastate network in the country and I feel that we should see how this provision works in California. If successful, then I feel that we should permit it in Florida as well, and I would support the request of my friend, Mr. LEHMAN.

Mr. SNYDER. Mr. Speaker, I yield such time as he may consume to the gentleman from Minnesota (Mr. HAGEDORN).

Mr. HAGEDORN. Mr. Speaker, I would like to commend the distinguished chairman of the subcommittee, the gentleman from California (Mr. ANDERSON) and the ranking minority member, the gentleman from Kentucky (Mr. SNYDER) for their diligent work in the full Committee on Public Works and Transportation in passing this very essential legislation. I am hopeful that it will become law during this session of the Congress.

Mr. GILMAN. Mr. Speaker, I rise to voice my support for this very worthy piece of legislation, H.R. 27, amendments to the Federal Aviation Act of 1958. This measure would enable the elderly and handicapped to enjoy reduced fares on interstate flights, and would allow those people, who are faced with extraordinary difficulties in traveling, to share in one of America's most enjoyable pasttimes—air transportation.

The elderly and handicapped are forced to take a back seat in too many aspects of American life. They face severe discrimination in jobs and in housing, and are unable to enjoy the mobility which is so necessary in the fast pace of modern life. It is almost impossible for many of our older Americans, and those who have physical handicaps to sightsee or visit relatives in other parts of the country. They are often plagued with high medical bills and the burdens of modification which must be made on their housing and automobiles, oftentimes consuming a large portion of their life savings. For too long the elderly and physically disabled have suffered inconveniences and hardships. I believe that it is time to relieve them of some of the burdens which are placed upon them solely because of their age, or physical disabilities.

Accordingly, the reduction of air fares for this ever growing segment of our society is a sensible and necessary step and I urge my colleagues to consider this legislation favorably, to insure that this measure is made public law.

Last Congress, we addressed ourselves to this legislation, and the bill, H.R. 15026 passed in the House. Unfortunately, differences between the House and Senate versions were not reconciled prior to final adjournment. It is time to seriously consider this measure, and to support it as a worthy and sound step in the assimilation of the elderly and the handicapped back into American society.

I urge my colleagues to join with me in supporting this worthy legislation.

Mr. WAXMAN. I rise in strong support of H.R. 27, which provides reduced air fares for the elderly and handicapped. This legislation permits the Civil Aeronautics Board to approve reduced air fares, on a space-available basis, for retired persons over age 60, for all persons over age 65, and for all handicapped persons and their attendants.

This legislation is a reasonable and imaginative response to one of our senior citizens' compelling needs: the ability to afford to travel.

We are all aware of the economic plight of many of our senior citizens. Though the median income of all families in 1975 was slightly over $12,000 per year, the median income for households headed by a citizen over 65 was less than $6,000 per year. Of special concern is the proportion of single individuals over 65 with incomes under the poverty line; in 1974, over 30 percent of all senior citizens fell in that category, with black elderly people comprising an astonishing 60 percent of the total.

Ours is a mobile society, with families moving frequently to places far from their original homes, thus putting great distances between them and their elderly relatives, who tend to remain in the familiar home area. For the elderly to visit family and friends who live great distances, the cost of travel is often prohibitive. At one time, plane travel was considered a mode of transport reserved only for the wealthy and near-wealthy. But with the decline of other less expensive means of travel, and greater distances between families, plane travel is often the only feasible way for families and friends to see each other. For those who are old or handicapped there is often a sense of isolation which the economic ability to travel will hopefully reduce.

It therefore seems to me, Mr. Speaker, that offering seniors the opportunity to travel at a reduced rate is justified and should be supported by the Congress.

Mr. ALEXANDER. Mr. Speaker, I rise in support of H.R. 27, legislation that will permit the Civil Aeronautics Board to approve reduced air fares on a standby basis for elderly and handicapped persons.

I am a sponsor of legislation similar to H.R. 27, as I was in the last Congress. As you know, both the House and Senate passed versions of this legislation last year but were unable to conclude a conference on the bill prior to adjournment of the 94th Congress. I applaud the work of my colleagues on the Public Works Committee for the speed with which they have prepared this worthy piece of legislation for the consideration of the full House.

This bill will give scores of senior citizens and handicapped persons the opportunity to travel and visit with friends and relatives from whom they have been separated, either by distance or for health reasons. It will also aid airlines by filling seats that would otherwise go empty, thus increasing income for the airline and helping forestall future rate increases to all pasengers.

The bill allows the CAB to approve these reduced rates for all retirees over the age of 60, for all individuals over 65, and for all handicapped Americans.

A 1976 study of transportation problems of the elderly by the Select Committee on the Aging cites an airline survey which shows that roughly 5 percent of its passengers are 65 and older, compared to the 10 percent our senior citizens constitute of the total population of the Nation. I believe sheer economics explains why such a small percentage of the Nation's elderly travel by air.

My State of Arkansas has the second largest percentage of residents 65 and older. Aside from inadequate income and the high cost of medical care, I believe their lack of mobility is the chief concern of our elderly.

By passing this legislation, the Congress can help to keep our senior citizens in the mainstream of American life by extending to them the convenience and comfort of travel by air. I am convinced that many of our elderly have both the desire and the time to travel, if only they could afford it.

Mr. Speaker, I urge adoption of H.R. 27.

Mr. DRINAN. Mr. Speaker, under the Urban Mass Transportation Act of 1970 the Congress declared as national policy that: "Elderly and handicapped persons have the same right as other persons to utilize mass transportation facilities and services." Even with this policy a survey by a major airline showed that only 5

sist small concerns in weathering the slow economic recovery which has been experienced in the United States.

I urge my fellow Members of Congress to overwhelmingly support this important pending legislation.

Mr. FISH. Mr. Speaker, H.R. 692 underwent extensive and deliberate hearings in the 94th Congress, and as a matter of fact, passed the House by a vote of 341 to 2. Unfortunately, the other body of Congress failed to act on the bill.

For this reason, the House passed, on February 1, title I, part A of this bill on an emergency basis in order that the Small Business Administration could continue making loans. Without the passage of that bill, H.R. 2647, the Small Business Administration would have had to stop making loans by the end of this month.

H.R. 692 not only contains technical amendments that will establish better communications between SBA and the Small Business Committees of Congress, but will expand SBA's program for small homebuilders, liberalize the disaster loan program, and authorize loans to facilitate compliance with current Federal laws.

As a cosponsor of this legislation, and as a former member of the Small Business Committee, I am well aware of the need for this legislation, and I urge its passage.

Mr. BALDUS. Mr. Speaker, the House is considering today the Small Business Act amendments. The bill, H.R. 692, was unanimously reported out by the Small Business Committee on January 27. The bill provides for important reforms of small business programs. It deserves the same overwhelming support that it received from the House in the 94th Congress when it passed by a vote of 341 to 2.

The bill increases the limitation on the amount of financial assistance which may be outstanding under the SBA's business loan and investment fund from $6 billion to $8 billion. This reenacts and extends the much needed increases contained in H.R. 2647, an emergency measure, which passed the House on February 1.

Title III of the bill makes small homebuilders eligible for SBA assistance for the first time. It specifically authorizes the SBA to make regular business loans to small homebuilders for construction or rehabilitation of buildings. Small homebuilders have been hard hit by the recession and need this assistance.

The bill also increases the eligibility for SBA compliance loans. This will help small businesses to meet the requirements of Federal law. Small businesses are often hardpressed to comply with OSHA, clean air, and similar acts. This bill will provide assistance to small businesses which have difficulty raising the capital needed to comply with Federal law.

Other provisions will give the SBA final authority to determine a small firm's ability to perform a Government contract; direct Federal agencies, when possible, to divide their small business set-aside contracts into amounts of less than $1 million each which will allow small businesses to more easily bid on Government contracts; and, authorize the SBA to make economic injury loans, at a Governor's request, to small firms affected by a natural disaster.

In summary, this bill will help the SBA to better meet the needs of our small business community. Small businesses are the backbone of this Nation's economy. They need and deserve the assistance this bill provides.

Mr. McDADE. Mr. Speaker, I rise in support of H.R. 692. I urge all my colleagues to favorably consider it. The problems this bill seeks to remedy demand a speedy passage.

The Small Business Administration is about to meet its loan authorizations because of its own diligence. By establishing and carefully nurturing a secondary market in guaranteed paper, the SBA has increased the loan potential of most lending institutions in America, especially in rural areas. In the past, rural banks quickly reached their loan limitations because of small amounts of available deposits. Because of the SBA's excellent work, small banks can now sell guaranteed paper in this secondary market, using the proceeds to make more loans. It is clear that the secondary market is a great boon to small businessmen. We must increase the loan authorizations and limitations so that more small businessmen may benefit.

Mr. Speaker, there are two other sections of the bill which I feel are particularly noteworthy.

Eligibility changes which qualify small homebuilders for SBA programs are long overdue. The Nation's spiraling housing shortages and housing costs demand that we take every step to increase the supply of housing for Americans. This section of H.R. 692 will help to solve this problem.

The improvements in eligibility for economic injury loans are also crucial and may well provide immediate relief for many of our Nation's small businessmen who have suffered greatly because of this terrible winter. Americans need this program now and I urge you to approve this measure without delay.

Mr. ADDABBO. Mr. Speaker, I rise in support of H.R. 692, which I consider to be one of the most important measures offered on behalf of our small business community in recent years. I commend the chairman for expeditiously bringing this legislation to the floor.

For the sake of brevity I will limit my remarks to title V of this bill which is designed to greatly expand the Small Business Administration's certificate of competency program. The measure we have before us would authorize the SBA to make all final determinations regarding the responsibility of a small business concern to perform a specific Government contract. The term "responsibility" includes not only all elements of capability, competency, capacity, credit, integrity, perseverance, and tenacity, but also any other factors which procuring activities may determine, now or in the future, relate to the ability of a small business firm to successfully complete a specific Government contract.

Title V also gives the SBA authority to review determinations from a Federal procuring activity that a particular small contractor may be in violation of the "manufacturer or dealer" requirements found in section 35(a) of title 41, United States Code of the Walsh-Healey Act. If the SBA believes the procuring activity has made a proper finding, the matter will be referred to the Department of Labor for a final decision. However, if the SBA determines that the small concern is not merely a broker of Federal contracts, but a manufacturer of or dealer in the items called for, it must certify that the small business is eligible pursuant to 41 U.S.C. 35(a) to receive the subject contract. It is, of course, expected that the SBA will issue rules and regulations to implement this new authority.

Such regulations should adopt a commonsense business approach and reject prevalent theories that in order to qualify as a manufacturer under the Walsh-Healey Act a firm must demonstrate the independent ability to produce every integral part of the finished product. The Department of Labor should cooperate with the SBA in this endeavor and SBA should advise the Department of the peculiar problems facing small business concerns.

Title V does not amend the Walsh-Healey Act in any respect and the SBA must, of course, follow those statutory provisions, the statutory intent and rules and regulations duly promulgated by the Department which appear in the Code of Federal Regulations. Departmental memorandums, notes, or opinions of the Department of Labor cannot, according to the Administrative Procedure Act, provide SBA with prospective rules of general application for its use in this regard.

In summary, title V, if enacted, will result in referrals to SBA in three types of cases where the procuring activity has determined that a small business concern is otherwise qualified to receive a specific Government contract. These three types of cases occur when:

First. There is some element of responsibility of a small business involved; or

Second. The small firm may be ineligible for a contract pursuant to 41 U.S.C. 35(a); or

Third. An element of responsibility is involved as well as a determination that the small firm may be ineligible pursuant to 41 U.S.C. 35(a).

Title V further provides that once the SBA issues its certificate of competency it must be deemed conclusive and the subject contract shall be awarded.

I urge all my colleagues to support H.R. 692.

Mr. BADILLO. Mr. Speaker, the many small businesses of this country are the foundation of our free enterprise system. These small businesses are begun by people who often risk their financial well-being to build a company that will

percent of its passengers were older Americans while this group comprises over 10 percent of our population. For the handicapped the percentage of air-travelers is most likely lower.

Recognition of the basic right of travel is not enough to realistically provide the access available to the rest of the population. Besides the physical restrictions of both of these groups, there is a further and greater economic restriction. Because for the most part the incomes of handicapped and older Americans is fixed and more vulnerable to inflation, the possibility of air travel is remote.

H.R. 27, which we are considering today, is a major step toward implementation of the policy we expressed in 1970. By providing reduced air fare to the handicapped and older Americans on a space available basis, travel opportunities for these two groups will be brought within their financial reach.

The lack of mobility for the handicapped and older Americans has been documented and recognized as a link which reinforces isolation. For this part of our population reliance on public transportation is tantamount to obtaining needed services and maintaining ties to family, friends, and communities. There is much to be done in this regard and enactment of H.R. 27 at this time will be a vital contribution in improving the quality of life for handicapped and older citizens.

Older Americans see their retirement years and the leisure time it brings as a period to enjoy their grandchildren and families. In the United States today many families are separated by miles which can best be traversed by air travel. This is particularly true of those retired people in small towns and rural areas whose children left to follow job opportunities in larger cities.

Enactment of this legislation will give credence to our policy of providing access to travel for handicapped and older Americans.

Mr. CONTE. Mr. Speaker, I rise to express my support of H.R. 27, which would provide reduced air fares for our elderly and handicapped citizens and would provide them with the opportunity to take advantage of air service. We can recognize the fact that many air carriers operate at well below capacity and an estimated 45 percent of air carrier seats fly empty. This situation is aggravated by the high cost of air travel, placing air transportation beyond the reach of many consumers and thereby limiting the availability of air travel to those people who can reasonably afford it.

The elderly and handicapped are particularly dependent on public transportation, yet their below average incomes prevent accessibility to air transportation. Citizens be they young or old require access to services and resources. To maintain a fair and reasonable degree of mobility, we must have a public transportation system that provides these needed services to all citizens. During my many years of service in the Congress, I have focused special attention on those citizens who need public assistance the most.

H.R. 27, as reported, would not only benefit these deserving groups of the elderly and handicapped, but is likely to prove economically beneficial to the air carriers in terms of initiating increased air traffic. I urge my colleagues to support H.R. 27.

Mr. PICKLE. Mr. Speaker, I rise in support of H.R. 27, providing reduced fare transportation for elderly and handicapped persons. In past Congresses I have sponsored similar legislation, although my bill also included those 21 years of age or younger. It seems to me that making reduced fares available to these groups on a "space available" basis is one way to insure that they have access to transportation facilities to give them the mobility they need.

It is becoming increasingly apparent that with inflation, the price of air travel is becoming a luxury that is beyond the reach of many of our elderly and handicapped citizens. Yet this is the group that probably would most benefit from air transportation which insures a safe journey within a short period of time. Long trips by other transportation can be exhausting, particularly for these groups.

Since these reduced fare tickets would be limited to space available, it means that it would not cost the airlines money, but rather would insure that all planes carry the maximum number of passengers. Those that want to have a definite reservation would still have to pay the maximum fare.

I hope that the CAB study of the feasibility of including reduced fare for youth will meet with approval. While I understand that there were problems when multiple reservations were made by youths so that there would be space available, I would hope that these abuses can be corrected.

Mr. PEPPER. Mr. Speaker, you know it is a pleasure for me to urge the passage of H.R. 27, which if enacted will permit airlines to offer reduced air fares, on a standby basis, to those aged 65 and over, and to those over 60 who have retired.

As the chairman of the House Select Committee on Aging, I want you to know the Select Aging Committee cannot report bills for floor action. Rather, it is the purpose of this committee to recommend action on legislation which it feels merits the immediate attention of the Congress. It is the recommendation of the committee that H.R. 27 be promptly considered and passed and that is why I am before you today.

Last year, the Subcommittee on Federal, State, and Community Services held hearings on the transportation problems of the elderly. Hearings revealed that the most expensive mode of travel for the elderly is the commercial airplane. Living on one-half the income of those still working, the elderly are often forced to choose less expensive alternatives of travel. The committee discovered, however, that such alternatives do not always exist. For example, in Alaska and Hawaii, the elderly must travel across great distances or to different islands to secure the medical care, counseling, and other types of specialized care they need which are nonexistent within their own communities.

Hawaii responded to this situation in 1967 by instituting the half-fare for those aged 65 and over on a space-available basis. One airline reported a 340-percent increase in the number of senior citizens they were able to accommodate. Moreover, the fares charged more than covered the extra costs of carrying them and returned substantial increased revenues to the carriers. This fare reduction remained in effect until 1974, when Hawaiian carriers were forced to withdraw the fares when faced with the prospect of lengthy, expensive challenges to the fares from the Civil Aeronautics Board.

You will recall, when the House took up this bill on September 21 of last year, its passage was secured by an overwhelming vote of 400 to 1. The measure received a similar reception 3 days later in the Senate where it passed amended by a vote of 73 to 0. Unfortunately, the press of legislative business the week prior to the adjournment of the Congress did not permit the two Houses to resolve, in conference, differences between the two adopted versions of the bill. Nevertheless, the voting record of the 94th Congress clearly indicated the endorsement of this worthwhile legislation.

Mr. Speaker, lack of inexpensive air transportation is one of the most serious barriers facing the elderly in their search for the services they must have to meet their unique needs.

I am in complete agreement with the proposal embodied in H.R. 27 and urge my colleagues to support its speedy passage.

Mr. MARKS. Mr. Speaker, I rise in support of H.R. 27, a bill that would permit the Civil Aeronautics Board to approve reduced air fares for the elderly and the handicapped. As the cosponsor of an identical measure, H.R. 3274, I am pleased to see this issue receiving early attention in the 95th Congress.

Under existing law, the CAB is limited in its ability to approve reduced fares for deserving groups. This limitation works a special hardship on the elderly and the handicapped because these citizens usually have relatively low incomes but a great deal of leisure time. For example, a survey by one large commercial airline revealed that only 5 percent of its passengers were over 65, while persons in this age bracket make up more than 10 percent of the general population. The problem is compounded when we realize that the elderly and the handicapped are heavily dependent upon public transportation since they may be unable to use private automobiles.

H.R. 27 provides that reduced fares for these groups be offered on a space-available basis. This would ease the airlines' current financial crunch by helping to fill the 45 percent of air carrier seats that now fly empty. It should be noted that reducing these fares would not entail any cost to the taxpayer, or place any burden on air patrons paying full fares.

H.R. 27 would also require the CAB to study the economic feasibility of reducing air fares for youth.

I urge my colleagues to vote in favor of this bill. Hopefully, upon enactment, the CAB will move expeditiously to permit reduced air fares for the elderly and the handicapped.

Mr. BOB WILSON. Mr. Speaker, on behalf of the elderly and handicapped citizens of our Nation, I rise in support of H.R. 27, reduced air fare for the elderly and handicapped persons.

The Subcommittee on Federal, State and Community Services of the House Select Committee on Aging, of which I am ranking minority member, recommended in its report last year the need for this type of legislation to relieve one of the many problems encountered by our elderly population. Adequate transportation is central to all other services; passage of this legislation would relieve our senior citizens from being forced to live in isolation and loneliness.

The subcommittee emphasized in its study the need for passage of legislation which would reaffirm the authority of the Civil Aeronautics Board to permit the airlines to offer reduced fares to the elderly during nonpeak traveltimes. This legislation envisions no expenditure of funds by the Federal Government and would work very much to the advantage of both senior citizens and the transportation industry. With reduced fares, many elderly people would be able to stretch their finances enough to visit distant loved ones. The airlines would be able to fill more of the 45 percent of passenger seats which currently go empty.

Once families lived in close proximity throughout their entire lives; however, this is no longer the case. In our present highly mobile, transient society, families are dispersed from coast to coast, separated by thousands of miles.

Many senior citizens have barely enough income to provide for the mere essentials of life. This, when compounded by continuing inflation, leaves little doubt as to why the elderly find it difficult to pay the present fares charged for air transportation.

A survey by a major airline showed that only 5 percent of its passengers were 65 years of age or older; yet senior citizens account for over 10 percent of our general population. This legislation will allow standby fares for all retired persons over 60, all persons 65 and over, and the handicapped, permitting the airlines to provide discounts sufficient to attract those customers who would otherwise be unable to afford the present air fares. Since standby travel is less convenient, customers who were previously willing and able to pay the full fare for air travel would continue to do so.

Older persons as a group are particularly suited to standby travel because their schedules can be flexible. Without deadlines to meet, they can plan their travel for times when airlines are least crowded. They can afford to be more flexible in their planning because they have no 2-week vacation limit or set time that they must return home.

The Civil Aeronautics Board has not approved reduced fares for such deserving groups because they felt this action would be in violation of section 404(b) of the Federal Aviation Act, which prohibits unjust discrimination in airfares. Reduced fares were in operation in Hawaii from 1967 to 1974 when they were abandoned to avoid a lengthy challenge by the Civil Aeronautics Board under this section. During its operation, the reduced fare program was quite successful and cost-effective as senior citizen customers utilized the otherwise empty seats.

Cost considerations are complex and, in the final analysis, the responsibility for this and the decision on cost-effectiveness, will rest solely with the airlines themselves. I urge the passage of H.R. 27. The legislation would be a major step in relieving the terrible feelings of desolation and abandonment which beset so many elderly and handicapped.

Retirement should be the "Golden Years" when one can relax and enjoy the fruits of a lifetime of toil. We often ask what can be done to help our elderly population. Here is one important answer.

During the 94th Congress, the House and Senate approved legislation authorizing reduced air fares for the elderly and handicapped. Unfortunately, other provisions in the package could not be resolved before the Congress adjourned. The time is ripe, and I urge the Members of the House to lend their full support by passing H.R. 27, a most worthwhile piece of legislation.

Mr. ROSENTHAL. Mr. Speaker, I am pleased to be able to vote today for passage of H.R. 27, which authorizes reduced air fares, on a space-available basis, for elderly and handicapped persons.

I first introduced legislation to accomplish this goal 6 years ago, and thus feel some paternal pride in its passage.

Present law limits the Civil Aeronautics Board's ability to authorize reduced fares for certain categories of travelers. This bill would remove that restriction and allow persons over 65 and the handicapped to travel at a reduced rate. The bill also orders CAB to study the economic feasibility of reduced fares for youth.

I wish to commend the Committee on Public Works and Transportation, and particularly the Aviation Subcommittee, for its fine work on this legislation. It has done a thorough job and presented a persuasive case.

Although the elderly represent 10 percent of our general population, they constitute only about 5 percent of the flying public. Low, often fixed, incomes are the primary cause of this disparity. The elderly and handicapped are among inflation's most hard-hit victims, and a plane ticket today is simply beyond the reach of many.

Legislation such as H.R. 27 can help give new meaning to the lives of 25 million of the Nation's handicapped, including many Vietnam veterans, and over 22 million elderly Americans who wish to remain active and keep in touch with their family, friends, and society.

Money is not the only factor preventing many elderly and handicapped Americans from traveling. There also are physical barriers that deny them even the use of basic, local transportation. Providing that help is one goal of H.R. 69, the Elderly and Handicapped Americans Transportation Act, which I reintroduced at the beginning of this Congress.

In addition to calling for reduced fares, it also seeks to provide special services and facilities to eliminate travel barriers—such as steps for those in wheelchairs—encountered by handicapped and elderly persons using public transportation.

This bill provides special grants and loans to State and local agencies to assist them in providing barrier-free mass transportation services that are planned, designed, and carried out to meet the special needs of handicapped persons.

Some of the services that would be included are ramps at subway stations, sheltered waiting areas with special areas for wheelchairs, graphic signs, audio signals, and stanchions running from floor to ceiling in buses and subway cars instead of overhead grips.

Many measures can and should be taken to relieve the strain of urban and cross-country travel for the elderly and handicapped. The purpose of my bill—and of H.R. 27 before us today—is to make available to the elderly and disabled new opportunities for a richer, and more independent and meaningful life.

Mr. ABDNOR. Mr. Speaker, I fully associate myself with the remarks by the gentleman from California (Mr. ANDERSON) and the gentleman from Kentucky (Mr. SNYDER) on the four aviation bills which are before us. This is sound, well-considered legislation which benefits both the public and the aviation community.

I will not take the time of my colleagues to repeat the details of the four bills just recounted by the chairman of the Aviation Subcommittee and the ranking minority member—but, as a member of the Aviation Subcommittee I do wish to record my strong support for all four proposals.

Mr. Speaker, the Aviation Subcommittee developed a complete record on all matters addressed in this legislation during the 94th Congress. The bills were reported by the Committee on Public Works and Transportation, and passed by the House of Representatives on two occasions. Regrettably, however, they were not enacted because of a disagreement with the other body on legislation to aid Federal express—a part 298 all-cargo air taxi operator.

Mr. Speaker, I am convinced that all four bills should again be passed by the House. Hopefully, this time, our colleagues in the other body will allow these needed reforms to become law.

Mr. WEISS. Mr. Speaker, I am pleased to support H.R. 27, a bill to provide reduced air fares on a space-available basis for the elderly—and those retired over 60—and the handicapped. It is very much in the same vein as another bill of which I am proud to be a cosponsor, H.R. 3720 introduced by Representative BENJAMIN ROSENTHAL, which would provide reduced fares to all modes of transportation. H.R. 27 also includes an important provision requiring the Civil Aeronautics Board to study the economic feasibility of reduced fares for youth.

Reduced fares, offered throughout the Nation, have proven to be highly successful both in terms of increased participation by the elderly and handicapped and economically feasible for the carriers.

The House report on H.R. 27 notes the "unjust discrimination" clause in the Federal Aviation Act, which initially was interpreted to prohibit reduced fares. The report explains that if the fares meet the economic tests generally applied to discount fares—they will cover the costs

of service, will not burden normal fare passengers, and will not be discriminatory.

The elderly and handicapped are for the most part in lower income brackets and have severe limits on what they can afford for transportation.

Mr. Speaker, I think that this is a small but significant step in making life just a bit easier for those who need and deserve help. I am confident that this legislation will ease their way in the enjoyment of hard-earned leisure time as well as facilitating essential travel for business and family reasons. It is a bill which shows compassion as well as commonsense.

Mr. BIAGGI. Mr. Speaker, I rise in unqualified support for H.R. 27, legislation which will authorize the Civil Aeronautics Board to grant reduced air fares for millions of elderly and handicapped in this Nation. Passage of this legislation will represent a major breakthrough in the battle for transportation equality in this Nation.

I am very deeply involved in this fight. It was my amendment to the 1970 Urban Mass Transportation Act which made it national policy that the elderly and handicapped had a right to full and equal access to transportation facilities. The implementation of this amendment has been slow—there have been many jurisdictions which have attempted to skirt the law—there are others who are creating separate and unequal facilities However with the publishing of the final regulations by the Department of Transportation, we have turned the corner on this issue.

What we are proposing here today is quite simple but could result in profound savings for those elderly and handicapped who wish to utilize airplane service. For too long the price of air travel has been prohibitive to many senior citizens and elderly in this Nation who live on fixed or reduced incomes. It was estimated by one of this Nation's major air carriers that only 5 percent of its customers were elderly. Passage of this legislation should increase this figure and allow our seniors new opportunities to visit friends and relatives and see more of this great Nation.

I also take special pride in this bill in my capacity as a member of the House Select Committee on Aging. The committee considered this proposal thoroughly in the 94th Congress and our final report aided in this identical bill being passed by the House late last year. Unfortunately, the Senate never considered the proposal but I have every hope that the Senate will join the House in enacting this legislation.

We must continue to break down the barriers which separate our handicapped and elderly from the rest of our society. The barriers are economic, social, political. They are real. I support this measure for it breaks down a longstanding economic barrier for our elderly and handicapped. It is a bill worthy of immediate passage and implementation.

Ms. MIKULSKI. Mr. Speaker, I want to speak in favor of H.R. 27 which would permit reduced air fares on a standby basis for elderly and handicapped persons.

We live in a mobile society; transportation is a necessity, not a luxury, if people are to be active participants in life. Yet the elderly and handicapped are denied this because of the prohibitive cost.

These people have a difficult time meeting the day-to-day expenses. Thirty percent of the elderly are poor and many more live well below the national average. For this reason, a very small percent of elderly travel by air. Studies show that the number would increase substantially if the price of the ticket were reduced.

Reduced fares would not prohibitively cost the air lines, yet they would allow grandparents to be present at baptisms, bar mitzvahs and other family occasions; lessening the alienation and loneliness they feel and that their children and grandchildren also feel.

This legislation is only a start. I support additional legislation that would encourage rail, bus and other mass transit to do the same as well as research to find additional ways to assist these people in their need to be mobile whether it is across town or across the country.

Mr. ANDERSON of California. Mr. Speaker, I have no further requests for time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. ANDERSON) that the House suspend the rules and pass the bill H.R. 27, as amended.

The question was taken.

Mr. BAUMAN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The SPEAKER pro tempore. Pursuant to clause 3, rule XXVII, and the Chair's prior announcement, further proceedings on this vote will be postponed.

GENERAL LEAVE

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill H.R. 27.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

AIRCRAFT REGISTRATION

Mr. ANDERSON of California. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 735) to amend the Federal Aviation Act of 1958 relating to eligibility for aircraft registration.

The Clerk read as follows:

H.R. 735

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 501(b)(1) of the Federal Aviation Act of 1958 (49 U.S.C. 1401(b)) is amended to read as follows:

"(1) It is owned by a citizen of the United States or an individual citizen of a foreign country who has been lawfully admitted for permanent residence in the United States and such aircraft is not registered under the laws of any foreign country; or".

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. ANDERSON) and the gentleman from Kentucky (Mr. SNYDER) will be recognized for 20 minutes each.

The Chair recognizes the gentleman from California (Mr. ANDERSON).

Mr. ANDERSON of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 735, as reported, is to permit citizens of foreign countries who have been lawfully admitted for permanent residence in the United States to register aircraft in the United States.

Under present law, persons not citizens of the United States cannot register aircraft in the United States. The Federal Aviation Act of 1958 makes it unlawful for any person to operate or navigate any aircraft eligible for registration if such aircraft is not registered by its owner, or to operate or navigate within the United States any aircraft not eligible for registration. The law limits eligibility to: First, those aircraft owned by a citizen of the United States; second, those aircraft not registered under the laws of any foreign country; and third, those aircraft of the Federal Government, or of a State, territory, or possession of the United States, or the District of Columbia or of a political subdivision thereof.

A foreign national can own and operate an aircraft within the United States provided it is registered in another country and provided that person complies with any permits, orders or regulations issued by the Civil Aeronautics Board pursuant to the Federal Aviation Act of 1958. This has not been a satisfactory solution for permanent residents of the United States who wish to base their aircraft here because the aircraft must be maintained in accordance with the airworthiness requirements of the country of registry, including periodic maintenance and inspection. It is often difficult, if not impractical, for a foreign national to contract with qualified mechanics and repair stations in the United States in order to meet the particular requirements of the country of registry.

With respect to airman licensing there is no parallel problem. A foreign national can obtain a U.S. pilot license and a Federal Communications Commission permit to operate the radio transmitters aboard aircraft. The anomaly of the present law is that a foreign national can legally fly a U.S. registered aircraft in the United States, but he or she is prevented from owning an aircraft of U.S. registry.

As reported, the bill would extend the eligibility to register aircraft in the United States to citizens of foreign countries who have been lawfully admitted for permanent residence in the United States, provided, as is the present case, the aircraft is not registered under the laws of any foreign country. If a foreign national loses his or her status as a resident alien, the aircraft would no longer be eligible for registration, thus subjecting the certificate of registration to sus-

pension or revocation by the Secretary of Transportation as provided by law.

Mr. Speaker, this bill is identical to H.R. 3647 which passed the House September 21, 1976, under suspension of the rules. I urge its passage.

Mr. SNYDER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, as was the case with our first two bills, the pending bill was reported last year—as H.R. 3647—and passed by the House on two occasions. We can only hope that the other body will see its way clear to allow this needed legislation to be enacted this year.

H.R. 735 simply would permit aliens who have been admitted to the United States for permanent residence to register their aircraft with the Federal Aviation Administration, FAA. Such aliens can and do obtain U.S. pilot licenses from FAA, and they can and do obtain licenses for aircraft radio transmitters from the Federal Communications Commission, FCC.

In our hearings on this legislation last year, the witness who appeared in behalf of the Aircraft Owners and Pilots Association, AOPA, noted:

An alien can legally fly a U.S. registered aircraft in the United States, but he can't own one.

He also observed that—

The present prohibition seems to be more of an accident of legislative history than any real national interest.

Based on the record we compiled, I agree that this is an accurate characterization of the situation—and I know of no reason for opposing the bill.

Mr. Speaker, I wish to commend our colleague from California (Mr. GOLDWATER) for having brought this situation to our attention during the 94th Congress—and I take this opportunity to recognize his leadership in achieving a legislative solution to a difficult problem.

Mr. Speaker, I urge my colleagues to support the pending bill.

Mr. Speaker, I have no further requests for time.

Mr. ANDERSON of California. Mr. Speaker, I yield such time as he may consume to the gentleman from California (Mr. JOHNSON).

Mr. JOHNSON of California. Mr. Speaker, I rise in support of H.R. 735, a bill which will permit citizens of foreign countries who have been lawfully admitted for permanent residence in the United States to register aircraft in the United States.

The law prohibiting foreign nationals to register aircraft in the United States has been on the books since the Air Commerce Act of 1926, when aviation was in its infancy. I believe it can no longer be justified to deny individuals the right to register aircraft in the United States solely on the grounds of alienage, and I support this measure because it ends the outmoded restriction.

This bill does not open the U.S. aircraft registry to all, however; it contains several wise safeguards. First, it is limited in applicability to individuals, not companies. Second, the bill will only allow those foreign nationals who have been lawfully admitted for permanent residence in the United States to register aircraft. Third, it continues in effect the existing prohibition of dual registration consistent with our treaty obligations. Finally, the bill provides a means for the Secretary of Transportation to revoke a certificate of registration of a foreign national who has lost his or her status as a resident alien.

Mr. GOLDWATER. Mr. Speaker, I want to commend the chairman of our Aviation Subcommittee, Mr. ANDERSON, and the ranking minority member, Mr. SNYDER, for bringing this bill to the attention of Congress early in the session. While H.R. 735 would not have a major impact on the aviation community, it is an equity bill that deserves to be passed.

As has been explained, the problem we seek to rectify stems from a provision of the Federal Aviation Act which says that an aircraft is eligible for registration only if it is owned by a citizen of the United States.

Interestingly enough, most countries accept registration of aircraft by resident aliens. To the best of my knowledge there is no historical reason or precedent to restrict such registration in this country. It just appears that various aviation acts over the past 50 years have contained the restriction.

Also, there is no parallel situation in regard to airman licensing. An alien can get a U.S. pilot license as well as an FCC permit to operate radio transmitters on board an aircraft.

As I stated in the CONGRESSIONAL RECORD on September 24, 1974, when I first introduced this bill, we also must consider the safety factor involved.

Since the FAA cannot register the aircraft of aliens, these craft are not subject to the high standards and requirements for airworthiness and quality in the United States. Also, since these aircraft must meet the airworthiness requirements of the foreign nation of registration, it is extremely difficult for an alien to contract with qualified American mechanics and repair stations.

Thus, the U.S. aircraft and maintenance industry loses business and we risk letting nonairworthy aircraft operate in U.S. airspace.

Mr. Speaker, it is very unfortunate that Congress did not send this legislation to the President for a signature last year. As my colleagues have pointed out, this bill actually passed the House in the 94th Congress. Hopefully, our colleagues in the other body will follow the lead of the House and consider the bill very soon. It is a good bill and it deserves pasasge.

Mr. ANDERSON of California. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. ANDERSON) that the House suspend the rules and pass the bill H.R. 735.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

FEDERAL AVIATION ACT—EMERGENCY LOCATOR TRANSMITTERS

Mr. ANDERSON of California. Mr. Speaker, I move to suspend the rules and pass the bill (H.R. 736) to amend the Federal Aviation Act of 1958 relating to emergency locator transmitters, and for other purposes.

The Clerk read as follows:

H.R. 736

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) section 601(d) of the Federal Aviation Act of 1958 (49 U.S.C. 1421), relating to emergency locator transmitters, is amended as follows:

(1) In paragraph (1), immediately before ", minimum standards" insert the following: "and except as provided in paragraph (3) of this subsection".

(2) By adding at the end thereof the following new paragraph:

"(3) The Administrator shall issue regulations which permit, subject to such limitations and conditions as he prescribes in such regulations, the operation of any aircraft equipped with an emergency locator transmitter during any period for which such transmitter has been removed from such aircraft for inspection, repair, modification, or replacement.".

(b)(1) Section 601 of such Act is amended by relettering subsection (d), relating to aviation fuel standards, as subsection (e).

(2) Any reference to such relettered subsection (e) shall be relettered accordingly.

(c) That portion of the table of contents contained in the first section of such Act which appears under the side heading.

"Sec. 601. General safety powers and duties."

is amended by striking out

"(d) Aviation fuel standards."

and by inserting in lieu thereof the following:

"(d) Emergency locator transmitters.

"(e) Aviation fuel standards.".

The SPEAKER pro tempore. Is a second demanded?

Mr. SNYDER. Mr. Speaker, I demand a second.

The SPEAKER pro tempore. Without objection, a second will be considered as ordered.

There was no objection.

The SPEAKER pro tempore. The gentleman from California (Mr. ANDERSON) will be recognized for 20 minutes, and the gentleman from Kentucky (Mr. SNYDER) will be recognized for 20 minutes.

The Chair recognizes the gentleman from California (Mr. ANDERSON).

Mr. ANDERSON of California. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, the purpose of H.R. 736, as reported, is to provide the Administrator of the Federal Aviation Administration increased flexibility, without

compromising safety, in carrying out the law—first enacted in 1970—which required that emergency locator transmitters be installed on certain civil aircraft.

As reported, the bill requires the Administrator to issue regulations permitting the operation of civil aircraft—which are subject to the requirement—during any period for which the transmitter has been removed for inspection, repair, modification, or replacement.

The Federal aviation regulation—FAR—requiring an operable ELT on certain civil aircraft was adopted in response to a mandate from Congress (Public Law 91–596). This regulation, which carried out the intent of Public Law 91–596, prohibits the operation of airplanes subject to the law unless there is an operable automatic type emergency locator transmitter. The mandatory date for compliance was June 30, 1974, in accordance with Public Law 93–239, which extended the original date. There was no provision made in the two statutes to permit the operation of an airplane, subject to the ELT requirement when an installed ELT becomes inoperative. The FAA, then, cannot by regulation provide for flexibility in the ELT requirement.

This lack of flexibility has caused problems. For example, following installation of some 27,000 units built by one manufacturer, a high rate of inadvertent activations was experienced. Examination revealed that internal corrosion was evident, causing the transmitter to activate indicating that an emergency existed. When a number of units were found to be defective, an airworthiness directive—AD—was issued by FAA to require the removal and return to the manufacturer of some 27,000 units. This AD, therefore, in effect, required the grounding of some 27,000 aircraft since there were not enough units available to replace those removed pending inspection and correction by the manufacturer. Current reports from airplane owners, and ELT manufacturers, indicate that time required to remove, repair, and reinstall a defective unit runs from 3 weeks to 2 months. The variation is dependent on the location of the owner and the backlog of the manufacturer. The airplanes that may be grounded have a variety of uses. Many are used for business and personal transportation while others are used for pilot training.

Provisions should be made in the law that would allow the continued operation of the airplane while the ELT is being repaired, inspected, modified, or replaced. Such provision in the law as is contained in H.R. 736 would permit the FAA to maintain an adequate level of safety and to carry out the broad intent of the statutory requirement without causing unnecessary hardship due to inflexibility existing in the present law.

H.R. 736 is identical to H.R. 8228 which passed the House February 17, 1977, under suspension of the rules.

In conclusion, Mr. Speaker, I urge passage of H.R. 736.

Mr. SNYDER. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, our fourth aviation bill today also was reported last year—as H.R. 8228—and passed by the House on two occasions. It is one of those seemingly minor items which is of such great importance to much of the aviation community.

H.R. 736 authorizes the FAA administrator to promulgate regulations under which aircraft required to be equipped with emergency locator transmitters—ELT's—may be moved in the event their ELT's have been removed for inspection, repair, modification, or replacement. This legislation does not dilute the statutory requirement that certain categories of aircraft be equipped with ELT's. The bill simply provides needed flexibility to cover those situations when, under existing law, an aircraft with an inoperable ELT is, in effect, grounded.

Our hearings last year disclosed that the inflexible statute now on the books results in severe hardship in many cases, and we believe that H.R. 736 will provide the relief which we are convinced is justified by the facts.

Mr. Speaker, I urge my colleagues to support the pending bill.

Mr. Speaker, I have no further requests for time.

Mr. ANDERSON of California. Mr. Speaker, I yield such time as he may consume to the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Speaker, I have some real problems with this. Maybe the gentleman can be of some help.

Mr. Speaker, I believe that I was responsible for the original legislation which required crash locator beacons to be installed on private aircraft. There was tremendous resistance at the time from the aircraft owners to doing this, even though literally hundreds of planes are lost every year, particularly in the Rocky Mountain area, and many lives are lost through the inability to be able to locate the area of the crash with sufficient rapidity to be able to recover victims of the crash.

Mr. Speaker, I wonder why it is not feasible, when a locator device has to be repaired, for the aircraft owner to go and rent another device during the time of the repairs, rather than be allowed to fly without one.

I would also like to know what kind of safeguards the FAA may be prepared to require to assure that this is not used as a device just to avoid the necessity for carrying this equipment altogether. Is there going to be a time limit imposed during which the operator or the owner would be allowed to operate without these locator beacons? What protections are provided?

Mr. ANDERSON of California. Mr. Speaker, I thank the gentleman for his question.

The bill does not do away with the statutory requirement. It merely allows the FAA Administrator to exercise his discretion and to provide needed flexibility so that hardship can be avoided. I would assume that the Administrator, in promulgating regulations as required by the bill, would set a time limit of some kind. We certainly do not want a long term approval.

It would be very difficult to rent a plane if one's ELT was out of order some place and one had to get it to a place where there would be someone available who could repair it. One might have to transport the plane across State lines or perhaps to several places in order to get the ELT repaired.

This bill would allow the operator, at the Administrator's discretion, to fly his plane some place to get it repaired, after the Administrator has given permission to do that, and have it repaired. The plane could not be flown further, of course.

So I believe this is simply giving the Administrator this authority, and I do not see any objection to it. The statutory requirement has not been removed.

Mr. Speaker, I strongly believe that we have thoroughly considered the gentleman's question. We held lengthy hearings on this last year, and after the hearings were held, this body passed an identical bill, and the vote was overwhelming. I am sure that safety will not be overlooked.

Mr. OTTINGER. Mr. Speaker, will the gentleman yield further?

Mr. ANDERSON of California. Yes, I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Speaker, as I understand it, this would permit the emergency locator to be taken out of the plane, and it would permit the plane to be flown without any crash locator beacon at all for such periods of time as the FAA Administrator might designate. This would allow the aircraft to be flown from one place to another in order to have the device repaired. The plane would be flown at times when this device may have been taken off, and the aircraft would be flown without a locator beacon for some undesignated period of time. Therefore, I would hope that the committee would express its concern to the FAA Administrator that he be very cautious in any act suspending the necessity for these locator beacons, and that where it is feasible the operators should be required to rent a device for use during such periods of time when repairs must take place.

Mr. Speaker, I would also like to urge strongly upon the committee that it consider requiring these beacons to be installed on commercial aircraft, particularly those that carry passengers, since that is presently not a requirement. I think that that amounts to a great hole in the present regulatory and statutory scheme.

Mr. ANDERSON of California. Mr. Speaker, this bill has nothing to do with commercial aircraft which are presently exempt from the ELT requirement. It solely pertains to general aviation aircraft.

Mr. OTTINGER. I understand, but I am saying it should pertain to commercial aircraft.

I am wondering if the chairman of the subcommittee would consider legislation that does require commercial aircraft to install these devices. These planes go all over this country, and they are subject to the same kind of crashes and the same kind of problems, and they should be required to carry these beacons.

Mr. ANDERSON of California. That is a new area to be explored. I am sure that if some Member would show the need for this, the committee would surely take up the matter.

However, all this bill does is to main-

tain the statutory requirement that certain general aviation aircraft must employ these devices, but it allows the Administrator the right to waive their use during that period while the ELT is being repaired, and only during that period of time. I would assume that under the regulations issued by the Administrator, he would limit this to a short span of time.

Mr. OTTINGER. Mr. Speaker, I hope that the committee will exercise strong oversight in this area, and I hope the committee's recommendations will be heeded by the FAA. I look forward to the drafting of new legislation.

Mr. ANDERSON of California. Mr. Speaker, I assure the gentleman from New York that we will do all we can.

Mr. JOHNSON of California. Mr. Speaker, I rise in support of H.R. 736, a proposal which would permit the temporary operation of aircraft, which are subject to the law requiring an operable emergency locater transmitter, while that transmitter is being inspected, repaired, modified, or replaced.

At present, functioning ELT's are required by law in all U.S. civil aircraft, with certain exceptions such as scheduled airliners, turbojets, and single place airplanes. The locaters are used to guide rescuers to the scene of an accident, and the FAA now has no option but to ground planes that do not have ELT's in working order.

Because of this requirement, some 27,000 planes were effectively grounded when a number of ELT units built by one manufacturer were found to be defective and all units of that make had to be removed and returned to the manufacturer—who did not have enough units on hand to replace the originals.

Reports from airplane owners and ELT manufacturers indicate that the time required to remove, repair, and reinstall a defective unit is approximately 3 weeks to 2 months.

The FAA has noted that the planes that have been, and could be, grounded under existing statutory requirements include many that are used for business and personal transportation and for pilot training.

The agency witness testified that—

> Considering the number of aircraft involved and the variety of uses to which they are put, considerable hardship will continue unless a reasonable measure of relief is forthcoming.

Any regulated relaxation of the ELT requirements will be no greater than is necessary. Safeguards might include a requirement that a plane permitted to operate without a working ELT must be on a visual or instrument rule flight plan.

I wish to commend all the members of the Public Works and Transportation Committee for their work on this proposal—especially Mr. ANDERSON, the chairman of the Aviation Subcommittee, and Mr. SNYDER, the ranking minority member of the subcommittee, for their diligence and hard work in producing this legislation which has the support of the aviation community and the Administration.

Mr. Speaker, this legislation, H.R. 736, is necessary to relieve this hardship, and I urge the House to adopt this measure.

Mr. GOLDWATER. Mr. Speaker, I am very pleased that the House is taking early action this year on H.R. 736, which will give the Federal Aviation Administration some flexibility in permitting aircraft to continue operation when the mandated emergency locater transmitter has been temporarily removed.

I first introduced a version of the bill before us today almost 2 years ago in response to a legitimate concern on the part of pilots who were experiencing serious mechanical problems with their ELT's.

It seems that in numerous instances, the ELT device would issue a false alarm. In fact, almost immediately after the mandated ELT law was passed in the 91st Congress, one ELT manufacturer had to recall about 20,000 units.

Unfortunately, if the ELT unit must be taken out of the aircraft for repair, as is so often the case, the pilot technically cannot fly his aircraft. Thus, if the pilot has a defective system in a somewhat remote area with inadequate repair facilities, the aircraft could be grounded for an inordinate period.

Without the ability to deviate from the existing law, the Federal Aviation Administration really cannot reduce or eliminate the false alarms by normal regulatory authority. Frankly, the ELT state-of-the-art technology has not been perfected, and it has been a tremendous burden for pilots to find ELT's that function properly. It is another example of the Government putting the cart before the horse.

The bill before us today will not compromise safety. It would simply correct an omission in the original law that is currently handicapping the FAA and causing unnecessary and unwarranted hardship on aircraft operators. I urge its passage.

Mr. ANDERSON of California. Mr. Speaker, I have no further requests for time, and I yield back the balance of my time.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. ANDERSON) that the House suspend the rules and pass the bill H.R. 736.

The question was taken; and (two-thirds having voted in favor thereof) the rules were suspended and the bill was passed.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. ANDERSON of California. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the bill just passed.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

ANNOUNCEMENT BY THE SPEAKER PRO TEMPORE

The SPEAKER pro tempore. Debate has been concluded on all motions to suspend the rules.

Pursuant to clause 3, rule XXVII, the Chair will now put the question on the motion on which further proceedings were postponed.

AMENDMENTS TO FEDERAL AVIATION ACT OF 1958

The SPEAKER pro tempore. The unfinished business is the question of suspending the rules and passing the bill H.R. 27, as amended.

The Clerk read the title of the bill.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from California (Mr. ANDERSON) that the House suspend the rules and pass the bill H.R. 27, as amended, on which the yeas and nays are ordered.

The vote was taken by electronic device, and there were—yeas 403, nays 0, not voting 28, as follows:

Fountain	Murphy, Pa.	

The Clerk announced the following pairs:

Mr. Teague with Mr. Andrews of North Carolina.

Mr. Dent with Mrs. Pettis.

Ms. Oakar with Mr. Stockman.

Mr. Koch with Mr. Udall.

Mr. Hawkins with Mr. McClory.

Mr. Howard with Mr. Murphy of Pennsylvania.

Mr. Biaggi with Mr. Carter.

Mr. John Burton with Mr. Edwards of Alabama.

Mr. Evans of Colorado with Mr. Erlenborn.

Mr. McDonald with Mr. Dellums.

Mr. Murphy of New York with Mr. Fountain.

Mr. Rostenkowski with Mr. Goldwater.

Mr. Wirth with Mrs. Holt.

Mr. Gonzales with Mr. Tonry.

Mr. AuCOIN changed his vote from "nay" to "yea."

So the bill was passed.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

PERMISSION FOR SUBCOMMITTEE ON SCIENCE, RESEARCH AND TECHNOLOGY TO MEET DURING GENERAL DEBATE TODAY

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the Subcommittee on Science, Research and Technology be permitted to sit this afternoon during general debate.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Washington?

There was no objection.

PROVIDING FOR EXPENSES OF INVESTIGATIONS AND STUDIES TO BE CONDUCTED BY COMMITTEE ON HOUSE ADMINISTRATION

Mr. THOMPSON. Mr. Speaker, by direction of the Committee on House Administration I call up House Resolution 261 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 261

Resolved, That effective January 3, 1977, expenses of investigations and studies to be conducted by the Committee on House Administration, acting as a whole or by subcommittee, not to exceed $860,000, including expenditures—

(1) for the employment of investigators, attorneys, and clerical, stenographic, and other assistants;

(2) for the procurement of services of individual consultants or organizations thereof pursuant to section 202(i) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(i)); and

(3) for specialized training, pursuant to section 202(j) of such Act, as amended (2 U.S.C. 72a(j)), of committee staff personnel performing professional and nonclerical functions;

shall be paid out of the contingent fund of the House on vouchers authorized by such committee, signed by the chairman of such committee, and approved by the Committee on House Administration. Not to exceed $100,000 of the total amount provided by this resolution may be used to procure the temporary or intermittent services of individual consultants or organizations thereof pursuant to section 202(i) of the Legislative Reorganization Act of 1946, as amended (2 U.S.C. 72a(i)); not to exceed $5,000 of such total amount may be used to provide for specialized training, pursuant to section 202(j) of such Act, as amended (2 U.S.C. 72a(j)), of staff personnel of the committee performing professional and nonclerical functions; and not to exceed $200,000 of such total amount may be used for the operation of the summary of debate system; but these monetary limitations shall not prevent the use of such funds for any other authorized purpose.

SEC. 2. No part of the funds authorized by this resolution shall be available for expenditure in connection with the study or investigation of any subject which is being investigated for the same purpose by any other committee of the House.

SEC. 3. The authorization granted by this resolution shall expire immediately prior to noon on January 3, 1978.

SEC. 4. Funds authorized by this resolution shall be expended pursuant to regulations established by the Committee on House Administration in accordance with existing law.

Mr. THOMPSON (during the reading). Mr. Speaker, I ask unanimous consent that the resolution be considered as read and printed in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New Jersey?

There was no objection.

The SPEAKER pro tempore. The gentleman from New Jersey is recognized for 1 hour.

Mr. THOMPSON. Mr. Speaker, this resolution is the first funding resolution for a standing committee to be considered by the House this year. This resolution requests funding at the same level as was requested and approved for the second session of the 94th Congress except for the additional funds identified for the summary of debate clerks.

The explanation of that additional funding, the reference, Mr. Speaker, to the summary of debate section, is on page 6 of the committee report, contained in the second paragraph.

The summary of debate clerks were under the control of the Commission on Information and Facilities until December, when the Committee on House Administration assumed responsibility for them. They provide through the Members Information Network a summary of four proceedings. That allows Members on the network to be aware of what is occurring on the floor with no more than a 10- to 15-minute lag, which we hope to improve shortly.

It is hoped that this resolution will be a benchmark to subsequent resolutions and that additional funds will be requested only for activities that are new to the committees this year.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON. I will yield for purposes of debate only.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman from New Jersey for so yielding.

Mr. Speaker, I want to ask the gentleman about the $200,000 provided for preparation of summaries of debates. Is that going for salaries for staff?

Mr. THOMPSON. It is entirely for salaries, I might say to my friend, the gentleman from Maryland. In all candor, the actual amount was $180,000, but with the anticipated cost-of-living pay raise in October, the $20,000 was put in for that eventuality.

Mr. BAUMAN. Mr. Speaker, if the gentleman will yield further, without commenting on the literary merit of the debate summary, some of which I have read, I wonder whether or not the CONGRESSIONAL RECORD does not already fulfill this function?

Mr. THOMPSON. Did I split an infinitive some place?

Mr. BAUMAN. I do not believe the erudite gentleman from New Jersey has split an infinitive. I did not notice any.

I would say to the gentleman that I have read some of these summaries. I am wondering if the CONGRESSIONAL RECORD does not fulfill the "morning-after" role that this summary has. After all, Members could come to the floor and lis-

ten to the proceedings. It would save $200,000.

Mr. THOMPSON. I would say to my friend, the gentleman from Maryland, that, I have a rather dual answer. The first is that those who are now on the network within the 10- or 15-minute time period can be informed and can be up to date during the debate itself.

The second is that I am very happy to be able to say to my friend, the gentleman from Maryland, that if the plans of the committee proceed as anticipated, by a more sophisticated use of the House Information System we will shortly establish an electronic printing system by which committee hearings and possibly bills will be put onto an electronic system and by our estimates reduce the price of printing chargeable to the Congress.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield further?

Mr. THOMPSON. I yield for purposes of debate only.

Mr. BAUMAN. Mr. Speaker, I thank the gentleman for that explanation.

Mr. Speaker, let me pass to something else. On page 3 of the report it is mentioned that under rule X the House Administration Committee has the duty of dealing with official allowances for Members.

Last July 1, the gentleman from New Jersey and I had an exchange on the floor regarding his public statement that he had ordered an extensive audit by the General Accounting Office of various Members of Congress and committees and their activities. I assume he was referring to his predecessor as chairman, and he informed us in debate on that day that the audit would be made and available shortly.

Could the gentleman give us a statement with regard to the progress of these audits?

Mr. THOMPSON. In the first place, I say to the gentleman from Maryland that no Members' accounts were audited. After consultation with the GAO, it was decided on a pilot basis, first doing a complete audit of the Committee on House Administration, then the Committee on Banking, Currency and Housing was done; then, the Committee on Education and Labor. I felt as the new chairman of the Committee on House Administration, and in agreement with my distinguished friend and colleague from Kentucky (Mr. PERKINS), that it would be reasonable that our committee be audited. The Committee on Science and Technology was audited, and on the occasion of the organizational meeting in this Congress of the Committee on House Administration, all Members were given copies of those audits. They are available to the press.

The GAO determined and took the initiative that the committees which we had audited were sufficient to be representative, and accurately representative, of all of the committees of the House. The expenditure needed to audit the accounts of each of the 435 Members of the House and all its committees, subcommittees, and select committees, was so enormous that we felt that we ought to try this trial experience.

Counsel tells me that the audits of the committees which I have just referred to each cost about $5,000, and the estimates from outside professional auditors indicate that the cost for individual audits of Members' offices would amount to about the same. We felt that it was unnecessary, in light of the increased requirement for vouchering and reporting and auditing under the new reforms which the Committee on House Administration passed in July, to audit individual Members except on probable cause, which would and shall be done in the event that questions arise.

I shall be glad to provide the gentleman, within the hour, copies of the audits which were done, and invite his comments.

Mr. BAUMAN. I thank the gentleman for that offer. My concern grows out of the fact that there were a number of serious allegations made about the manner in which the former chairman of this committee handled funds regarding travel, the possible purchase of art works overseas, the use of counterpart funds and so forth. Was there any effort made in this audit to settle these questions or to make a report to answer these charges which have been made?

Mr. THOMPSON. Yes. Every possible effort was made. Every single piece of paper with regard to expenditures was gone over, and I am very happy to say that many of the allegations were just totally untrue. There were some irregularities, as the gentleman will see from the documents which I provide him, but they were minimal. I am very glad to say that the irregularities have been straightened out.

Mr. BAUMAN. I thank the gentleman. I have one last question.

The gentleman's committee acted last week in two instances in 1 day, I believe, on the increase of the congressional district allowance from $2,000 to $7,000. As I understand it, the form in which the gentleman's committee finally approved this—and the committee has the power to finally approve it without recourse to the House—authorized a $7,000 district allowance for Members which takes effect at the time the so-called unofficial office accounts are abolished. Is that to be an automatic effective date contingent only upon the abolition of such private accounts?

Mr. THOMPSON. It is effective upon the date of the enactment of the change in the rules abolishing unofficial office accounts.

Mr. BAUMAN. I raise the question because I would hope the House will be permitted to vote against the $5,000 increase on the merits. At the same time we should be able to abolish the unofficial accounts. That is the reason I put the question to the gentleman.

Is the effect of the committee action the other day to deny those of us who oppose the increase a chance to vote on it?

Mr. THOMPSON. I can say to my colleague, the gentleman from Maryland, that is not the case.

Mr. BAUMAN. I thank the gentleman. I hope he is correct.

Mr. THOMPSON. The effect of the increase, I might say to the gentleman, is conditioned upon the adoption of the change in the rule which would abolish unofficial office accounts.

The Committee on House Administration had referred to it—section 302, and 302 only, of House Resolution 287, which is the reform package which I enthusiastically support.

Mr. BAUMAN. If the gentleman will yield further, the reason I am concerned is that it appears to me, from reading the minutes of the gentleman's committee meeting, which I did this morning, the House may have no chance to vote on the floor on this $5,000 increase, which comes, at the very least, at an inopportune time, on the heels of an enormous pay raise. Since the gentleman's committee has the final power to approve such increases, it seems to me that the gentleman's committee should reserve his final judgment on this until the full House acts.

Mr. THOMPSON. Mr. Speaker, I might say to my friend, the gentleman from Maryland, that I do not consider that necessary, because, first, I do not think that it is at an inappropriate time. I think it is at an appropriate time.

Secondly, the question of whether or not we shall be able to debate that section is a matter in the hands of the Committee on Rules, and it depends on the rule.

Mr. Speaker, I am very glad that the gentleman was able to get the transcript, as any other Members may, incidentally. The committee is completely open in all of its records.

In the colloquy with the gentleman from California (Mr. VAN DEERLIN), I gave him assurance that I would have no objection at all to that section being open for amendment.

Mr. BAUMAN. I thank the gentleman.

Mr. THOMPSON. Mr. Speaker, I would like to yield to my distinguished colleague, the gentleman from Minnesota (Mr. FRENZEL) who is representing the minority on the Committee on House Administration, such time as he may consume, for purposes of debate only.

It is my understanding that the ranking minority member, the gentleman from Alabama (Mr. DICKINSON) and the minority are in agreement with the budget for the Committee on House Administration.

Mr. FRENZEL. I thank the gentleman for yielding.

Mr. Speaker, our distinguished colleague, the gentleman from Alabama (Mr. DICKINSON) instructed me to say that the minority had no objection to the resolution, and I hope that it is promptly adopted.

Mr. THOMPSON. I thank the gentleman.

Mr. Speaker, in conclusion, before moving the previous question, I might point out that I am handling this resolution as the chairman of the full committee only, because of the tragic death yesterday of a brother-in-law of the distinguished chairman of the Subcommittee on Accounts, the gentleman from Pennsylvania (Mr. DENT). All subsequent resolutions, will be handled by the gentleman from Pennsylvania (Mr. DENT) if his schedule permits.

Mr. Speaker, I would like to take this

opportunity to extend my condolences, those of my wife and the members of the committee, to the gentleman from Pennsylvania (Mr. DENT) for the loss in his family.

Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

THIRD CONCURRENT RESOLUTION ON THE BUDGET—FISCAL YEAR 1977

Mr. GIAIMO. Mr. Speaker, pursuant to section 305(a), title III, of Public Law 93–344, the Congressional Budget Act of 1974, and the order of the House of February 16, 1977, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the concurrent resolution (H. Con. Res. 110) revising the congressional budget for the U.S. Government for the fiscal year 1977.

GENERAL LEAVE

Mr. Speaker, pending that motion, I ask unanimous consent that all Members be allowed to revise and extend their remarks, and include extraneous matter, during the consideration of House Concurrent Resolution 110.

The SPEAKER pro tempore (Mr. WRIGHT). Is there objection to the request of the gentleman from Connecticut?

There was no objection.

The SPEAKER pro tempore. The question is on the motion offered by the gentleman from Connecticut.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the concurrent resolution, House Concurrent Resolution 110, with Mr. NATCHER in the chair.

The Clerk read the title of the concurrent resolution.

By unanimous consent, the first reading of the concurrent resolution was dispensed with.

The CHAIRMAN. Pursuant to section 305(a), title III, of Public Law 93–344, the Congressional Budget Act of 1974, the gentleman from Connecticut (Mr. GIAIMO) will be recognized for 5 hours, and the gentleman from Ohio (Mr. LATTA) will be recognized for 5 hours.

The Chair recognizes the gentleman from Connecticut (Mr. GIAIMO).

Mr. GIAIMO. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise in strong support of the third budget resolution for fiscal year 1977, the first such resolution we have had since the inception of the new congressional budget process.

It is made necessary, in the final analysis, by the continuing economic recession which began in late 1974. Although the Congress actions in early 1975 helped to reverse the economic decline and to begin the recovery from recession, that recovery, as we now know, stalled badly last summer and fall. As a result, the economic goals we set last September in the second budget resolution are no longer valid.

Recognizing the sharp decline in economic activity in the second half of 1976, both former President Ford—in his fiscal year 1978 budget—and President Carter have proposed economic stimulus measures to deal with the continuing economic decline. However, neither these nor other stimulus proposals can be accommodated within the existing revenue floor and spending ceilings set last fall in the second budget resolution; and consequently, a third budget resolution is needed.

Before discussing the components of House Concurrent Resolution 110, I wish to extend my deep appreciation to all members of the Budget Committee for their full cooperation in reporting this resolution so promptly to the House. Their attendance and participation in the committee's hearings on the economy and the need for the resolution, and in the markup session, were outstanding. I want to extend special thanks to the committee's ranking minority member, the gentleman from Ohio (Mr. LATTA), for his cooperation in facilitating the work of the committee in these first hectic weeks of the session.

SUMMARY OF THE RESOLUTION

This resolution revises the second budget resolution for fiscal year 1977 which was adopted by the Congress on September 16, 1976. It establishes the following new budget aggregates for this fiscal year, which ends on September 30, 1977:

Revenues of $348.5 billion; budget authority of $482.3 billion; outlays of $418.8 billion; deficit of $70.3 billion; and public debt of $720.5 billion.

In addition to the revenue and spending proposals in the committee's economic stimulus package, which follow closely the proposals made by the President, the resolution makes needed adjustments in the second budget resolution's revenue and spending estimates, adjustments resulting from changed economic and program developments and anticipated supplemental budget requests from the new administration.

The resolution is designed to achieve the following economic goals for calendar year 1977:

First, a gross national product of nearly $1.9 trillion, which assumes real growth in GNP during 1977 of nearly 5 percent;

Second, a reduction in the unemployment rate to about 6.8 percent at the end of the year; and

Third, a rise in the Consumer Price Index of approximately 5.9 percent.

I wish to stress to the House that the very severe winter weather of late January and early February makes any set of economic goals even more uncertain than usual. To the extent possible, the committee's recommendations recognize the terrible economic impact of the weather through January; however, it was clearly impractical to assess its precise impact or to predict its duration. Members should recognize that it may be necessary to deal further with the economy in the weeks ahead, through emergency measures if the situation warrants.

THE COMMITTEE'S ECONOMIC STIMULUS PROPOSALS

The committee's economic stimulus proposals follow closely the overall strategy set forth by President Carter: First, that lagging consumer demand be stimulated through immediate tax rebates and reductions; and second, that existing spending programs which are designed to provide general fiscal aid and create new job opportunities be accelerated and expanded to put people to work immediately and to sustain and strengthen the economy this year and in 1978 as well.

To carry out this strategy the committee resolution adopts the $13.8 billion package of tax rebates and reductions proposed by the President. It does not, however, specifically endorse the components of the President's program. As Members know, the precise components of the tax reduction package will be determined by the Congress in the next several weeks.

The resolution also adopts the basic elements of the President's spending proposals. However, in this area it provides modest increases in those proposals, as follows:

[In millions of dollars]

	President Carter (revised)		House Budget Committee	
	BA	O	BA	O
General fiscal aid:				
Countercyclical assistance	925	925	800	800
EPA construction grant reimbursement			320	260
Direct job creation:				
Accelerated public works	2,000	200	4,000	500
Public service employment	1,919	715	7,000	713
Youth programs (CETA, titles I, III, IV, and other programs)	1,508	328	1,500	600
Job opportunities program			244	60
Older Americans and community service employment			59	30
Railroad and highway construction			425	200
Recreation and park improvements and maintenance			400	300
Total	6,352	2,168	14,748	3,463

In all, the resolution provides for a total stimulus package of $17.3 billion in fiscal year 1977—$13.8 billion in tax stimulus and $3.5 billion in actual outlays for job-creating programs—compared to the President's $16 billion—again $13.8 billion in tax stimulus and $2.2 billion in program outlays.

It should be noted that since the committee reported the resolution, the administration has increased its recommendation for the countercyclical program to $925 million. Together with other minor adjustments the difference between the President's spending proposals and the committee's proposals is only $1.3 billion.

I believe these are very modest increases, made even more necessary by the continuing cold weather and drought in much of the country. They hold no risk of overstimulating the economy, which remains weak despite the mild economic upturn in December. These increases are consistent with the President's call for "prudence and fiscal re-

straint" and are virtually identical with the Senate's third budget resolution as well.

THE COMMITTEE'S NONSTIMULUS RECOMMENDATIONS

The resolution before the House also makes a series of recommendations dealing with nonstimulus matters. There are 13 such recommendations, explained in the committee report on the resolution, of which I want to bring four to the attention of the House.

First, the resolution proposes the rescission of $371 million in budget authority for modernizing the U.S.S. *Long Beach*, and the rescission of $82 million for construction of a fourth *Nimitz*-class aircraft carrier. These rescissions were proposed by the Ford administration in its January budget submission and are supported by the new administration.

Second, the resolution proposes extension of the Federal supplemental benefits program, under which benefits may not be paid after March 31, 1977. This program has provided unemployment insurance benefits of up to 26 weeks beyond the regular and extended benefits of 39 weeks.

The resolution includes $508 million in budget authority and outlays to extend the FSB program for 13 weeks of coverage beyond the basic 39 weeks in existing law, whenever the national insured unemployment rate is 5 percent or more. I believe this extension is urgently needed to provide benefits while our various stimulus programs are being expanded to serve higher levels over the next several months.

Third, the resolution provides additional funding—$757 million in budget authority and $122 million in outlays—over existing law for an education supplemental submitted by President Ford. These funds are primarily for higher education programs which were not included in the regular Labor-HEW appropriations bill due to late reauthorizations.

And fourth, the resolution provides $20.3 billion in budget authority for additional subsidized housing to accommodate a supplemental budget request by the administration. The reason for this large amount of budget authority is the unique budget accounting for subsidized housing programs—budget authority provided is for the entire life of the HUD subsidy commitment.

Today's budget submission by the President changes this budget authority request to approximately $15.6 billion. Consequently, the $20.3 billion amount will be revised in a committee amendment.

The resolution also makes other needed spending adjustments in a number of programs. I have given you only a few of the major recommendations contained in the resolution.

NEED FOR COMMITTEE AMENDMENT

I want to inform Members that tomorrow I plan to offer a committee amendment designed to update the resolution in two respects: First, to revise the revenue floor to reflect the precise impact of the tax bill approved by the Ways and Means Committee last Friday; and second, to make further adjustments in the spending estimates as a result of revised administration recommendations submitted to the Congress today. The result of the amendment will be to make only minor changes in the resolution amounts.

CONCLUSION

I believe this resolution is responsible and prudent. Its major change involves the revenue side of the budget, a reduction of $14 billion from the second budget resolution, primarily to accommodate the President's tax rebate and reduction proposals. The overall outlay change is $5.7 billion, again primarily to accommodate the economic stimulus proposals.

Members should realize that the increase in the deficit—from $50.6 to $70.3 billion—is unavoidable. Without this resolution, the deficit had already risen—due to a decline in revenues—to about $57 billion; and would rise yet further if economic stimulus measures were not adopted.

As chairman of the Budget Committee, I am constrained to inform my colleagues that our stimulus package, while being a significant input in our recovery, may have only limited effect. Our national economy has many dimensions, and the Federal budget makes up only 23 percent of the gross national product.

The efforts we make here depend upon the cooperation and coordination of efforts by other segments of our society which heavily influence our economic capability and performance. The private sector must not only take full advantage of the employment tax credit, but find independent ways to raise our per capita production and make full utilization of our industrial capacity.

Similarly, we cannot have our State and local governments, whose activities constitute approximately 12.6 percent of our GNP, working at counterproductive purposes. They, too, must direct their efforts toward job creation rather than job cutback. The countercyclical assistance and public service job programs are specially designed to assist them in that effort.

Finally, a renewed tight-money policy by the Federal Reserve Board would negate the positive effects of the stimulus proposals. Our programs are not targeted toward shortages in the labor force, which could produce inflationary pressure, nor is there any shortage of available money to borrow for new investment.

In essence, we need to bring all of the forces of our economy together working toward the goal of full employment. I urge every Member to support this resolution.

Mr. LATTA. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, this third budget resolution once again points up the difference in philosophy between the minority and the majority on the Budget Committee. We feel the third budget resolution for the fiscal year 1977, House Concurrent Resolution 110, offers a fundamentally wrong approach in dealing with economic problems confronting our Nation. It must be changed so that instead of a hindrance it can become a helpful force in achieving economic progress.

Properly restructured, this resolution could help steer the country into a positive plan of action to strengthen the economy by encouraging people to produce and achieve. That is the path to lasting prosperity and toward preserving freedom for all Americans.

The reason a third budget resolution is before us today can be stated very easily—it is here to accommodate the Carter stimulus spending package and his stimulus tax proposal which features the tax rebate. In raising the spending limit and lowering the revenue floor to accommodate that request, House Concurrent Resolution 110 calls for a huge increase in the Federal deficit. The deficit for fiscal year 1977 would go from $50.6 billion to $70.3 billion and the national debt would soar to $720.5 billion. Most of those increases would be due to the stimulus plan.

I believe it is essential that the House take a very careful, critical look at the underlying rationale for this legislation. As they analyze the basic issues involved, surely many of my colleagues will come to appreciate the fact that general tax reduction rather than Federal spending is the correct answer to giving the economy the support it needs.

The justification we hear for a third budget resolution is that there is a pause in the economic recovery notwithstanding the fact that the official gross national product figures, adjusted as they should be for volatile changes in inventories, show that GNP rose steadily every quarter of 1976.

At this time, if we do nothing to remove existing impediments to work and invest the economy can only be hurt by a spending stimulus designed to increase the demand for goods and services. To add more spending when there are impediments to additional production will reverse the fine success President Ford achieved in cutting the inflation rate by more than half. This reduction in inflation accomplished under President Ford's leadership was absolutely essential to the recovery now underway. Spending policies that send inflation skyrocketing again could cause a serious turnaround in the economy.

One of the prime reasons given in attempts to justify a big Federal spending binge at this time is the unemployment situation. The flaw there is that the unemployment problem today is not due to spending. Rather, it is because tax rates are too high. Only once in our history has unemployment stemmed from an inadequacy of spending, and that was in the 1930's when the Federal Reserve Board, reacting to the stock market crash and bank failures, mistakenly called for monetary policies which shrunk the supply of money in our economy during this period. Obviously, if you shrink the money supply in relation to the goods and services that are being produced at a prevailing price level, there will be inadequate spending. However, today there is no shrinkage in the supply of money. The money supply is continually expanding.

In spite of the fact that today's unemployment is due to high tax rates, the spending package that the Budget Committee has brought to the floor would have the effect of raising the tax rates even higher. A rebate does not lower the

tax rates, but by adding to inflationary pressures it will help push all incomes into higher tax brackets even though the real purchasing power of those incomes does not rise. The result of a rebate will be that everyone who pays taxes will face higher tax rates and have to pay next year a higher proportion of their income in taxes. What the rebate amounts to is a clever way of making people think they are getting a tax cut when really they are being driven into higher tax brackets by inflationary pressures.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield?

Mr. LATTA. I yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, I appreciate the ranking member of this committee yielding.

To put this debate in perspective, we should bear in mind that actions of the Federal Government itself have reduced the incentives for people to work and have contributed to the widespread belief that "something must be done to create more jobs." One commentator, Charlton Ogburn, writing in last Sunday's Washington Post, has described the Federal Government as a "prime promoter of unemployment." Moreover, the statistics which are generally relied upon to provide a reliable indication of the severity of unemployment can often be misleading because they include hundreds of thousands of students, housewives, and others who are voluntarily unemployed. By their own admission, many of these people are capable of working and would probably find jobs if overly generous assistance programs had not deprived them of their incentive to work.

The Wall Street Journal recently concluded a series of four articles on the unemployed. The first two articles, "Bo Grier, Aristocrat of the Streets" and "Mark Rinaldi: Jobless by Choice," as well as the Ogburn article, were inserted as part of my remarks yesterday. The remaining two articles, "Sandy Biggest: Search for Fulfillment," by Christopher A. Evans, and "A Better Fix on Unemployment," by James C. Hyatt, appeared in the Wall Street Journal on February 7 and February 16, respectively. The full text should be reviewed by my fellow Members:

[From the Wall Street Journal, Feb. 7, 1977]

SANDY BIGGEST: SEARCH FOR FULFILLMENT

(By Christopher A. Evans)

LEMONT, ILL.—Sandy and Ed Biggest like to fly for fun and last spring they bought their second two-seater airplane. The Biggests, both 33 years old, also own two cars and a comfortable six-room house, fully paid for, in this pleasant suburb of Chicago. Their two children, aged nine and 14, attend Catholic school.

Ed is an $18,000-a-year mechanic for Amoco Chemical Co. Sandy is a housewife. The couple currently has no outside income, but in the early days of their marriage Sandy worked and Ed put in many seven-day weeks, allowing them to build a respectable nest egg. They still consider themselves quite comfortable financially.

Yet Sandy, an attractive and energetic woman, is an unemployment statistic because she's bored with housework and has been looking for a job. And not just any job, mind you. Despite the fact that she has only a high school education, she says she won't settle for less than a position selling sophisticated business machines at a minimum salary of $15,000 a year.

"I'd be working right now if I wasn't so fussy about the kind of work I'd take," she admits. "I'm not looking for a job because we need the money, so why shouldn't I be choosy?"

Sandy Biggest's atttiudes about work may not be universal, but they surely shed some light on a sizable and often overlooked component of the nation's unemployment picture: housewives who are looking for jobs but don't "need" them by most economic standards.

THE STATISTICAL BREAKDOWN

Of the 7.6 million Americans who were classified as unemployed in December, 3.4 million, or 45%, were women. It's estimated that the greatest number of these (if the total women's labor force is to serve as a guide) were married to men earning $10,000 a year or more.

To be sure, $10,000 isn't all that much these days, and the paychecks of many working wives help make ends meet for their households. Other women work so that their families can afford such worthy "extras" as a home of their own or college education for their children. Sandy's underlying reason for wanting to work isn't unimportant—she desires the self-fulfillment of doing something on her own.

Still, it has come to be widely recognized that many women who don't have to work to survive approach job hunting in a different way than do men and women who must work to live, and that their inclusion among the jobless might make the overall rates seem more alarming than they actually are.

Sandy Biggest "may well be typical of the woman who feels financially secure" but still wants to work, says Eileen M. Schaeffler, Chicago regional director of the Labor Department's Women's Bureau. She continues: "In the absence of economic necessity, she has the freedom to think of other factors—to expect the same pay and responsibilities as men she compares herself to. She doesn't have to make the compromises that others do."

Female job seekers who are financially secure are indeed more fussy than men, says Gus Lambros, vice president of Future Personnel Services Inc., a Chicago employment agency.

Men, he claims, are reared with the idea that they eventually will have a career and will have to make money for a family. They will generally go anywhere to obtain a job. Women, on the other hand, sometimes will refuse jobs if they have to walk several blocks to work, if office decorations aren't nice or if the money isn't quite right, he says.

Sandy herself can attest to that. A month or so ago she turned down three job offers selling insurance plans either because of insufficient or uncertain salary terms. She says that if she is going to work for the rest of her life she wants to make it worth her time and notes that other job perquisites for her include flexible office hours but not too much traveling.

She concedes, however, that despite increased female hiring these days and her husband's encouragement, her job pursuit will be difficult at best.

"But I'm going to try it," she says hopefully. "If I'm rejected repeatedly then I'll try getting the credentials they're looking for. Just because I'm a housewife doesn't mean I'm dead meat," she complains.

So far her search in her chosen area has gone poorly. She called six business-machine companies recently but wasn't given an interview, either for lack of education or experience. But the process of looking for a job is in itself beneficial, she reasons, because it gives her a better idea of the kind of person the companies are seeking.

And she figures that getting an interview may be all she needs to fulfill her job expectations. "You can go to 1,000 companies and if you can finagle just one interview, you can get the job, especially in sales, where personality is so important.

This approach illustrates what one women's job counsellor believes is a common problem among housewives returning to the job fold: business naivete.

"These women generally aren't aware of the rules of the game in careers," says Diane Manhoff, director of job development and referral at Flexible Careers, a Chicago-based, non-profit organization that helps women get jobs. "Their orientation hasn't been toward the future. They have a certain naivete about what it's like to get into and move ahead in business."

Sandy first got into business after she married her high school sweetheart shortly after graduation. Her grades would have permitted college, but she preferred to get married.

Like many young wives, she worked: for a department store, in cosmetics sales, as a waitress and hostess in a restaurant. As her children were born and needed the attentions of a mother her work became part-time and then she didn't work at all.

Four years ago, with the children aged 10 and five, and well on their way, she started full-time work as a bookkeeper for a door manufacturer. The job lasted until part of her division was eliminated.

AIMING HIGH

Currently, she spends her time shopping and doing housework. She is dissatisfied because she doesn't have enough to keep her occupied, and feels that she has the ability to go out and accomplish something worthwhile on her own. "But I decided that if I was going to work it would have to be something a little bit out of the ordinary," she hastens to add. "I don't care for the environment where you go in and do the same thing every day with the same people."

Her office work and "sales" experience were enough to convince her that she should go into a far more sophisticated area of sales. She pictures herself 10 years from now "in management in some area."

It may happen, but Sandy knows that it is only her fussiness that prevents her from alleviating her unemployment problem right now. And in the back of her mind, no doubt, there is the realization that a job would mean leaving behind some of the good things about being a housewife: the flying and other recreational activities or just being home when the kids get back from school.

All of this may provide a clue as to why unemployment is such a persistent economic headache. And it may give thought to the President's National Commission on Employment and Unemployment Statistics when it meets this spring to reevaluate, among other things, the unemployment problem.

[From the Wall Street Journal, Feb. 16, 1977]

A BETTER FIX ON UNEMPLOYMENT

(By James C. Hyatt)

WASHINGTON.—The national unemployment figure issued each month is ready-made for headline-writers:

JOBLESS RATE CUT TO 7.3 PERCENT

But treating that statistic as an economic won-loss record doesn't tell much about who is on the losing side in the unemployment game.

The single percentage figure yields little insight into a variety of questions whose answers affect public policy: Are the jobless workers fresh out of school, or the victims of layoffs; are they skilled or untrained? Could they find a job elsewhere if they had

bus fare? Is their economic distress cushioned by unemployment benefits, or has such aid been exhausted?

"Many statistics are designed for public consumption, but not to make decisions with," declares Ray Marshall, the new Secretary of Labor. "The numbers don't tell you what you have to do to get those people into jobs."

The limitations of the present unemployment statistics have led Congress and the administration to seek better ways of measuring—and understanding—joblessness. The Carter team is moving to set up a new National Commission on Employment and Unemployment Statistics created by Congress last fall.

CONFUSING FIGURES

Many economists feel the current statistics often conceal as much as they reveal. For instance, the monthly figures ignore "discouraged" workers who've dropped out of the labor force, as well as part-time employes who'd like to work full-time. When those groups are included, the AFL–CIO figures, December's 7.8 percent jobless rate was actually 10.7 percent.

Others argue the figures overstate unemployment distress. A full-time student seeking part-time work, or a job-seeking teenager living at home with two working parents, counts as much in the survey as does a jobless head of household who has been out of work for weeks.

As earlier stories in this series have pointed out, some groups of workers are more serious about seeking employment than others are; some are more in need than others. The Labor Department reports that in January, when the standard jobless rate was 7.3 percent, persons out of work 15 weeks or more were 2.4 percent of the labor force, and the unemployment rate for heads of households was 4.8 percent (compared with a high of 6.1 percent in May, 1975, during the recent recession).

Labor Secretary Marshall has pledged to get the commission in operation soon. "We've got to measure the looseness or tightness of the labor market much better than we do," he declares.

All that leads to the question of what is an appropriate national employment goal, and there are now three distinct arguments in circulation.

Proponents of "full employment" seek jobs for all persons willing and able to work, a concept that some economists insist would translate into a 3% jobless rate among adults.

More conventionally, the unemployment goal has been defined as the lowest jobless rate possible without generating inflation through tight labor markets; in the early 1960s, the Democrats pegged the goal at 4 percent. The Ford administration's last economic report argues that changes in the nature of the labor force have shoved that figure "closer to 5½ percent." Among other factors, it notes that increased participation by teenagers in the labor force—a group with high job turnover rates—tends to increase joblessness without affecting the supply of skilled workers, which more directly affects inflation.

Finally, some economists argue that unemployment goals should take into account the amount of voluntary joblessness, which they think is rising due to more generous unemployment benefits and reluctance to take certain kinds of work. Thus, they conclude, a rising jobless rate may signal less economic distress than in the past.

THE LAYER CAKE THEORY

Instead of viewing unemployment as a huge boulder which must be worn away, Labor Secretary Marshall and other economists insist joblessness should be seen as a giant layer cake, each layer with its own unique, if distasteful, flavor. Examining each layer, they argue, helps put the unemployment problem into better perspective and suggests possible solutions.

Some joblessness will disappear, of course, simply as a result of general economic gains. Laid-off workers account for the biggest wedge of unemployment—45.6 percent of the jobless total in January. As demand improves and rehiring begins, many workers from that pool can expect to go back to work.

But economic recovery often leaves millions of others on the jobless rolls. They may lack training or work experience, their jobs may have been eliminated due to changes in technology or demand. Or they may be ignorant about how to go about finding a job. For such groups, the layer-by-layer approach may be helpful.

Late in January, for instance, the Carter administration sliced off one segment—jobless Vietnam-era veterans—for a closer look and special assistance. Officials found that of the nation's 7.6 million jobless workers, 558,000 were male Vietnam-era veterans. Many were disabled, and among younger vets 20 to 24 years old the jobless rate was 18 percent. (There aren't any statistics on female veterans.) The administration has launched a drive to place up to 60,000 disabled veterans in private jobs, with Uncle Sam paying training costs; the administration also pledges to fill 35 percent of the 415,000 new public service jobs proposed for the next two years with veterans.

Teenage unemployment, in particular, is suddenly a favorite "target" in Washington. Many politicians and business leaders have been persuaded that programs aimed at youth are feasible because, while the percentages appear alarming, the numbers may be manageable. In January, there were 1,668,000 unemployed teenagers, or 18.7 percent of the 16-to-19 year olds, in the labor force. But roughly half were in school and not seeking full-time work.

Measuring the youth employment problem in terms of the number in greatest need also makes it look less desperate. In the 1976 fourth quarter, minority youth living in low-income metropolitan areas had a severe 44 percent jobless rate, but that represented only 110,000 youngsters. Even with white teenagers and rural places added, the number of jobless youths living in poverty areas was not overwhelming—about 322,000. Also, the teenage labor force is expected to cease growing by 1980, and in the following decade a decrease of 1.5 million is predicted.

Many planners see increased job training for youth as feasible immediately and productive over the long run. During the next 18 months, the Carter administration wants to add 154,000 assorted training slots for youth, as well as double the 44,000 trainees housed in the Job Corps' residential centers. Secretary Marshall is working with other Cabinet officers to arrange jobs in national parks and forests, on railroads, or at other locations where youth could gain work experience by filling unmet public needs.

Long-unemployed workers are another possible target. Though half of all those losing jobs typically return to work within four weeks, chances of reemployment, particularly for workers over 45, dwindle if joblessness drags on and on.

In January, 2.3 million workers had been off the job 15 weeks or more, 1.2 million of them for more than six months. And many other workers, idle still longer, have exhausted their unemployment insurance. A Labor Department study last year found that more than 2.7 million workers used up their benefits between January 1975 and mid-1976. A sample found 63 percent of them still unemployed two months after the insurance payments stopped.

Their difficulties often may reflect ignorance of how to seek a job as much as actual lack of skills, some authorities suggest. "The process of matching people to jobs is probably the least efficient thing we do in this country," declares Carolyn Shaw Bell, a Wellesley College economist. She suggests some unemployment insurance funds might be spent on helping long-time unemployed workers look for jobs or prepare for job tests. A new Labor Department experiment is trying to determine whether workers can be placed in jobs if they're given assistance in relocating to a better labor market.

Secretary Marshall insists that the unemployment insurance system, which paid out $19.5 billion in benefits last fiscal year, was never designed for long-term income maintenance. When people have been out of work for a long time, he suggests, they should be moved into some sort of productive public-service employment. Paying someone not to work "tells him his work isn't worth anything," Mr. Marshall says.

Congress is eyeing aid to other special target groups among the unemployed. It plans a sizable increase in local public works programs to put idle building tradesmen back to work. The Carter administration proposes spending another $2 billion this year, a sum that AFL-CIO says should go to $10 billion. "It would have an immediate, healthy employment and economic impact," declares AFL-CIO President George Meany. He says the bigger amount would generate 700,000 jobs directly and as many more in firms supplying materials and services.

MISSED TARGETS AND A CHALLENGE

There are plenty of other possible aid targets around that are likely to be missed by the stimulus of a growing economy: persons on welfare, persons who need part-time work, ex-convicts and drug addicts.

The biggest challenge of all, however, is raised by the perennial swarm of first-time job-seekers plus former workers lured back into the job market by rising prosperity. Julius Shiskin, Commissioner of Labor Statistics, estimated in January that if the labor force grows by only two million workers this year—less than last year's 2.8 million increase—about 1.8 million new jobs will be needed "just to hold the unemployment rate steady." To lower the unemployment rate to the Carter administration's 6.5% year-end goal, 3.3 million new jobs would be needed.

However the Carter team slices the unemployment cake, it is a massive thing to deal with. The current leaning is to go at it one bite at a time.

I also appreciate the remarks the gentleman is making about the problems of unemployment and what really generates or reduces that unemployment picture or on the other hand expands the employment rolls. This was discussed rather extensively in the committee. As the gentleman recalls, when we had the discussions in the Committee on the Budget as to what generates jobs and what does not generate jobs, there were great discrepancies as to whether certain so-called stimuli in this package, recommended by the majority side, will really improve the employment picture.

Mr. Chairman, as the gentleman remembers, when given programs were put before the Budget Committee as to what they would produce in jobs in one category, the computer broke down somehow and we were supposed to get 160,000-some odd jobs out of it and it turned out they really only meant 16,000 jobs.

Now, the point is that it is not an exact science as to what does, in fact, produce jobs on the Federal level and especially by Federal funding. As a matter of fact, the Democratic package of so-called emergency employment that was passed very hurriedly in this Congress the last time and vetoed by President Ford has not produced one single job in the private

sector, as it was supposed to. As a matter of fact, all it has produced is something like 300 bureaucratic jobs.

Mr. Chairman, I think that the point the gentleman is making is well taken; that is, that most of the so-called hurry-up emergency programs that have been raced through this Congress have not produced jobs and the fact remains that the gentleman's suggestion, along with many other members of the committee, that what we really need are tax cuts that produce more housing, more development, is the position that this House should be taking.

Mr. Chairman, I compliment my colleague, the gentleman from Ohio (Mr. LATTA) on the gentleman's forthright remarks.

Mr. LATTA. Mr. Chairman, let me just add to what the gentleman has said in furtherance to the discussion along these lines, that even the committee's report itself reveals we are not facing a real emergency for the creation of these jobs, as only $500 million is being programed for outlays in fiscal year 1977; and $3,500 million of the public works package will be spent in future years. We are just talking about a $4 billion jobs package but only $500 million of that package will go directly for jobs during fiscal year 1977.

Mr. ROUSSELOT. Mr. Chairman, will the gentleman yield further?

Mr. LATTA. I am happy to yield to the gentleman from California.

Mr. ROUSSELOT. Mr. Chairman, as we proved last fall, the so-called emergency job package that was whistled through here in the fall has not produced all those predicted jobs. A portion of the recommendations in this budget resolution call for the same type of public works programs that will not be on stream for 9 months; so the gentleman's point is well taken. We should be addressing ourselves to creating those incentives that will produce real permanent jobs and not some kind of mythical jobs that really do not come on stream very soon and improperly raise expectations.

In the Monday, February 14 Wall Street Journal, James C. Hyatt commented on the question, "Do public works work?" Let me review those type questions with my colleagues:

(By James C. Hyatt)

WASHINGTON.—Do public works work?

With $2 billion now flowing through the federal pipeline to states and cities, and with Carter administration planners proposing to pump another $4 billion into the stream, a lot of government policymakers seem convinced the answer is yes—that public works projects meet important community needs while putting the unemployed to work.

However, the planners seem to lack a clear idea of how to reach the goals they're aiming for. The current system, about four months old, already is awash in controversy and criticism. Congress appropriated $2 billion for local public works last fall, but no worker has yet earned a cent, unless one counts the 265 people hired temporarily by the Commerce Department to figure out which cities should get the money.

If the roar from the mayors and members of Congress is any indication, the public works planners didn't do much to earn their pay. After reviewing the list of nearly 2,000 state and local governments which will receive funds. Mayor Lee Alexander of Syracuse, N.Y., fumed that "45 out of the 100 largest cities in America were excluded. Half of the money that went to New York State went to communities with unemployment rates lower than the national average."

Newark's Mayor Kenneth A. Gibson, president of the U.S. Conference of Mayors, has charged that in setting up the program, the Ford administration adopted a formula "clearly designed to frustrate the needs of the big cities by allocating the money in large amounts to small and rural units of local government."

A similar complaint has come from Capitol Hill. "Economically depressed cities throughout eastern Massachusetts have been denied aid specifically intended for them by Congress," asserts Rep. Margaret M. Heckler (R., Mass.).

Of Mississippi's $10 million share, $4.9 million went to Mound Bayou, pop. 2,100, for "municipal administrative district improvements." In other states that got as much money or more, the allocators totally ignored such major cities at Pittsburgh, Seattle, Toledo, Sacramento and Oklahoma City.

SOMETHING MUST BE WRONG

"When so many desperately needy communities are left dry," says Rep. Heckler, "something must be wrong." What went wrong, it appears, was mostly a political failure. Congress whetted the appetite of financially strapped municipalities across the country, but failed either to provide enough money to meet their wants or to recognize the inevitability of disappointments and complaints. As might have been expected, the Commerce Department was flooded with public works proposals once it began taking applications last October. State and local requests for federal money eventually totaled more than $25 billion.

"To some extent this program was like a lottery," Rep. Samuel S. Stratton (D., N.Y.) told his colleagues. "There were 25,000 applications and only 2,000 could win. That is pretty much like putting down $2 at the track and hoping for the best."

Congress had bigger things in mind last fall when it passed the public works legislation over President Ford's veto. Proponents saw public works as a key to opening up jobs for the nation's unemployed, particularly construction workers, and to helping meet local governments' needs.

The eager politicians fashioned a timetable designed to move the funds quickly into the states and cities. The Commerce Department's Economic Development Administration was ordered to issue regulations within 30 days after the measure became law. It was told to act on all applications within 60 days, and to approve only projects where on-site labor could begin within 90 days.

EDA officials are proud of their performance. "There's never been a program to match this," declares John W. Eden, an outgoing assistant secretary of commerce. "By mid-February, from a program that started Oct. 26, there will be funds from 1,988 separate grants ready to be injected into the economy."

Nonetheless, Congress is starting to rethink some of the procedures it required or permitted. "We put some provisions in the law without knowing how they would work out," says one congressional staff member. To their dismay, the lawmakers have discovered:

—Cities with low jobless rates actually had a better chance of getting the money than cities with a high rate. The 1976 law allocated 70 percent of the funds to areas with unemployment above the national average, and 30 percent to areas with lower-than-average rates. But because most of the applicants sought funds from the 70 percent pool, the overall result was that cities, counties and states had twice as good a chance of getting money from the smaller pool.

—To establish need, cities with low jobless rates were permitted to "claim" adjacent pockets of high unemployment. Congress expected that jobless workers nearby could be hired to work on the projects. "This (provision) seems to have resulted in a great deal of 'gerrymandering'" as cities drafted their applications, one Congressman says. By such methods, more affluent areas often crowded out needier places.

—Federal statistics were often too fuzzy to help identify areas suffering the highest unemployment. The national jobless rate is based on a monthly survey of 50,000 households, but the sample doesn't produce precise rates for particular geographic areas. Building trades unions complained that the government couldn't pinpoint places where their members are particularly hard hit by unemployment. And some states which work up their own figures "dramatically underestimate the number of long-term chronically unemployed, the very people a measure like this should be helping," complains Rep. Silvio Conte (R. Mass.)

One thing is reassuring: No one has made a convincing case that politics influenced the distribution of the money. None of the applications from Americus, Ga., near Jimmy Carter's hometown, was approved. Gerald Ford's hometown of Grand Rapids, Mich., also struck out. But officials of that city have challenged the ruling in federal court, with a story that may well arouse some sympathy.

Grand Rapids based its application on a claimed 7.8 percent jobless rate, only to discover after the deadline that the Commerce Department allocators were using rates calculated out to hundredths of a percentage point. Its actual rate was 7.77 percent, just under the national average of 7.78 percent. Use of the more exact figure would have put Grand Rapids right at the top of the smaller group of applicants competing for the 30 percent share of federal funds; instead, the 7.8 percent figure threw the city right at the bottom of the line for the larger allocation.

While examining Grand Rapids' complaint, a federal judge temporarily enjoined the Commerce Department from allocating some of the Michigan public works funds. The injunction has now been lifted, but the city is still pursuing its court challenge.

A FAMILIAR STORY

There are similarities between the difficulties the new public works law is encountering and the woes which beset the emergency public-service jobs programs of the early 1970s. In both cases, there was intense pressure to get the funds distributed quickly. There were quarrels about the statistics used to determine eligibility for funds. Then, as now, Congress had to tighten up some regulations while loosening others.

The major change likely in the next public works allotment will be to target the funds more closely to areas of high unemployment. "The implication that we are simply going to extend this act" without making changes in the rules "would be a serious mistake," declares Rep. Barber Conable (R., N.Y.). That warning seems to coincide with Carter administration views. "We intend to see that those applications are processed in a way that would push them to areas of high unemployment," declares Stuart Eizenstat, domestic policy adviser to President Carter.

Skeptics of public works as an efficient, fast economic stimulus are saying I-told-you-so. "We are very anxious to legislate results, but apparently do not really care whether the programs work," declared Rep. Bill Frenzel (R., Minn.), during a recent House discussion of the public works shortcomings. Projects "which produce temporary

jobs costing the taxpayers $25,000 to $40,000 each can hardly be considered a sound or responsible way to try to improve our economy," he argued.

In his last budget, former President Ford criticized public works as taking too long to generate significant numbers of jobs. Of the $2 billion appropriated last fall, his planners forecast, only $800 million will be spent in fiscal 1977 and another $800 million in fiscal 1978. The budget said the funds would create only 48,000 jobs each year. (The AFL–CIO figures each $1 billion spent accounts for about 40,000 direct jobs and about 20,000 indirect jobs.)

The brief experience of the present public works program seems to indicate that Congress should answer a number of questions before expanding public works subsidies as a more permanent job-creation tool. How fast does the money flow into the economy? Does it reach the pool of hard-to-employ workers? Is too much spent on bricks and mortar instead of payroll? Do slow-starting projects risk aggravating inflation later by tightening up labor markets in an improving economy?

The hopes of the mayors, at least, aren't diminished by the initial confusion. "There seems to be a wide chasm between congressional intent and execution," declares Mayor Alexander of Syracuse. "There were some casualties in the initial assault made on the program. But we've got some experience now. We can build on that experience and put together a better program."

Mr. LATTA. Mr. Chairman, in furtherance of what the gentleman has said about the program passed last year and vetoed by President Ford, I do not believe in my entire service in the Congress can I recall a piece of legislation which created so much hope and produced so little.

For example, in the State of Ohio we had 1,172 applications filed in the State. Every little community, every county, it seemed, was coming up with plans prepared at local expense to get onstream for some of this money which was being held out to them as being available. One could not blame them if they had a project they were going to pay for locally and suddenly learned there was a chance to get 100 percent Federal funding for it.

How many were funded for the entire State of Ohio? Forty-eight. In my own district, we had 55 applications submitted, and how many were funded? One.

Mr. ROUSSELOT. Have any of those projects in the State of Ohio produced any new jobs?

Mr. LATTA. Not yet.

Mr. Chairman, unfortunately the committee has chosen a path that will lead us ever further down the deficit spending road to bigger government and higher tax rates that will further stifle the incentives to produce and initiatives of the American people.

This administration and the majority on the Budget Committee, in drafting this stimulus package, erroneously assumed that unemployment is the result of insufficient spending. Apparently, little thought was given to the relationship between unemployment and high tax rates. It seems somewhat useless to go into the "whys" and "wherefores" of the cause-and-effect relationship, but I think it is essential nevertheless that the Congress and the American people at least acknowledge the fact that unemployment results from high tax rates.

The rate of taxation directly affects decisions to work, to hire, and to invest. These decisions in turn directly affect employment, the gross national product, and the rate of economic growth. The rate of taxation affects decisions to work and to hire because it determines the gap between the overall cost to hire a person and such person's take-home pay and benefits. The greater the gap, the greater the cost to an employer to hire an employee, and so the less likely he is to hire. From the employee's standpoint, the greater the gap, the less his take-home pay and the less he will be interested in the job. The greater the tax gap—the tax wedge—between the employer's cost and the employee's take-home pay, the smaller the gap between the employee's take-home pay and the level of untaxed unemployment compensation benefits. The smaller this gap, the less the employee's interest in the job.

Tax rates, therefore, directly affect the decisions to work and to hire. The higher the tax rates, the more these decisions go against employment. At some point, we simply must acknowledge this fundamental issue. And as I have stated, inflation that will result from the committee's stimulus package will simply raise the effective tax rates even higher, and that will worsen the problem of unemployment. How ironic it is for the Budget Committee to come to the floor with this resolution expressing sympathy with the unemployed, and then produce a package that will make their plight worse.

Tax rates also effect the other important decision—the decision to invest. The rate of taxation directly affects investments because it determines the after-tax rate of return. The higher the tax rate, the less will be the earnings to an investor in any given investment.

The United States presently taxes investment at higher rates than any other industrialized country. As a result we allocate the lowest percent of our gross national product to investment. This means that the United States has the lowest rate of increase in productivity, or output per man-hour, and the lowest rise in living standards of all industrialized countries. This slow rate of growth in our capital stock—the plant and equipment that employs people in productive jobs—accounts for a large part of unemployment, because the labor force and the labor force participation rate are growing faster. People are entering the labor force faster than people are adding to the investments that create the factories and tools that provide the jobs. The low rate of capital formation is a direct reflection of the low after-tax earnings that investors, big and small, get for their efforts. Increasing the amount of spending without removing any of the tax incentives to investment will increase the rate of inflation and, thereby, raise the effective rates even higher.

Mr. Chairman, we hear over and over that the "reason people produce is that people buy." But that is only part of the story.

There are two other reasons why people produce: for income and for profit. That is, people work to get ahead; naturally, they work to provide for themselves and their families as best they know how. The higher the tax rates, the less income the profit they are going to get for producing and, therefore, the less they are going to produce. If we want to increase employment, we have to make it pay to be employed; we have to make it pay to hire; and we have to make it pay to invest. A permanent tax rate reduction across the board for all the American people is what it will take to wipe out unemployment in America. Increasing spending does not reduce the tax rates. To the contrary, it causes inflation and raises the effective tax rates.

In an address to the Nation on August 13, 1962, the late President Kennedy said:

> Our tax rates are so high as to weaken the very essence of the progress of a free society—the incentive for additional return for additional effort.

And on July 17, 1963, he said:

> The most urgent economic business before the Nation is a prompt and substantial reduction and revision of Federal income taxes in order to speed up our economic growth and wipe out our present excessive unemployment.

Taxes were reduced at that time and the results of what has come to be known as the Kennedy tax cuts are history. The tax base expanded as employment and GNP rose, and tax revenues to the Government rose.

That tax cut reduced tax barriers to full employment, and the economy enjoyed a period of prosperity. But the splurge of Great Society spending simultaneously with the Vietnam war, and the very large Federal deficits of the more recent years, were instrumental in bringing on inflation that has driven the effective tax rates back up. By pushing all incomes into higher brackets, the inflation has canceled out the effects of the Kennedy tax rate reductions. In fact, almost everyone today is paying a higher proportion of their income in taxes than they were in 1964. In the early 1960's only about 3 percent of all tax returns were subject to marginal tax rates over 30 percent. Today, nearly one-third of all tax returns are in the higher brackets.

High tax rates are a powerful deterrent to production, investments, and employment that cannot be removed by rebate handouts or by Government spending programs for jobs or by anything similar. It can only be removed by substantially reducing the tax rates across the board on all the people.

As for the spending parts of the stimulus package, both the makeup and the timing are unfortunate. The stimulus spending requested would produce some employment temporarily, but this is at a definite risk of keeping up inflation in the months ahead and contributing to unemployment over the long run. Furthermore, the upsurge in Federal borrowing to finance the increased deficit will compete with private borrowing, which is now reviving, and undermine the capacity of the private sector to provide lasting job opportunities.

The public service jobs part of the stimulus package shows the weakness of the majority approach. For one thing, it

is hard to guard against the job substitution problem when public service funding is involved, in spite of efforts to prevent Federal funds from being used in place of local funding. To the extent that substitution occurs, public service employment would not add to the net total number of jobs. Another drawback is that we do not have any good evidence that public service jobs provide much in the way of valuable job skills to the persons temporarily employed. So hundreds of thousands of persons on public service jobs will not really be any better able to gain private employment after their year on public service employment has ended. Yet the resolution contains $7 billion of budget authority and $713 million in outlays for such jobs.

Beyond that, once all the 725,000 public service jobs slots called for under the resolution are filled, does anyone doubt that there will be strong resistance to winding down the program? States and localities with public service jobs naturally will want to keep them. So the public service stimulus item could have the longrun consequence of adding 725,000 job slots to the Federal payroll. That will not help the economy on a permanent basis. We should not delude ourselves into thinking public service jobs are an acceptable solution to creating employment.

Similar objections can be made to the public works part of the stimulus package, for which $4 billion in budget authority and $500 million in outlays are included. Here again, shortrun considerations and political expediency seem to prevail. Everyone wants to alleviate economic hardship. But let us not fool ourselves into thinking that the method contained in this budget resolution is a good way to accomplish the same. At best it will provide little more than short-term relief. A substantial portion of the $4 billion for public works will go for short-range construction projects, not for construction projects which are job-intensive also over the long run and that would permanently provide added employment or upgrade employment skills. Long-range benefits should receive greater attention in any stimulus package worthy of the name.

As another indication of how little emphasis the resolution gives to long-range economic benefits, less than 5 percent of the stimulus spending is devoted to employment and training—to permanently improve the skills of the unemployed.

The Budget Committee resolution would increase the deficit for fiscal year 1977 to $70,315 million. The national debt or public debt would be permitted to go to $725,500 million. What a legacy to leave to our children and our grandchildren.

Our country has already had too much experience with high-cost, shortrun, quick-fix economic stimulus programs. Instead of solving problems they actually produce long-range difficulties, serious difficulties, I should add. The correct alternative is a permanent tax rate reduction. This is the solution that is practically guaranteed to benefit the economy over the long run. I urge the House to support the effort to achieve a needed and meaningful permanent tax reduction in this Congress.

Mr. GIAIMO. Mr. Chairman, I yield 4 minutes to the gentleman from Texas (Mr. BROOKS).

Mr. BROOKS. Mr. Chairman, the third budget resolution, which amends our expenditure ceilings and revenue floor, clearly indicates that the Congress has begun to master the intricacies of sound budgetary analysis. The congressional budget process is designed to provide Congress with the data and analyses to formulate fiscally responsible policies in response to major economic contingencies.

We are now in a state of economic emergency. The recovery of our economy has lagged behind our expectations. Unemployment has remained at unacceptable high levels. Our productive capacity is not being fully utilized. A real problem exists, the dimensions of which, because of the recent severe weather, are not fully known.

President Carter has sent an urgent economic message to the Congress asking for quick and decisive action. Under the able leadership of Chairman ROBERT N. GIAIMO, our Budget Committee has responded by formulating a resolution that will meet, at least in part, the challenge of our economic dilemma.

The recommendations contained in the third budget resolution are based upon the premises set forth by President Carter; namely, that we need an immediate tax reduction and business tax credits to spur consumer demand and that the Federal Government should take a more direct hand in the creation of jobs, both in the private and public sector. I endorse the efforts of President Carter and the House Budget Committee to provide stimulus to our economy. The recommendations contained in this resolution lay the groundwork for major economic improvement hopefully without increasing inflationary pressures.

Today, as chairman of the Government Operations Committee, I have introduced authorizing legislation to implement the recommendations contained in this resolution on countercyclical assistance. Although I remain unalterably opposed to general revenue sharing, I believe the countercyclical provisions, because they are geared to unemployment, will be helpful in our existing economic situation. We do not have the luxury of time to fashion new programs to meet this emergency. We must use our existing programs despite some of their obvious shortcomings as is the case with countercyclical assistance.

Mr. LATTA. Mr. Chairman, I yield 5 minutes to the gentleman from Virginia (Mr. ROBERT W. DANIEL, JR.).

Mr. ROBERT W. DANIEL, JR. Mr. Chairman, I would like to ask a question of the distinguished gentleman from Connecticut (Mr. GIAIMO), chairman of the Committee on the Budget.

I would like to ask about the relationship of the revenue floor to a bill which would affect fiscal year 1977 revenues, a bill which is cosponsored by approximately 120 Members of the House, and which the Committee on Ways and Means has indicated it will consider very soon. That bill is H.R. 318, designed simply to delay for 1 year the elimination of the so-called sick-pay exclusion, a personal income tax deduction which the Tax Reform Act of last fall has otherwise eliminated retroactively for the year 1976.

H.R. 318 would simply eliminate the retroactive aspect of the sick-pay change, at a 1-year cost, in fiscal year 1977, of $327 million, by Joint Tax Committee estimates. The Committee on the Budget of the other body has already stated in its report on the third concurrent resolution that its revenue floor, similar to that reported by the House Committee on the Budget, would "permit postponement until calendar 1977 of the stricter tax treatment of sick-pay benefits enacted retroactively for 1976 in the recent Tax Reform Act."

Since the revenue floor here is similar, and since the Ways and Means tax cuts under this resolution do not reach even that low, can we assume that this third concurrent resolution, as reported, will allow for the Members' consideration of H.R. 318, if reported?

Mr. GIAIMO. Mr. Chairman, if the gentleman will yield, as we know, the postponement of the sick-pay exclusion was provided for in the resolution before the other body.

The other body did discuss this problem in committee; and as I understand the report, it makes provision for the sick-pay exclusion in the event that the Senate Finance Committee and the Committee on Ways and Means should delay by 1 year the application of the present law, which would eliminate the sick-pay exclusion on 1976 income and would delay it to 1977 income.

Mr. Chairman, I can say to the gentleman that provision will be made for this item by the committee amendment which we will introduce tomorrow. When we get to the amendment stage, we will introduce an amendment changing our revenue figure as reprinted based upon the fact that the Committee on Ways and Means has reduced President Carter's $13.8 billion figure by somewhere in the neighborhood of $1 billion or more. We will, therefore, adjust our revenue figure accordingly.

Mr. Chairman, I can say to the gentleman that we will make provision in our figure for that sick-pay exclusion.

Mr. ROBERT W. DANIEL, JR. Mr. Chairman, I thank the gentleman for his response to my inquiry.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the gentleman from Ohio (Mr. ASHLEY).

Mr. ASHLEY. Mr. Chairman, I rise in support of House Concurrent Resolution 110, the third budget resolution for fiscal year 1977.

Mr. Chairman, I would be remiss if I did not say at this juncture a word or two about the truly remarkable way in which the distinguished gentleman from Connecticut (Mr. GIAIMO) has responded to the great and difficult task that met him upon his assumption of the chairman-

ship of the House Committee on the Budget.

We pay great tribute to our former colleague, Brock Adams, who is now the Secretary of Transportation for the responsible and dedicated efforts and work he brought to the chairmanship of the Committee on the Budget in the last 2 years. I believe that the gentleman from Connecticut (Mr. GIAIMO) has demonstrated the same capacity for hard work and for responsible conduct in the chairmanship of the subcommittee as did Mr. Adams. So, as I say, I do wish to pay tribute to the gentleman on this occasion.

Mr. LATTA. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Ohio.

Mr. LATTA. Mr. Chairman, I thank the gentleman for yielding and I just would like to say that I wish to concur in everything the gentleman from Ohio has said about the way our new chairman, the gentleman from Connecticut (Mr. GIAIMO) has taken over. I agree that he had some big shoes to fill in taking over from Brock Adams, as everyone knows, but, as I say, I believe that the new chairman is doing an outstanding job and I am sure he will continue to do so.

I just wanted to associate myself with the remarks of the gentleman from Ohio.

Mr. ASHLEY. Mr. Chairman, I am pleased that my colleague, the gentleman from Ohio (Mr. LATTA) has chosen to do this. Not only does it indicate a united front so far as the subcommittee is concerned, but it spans the political spectrum in a way that is wondrous to behold on occasion.

Mr. LATTA. Mr. Chairman, will the gentleman yield further?

Mr. ASHLEY. Of course I yield further to the gentleman from Ohio.

Mr. LATTA. Mr. Chairman, we might not agree philosophically, however, but I agree with the way in which the gentleman is handling his job as chairman of the committee. We shall disagree from time to time but we shall disagree agreeably.

Mr. ASHLEY. Mr. Chairman, I think I know exactly how far my colleague, the gentleman from Ohio, wants to go on this occasion.

Mr. LATTA. Mr. Chairman, I thank the gentleman.

Mr. ASHLEY. Mr. Chairman, I rise in support of House Concurrent Resolution 110, the third budget resolution for fiscal year 1977.

For the first time in the brief history of the congressional budget process, economic considerations of an urgent nature require that Congress revise its budget in midyear. Although there have been some positive economic indicators in recent months, hearings before the Budget Committee's Task Force on Economic Projections, which I chair, have convinced me that the overall state of the economy requires an immediate stimulative boost.

Therefore, I support fully the Budget Committee's overall stimulus recommendations, but I do so with certain reservations.

The tax component of the package, for example, contains investment and employment tax credits as an incentive to business. Our recent experience with these incentives raises serious questions about their effectiveness as stimulus measures, particularly in light of the fact that capacity utilization is relatively low and liquidity is relatively high. I greatly fear that these so-called incentives to business will not stimulate meaningful business investment that would not take place in any event. And while I realize the Committee on Ways and Means has modified the President's tax proposals, there is certainly some basis for questioning the efficacy of those changes as well, since they represent largely untried concepts.

With respect to direct spending, I support the committee's proposals, but again with reservations. There is widespread agreement that these proposals also have serious deficiencies.

Our experience with the countercyclical assistance program, for example, has not been uniformly positive. In many cases, sending a Federal assistance check to a State or locality is not an efficient means of stimulus—since it may take some time to spend the money—nor is it an effective investment in furthering any definable national goals—since there are no restrictions as to how the money can be spent.

The accelerated public works program is also an imperfect method of providing jobs and stimulating the economy because many projects require considerable lead time and the cost-per-job for these projects is extremely high.

Even the improved public service employment program operates under certain limitations. Recent amendments to the Comprehensive Employment and Training Act have attempted to get at the problem of substitution of new CETA jobs for existing public service positions by requiring that all new public service jobs be part of "projects" developed separately from regular city or county functions. Clearly, these new constraints make it difficult to gear up many new jobs quickly.

Despite these problems, however, in my opinion we are better off providing jobs through imperfect programs, than tolerating continued high levels of unemployment. We simply do not have time now to perfect our stimulus tools. The benefits of the additional economic stimulus will be felt throughout the economy regardless of the fact that some programs are flawed in certain respects.

Mr. Chairman, while we must act now with the resources at hand, we can do better in designing programs that are cost-efficient and that can provide economic stimulus quickly in areas of greatest need. In the coming months, the Task Force on Economic Policy, which I chair, will examine these various stimulus programs—such as countercyclical assistance, public works, and public service employment—to assess their effectiveness and to determine how they can be improved in the future.

Until these improvements are made, however, we must work with what we have. House Concurrent Resolution 110 is a responsible and reasonable approach to meeting the immediate demands of the economy. I urge its adoption.

Mr. LATTA. Mr. Chairman, I yield 2 minutes to the gentlewoman from New Jersey (Mrs. FENWICK).

Mrs. FENWICK. Mr. Chairman, I have a few questions of the chairman of the Committee on the Budget, the gentleman from Connecticut (Mr. GIAIMO).

I do not know whether he read, as I did, two accounts in the New York Times yesterday. One described the chairman of the Committee on the Budget of the other body as announcing that $1 billion—one thousand million dollars—would produce 87,000 jobs. I presume, although it was not specified, that these were in public service. Surely that is a very high cost per job, especially when compared to an account in another section of the newspaper which described a program in Rhode Island whereby 3,500 people are now employed at a cost of $1,000 per job, instead of well over $10,000 per job in the Federal program. In Rhode Island program, the Federal Government has already received back the money it paid for the training, through the taxes of those employed workers who are getting $4.74 an hour.

I lean toward the public works solution to the unemployment problem, but I do think we need two things there. We need some cost estimate as to what each job will cost. We need some time estimate as to how long each project is going to take.

Further, we should revise our methods of funding. One town in Rhode Island was begging for a sewer plant which was desperately needed for various good, sound health reasons. What did it get? It got funding for a shopping center.

The CHAIRMAN. The time of the gentlewoman has expired.

Mrs. FENWICK. Another problem is the way funds are used. CETA funds in New York City were quite openly used to hire policemen who had been laid off. There was no training involved. They had taken their training years ago. These were rehired, formerly trained policemen that New York City had laid off.

We should not pretend that CETA is a program for those who are unemployed. This ambiguity is part of the distressing difficulty that people who are not experts in this field, and the public, certainly do not understand. But also the Members of this body who sit here day after day listening to the debate do not understand why these things should be so. What can we do about this, Mr. Chairman?

Mr. GIAIMO. Mr. Chairman, will the gentlewoman yield?

Mrs. FENWICK. I yield to the gentleman from Connecticut.

Mr. GIAIMO. Mr. Chairman, let me just say first of all I did not see the article to which the gentlewoman referred in yesterday's New York Times but I am familiar with the questions she raised.

At the outset I would say one thing we cannot do is wave the magic wand and solve these problems easily. What we can do is to try our best.

The CHAIRMAN. The time of the gentlewoman has expired.

Mr. LATTA. Mr. Chairman, I yield the gentlewoman 2 additional minutes.

Mr. GIAIMO. Mr. Chairman, if the gentlewoman will yield further, we try the best we can to relieve unemployment. We do it through many different ways. We do it through the hope that the tax reduction will stimulate the private sector, as we know it will and as our experts and economists tell us it will. This effort will stimulate employment and expansion of the economy. That is one way.

The other way is through these various different programs such as countercyclical moneys to communities, and public service jobs, and public works jobs. It is a real mix. It is the best efforts we can come up with collectively to stimulate employment, and therefore, to bring down unemployment modestly.

If the gentlewoman will just yield further—and I will give her plenty of time—we do the best we can. The best estimates that we can get and garner indicate that if we adopt this stimulus package, it will result in approximately 950,000 jobs, some public service, some working in parks, some will be on the roads, some will be the public works jobs, and some will be countercyclical.

All in all this package contributes to the reduction of unemployment.

We have to be very careful about trying to put a price tag on how much it costs the Government to create each job, because it is not that easy. I caution the gentlewoman not to get into that because there are many factors other than the payroll which go into making these different types of job programs which we have. I refer the gentlewoman to pages 41 and 42 of the report where some of these problems are laid out at length.

The CHAIRMAN. The time of the gentlewoman has expired.

Mr. GIAIMO. I yield to the gentlewoman 1 additional minute.

The main solution to the problem of unemployment has to come from the private sector. The stimulus package of the administration and this budget resolution is designed to give some stimulus to move toward recovery. We are trying to get unemployment below 7 percent into the 6.6 percent and 6.7 percent area this year, and we hope this resolution will do it.

Mrs. FENWICK. I thank the gentleman for his answer. Certainly unemployment is a tragedy matched only by inflation.

The $1,000 per job training program to which I referred took unemployed people and trained them for jobs, but it was not approved by the Department of Labor. But here we have a wonderful working model, it seems to me.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois (Mr. SIMON).

Mr. SIMON. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I heard the distinguished minority leader say a few moments ago in talking about the low productivity in the United States, I think, that low productivity is the reason why the jobs sector of this bill is so important.

I have some reservations on the third resolution, on the $50 rebate, because it is not particularly productive in the jobs sector. When some of us took economics 1, we learned about the Phillips curve. We learned that when unemployment goes up the inflation goes down. There is only one thing wrong with that. That did not contemplate the kind of economy we have today, with the unemployment compensation and welfare and a lot of other programs. Since World War II it is very interesting that when our employment has been high, inflation has been low.

Mr. Chairman, we now have roughly 20 percent idle plant capacity. We have to put people to work if we want productivity to move.

I think we face a choice of whether we want to pay people to be nonproductive under unemployment compensation and welfare programs or whether we want to pay people to be productive. I think it makes infinitely more sense to pay people to be productive.

Now, the allegation is made that this is inflationary. That would be true if private investments were high. The fact is that gross private investment is down. We can put tax incentives, here I agree with my colleague, the gentleman from Ohio (Mr. ASHLEY) in the gentleman's remarks, we can put the tax incentives in the corporate sector, but if the demand is not there, expansion will not take place.

The gross private business investment for the fourth quarter of 1976 was 11 percent lower than the gross private business investment of the fourth quarter of 1973, despite the fact that we had all kinds of additional incentives. I do not believe at this point that what we are talking about is inflationary. If private sector spending would pick up and on top of that we had a $70 billion deficit on this kind of resolution, it would be inflationary.

There is a danger that today's emergency becomes tomorrow's habit, and that should not happen.

Mr. Chairman, I would finally differ some with my colleagues who are supporting this resolution who are suggesting this is an emergency situation and we have to do something in the job sector. I think we have to recognize something unpleasant that we are not yet recognizing and that is that we have reached the stage of productivity that we are going to have to have a permanent jobs program as an alternative to some of the unemployment compensation, some of the welfare programs that we have right now.

I know the image of WPA is of people leaning on shovels, but those people leaning on shovels built 113,000 schools and libraries; they built 600,000 miles of highway. We have 1½ million adults who learned to read and write under WDPA. We had histories written, plays produced. We became a richer society by converting a liability into an asset I think that is what this third resolution is attempting to do. I think that is fundamentally sound.

There are problems with all band aid approaches, and that is what we have now. There are some weaknesses to these jobs programs that were pointed out by our colleague, the gentleman from New York (Mr. PIKE) a few days ago. One is the Budget Committee meeting. We are band aiding it because we do not recognize that it has to be a permanent thing. I think we have to set up a sounder program and let people be a productive part of our society. Then, we will move on the productivity sector.

Mr. Chairman, I think this third resolution is sound.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. GIAIMO. Mr. Chairman, I yield 2 additional minutes to the gentleman from Illinois.

Mr. SIMON. Mr. Chairman, I have real qualms about the $50 rebate. I am afraid we will get very few jobs, very little stimulation, and almost nothing for the end product; but the job sector of it, I think, is very sound and I am supporting the third resolution.

Mr. LATTA. Mr. Chairman, I yield myself 5 minutes.

I mentioned earlier that the Rules Committee is now considering the extension of the public works bill which was passed last year, only this time they are supposed to be correcting some of the inequities and deficiencies of the last act. Just let me say that in my humble opinion it is not correcting many of these inequities. I indicated earlier today that we had 1,172 applications for the State of Ohio last time, and only 48 of them were funded. In my congressional district, 55 applications were rushed to Chicago, and only one of them was funded. Some congressional districts did not even get one project funded.

What have they done to correct some of these inequities? Well, according to the information given to us up in the Rules Committee, they are going to have two new subsections added to section 106. One would prohibit any project from being constructed by any State or local government through the use of its own employees. Construction would have to be done by private contractors through competitive bids. Second, it would require all supplies and materials to be produced in the United States.

I do not know whether either one of these provisions is going to correct the inequities of this last program. I think they heard downtown from practically every congressional district in the Nation about the inequities. Section 108 is amended to change the timespan for unemployment data used in making grants from the 3 most recent months to the 12 most recent months. This was done to avoid seasonal fluctuations in the unemployment rate applied.

Section 108 would also be amended to provide that up to 2½ percent of amounts appropriated shall be granted to Indian tribes. The Secretary is authorized to set aside a fund to make grants for projects that were rejected through errors in any of the applications. The building project applications made after enactment of the bill that will result in conserving energy will be given priority by the Secretary. I do not

know how he is going to get that into his computer, but nevertheless it is in the bill.

State jail construction standards, wherever they exist, will be the sole standards criteria governing jail projects under this program.

Two provisions of the original act are repealed: One, requiring 70 percent of funds appropriated to go for projects of State and local governments having an unemployment rate in excess of the national rate, and the remaining 30 percent to go to other areas; two, permitting the Secretary to consider unemployment in adjoining areas from which the labor force for a project may be drawn. We heard a lot of complaints about that after the various programs were announced as they were going into the central cities in order to use their unemployment figures for projects in the suburbs.

Now, if these provisions that I have just read are going to take care of this one situation, it is a slight improvement over the bill that we had last year. But, I cannot see many other improvements in the bill. Hopefully these matters will be discussed on the floor and some input by the entire House will be made to correct these inequities, or just as sure as I stand here, once those projects are announced under this new bill, we are going to have just as many complaints as we had following the last announcements.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the gentleman from Florida (Mr. LEHMAN).

Mr. LEHMAN. Mr. Chairman, I want to commend the chairman, the staff, and the members of the Committee on the Budget for the expeditious manner in which we were able to produce the concurrent resolution that is on the floor at this time. It took a lot of hard work.

I also want to commend them for being able to work out differences with the administration's economic stimulus package, so that we are now in the same ball park, and we can get a stimulus package out where it will do some economic good for the country.

Like my colleague from Illinois, I have certain reservations with regard to the $50 rebate. I, too, can go along with it because perhaps it is the only really quick way to have an impact on the economy. But I am particularly pleased with the $4 billion that is part of the budget resolution for public works.

During the last week I attended groundbreaking ceremonies in Dade County for two public works projects. One was a warehouse for the Port Authority, the other was a data processing center, both of which were badly needed. This is the kind of economic development project that we need more of, not only in my own part of the country but throughout the entire Nation.

When this economic crisis is over with and public service jobs are no longer needed, the next generation will still have the benefits of these public works.

Mr. Chairman, I just want to strongly urge my colleagues to support this budget resolution and to help this country get going again.

Mr. GIAIMO. Mr. Chairman, I yield 7 minutes to the gentleman from California (Mr. MINETA).

Mr. MINETA. Mr. Chairman, I rise in support of House Concurrent Resolution 10, the third concurrent resolution on the fiscal year 1977 budget.

As we are all aware, the recovery of 1976 fell far short of expectations. In contrast to the assumptions of an annual GNP growth rate between 5½ and 6 percent for 1976, we were confronted with a fourth quarter 1976 growth rate of only 2.4 percent. Of course we fell even shorter of the expectations of the Ford "austerity budget" which predicted growth at more than 6 percent.

The extraordinary slowdown has been aggravated by continuing cold weather and drought. First, the unemployment rate has remained well above 7 percent, even the decline to 7.3 percent in January masks the 440,000 Americans who left the labor force. That unemployment rate was also calculated before the worst effects of the weather were felt.

Secondly, industrial production continued its downward trend, dropping by 1 full percentage point in January alone. Third, housing starts were down a tremendous amount—27 percent last month. Finally, spendable earnings rose only one-tenth of 1 percentage point in January, a truly abysmal increase for this period of a recovery.

With forecasts of a similarly sluggish nature for the next 2 years, we can only expect that many of our country's plants and factories will continue to operate far below capacity and millions of Americans will remain out of work with little hope of finding a job. A danger of which we must all be aware is that this "disappointing" recovery could possibly deteriorate into a recession sometime late in 1978. I feel that the need for some economic stimulus is clear.

The plan we are considering today is designed to cut the unemployment rate to below 7 percent and to increase the GNP growth rate above 6 percent by the end of 1977. It contains sufficient, but not extravagant, increases in jobs programs to meet both cyclical and structural unemployment. At the same time, over two-thirds of the increase in the deficit is in the form of tax cuts to support consumer spending and business activity.

It is much the same as President Carter's plan, with a number of improvements. As others have stated, the strategy is based on a balanced 2-year program of tax rebates and reductions and additional spending programs. First, the rebates and reductions will bolster consumer demand in this year and the next; and second, as that impact wears off, direct spending takes place to augment the rebate stimulus, strengthening and sustaining the economy well into 1978.

The programmatic spending side of the stimulus package in the third resolution is also a well balanced effort to reach those Americans who desperately need job training, who need jobs immediately, and those State and local governments with severe levels of unemployment. The incremental amounts of the increase in these programs have been carefully calculated to avoid putting more money in program areas that could not absorb the increase. Thus, the spending aspect of the third resolution has scope, efficiency, and both short term benefits and long term flexibility.

Those who criticize this plan as too lopsided in favor of rebates, both miss the point of the strategy of the plan and lose sight of the virtues of realism and restraint.

In terms of strategy, rebates are emphasized because they are simply the quickest way to get money to consumers this year. While no certainty can be attached to any estimate of how much or how little additional consumer spending will take place as a result of the rebates, we can at least be certain that consumer income will get a one-time increase of $13.8 billion in the spring and summer.

In terms of realism, while the direct spending approach is certainly more effective in creating jobs for the unemployed, it must be recognized that it has a severely limited potential for this fiscal year. Mr. Chairman, I wholeheartedly support programs that target jobs to the unemployed, but I am going to be realistic in my assessment of how many jobs can actually be funded with existing programs before the end of the fiscal year on September 30. $3.5 billion in direct spending, an increase over President Carter's proposals of $1.7 billion, represents an upper limit on what can be effectively and prudently managed this year.

When various groups call for more direct spending, what they are actually calling for is a commitment beyond 1977 into 1978 and 1979. I, for one, feel that these matters are best dealt with in our deliberations on the 1978 budget. In fact, one of the most important features of the stimulus is that it deals with the current situation in a way that gives a great deal of flexibility in formulating fiscal policy in the 1978 budget.

Also, Mr. Chairman, I am aware that many Members will be concerned with the effect of the enlarged deficit on the Nation's capital markets. They may wonder if the prospective federal borrowing will "crowd out" other investments.

I want to assure the membership that in our Budget Committee hearings over the past month we carefully considered this question. We heard testimony from the new administration's three top economic advisors—Bert Lance, Michael Blumenthal, and Charles Schultze—and carefully questioned them in this regard.

Total credit demand in 1977 is expected to reach an all-time high; however, the outlook on the supply side is such that this demand can be met with relatively little stress.

The two tables below, taken from the Morgan Guaranty Survey for January; show where the demand for credit is expected to come from and where the money to meet that demand will be found:

THE DEMAND FOR CREDIT

[Billions of dollars]

	1972	1973	1974	1975	1976[1]	1977[1]
Federal Government issues	14.3	7.9	12.0	85.8	66.5	68.0
Federal agency issues	9.4	20.4	22.4	12.1	18.0	21.0
State and local issues	15.7	16.6	20.3	17.5	18.5	18.5

[1] Estimated.

Source: Morgan Guaranty Survey, January 1977.

As the tables show, total credit demand is expected to be about $330 billion—an increase over 1976 of $41.5 billion. I want to point out that much of this record demand is due to an increase in short term credit demand by business; more than double the 1976 level. An important element in this enlarged corporate borrowing is an anticipated increase in capital investment outlays of 13 percent this year. This portends a rise in business activity and gives me hope that with the additional stimulus we are voting on here today, the economy could do quite well in the coming year. It also points out the wisdom of the moderate size of the package so that inflation fears are not aroused.

Although loan demand is expected at the $330 billion alltime high, there appears to be ample funds available to meet this demand, without undue pressure on interest rates. As the tables above show, one can estimate a sufficient level of funds that will be available without employing magnitudes so large as to strain credibility.

Mr. Chairman, given the relatively relaxed monetary policy promised by Mr. Burns, the year will be a fairly calm one in money and credit markets. There should be an orderly matching of supply of and demand for credit, without the volatility and dislocations of past years.

Finally, Mr. Chairman, I hope we can all be guided by the underlying purpose of the congressional budget process: to insure that we in the Congress assume the responsibility for—and the accountability for—the total fiscal consequences of our various actions. I rise in support of this resolution because I want to urge every Member of Congress to assume fully that responsibility and not to shrink from that accountability.

I recognize the range of opinions expressed on the size and makeup of this package; this only reflects the healthy diversity of opinion which our democratic process encompasses. But the time for the expression of this diversity is in the amending of the resolution, not in its final passage. Any Member failing to achieve his or her own purpose by amendment, must recognize that a defeat for the resolution cannot be a victory for his or her own cause. If he or she did not have the votes for the amendment, the votes will not be there for a new resolution. A "No" vote on final passage cannot be seen as a vote for a smaller stimulus, or for a different rebate plan, or for more direct spending, or for a smaller deficit. A "No" vote is indiscriminately and irresponsibly a vote for all these at once and is therefore meaningless.

Nay saying does not offer an alternative; it only sabotages the one mechanism by which each Member of Congress must take responsibility—and can be held accountable for—the consequences of the many separate decisions made by the Congress.

Thus, Mr. Chairman, I most fervently urge all Members to vote in favor of the third budget resolution and the congressional budget process of which it is a part.

Mr. Chairman, I would like to direct a question to the chairman of the full committee in order to clarify a point.

Mr. Chairman, it has recently come to my attention that the private sector work force currently employed in the research, development, testing, and evaluation phase of the Space Shuttle will be cut back beginning in this month and in March. About 2,800 of these lost jobs are a result of a lack of funds for the fiscal year. Then in October, after fiscal year 1978 funds become available, the program would rehire 2,800 people to continue work on this phase of the Space Shuttle program. With the continuing influence of inflation, the costs of both labor and materials will be substantially higher after the delay. In addition, the Federal Government will be required to pay a substantial amount of unemployment compensation to tide over to October these highly skilled workers, most of whom would then be rehired. The California unemployment rate has continually exceeded the national averages. At a time when we are trying to stimulate the economy and reduce unemployment, it seems important to me that we, to the extent we can, should prevent additional layoffs. I understand that a $50 million supplemental appropriation could be constructively and efficiently used to keep 2,800 people working who would otherwise be laid off. I would like to ask the committee chairman whether such an appropriation could be accommodated within the third budget resolution as reported.

Mr. GIAIMO. Mr. Chairman, if the gentleman will yield, I think his concern is well taken. I understand just exactly what it is that the gentleman is trying to accomplish, that is, to reduce unemployment.

Mr. Chairman, I would like to remind my colleagues on the Committee on the Budget that in the overall dollar allocations which are available to the Committee on Appropriations, there is a good deal of flexibility; and if the Committee on Appropriations saw fit, they could allow for consideration of such a supplemental request. It would be available; and if it were submitted to the Committee on Appropriations, I am reasonably sure that within the figures of the Committee on the Budget available to the Committee on Appropriations, this request could be considered by the Committee on Appropriations.

Mr. MINETA. I thank the chairman.

Mr. GIAIMO. Mr. Chairman, I yield 3 minutes to the gentlewoman from New York (Ms. HOLTZMAN).

Ms. HOLTZMAN. Mr. Chairman, I would like to begin by commending the distinguished gentleman from Connecticut (Mr. GIAIMO) for the masterful job he has done in chairing the Committee on the Budget in this important effort to produce the third budget resolution. The Budget Committee and the administration deserve credit, as well, for acknowledging the severity of the Nation's economic condition and for taking steps to improve it.

Unfortunately, in my judgment, this budget resolution does not go far enough. It does not create enough jobs and it tolerates too high a level of unemployment. Under this resolution, unemployment will still be at 6.8 percent by the end of calendar year 1977—a rate that is insupportably high. In addition, I question the effectiveness of the $50 rebate as an economic stimulus measure, and the validity of the business tax credit. This tax credit, in fact, seems to be more a political gesture toward business than a sound, effective means to get the economy moving quickly.

Despite these reservations, however, I believe the resolution's basic thrust is in the right direction. It recognizes that the continuing high levels of unemployment cannot be tolerated, and that the Federal Government has the responsibility both to stimulate consumer demand and to create jobs.

For example, the Budget Committee more than doubled the administration's proposed expenditures for job creation. The committee called for increases in spending for countercyclical assistance, EPA reimbursement payments, accelerated public works, the job opportunities program, the employment of older Americans, providing additional jobs in recreation areas, and railroad and highway construction. These expenditures will produce both desperately needed jobs and valuable public services.

I would like to see the Congress go still

further. Tomorrow I will offer an amendment to increase the funds available for countercyclical assistance to State and local governments. My amendment will mean that increased countercyclical assistance will become available on April 1, 1977 instead of July 1, 1977 as the Budget resolution contemplates.

Having the extra countercyclical funds 3 months earlier will allow hard-hit States and localities to prevent budget gaps, layoffs, and service reductions which would otherwise result from this winter's unusually harsh weather. My amendment will, thus, help to create and save jobs in one of the weakest sectors of our national economy—State and local governments. I am hopeful that this amendment, which is supported by the Carter administration, will be adopted.

Mr. Chairman, I urge my colleagues, the Members of the House, to support this resolution tomorrow.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the gentleman from California (Mr. LEGGETT).

Mr. LEGGETT. Mr. Chairman, I do want to commend the gentleman from Connecticut (Mr. GIAIMO) and the whole committee for the work they have been doing this year on the third budget resolution.

I think we have held some very good hearings. We have come to some good conclusions. We have some hard numbers, and I believe that we have a stimulus package here that makes some sense. If we can tie this into a cooperative effort with the committees that we have to interrelate to, I do believe that we are going to build some jobs.

The deplorable economic situation that has persisted for over 2 years has prompted President Carter to recommend economic measures to stimulate our economy. The House Budget Committee, after careful and prudent consideration of these recommendations is reporting the third budget resolution which, by lifting our expenditure ceilings and lowering our revenue floor, provides the flexibility for the adoption of specific measures that will create jobs and increase consumer demand. I rise in support of this resolution.

Certainly no one can quarrel that the economic facts are ominous. Eight million Americans are unemployed, millions more have been discouraged from entering the work force. Our industrial capacity is underutilized, operating at only about 80 percent of its potential. Consumer demand is both slow and sluggish and the price spiral has not abated as rapidly as we had hoped.

The question is: how do we combat this? The Federal budget is, at best, a limited economic instrument for stimulation in that it constitutes only 23 percent of the gross national product. A sizeable portion of the $418 billion in outlays recommended as a ceiling in this resolution will be spent on programs that do not increase our economy activity, or our per-capita production: $20 billion is spent on unemployment compensation alone. Over $6 billion is spent on food stamps, and over $100 billion is spent on social security recipients, military and civilian retired personnel, and medicare and medicaid. All of these expenditures are worthwhile, but they do not increase the real wealth of our Nation through productive output.

Consequently, I enthusiastically support the efforts we have made here for additional job creation. We have recommended, including amendments that I understand will be accepted, an additional $4 billion in direct stimulation for job creation. Included in these recommendations are funding levels for 600,000 public service jobs in fiscal year 1977, which will go to 725,000 in fiscal year 1978. We recommend additional countercyclical assistance targeted to areas of high unemployment of approximately $1 billion with expenditures to begin as early as April 1. We have provided $4 billion in budget authority, with immediate outlays of approximately $500 million for accelerated public works. Provision is made for funding of additional highway and railway construction projects, recreation projects, and job opportunities programs.

All of these programs have been carefully thought out. They are targeted in such a way as to be noninflationary. Public service jobs are geared toward the hard-core unemployed. Countercyclical assistance is based on a formula so that the funds go to the places where there are no critical labor shortages. The construction industry, hardest hit by the recession, with unemployment being in some areas over 20 percent, can only benefit by the increased emphasis on public works projects. This was demonstrated conclusively last year by the noninflationary high spend-out rate from the highway trust fund where outlays were greater than at any time before and the bids on projects were the lowest in recent years.

The tax portion of the stimulus package recommended in this resolution merits our support. I am not overly enthusiastic about the per-capita $50 rebate because it is not targeted to the people who need it most. I do applaud the Ways and Means Committee decision to include AFDC—aid to families with dependent children—recipients.

I am considerably more enthusiastic about the employment tax credit. Under this program, employers will be given a $1,680 tax credit for each additional employee hired over and above the 1976 level. If employers take full advantage of this program, and I think they will, it could mean as many as 416,000 new jobs in this fiscal year and 1,426,000 in fiscal year 1978. I realize that not everyone is as enthusiastic as I am about the employment tax credit, because it applies only up to the first $4,200 in wages. However, most of the 2 million people who are entering the employment force every year are teenagers, where unemployment is as high as 19 percent. Since small businesses such as wholesalers, department stores, distributors, food chains, and grocery chains will benefit from this, it provides an opportunity for them to expand their labor force to include some of the 1.7 million teenagers who otherwise may be unemployable.

I was reading in one of the labor journals the other day an indication that tax credits are probably no good because most of the jobs created thereby are probably in the $10,000 bracket. A 40-percent credit on $4,200 is only a 15- or 20-percent overall benefit on a $10,000 job and that that is not enough of an incentive to hire new people.

It may well be that that is not enough of an incentive to hire new people if one really does not need to hire them, but I do believe that there are a large number of people that are having a difficult time at the present time in hiring teenagers at the minimum wage during times of fiscal extremis.

I think that this credit provides a reasonable way of circumventing that particular hurdle. It will allow 1.8 million young people who normally do not make more than $4,200 a year part time to go to work and be paid a regular rate of pay and, in large part, it is only going to cost the employer about half of what the teenagers are going to receive. So I think this provision has a potential and we shall see a very substantial improvement in the overall employment statistics.

I think this resolution as pioneered by the gentleman from Connecticut (Mr. GIAIMO) shows some clear directions to the House of Representatives, to the Committee on Ways and Means, and to the Committee on Appropriations. It allows for a deficit in the current fiscal year of some $77 billion, if I am not incorrect, with the revised estimates including the off budget items as presented by President Carter in his budget yesterday.

This is not an inconsiderable number, believe me. We all want to get back to a balanced budget, but we are not going to do it overnight.

On balance, therefore, I support this resolution. I must caution my colleagues, however, that our stimulus effort requires the direct cooperation of other segments and forces that shape our national economy. If the Federal Reserve Board adopts a tight money policy, even though there is no evidence of a shortage in available credit, it will obviously adversely effect our efforts here today. If the private sector does not launch its own independent efforts toward increased productivity and job creation that, too, will negate our efforts. Moreover, our State and local governments whose expenditures constitute 12.6 percent of our gross national product, must be careful not to work in a counterproductive manner and they, too, should gear their programs and decisions toward stimulative programs.

With this in mind, I urge my colleagues to support this resolution and I commend Chairman GIAIMO for his prompt and decisive handling of the President's proposals.

Thank you.

Mr. LATTA. Mr. Chairman, I yield such time as he may consume to the gentleman from Iowa (Mr. GRASSLEY).

Mr. GRASSLEY. Mr. Chairman, the Congressional Budget and Impoundment Control Act of 1974 set up a procedure for the orderly consideration of Federal spending and revenue policies. This was supposed to insure congressional control over the budgetary process. The third concurrent budget resolution, before us

now, contradicts both the spirit and letter of the law.

The second concurrent budget resolution for fiscal year 1977, which passed last September, was bad enough in that is projected a Federal deficit of $50.6 billion. House Concurrent Resolution 110, as brought to the floor, only compounds the problem and makes a bad situation worse. Federal spending will increase substantially. The projected deficit for fiscal year 1977 will rise by approximately 39 percent to the $70 billion level.

It should be noted that this revised deficit will constitute 10 percent of the total national debt which will break the $700 billion mark. It took the United States nearly 140 years to accumulate a national debt equal to that which we will be imposing upon our citizens in just 1 year. Of course, our predecessors subscribed to the apparently outdated notion that the Federal Government should not continually spend more money than it takes in.

Recently there has been a good deal of discussion on the merits of having a balanced Federal budget. The passage of this resolution will demonstrate to the American people that such talk about balancing Federal expenditures and revenues is merely talk and nothing more. A vote in favor of House Concurrent Resolution 110 should be construed as a vote in favor of more Government programs with increased spending. A vote in favor of this resolution is a vote against the best interests of the average American taxpayer who will finance such programs and the increased interest on the national debt with his hard-earned tax dollars.

Frankly, I fear that the measure before us is only a portent of things to come. The great majority of American people want reductions in both Federal spending and confiscatory rates of taxation. It is apparent that the President and Democratic Members of Congress have different ideas. They have seized this early opportunity to begin implementing their grandiose plans for the future.

I want to go on record now as opposing the passage of House Concurrent Resolution 110. There is a better alternative. The Congress should enact permanent reductions in tax levels, especially for wage earners.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Virginia (Mr. FISHER).

Mr. FISHER. Mr. Chairman, I rise to support the third concurrent resolution on the budget. It is not perfect, I am sure, but on balance I am convinced that it is the right move to take at this time. It includes a stimulation package, as stated, in outlays for 1977 of $17.2 billion. This is a little bit more than the President recommended but well within his ballpark. It includes certain other changes on the outlay side that would add an additional $2.5 billion to the stimulation amount. This, I believe, is necessary to get the economy going again at a level that will permit the deficit to be brought under control and reduce it way down, I hope to zero, within the next few years.

It would be nice if we could balance the budget without the stimulation implement in this program but I do not think that that is in the cards.

As I said, the stimulation program probably is not perfect, but I believe it is about right in total outlays and in the composition of the items that make it up. It includes in the tax package the famous $50 refund. The Committee on Ways and Means has in its action in committee the other day extended the $50 refund to cover a good many million people not covered in the President's proposal—welfare recipients, certain categories of veterans, recipients of black lung benefits, and so forth. At the same time it took another step to try to reduce the chance that very many people would get two $50 refund checks. The principle that was guiding us was to include everyone for one $50 refund and try to eliminate the possibility that persons would get two refunds.

The tax side of the program includes a reduction brought about by means of increasing the standard deduction, which presumably would be permanent.

The final thing was to provide the employment tax credit of special benefit to smaller business people with a cap of $40,000 in total credit in a year, or approximately 25 new jobs.

On the expenditure side the components included public service jobs, public works training, countercyclical aid, job opportunities program, and several other items. As I said, the stimulation package undoubtedly is not perfect, and certainly it is not precisely the one I would like.

For example, I would like to have kept in the picture the option of some increase in the investment tax credit, mainly because I think everybody in the economy, certainly those making major decisions about our economic future, ought to be a part of the program. Therefore, I should have preferred that they be included, and perhaps there will be time to make that change later on.

I should have preferred on the expenditure side, for example, that we go a little heavier on countercyclical aid, which is the best thing going that I know of to get aid right in where it is most needed, and perhaps a little less heavy on public works or something else. But on the whole I think the job has been well done, and Members, I think, will have a hard time to improve on it in a way that will be generally acceptable, apart from what each individual would like for himself. This is a 2-year strategy leaning heavily on tax refunds and reductions in the first part and heavily on public spending in the second year.

We will have a chance to look at the second year again later on this year when we adopt our budget target guidelines for fiscal year 1978, so we are not cast in concrete for that second year of the 2-year plan.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GIAIMO. Mr. Chairman, I yield 2 additional minutes to the gentleman from Virginia (Mr. FISHER).

Mr. FISHER. Whether this strategy will work or not depends quite largely on how the economy reacts to it. I believe everybody should have a part in the program. This is part of the psychological aspect of the plan. There is a morale factor that everybody in the economy—consumers, social security recipients, welfare recipients, businessmen, everybody else—ought to be in on the act. I think this is very important because the transmission belt between the Government stimulation and the much, much larger massive private economy operates on the psychology that surrounds the stimulation. Do business people, do consumers who have a little more money to spend, react in such fashion that the stimulation incentive works and the private economy really does pick up?

That is why I think it is so important that everybody have a part in the program. The Government owes it to the country to take the lead. We are taking the lead with this program.

It is not a huge program—$19 billion in additional outlays this year stacked up against a Federal expenditure of over $400 billion and a gross national product of nearly $1.8 trillion—but it can be a critical item if it is done in such a way that the whole economy, the whole country, reacts favorably and takes the incentives provided and puts them to work so the economy picks up. If the program succeeds, and it is a modest program, the cost of it will be small indeed.

Mr. GIAIMO. Mr. Chairman, I yield 8 minutes to the distinguished gentleman from South Carolina (Mr. DERRICK).

Mr. DERRICK. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I urge my colleagues to support the third budget resolution for fiscal year 1977. This third budget resolution has been forced on the Congress by events outside our control. Since we passed the second budget resolution the economic recovery, which we expected, has faltered. Our expectations were shattered by several events: an $11 billion shortfall in Federal spending, the failure of the business community to expand investment, the slow growth in the economics of our major trading partners, and the debilitating effects of this brutal winter. Our choices are simple; we can do nothing and let the economy drag itself along or we can provide an economic stimulus which can ignite a self-sustaining movement back to full-employment. President Carter has suggested the latter course. I recommend we give him the opportunity to lead.

A strong and growing economy is required to satisfy the needs of our country. To balance the budget, to offset the heavy burden of taxation, to provide security for our senior citizens, and to assure sufficient opportunities for our citizens to enjoy productive and rewarding employment it is imperative that the economy achieve and maintain full-employment with price stability.

The performance of the U.S. economy during the 1970's has moved us away from achieving our goals. In the 1970's the unemployment rate has averaged 6.2 percent and reached 9 percent in 1975; the rate of inflation has averaged 6.5 percent in the 1970's, as compared with 2.3 percent between 1948 and 1969; economic growth in the 1970's averaged 2.4 percent per year, a 50 percent lower growth rate than we enjoyed during the previous two decades. Between 1973 and

1975 we suffered through the deepest and longest recession since the 1930's. The manifestations of the inadequate performance of the economy are obvious: large deficits, mounting public debt, escalating costs for welfare, food stamps, mortgage foreclosures, business bankruptcies, labor force withdrawal, and shrinking public services at the State and local level.

The economy has been recovering for the past 2 years. But the pace of the recovery is unsatisfactory: there are still 7.5 million people unemployed, industrial production has barely recovered to its 1973 level, business investment in new plant and equipment is still well below its 1973 level. Real GNP in the final quarter of 1976 exceeded total output in the final quarter of 1973 by only 3.1 percent. The recent spell of unusually heavy storms and severely cold temperatures have added to our economic problems. Shortages of natural gas caused factories to close, transportation flows were interrupted by snow storms, conservation practices led stores, schools and other employers to curtail their operations. The severe drought in the Western States will add to our difficulties in the months ahead.

It is against the background that the third budget resolution for fiscal year 1977 must be seen and should be judged.

In the absence of any additional stimulus we can expect the economy to remain in the doldrums. The economy will grow by only 4.4 percent during 1977; the unemployment rate will average 7.5 percent for the year, and the Federal deficit will approach $60 billion. These are our best estimates of what will occur if we do not act.

The President and your Budget Committee found this prospect unacceptable! Charles L. Schultze, chairman of the Council of Economic Advisers, has testified that "the basic problem is that the recovery has not yet proceeded far enough or rapidly enough to set off a self-sustaining economic expansion." Additional economic stimulus that expands the stimulus package submitted by the President and recommended by your committee provides a stimulus, through tax rebates and tax reductions to consumer spending that will expand markets, reduce unemployment, stimulate business investment, and initiate a period of self-sustaining, long-lasting economic recovery.

The budget resolution also provides for manageable increases in a small number of expenditure programs. We have tried to identify programs whose expansion would quickly lead to increases in employment, finance worthy projects, and would not simply fund "boondoggles." Your committee's resolution is less than one-half of 1 percent higher than the spending increases recommended by the President. We have recommended to the Committee on Ways and Means, and they have accepted, the creation of an "employment tax credit." This innovation in Federal tax policy will provide a substantial incentive to the private sector to hire new workers. This promising new policy direction can be pursued only if the third budget resolution is passed.

Until we get the economy to full employment and on a track of sustained economic growth we will be faced with votes on big deficits, big welfare costs, and big government.

Mr. GIAIMO. Mr. Chairman, I yield 5 minutes to the distinguished gentleman from Minnesota (Mr. FRASER).

Mr. FRASER. Mr. Chairman, last September when we passed the second concurrent resolution for fiscal year 1977, it was estimated that unemployment by the end of calendar year 1977 would be down to 6.2 percent. In their January report, "The Disappointing Recovery," the Congressional Budget Office indicated that with no changes in current policy we can expect the end of the year unemployment rate to be between 7.1 and 7.8 percent. During 1976 the economy did not grow as fast as had been expected. The worldwide economic lull has lasted longer than was expected. The Federal Government spent less than was expected. And now, to make matters worse, the cold weather and gas shortage have further reduced production.

It is within this economic context that the President proposed his stimulus package and that we are now considering the third concurrent resolution. It should not be expected that we will be dealing with a third budget resolution each and every year. The present resolution is an emergency measure. Fortunately, the budget process provides the required flexibility; we can come back with adjustments for unexpected contingencies. Nonetheless, it would be unfortunate if we came to rely upon a corrective third resolution as a regular event.

The present resolution does not represent a cure for our unemployment problem. The Budget Committee staff estimates that even with the additional stimulus outlined in the resolution, unemployment at the end of calendar year 1977 will be about 6.8 percent. This 6.8-percent figure is a national average. It masks a much more unpleasant social reality. The present unemployment is very unequally distributed amongst the population. Our unemployment problem is a racial problem, a class problem, and a youth problem. Anyone who is in doubt about this need only look at the statistics:

In January unemployment among whites was 6.7 percent; unemployment among nonwhites was 12.5 percent.

Unemployment among white-collar workers was 4.5 percent; unemployment among blue collar workers was 8.4 percent.

Unemployment among youth, 16–19, was 13.7 percent.

For those who are both young and nonwhite the problem is compounded: In January the nonwhite youth unemployment rate was 36.1 percent. There is no point in fooling ourselves. The budget resolution will not of itself solve our unemployment problems. Unemployment is more than a macroeconomic problem. Present unemployment is also the culmination of a history of social problems which remain unsolved.

Nonetheless, the budget resolution before us is an excellent first step. Under the able leadership of Mr. GIAIMO, the Budget Committee has acted quickly, and it has acted intelligently. The general framework of the resolution closely resembles President Carter's stimulus proposal. Without recommending the particular scheme put forward by the President, the committee provided for a tax package of $13.8 billion, the same amount proposed by the President. The President called for $1.8 billion in spending; the committee recommended an additional $1.63 billion above the President's proposal.

The additional spending recommended by the committee takes some additional and valuable steps toward directly affecting the unemployment problem. The committee added $300 million in accelerated public works; $300 million for the training and employment programs under CETA titles I, III, IV; $200 million in railroad and highway construction; and $300 million for employment in the National Park Service and National Forest Service.

It should be remembered that these are outlay figures for fiscal year 1977. They represent predictions of what will be spent by October 1. The full extent of the expansions of our public works and public service programs will not be felt until some time in 1978.

Four weeks from now the committee will be marking up the first concurrent resolution for fiscal year 1978. If we are serious about reducing unemployment, we will need to followthrough with the same kind of action as is offered by the present resolution.

Mr. DICKS. Mr. Chairman, I agree with most of the changes incorporated in the third budget resolution, with one major exception: I do not believe that the Congress should rescind funds to convert the nuclear-powered cruiser *Long Beach* into an Aegis ship.

Let me say at the outset that I have some parochial concern in this matter: The *Long Beach* conversion—if it is to take place—will be performed at Puget Sound Naval Shipyard. But I believe there are compelling reasons that are anything but parochial which argue for this Aegis conversion.

In my view, the decision made by the Ford/Rumsfeld team and ratified by the Carter/Brown team not to build a fifth large deck, nuclear-powered carrier is debatable.

But assuming it is correct, I believe that the same logic that leads one to this conclusion also calls for the conversion of the *Long Beach* into an Aegis platform without delay.

As I understand it, the reason for switching away from large-deck aircraft carriers relates to the increased vulnerability of such platforms. Many of my colleagues know better than I about Soviet efforts in antiship satellite surveillance and cruise missiles. I am not very conversant about Soviet satellite surveillance systems, but what I have seen about their antiship missiles causes me great concern.

At present, we are relying on the Tartar, Terrier, and Talos—the three "T's"—for intermediate-range defense of the fleet against cruise missiles and aircraft. These systems were introduced into the fleet in the 1950's, and the Navy has told us that we really cannot rely on

them to do the job against current and projected threats. A National Security Council study recently agreed with this conclusion, according to the former Secretary of Defense, by noting that "the U.S. Navy is vulnerable to the Soviet antiship cruise missile threat."

This is understandable when we consider Soviet naval tactics which appear to place great reliance on massive, coordinated attack by cruise missiles and other forces. According to the former Assistant Secretary of the Navy for Research and Development, the most demanding scenarios call for a reaction time of 8 seconds to successfully blunt such cruise missile attacks. One survey I have seen lists 10 different varieties of Soviet air-to-surface cruise missiles, and 8 more surface-to-surface cruise missiles. Twenty percent of the Soviet submarine force fires cruise missiles, as do seven classes of Soviet major surface combatants. By one Navy account, there are 251 cruise-missile-firing Soviet ships, which house 1,210 cruise missiles. In addition, the Soviet naval aviation arm has 290 Badger C and G aircraft which can fire cruise missiles. Some observers look at the Backfire bomber as a threat in the strategic role, but in my view, the real threat from Backfire comes from its antishipping capability.

Up to now, the Congress has really been playing "chicken" with the Aegis system. There are two separate camps, one in favor of a conventionally powered DDG–47 Aegis platform, and one in favor of a nuclear-powered strike cruiser platform. Up till now, each camp has been successful in blocking the other, but the end result is that we have yet to start construction of a single Aegis ship. Clearly, the Navy and the American defense posture suffer as a result of this impasse.

In light of this threat, the administration has made a decision not to build any additional large-deck carriers. But by the same token, in light of this threat, what we are going to do to protect the four nuclear-powered and eight conventionally powered carriers we can expect to serve U.S. national purposes in the 1980's and 1990's?

Just about everyone agrees that Aegis is one way to meet this threat, but from this point onward, the consensus breaks.

I believe there is another route we should investigate on this matter, and that route involves the conversion of the *Long Beach*. For the following reasons, I have concluded that it makes a good deal of sense to convert the *Long Beach* into an Aegis ship—but not necessarily as a prototype for the Aegis strike cruiser:

First. There are clear tactical advantages with having an Aegis nuclear-powered escort alongside a nuclear-powered carrier—even if all the other escorts are not nuclear powered.

Second. The *Long Beach* conversion is the earliest mechanism to place Aegis at sea. An Aegis strike cruiser prototype could be combat ready in fiscal year 1981, 1 year ahead of the DDG–47 and 3 years ahead of the first CSGN. If the decision were made to make the *Long Beach* an Aegis ship without being the strike cruiser prototype, the initial operational capability of the ship would undoubtedly be even sooner.

Third. The *Long Beach* overhaul, as planned by the Navy as a substitute to the Aegis conversion, represents a poor utilization of resources. At present, this platform has all the advantages of nuclear power and none of the advantages of modern, effective, offensive, or defensive weapons suites. The Navy's proposed overhaul would make marginal improvements on both fronts; but these improvements will constitute an inefficient use of a potentially valuable naval asset.

I recognize the arguments against the *Long Beach* conversion. We are dealing with scarce dollars, and the complete *Long Beach* conversion will cost $783 million in today's dollars. There is one other alternative, however, that this Congress may want to explore, one that will save dollars and yet will provide the Navy with nuclear-powered Aegis ships.

It may be possible to convert the *Long Beach* into an Aegis ship without going the entire route and making it a strike cruiser. The cost estimates I have seen for a straight Aegis conversion range between $400 and $675 million. In addition, it may be worthwhile to reopen the question of refitting Aegis on board the four *Virginia*-class nuclear-powered cruisers. Once again, this would be expensive: The lead conversion would cost $400 million. But as you know, these ships were originally envisioned to handle Aegis; they are certainly big enough—they are as large as the DDG–47.

All of these conversions would be less costly than to proceed with a new class of nuclear-powered strike cruisers; perhaps we will need the strike cruisers in addition to these conversions—I do not know. But I do know that we are not using our nuclear-powered surface ships to their fullest potential, and Aegis conversions can turn this situation around.

I realize that the "bare-bones" Aegis conversions I am talking about here will not add any offensive punch which is badly needed in today's Navy. This means that stripped down Aegis ships will not be able to operate independently from aircraft carriers. If the Congress feels this is a valid mission requirement, then the suggestions I have offered here do not make sense. But if the Congress feels that the independent operations requirement is not valid, or that we will not have enough nuclear-powered Aegis ships to carry out this mission, then my suggestions take on added force. Aegis ships operating in concert with aircraft carriers do not need to provide offensive punch—the carrier can provide enough of its own.

For these reasons, I believe we should allow the original downpayment on the *Long Beach* conversion to stand, and I believe we should not rescind the $371 million previously authorized and appropriated for this purpose.

Mr. BADILLO. Mr. Chairman, although I am far from being entirely happy with the provisions of House Concurrent Resolution 110, the third concurrent resolution on the budget for fiscal year 1977, it does, for the first time, achieve a $3,312 million cut in budget authority and a $573 million cut in actual budget outlays for defense spending. In addition, it makes an attempt to respond to our critical dual problems of national unemployment and housing shortages by stipulating an additional $20,300 million in budget authority and $57 million in outlays for subsidized housing. So, for the first time since the congressional budgetary process began, I shall vote for the measure before us as a gesture of good faith and an expression of confidence that these improvements constitute only a beginning.

Labor Department statistics indicate that unemployment has dropped from 8.1 percent in November–December 1976 to 7.9 percent by January 12, 1977, the total number of persons looking for work remained unchanged. The unemployment rate for black workers remained constant at 13.6 percent, while the overall rate for teenagers dropped by only one-tenth of 1 percent, from 19 to 18.9 percent. Moreover, the Department's data also indicates that existence of more than 1 million discouraged workers, ominously up by about 200,000 from the third quarter. There are, of course, no accurate statistics to reveal the plight of part-time workers who want and need full-time employment, and young workers and women who for some reason or another cannot enter the work force.

In their supplemental views accompanying the committee report dealing with this resolution, Congressmen MITCHELL and STOKES express serious reservations about the impact that the budget resolution, with all its limitations, can have on our national economic situation. I share their concerns and reservations and, should it later develop that commitment to a full employment policy does not become a realistic national policy goal in 1977–78, I shall support their efforts to act as "the advocates of job opportunities for the 'disadvantaged'" in formulating and advocating an alternate policy. However, I hope that this will not become necessary and that, instead, Congress and the administration working together will be able to supply our economy with the necessary impetus.

Mr. CONYERS. Mr. Chairman, the third concurrent resolution at best is unacceptable to me because it accepts a disastrously high rate of official and unofficial unemployment. In fact, the third budget resolution does not in any way really address the problem of millions of men and women, youths and adults, who cannot even find a foothold in the labor force.

The third budget resolution guarantees the status of unemployment, not the status of employment, to over 7 million people by the end of this year. Like the 1976–77 Federal budget, under a Republican administration, it is essentially a private enterprise budget designed to bolster the confidence of businessmen, bankers, and stockmarket investors. But what about the confidence of those millions of citizens who cannot participate in worklife, and then are subjected to abuse because of their dependence on public assistance?

The third budget resolution fundamentally is the wrong collection of answers, with respect to unemployment, to the wrong problem. The tax rebate approach especially attempts to buy time, without unduly unsettling anyone, by a one-shot return of taxpayers' money.

But the question remains: to buy time for what? As yet we have no commitment by the administration to economic planning, which by definition is long range. Of course, economic planning is going on all the time, as highlighted by the gas crisis. Only it is happening principally in corporate boardrooms related to schemes for profit maximization at the public expense. Obviously the Federal Government will have to assume a much more active role in economic planning if we are going to have a full employment economy and protect the public interest.

How can I or any other Member of Congress with a depression-level unemployment rate in his or her district in good conscience tell our constituents that this is the most that the Government of the United States can do for them.

Mr. KEMP. Mr. Chairman, we are here today to consider the third concurrent resolution on the budget for fiscal year 1977; a resolution necessitated by President Carter's economic stimulus program. The effect of this resolution will be to further increase the budget deficit for this year by $19.7 billion over the second resolution to a total of $70.3 billion for for fiscal year 1977. This is $2 billion above the President's own estimate because of additional spending authority for public works included by the Budget Committee.

Now, I do not think there is a single Member of Congress who does not agree that the budget ought to be balanced—perhaps not immediately, but certainly within a few years. This is a goal which President Carter has also expressed considerable desire to achieve. But given the magnitude of these spending figures, it seems to me that we are making little progress in this area, despite the revised budget procedure adopted by the House last session. In fact, we seem to be going backward, given the insistence by the Budget Committee to enlarge the President's stimulus package above his own request.

At this point it might be useful for us to consider exactly why it is important to balance the Federal budget. The reason is really quite simple: every dollar the U.S. Government spends must come from somewhere, because each dollar represents real resources which must be taken out of the economy somehow. If the Government does not raise these resources by taxation there are only two other ways it can get them: by borrowing the money it needs or by printing it up out of thin air. All of these methods ultimately have bad side effects.

Taxation, for example, obviously must be kept to some level below 100 percent, or else there will be nothing to tax. As they say, 100 percent of nothing is nothing.

Borrowing is also a withdrawal of real resources from the economy, but in some respects it is a more harmful way than by taxation. This is because the funds come out of the capital stock needed to expand plant capacity, increase productivity through new machinery, and create jobs. It also drives up interest rates by increasing the demand for money which would normally go for such things as home mortgages.

Creating the money by the printing press is by far the worst way the Government could raise its funds, yet it is a time-honored technique going back to ancient times. It may be accomplished in a more sophisticated manner through the Federal Reserve System today, but it is essentially no different than counterfeiting. Since these bogus dollars command the same resources as a dollar raised through taxation or borrowing, however, they create excess demand for goods and services and become the principal cause of price inflation. A report by the House Banking and Currency Committee, for example, recently estimated that 60 percent of current price inflation can be attributed to increases in the quantity of money. The result is that the price increases themselves become an indirect tax on money held and on any kind of fixed income. This would be bad enough, but it also throws the price system out of coordination, causing tremendous inefficiencies.

A further result of inflation is that it indirectly causes taxes to go up. This is because our individual income tax rates are graduated such that the higher one's income, the higher the proportion of his income he pays in taxes. The idea, of course, is to match taxes with ability to pay. Unfortunately, this also means that there is a built-in disincentive to earn more money at some point. If, let us say, you are in the 50 percent tax bracket and you know that each additional dollar you earn will be taxed at, say, 55 percent, you may just decide it is not worth the trouble to earn that additional dollar and you take a vacation instead. The result is that the country loses not only the additional wealth that this person would have created had he worked, but the Government loses tax revenues as well.

You may say that this is a phenomenon which is relatively rare and confined only to millionaires and the like. The truth is that as a result of inflation and real economic growth since 1954, when the tax rates were last adjusted, there are a great number of people who are affected by high marginal tax rates and who either reduce their ability to earn proportionately or invest their money in tax shelters, such as tax-free municipal bonds, for example. This has also had the effect of secretly raising taxes across the board at a rate which is higher than the rate at which incomes have risen over the same period. Thus, in the early 1960's only 3 percent of all tax returns were affected by marginal tax rates above 30 percent. Today, nearly a third of all tax returns are affected by these rates. The Congressional Budget Office estimates that this inflation-induced tax increase will cause Federal revenues to rise by 1.2 percent for each 1-percent rise in the Consumer Price Index. This is a real and significant increase in the total tax burden on the economy which must have a serious effect on the incentive to work, to invest, and to hire.

An economist named Colin Clark once argued that the maximum level of taxation which could be sustained without serious adverse effects was 25 percent of national income—which, roughly speaking, is the gross national product less Government expenditures. This is a figure which John Maynard Keynes agreed was probably correct. The truth is that the total tax burden in the United States today is somewhere over 40 percent.

This would seem to indicate the drastic need for a tax cut. I believe we have to have at least a 20-percent reduction in each individual income tax rate just to make up for the inflation that has taken place since 1964.

Many of my colleagues are resisting this logic. Some feel that a cut in taxes will only exacerbate the deficit, others feel that tax cuts are too slow in stimulating the economy, and others resent any kind of across-the-board tax cut because they want to "soak the rich." I would disagree with each of these arguments and I believe they can be refuted both logically and by historical experience.

It is unlikely that any tax rate cut of 15 percent would result in an increase in the deficit because it will immediately result in an expansion of the tax base itself. This means there will be more total income upon which to raise taxes, even at the lower rate. This is because the tax rate cut will instantly reduce the cost of hiring new workers, create greater incentives for individuals to work and for companies to expand their productive capacity, and free billions of dollars of funds available for capital investment.

It can be seen from this that a tax cut works primarily to increase the total supply of goods and services as well as the demand for them. By contrast, increased Government spending works almost totally to increase demand and only secondarily to increase supply, through a kind of trickle-up process. Since demand increases faster than supply and since the money to pay for the Government spending comes from either borrowing or an increase in the quantity of money, the result inevitably must be inflation. On the other hand, if tax rates are reduced it will stimulate supply more than demand, which will hold down prices and expand the tax base at the same time.

President Kennedy is one who understood that tax cuts will stimulate the economy better than Government spending, replace lost tax revenues by expanding the tax base, create jobs, encourage investment, and fight inflation at the same time. As he put it in a speech in 1962:

> The single most important fiscal weapon available to strengthen the national economy is the Federal tax policy. The right kind of tax cut at the right time is the most effective measure that this Government could take to spur our economy forward. For the facts of the matter are that our present tax system is a drag on economic recovery and economic growth, biting heavily into the purchasing power of every taxpayer and every consumer.

This approach toward tax policy and economic growth was embodied in the Revenue Act of 1964. This bill cut the highest individual income tax rate from 91 to 70 percent; reduced the lowest rate from 20 to 14 percent; and cut the corporate tax rate from 52 to 48 percent. These were the principal features.

President Kennedy expected that this bill would probably create a larger deficit initially, but that this would be made

up within a short time by increased production. As he put it in a 1963 speech:

Our choice today is not between a tax cut and a balanced budget. Our choice is between chronic deficits resulting from chronic slack, on the one hand, and transitional deficits temporarily enlarged by tax revision designed to promote full employment and thus make possible an ultimately balanced budget.

I think that much the same thing can be said today. I also think that much the same results would be achieved. As the following table demonstrates, the Treasury Department estimated that the Kennedy tax cuts would result in a loss of revenues for several years, when in fact the revenues increased:

[In billions]

	1963	1964	1965	1966	1967	1968	Total
Treasury-estimated revenue losses	−2.4	−5.2	−13.3	−20	−23.7	−24.4	−89
Actual revenue gains	+7.0	+6.0	+4.0	+14	+19.0	+4.0	+54

Note: Library of Congress study done at my request.

The stimulative effect of this tax cut was immediate and substantial. Until the heavy spending and inflation resulting from the Vietnam war began pushing incomes higher into the tax brackets—thereby offsetting the tax cuts—the economy was on a continuous upward course. This is why such a large tax cut would be needed today just to compensate for what has happened since 1964.

In spite of this evidence, many will still argue that increased Government spending would be a faster, more efficient method to create jobs. It is alleged that something like $20,000 in tax cuts is necessary to create one job, while only $5,000 in direct spending is needed—this argument was recently made by Secretary of Labor Marshall. Furthermore, it is said that since Government spending creates jobs directly, this is faster than creating them indirectly through expansion of private industry. Both of these arguments are demonstrably wrong.

The Washington Star, for example, recently noted that the $2 billion public works package passed over the President's veto 7 months ago has produced exactly 250 jobs in the bureaucracy of the Commerce Department to administer the program. This is because there is so much redtape involved that there inevitably will be a considerable delay in channeling the money to public works or other government projects. Furthermore, the redtape also insures that a considerable amount of money allocated for public works projects will go to places that do not have an unemployment problem.

By contrast, a permanent tax cut would actually begin to have stimulative effects even before it took effect. This is because individuals and businesses would be able to anticipate higher profits and incomes not just for the present, but for the future as well. Businesses especially must make their decisions about whether to expand plant capacity long before the anticipated need for that capacity. Thus, if a company believed that its profits would be higher within the next few years, or that demand for its product would be increasing with time, it will begin to expand its production today, regardless of what current sales and profits are. This will provide immediate, real stimulation to the economy which cannot result from any kind of temporary tax cut or rebate, since businesses will know that the effects will only be temporary and will act accordingly.

It is another curious fact about a reduction in tax rates that it will actually result in making the rich pay more taxes. Take the case of the man who quits work in, say, August, because whatever income he earns after that date is taxed at a rate which does not make it worth his while to work. The net losers, obviously, are the people who would have benefited from his services, and the Government which lost potential tax revenues. By reducing the tax rates, therefore, such people would be induced to work and produce more, thereby increasing the tax base and resulting in higher revenues. By the same token, it would draw investment capital out of tax shelters and into the market, where it can be used to expand plant capacity and create new jobs.

This phenomenon was much more clearly understood in the 1920's than it is today. At that time Andrew Mellon was Secretary of the Treasury and he made it a personal campaign to reduce the high tax rates which had been imposed by World War I. He was supported in this effort by the New York Times, which on December 23, 1923, clearly outlined the situation in the following editorial:

Parts of Secretary Mellon's plan to cut taxes are accepted by everybody. No one can directly oppose easing the lot of people of moderate means. But there is much pother about lowering the rate of surtaxes. Senator Simmons of North Carolina declares that his party will yield to none in its desire to reduce the taxes of the middle classes, but that it will withstand to the last gasp the Mellon scheme which is intended to "relieve the rich."

The great point of Secretary Mellon's main argument is that the rich have found ways to relieve themselves. They are progressively escaping the heavy taxes levied specially upon them. It was certain from the first that they would do so. The Treasury figures cited by Mr. Mellon prove that they have done it. He wants in reality to get more money out of them than they are now paying. But he proposes to do it by making their rate of taxation lower. This is in line with economic theory and with experience running over many years, though of course it seems a ridiculous proposition to those whose thoughts are all of aiming sharp arrows of taxation at wealth.

Suppose the surtaxes on large incomes are not reduced—suppose that they are even increased; what will happen? The rich may or may not be relieved, but it is certain that the poor will be hit harder than ever. For a large proportion of the heavy taxation of rich corporations is inevitably passed on to the consumer. The tax is necessarily entered as an item in the total cost of production. The result is to make prices rise, to increase rents, to cause the poor man to feel that the necessities of life are less within his reach than ever. This sure course of economic events has been followed in all countries, and it has plainly been followed during the last few years in the United States. The lawmakers gleefully start out to lay oppressive taxes upon the rich, but really are all the while striking at the poor. The true way to help the latter is to make it possible for the former to put more money into enterprise and industry and less into tax-exempt securities.

It is therefore a fact of life that you cannot "soak the rich" by increasing tax rates or simply eliminating so-called loopholes. Even if you could make the tax rates effective and accomplish the elimination of all tax loopholes, you would still be left with the problem of getting additional revenues because rich people will either leave the country—as many people are leaving Great Britain today—or simply stop working and investing and live off their assets. The only effective way to make the rich pay more taxes is to lower the tax rates.

In spite of all this, I am sure that many people will continue to insist that we should not cut taxes but increase Government spending. I suspect that many of these people secretly fear that a reduction in taxes will mean a reduction in Government power and they do not want this. If this is true, then they are correct. Obviously the level of taxation is an indication of Government's control over the individual. If a person were taxed 100 percent of his income he would be a slave. Practically, of course, the point at which he would become a slave would be considerably lower than this. At the present highest level of 70 percent a person is working twice as hard for the Government than he is for himself. Does this not make him virtually a slave? After all, who really deserves having 70 percent of his income taken away from him regardless of how much he makes?

For these and many other reasons, it is now becoming more apparent that tax rates must be drastically reduced. And the beneficial effects which would flow from this action would be dramatic, far-reaching, and fast. As Prof. Paul McCracken recently put it:

The higher level of economic activity produced by tax reduction is a far more effective job creation program than public spending. It is more effective because it is faster and because the employment opportunities are less apt to be dead-end jobs. We tried tax reduction in 1954 and it worked. We tried it in 1964 and it worked. We tried it in 1975, and the fact that 4.2 million more people are now employed (88 percent of them in the private sector) strongly suggests that it worked once again. Because history is so clear about this, one has to suspect that those who stubbornly try to maintain this distinction between tax reduction and job creation have had their major objective simply a further expansion of political empires where both the newly created bureaucracy and the holders of public service jobs will be more explicitly beholden to government.

We are presently debating the third concurrent resolution on the budget for fiscal year 1977. I think that now would be an appropriate time to implement an across the board tax reduction in place of President Carter's stimulus program. An amendment to this effect will be offered from the floor and I urge my colleagues to support it.

Mr. DORNAN. Mr. Chairman, I rise in opposition to the third concurrent resolution on the budget for fiscal year 1977.

We have been told that this resolution is necessary to accommodate President Carter's "economic stimulus" proposals. These economic stimulus proposals—the President and the Democrat leadership lead us to believe—will help cure our economic ills. The proposals will encourage consumer spending; create new investment; reduce unemployment; and they will not increase inflationary pressures.

Now these are lofty goals which I believe all of us here support. The goals are good but the road that these proposals take us down leads in the opposite direction. I believe that this budget resolution is nothing more than a blueprint for increased Government intervention in the economy, costly and extravagant welfare proposals, and larger, inflation-causing deficits.

The approach of the President and the Democrat majority is typical of past Democrat economic proposals. It is nothing new. The approach is more big government at the expense of the taxpayer and the private sector of the economy.

If anyone doubts that this is largely a party measure, I would point out that the Republican members of the House Budget Committee voted unanimously against reporting this ill-advised piece of legislation.

What does this third resolution promise to do and how does it fail?

ENCOURAGE CONSUMER SPENDING

The President recommended a $50 tax rebate for every American—regardless of whether or not he pays taxes. The majority on the Budget Committee accepted the principle of the rebate, but imposed arbitrary and discriminatory limitations on the amount of the rebate. Both the President's proposal and the committee's version are intended to expand consumer demand and thus production and investment.

That is, as I said, an admirable goal. But the $50 rebate will not accomplish it.

The rebate concept is not new. It was not too long ago that a rebate four times the size of that proposed by President Carter was paid out. Can we forecast the outcome of the $50 rebate by examining the results of the $200 one?

The $200 rebate did little to stimulate new consumer demand. Studies conducted after the rebate program was completed, showed that most Americans spent their $200 on existing debts. They did not go out and spend their money on new purchases. It was a costly attempt that failed in its objective. The same result can be expected of the limited $50 rebate proposal.

It is just more politics as usual. It is not sound economic policy. We should face the facts: under the guise of tax relief, this one-shot handout allows the Government to maintain tax levels at their present crippling rate. Future big-spending programs are not threatened in any way.

But there is another way to reach the goal of stimulating consumer demand: the minority in Congress has proposed a permanent reduction in taxes in order to encourage new spending and investment. Legislative initiatives such as the Jobs Creation Act would change the tax laws to provide for a variety of personal and business tax credits and reductions. A permanent tax cut would increase take-home pay every week—not just the week of the rebate. It is this assurance that take-home pay will be larger over the long haul that stimulates consumer purchasing.

The effects of a permanent tax cut go far beyond those of the tax rebate. It has been estimated that within 3 years of the passage of the Jobs Creation Act, capital investment expenditures would increase by $234 billion and the gross national product would increase by $600 billion.

I sincerely doubt that many Americans would trade this kind of improvement for a $50 rebate.

LOWERED UNEMPLOYMENT

Another proposal of President Carter and the Democrat leadership is to put people back to work. Once again, this is an admirable goal. But spending 3.4 billion on make-work programs is not the way to go about it.

This vast sum of money will be expended on public works and public service jobs programs. According to the Congressional Budget Office, more than half of these jobs will not be available for at least 2 years. Even when they are realized, jobs of this type are often of short duration—anywhere from 1 month to a few years. Moreover, when so substantial an amount of funds is injected into the economy 2 years after having been voted, the result is often the opposite of that intended. This massive influx of artificially created funds may actually impede recovery by causing an inflationary spiral.

This has happened time and time again over the last few decades. But even after decades of recorded failure, the Democrat majority continues to rely on a pork barrel approach to the unemployment problem.

The pork barrel approach will not work and some of us in Congress recognize that fact. We believe that by permanently reducing business and corporate taxes, more people will be put back to work in productive, long-term employment.

Reducing business and corporate taxes stimulates capital formation and investment. This in turn produces permanent jobs at less cost than Federal make-work programs. This fact has been attested to by the Minority on the House Budget Committee. By cutting taxes to the extent proposed by the Jobs Creation Act, 28 million new long-term jobs can be created in a 3-year span.

INFLATIONARY PRESSURES EASED

The President has stated that he will balance the budget and he has called for "prudence and fiscal restraint." The majority on the House Budget Committee has stated that the proposals hold no risk of overstimulating the economy and spurring inflationary pressures.

Again, prudence and fiscal restraint are admirable goals and ones to which we can all subscribe. But the third budget resolution fails to achieve these goals.

The passage of this resolution will create the biggest national deficit in our Nation's history: $70.3 billion. The result of such a vast increase in the deficit is well known: the Federal Government will either print more money or will intrude further into the private money market. The Federal Government will have to do one—or both—of these in order to finance the debt. Either approach creates inflationary pressures. One does it by decreasing the worth of the dollar, the other does it by bidding up the cost of borrowing money.

There are those of us who recognize these facts of life. The Government cannot go on spending and spending with no thought of tomorrow. However, if taxes are reduced permanently—as the minority proposes—the tax base will expand and greater total revenues will be generated. Passage of the Jobs Creation Act would not increase the deficit but would increase Federal revenues by $45 billion. This is the way to balance the budget without risking a killing bout of inflation. This is the way to establish a healthy, confident, and productive economic environment.

Before endorsing the proposals embodied in the third budget resolution, we would be wise to heed the warning of Prime Minister James Callaghan of Great Britain:

> We used to think that you could spend your way out of a recession. . . I tell you, in all candor, that that option no longer exists, and insofar as it ever did exist, it only worked by injecting bigger doses of inflation into the economy followed by higher levels of unemployment as the next step. That is the history of the past twenty years.

In conclusion, Mr. Speaker, I must say that I am extremely disappointed and discouraged by the President's recommendations and by the actions of the majority on the House Budget Committee. Real economic growth requires real solutions. Real solutions will not be found in the sheltered halls of Congress and pork barrel programs. They will only be found in the framework of our market economy. The continued expansion of the Federal Government, as evidenced by the third resolution, means more economic uncertainty, increased inflationary pressures, and sustained long-term unemployment.

I intend to vote against this measure, and I urge my colleagues to do the same.

Mr. LATTA. Mr. Chairman, I have no further requests for time, and I yield back the balance of my time.

Mr. GIAIMO. Mr. Chairman, I yield back the balance of my time.

Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. BRADEMAS) having assumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the concurrent resolution (H. Con. Res. 110) revising the congressional budget for the U.S. Government for the fiscal year 1977, had come to no resolution thereon.

INCREASING AUTHORIZATION OF LOCAL PUBLIC WORKS CAPITAL DEVELOPMENT AND INVESTMENT ACT

Mr. SISK submitted a privileged report (Rept. No. 94–24) on the House resolution (H. Res. 304) to accompany H.R. 11, to increase the authorization for the Local Public Works Capital Development

and Investment Act of 1976, and for other purposes, which was referred to the Union Calendar and ordered to be printed.

EMPLOYABILITY, EMPLOYMENT, AND INCOME, A REASSESSMENT OF MANPOWER POLICY

(Mr. McKAY asked and was given permission to address the House for 1 minuate, to revise and extend his remarks and include extraneous matter.)

Mr. McKAY. Mr. Speaker, Garth Mangum, McGraw professor of economics and director of the Center for Human Resource Management at the University of Utah, has prepared for the National Commission for Manpower Policy a report entitled "Employability, Employment, and Income, a Reassessment of Manpower Policy," which I commend to all of my colleagues considering current proposals for stimulating the economy. Dr. Mangum, who was staff director of the President's Committee on Manpower during the Kennedy and Johnson administrations, is particularly critical of the trend over the past 8 years to substitute income transfers for efforts to improve the employability and employment opportunities of American workers. The United States, he says, increased its transfer payment expenditures 93 percent from 1965 to 1970, and another 121 percent between 1970 and 1975. In doing so, it made a deliberate choice to provide its citizens with nonwork incomes rather than provide them the job opportunities most of them would have preferred.

In a misguided attempt to depress U.S. labor markets, to stifle an inflation which had none of its origins there, as Dr. Mangum puts it—

> The administration destroyed 4 million jobs, most of them in the private sector, then tried to replace them with $20 billion of unemployment insurance and 300,000 public service jobs.

The Federal Government currently spends $200 billion per year on employability, employment, and income policies, he says. But some $177 billion goes to income maintenance compared to only $11 billion to enhance the employability of the work force, $3.4 billion for specific job creation, and $4.6 billion to provide workers with freer access to jobs.

Dr. Mangum constantly calls us back to economic first principles. There is only one way of creating jobs. Someone must spend for the purchase of goods and services. The demand for labor is a derived demand—derived from the demand for goods and services and sparked by purchasing power. Only by aggressive demand management can general levels of unemployment be significantly reduced. Public service employment and public works are appropriate weapons against unemployment only for comparatively disadvantaged workers and locations not sharing in general prosperity. The inflation of 1965–76 is easily explainable by nonlabor market factors—unwillingness to tax to pay for the Vietnam war, overanxiousness to get unemployment down for the 1972 election, and a concurrence of international forces in 1973–74. All of the attempts to hold U.S. labor markets ransom to those extraneous forces was not only wasteful, but ineffective.

Despite its pungent comments on the current scene, the perspective of his is long run. It traces the socioeconomic and demographic forces which created the problems to which the manpower policies of 1960–75 responded. It argues that a new set of forces now underlie the policies which will be necessary for 1976–90. Mangum argues that the manpower and employment policies of the 1960's worked reasonably well but suffered from a failure to recognize clearly the impacts of those socioeconomic and demographic trends and to respond to them in a manner consistent with the realities of functioning labor markets. "Policy need not accept the dictates of labor markets, but to be successful, policies must be consistent with, intervene knowledgeably in, or supplant deliberately the working of labor markets to identify those realities which must be recognized and accommodated to by policy workers.

Mangum's recommendations are not for a major restructuring of U.S. labor markets or manpower policies, nor for massive expenditures. He is convinced that modest restructuring of policies and reallocations within current budgets can achieve 4-percent unemployment by 1980 and the following by 1990.

A youth unemployment rate no more than double that of adults;

A nonwhite rate no more than 1.5 times the white employment rate;

Elimination of sex differentials in unemployment; and

Elimination of poverty defined as a family income less than one-half the average family income.

His recommendations are specific with price tags attached. Essentially, they involve:

Requiring that the President's Economic Report annually present a plan for achieving or maintaining 4-percent unemployment, not requiring that the plan be implemented, but depending upon political pressure for motivation;

Controlling inflation by attacking its root causes in ways he details;

Undertaking an aggressive program for productivity growth;

Using public service employment and public works only as the "employer of last resort"—a term Mangum coined in the 1966 report of the National Commission on Technology, Automation, and Economic Progress of which he was executive assistant;

Limiting both AFDC and unemployment insurance and providing public service employment in their stead for the potentially employable under prescribed conditions and providing incentives to revise the current trend toward early retirement;

Building upon career education, vocational education, and the manpower services of the Comprehensive Employment and Training Act to enhance employability;

Strengthening Federal enforcement of equal employment opportunity among national firms and decentralizing enforcement in smaller firms to State and local governments under Federal incentives and surveillance;

Redirecting the public employment service to training workers to seek their own jobs with information and techniques provided by that agency; and

Strengthening and broadening the State and local manpower planning capabilities currently established under the Comprehensive Employment and Training Act.

A philosophical commitment to a work- and achievement-oriented, but a just and compassionate, society is spelled out in the first chapter. The underpinning is maintained throughout what could turn out to be the most significant manpower blueprint of the decade.

Mangum is one of the pioneers in manpower policy and an internationally recognized expert on the subject. His book, "The Manpower Revolution," Doubleday, 1964, is considered one of the classics in the field. A study he prepared for the Nationl Governors' Conference became the original blueprint for the present Comprehensive Employment and Training Act. In all, Dr. Mangum has published more than 20 books on employment, training, and related topics.

This report has been published as a book by the Olympus Publishing Co. of Salt Lake City. I commend it for reading by all Members of the House, Senate, and administration.

THE DEATH OF BRITISH FOREIGN SECRETARY ANTHONY CROSLAND

(Mr. BRADEMAS asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. BRADEMAS. Mr. Speaker, I take this time to express my sympathy—and I am sure that I speak for all Members of the House—on the tragic death on Saturday last of the distinguished Foreign Secretary of Great Britain, Mr. Anthony Crosland.

Mr. Speaker, I did not know Mr. Crosland well, but I knew him and only last December visited him in his office in London. He was a most gifted public servant and his death is a loss not only to the British people but to our own.

As many Members know, Mr. Speaker, Mr. Crosland's wife was born in this country. To her and to his family I extend my deep sympathy.

May I also, Mr. Speaker, express the hope that Mr. Crosland's distinguished successor, also an outstanding leader, Dr. David Owen, will do well in the demanding responsibilities which have been assigned him by the Prime Minister of our great ally, the United Kingdom.

Mr. Speaker, I insert at this point in the RECORD articles about Mr. Crosland from the New York Times and the Washington Post:

ANTHONY CROSLAND IS DEAD AT 58; FOREIGN SECRETARY FOR PAST YEAR

LONDON, February 19.—Anthony Crosland, the British Foreign Secretary, died before dawn today at the Radcliffe Infirmary in Oxford, where he had been taken after suffering a stroke last Sunday. He was 58 years old.

Mr. Crosland, a socialist theorist as well as a practicing politican, had served as Foreign Secretary for almost a year. He died without regaining consciousness, with his American-born wife, Susan, at his bedside.

A Foreign Office statement said a simple cremation ceremony limited to members of the immediate family would be held in Oxford. No date or other details were given.

For more than a decade, Mr. Crosland had been considered as a potential Prime Minister. His intelligence, his energy and his centrist outlook made him seem eminently suitable.

That he was not chosen for that post was widely attributed to his manner: gruff, sometimes hot-tempered and even contemptuous. With his clipped, upper-class Oxford accent, he could have been cast as Lord Bellamy in the British television series "Upstairs, Downstairs," except that he often dressed casually enough to shock proper Londoners and he was a dedicated Laborite.

On his surprise appointment as Foreign Secretary last April, The Times of London commented: "He is an extremely able man, and a likable man, but his dearest friends would not call him a diplomatic man."

On the same occasion, The New York Times described him as "a stout defender of the Atlantic Alliance, an early supporter of British entry into the European Common Market, and a modern, pragmatic politician whose economic and social views closely resemble those of his Social Democratic counterparts in Western Europe."

GOOD FOOD AND WINE

Christened Charles Anthony Raven Crosland, he was born on Aug. 29, 1918, the son of Joseph Beardsel Crosland, then deputy Under Secretary for War. The family belonged to the Plymouth Brethren, a sect similar to the Quakers, but Mr. Crosland loved good food and wine, once remarking, "Total abstinence and a good filing system are not now the right signposts to a socialist utopia."

As others of his class did, he attended a private school in London, then went to Trinity College, Oxford, on a classics scholarship and joined the Labor Club. World War II intervened, he was commissioned a captain in the Parachute Regiment and saw service in North Africa, Italy and Austria.

Back at college, Mr. Crosland became head of the Oxford Union and of the Democratic Socialist Club, was graduated with first-class honors in philosophy, politics and economics and joined the faculty. In 1950, at the age of 32, he was elected to Parliament from South Gloucestershire.

RETURNED TO PARLIAMENT IN 1959

Defeated five years later, he was quoted as having said that he was through: "I can't be bothered with all that toiling masses stuff. I'm an economist, not a politician."

Soon afterward, he published the most influential of his half-dozen books, "The Future of Socialism." It argued that the central target of the Labor Party in an era of growing affluence should be the narrowing of class inequalities, rather than the elimination of capitalism.

A close ally of Hugh Gaitskell, Roy Jenkins and James Callaghan in the center-right of Labor, Mr. Crosland returned to Parliament in 1959, representing Grimsby, a fishing port. He held that seat until his death.

In the governments headed by Harold Wilson from 1964 to 1970, he became sucessively Minister of State for Economic Affairs, Secretary of State for Education, President of the Board of Trade and Secretary of State for Local Government and Regional Planning.

In these posts, he often jousted with the left wing of the party. He did so again when Labor returned to power in 1974, and he was named Minister of Environment. Mr. Crosland insisted that economic growth, including suburban development and consumer goods, remained major goals for working people.

REJECTED FOR TOP JOB

In the party leadership fight last year, Mr. Crosland was considered for the top post but was turned down, in part because he had not served in the key ministries, the Foreign Office and the Treasury.

Instead, he was named to the Foreign Office and was expected to switch jobs with Denis Healey at the Treasury next June. From there, the next stop would presumably have been No. 10 Downing Street.

The last nine months were strenuous ones. As Foreign Secretary, Mr. Crosland traveled to the United States with Queen Elizabeth, and to China. He also commuted to Brussels, where he presided over the Council of Ministers of the Common Market.

He also wrestled with the perennial Icelandic fishing dispute. But most agonizing of all was the Rhodesia crisis. When former Secretary of State Henry A. Kissinger somewhat optimistically announced an agreement between Rhodesia and its black neighbors, Mr. Crosland had to strive to bring that agreement to life. He was working on that issue at home when he was stricken last weekend.

Working in the same room was his wife, a journalist and writer who uses the pen name Susan Barnes. Their marriage in 1964 was the second for both. He had no children by either marriage: she has two grown daughters by her first.

[From the Washington Post, Feb. 19, 1977]

LABOR'S ANTHONY CROSLAND, FOREIGN SECRETARY, DIES AT 58

LONDON.—British Foreign Secretary Anthony Crosland, intellectual and theorist, died in hospital early today, the Foreign Office announced. He was 58.

Mr. Crosland has been in a coma since last Monday after suffering a stroke at his home the day before. His American-born wife, Susan, was at his bedside when he died.

The stroke came after a week of exhausting work preparing for talks on the Rhodesia settlement with Ivor Richard, the Geneva conference chairman.

Mr. Crosland's death is seen as a serious blow to Labor Prime Minister James Callaghan's government, in which he served as a key policy formulator. In addition to Mr. Crosland's sensitive position as chairman of the Common Market Council of Ministers, Callaghan had counted heavily on Mr. Crosland's support and advice in coming talks with President Carter.

Mr. Crosland moved from a longstanding preoccupation with domestic politics to become foreign secretary in April 1976, succeeding Callaghan, who became prime minister after the resignation of Harold Wilson. Mr. Crosland was an unorthodox politician who set out early in his career to change the British Labor Party's image. He was the gifted product of a privileged bourgeoisie in a class-conscious country, but he devotedly preached the classless society and the principle of equality of opportunity.

Mr. Crosland was the first British foreign secretary to have an American wife. In 1964, 11 years after he and his first wife, Hilary Anne Sarson were divorced, he married the former Susan Barnes Watson of Baltimore, daughter of Mark S. Watson, military correspondent of the Baltimore Sun. Mrs. Crosland, a freelance writer, is noted for profiles of leading British figures in the London Sunday Times.

The Croslands lived in a roomy Victorian house in the fashionable Holland Park district of London and had a country retreat near Oxford in a 200-year-old converted water mill.

Charles Anthony Raven Crosland was born in London on Aug. 29, 1918, into a family of civil servants who belonged, unusually for those of their profession, to the Plymouth Brethren, an extreme nonconformist sect that values hard work for its own sake.

The Plymouth Brethren, founded in Dublin in 1827, is based on principles of equality and nonconformity. Mr. Crosland said that a strong streak of nonconformist puritanism has always been a healthy feature of the British radical tradition.

As a youth he won a scholarship to Trinity College, Oxford, where he studied philosophy, politics and economics.

In World War II he served with the Royal Welsh Fusiliers and later with the parachute regiment, in North Africa, Italy, France and Austria. He had what the British call "a good war" and ended up as a captain.

He later became irritated when Conservatives or Conservative newspapers suggested that Labor politicians lacked patriotism or valor. If there was any more of "that nonsense," he once said, he would get out his old paratroop uniform—and his medals.

The late Hugh Dalton, a Labor minister, brought Mr. Crosland into politics before World War II. He had been a Labor Party member since the age of 16.

The young Crosland flashed into prominence in 1956 when he published "The Future of Socialism," long regarded as a seminal work on Social Democratic politics.

In this and other works, he argued that socialism is basically about the struggle for equality. He wrote that high public spending is one of the main routes toward a more egalitarian socialism.

He held this view until his death, although when Britain's economy came under severe strain in the 1970's he appeared to have felt that the level of spending by public authorities had temporarily gotten out of hand. With an eye on soaring public debt, he told local governments in 1975 that "the party's over," a phrase that was subsequently often heard.

Mr. Crosland argued that a mixed economy is essential to social democracy. He felt people should worry about the growth of state power, especially the trend toward big new institutions under centralized control.

"We should never forget that change from private control to state control is Socialist only if that control is democratic," he said.

Entering Parliament in 1950, he held Cabinet positions in economical affairs and education and was president of the Board of Trade, a government department, in 1967–69. He then headed the newly established Department of the Environment until Labor's election defeat in 1970.

Mr. Crosland was a close personal friend of the late Hugh Gaitskell, leader of the Labor Party, and was very much on the same moderate wavelength politically. With Gaitskell and others, he was part of an intellectual group called "The Hampstead Set," which drew its name from a literary and artistic district of London where Gaitskell lived.

Mr. Crosland was secretary of state for the environment when Callaghan, in one of his first acts as prime minister, appointed him Foreign Secretary.

There had been speculation that the job might go to Roy Jenkins, one of Labor's "heavyweight" ministers. According to speculation, Callaghan selected Mr. Crosland partly because he felt Mr. Crosland had greater appeal within the Labor Party.

Mr. Crosland was seen as a complicated man, his personality embracing a bundle of contradictions. One writer called him a fascinating blend of elitist, democrat and inverted snob. He had been described as alternately engaging and prickly.

Mr. Crosland's belief that there was no need to be austere to be a Socialist—although his dislike of formal dress was legend—also laid himself open to criticism. He was accused of speaking like a Socialist but living like a Conservative, and it was once said of him that his personal form of egalitarianism was to treat everybody with an equal superiority.

ATTEMPT TO STOP CONSTRUCTION OF VITALLY NEEDED WATER PROJECTS IN THE WEST

(Mr. SISK asked and was given permission to address the House for 1 min-

ute and to revise and extend his remarks.)

Mr. SISK. Mr. Speaker, I would like to take this opportunity to simply remind the new administration and our new President that some of us are concerned about the future, particularly some of us who come from the drought-stricken areas in the West. We deplore what we feel to be a very poor matter of judgment in recent days regarding the apparent attempt to stop construction of some vitally needed water projects in the Western part of the United States.

As one who served on the committee which authorized the Central Arizona Project and the Auburn Dam, I want to remind the President that this avenue out here is a two-way street, and some of us are going to do our best to see that it continues to be a two-way street.

In specific regard to the President's proposal not to fund $39.7 million for the Auburn Dam project in California, we are talking jobs, an estimated 1,500 jobs. In just a few days the House will be talking again about jobs, in the Local Public Works Capital Development and Investment Act Amendments. This bill has top priority with the current administration, and it has my top priority as well.

But I cannot, in all good conscience, agree that we should be giving jobs on one hand and taking jobs away on the other hand. Jobs at two of the water development projects targeted by the current administration for defunding total nearly 5,000.

As for the California and Arizona projects, those two are in areas with specific drought problems. In matter of fact, most if not all the projects targeted for defunding are in areas experiencing unnatural weather conditions.

We in California are now trying to develop short-term answers and meet long-term needs. Unquestionably one part of the answer is continued water development, as is exemplified by Auburn Dam. While this single project is not a total answer—no single project is—it is a part of the long-range solution.

Not too many years ago I predicted that California's water problems would not be fully understood or recognized until the end consumer at the end of the pipe turned on his spigot and nothing came out. Regrettably, I was accurate. Communities in my State are already rationing and others, I am afraid, will be joining them soon. We are now faced with developing short-term assistance and long-term solutions. It is an opportunity none of us in the West can afford to bypass.

What does concern me somewhat in this current development is that the bulk of the projects targeted for cutbacks are in States which did not support the current administration. I would hope that we can begin healing the wounds, not deepen them.

IMPROVING CRIMINAL JUSTICE: PUTTING OFFENDERS TO WORK AND COMPENSATING VICTIMS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KOCH) is recognized for 10 minutes.

Mr. KOCH. Mr. Speaker, in the past few years we have all become increasingly aware of the fact that in many cases our penal system, with its goal of rehabilitation, serves actually to reinforce criminal behavior. Our courts do not have the proper alternatives to deal with both the hardcore criminal and the first offender who has committed a misdemeanor. They lack a social mechanism to offer those offenders most likely to take genuine advantage of it, a greater opportunity for rehabilitation than jail.

One possible solution to this problem is presented by Prof. Amitai Etzioni of Columbia University in an article entitled "First Offenders" which appears in the February issue of Human Behavior magazine. Professor Etzioni's proposal outlines a program which would offer minimum wage public service jobs to first offenders, aged 16 to 25, as an alternative to jail. This would allow first offenders to work closely with people who lead productive lives rather than limiting contacts to hardened criminals and other first offenders. The offender would be under close daily supervision, often closer than that which a probation officer can provide, yet the supervision would be linked to a positive role—the public job—not part of the punishment. This would provide the offender with training for future jobs.

Several additional provisions are built into the program to insure that it retains an element of punishment and does not earn the reputation of providing a ticket to a rewarding job through crime. Any participant who does not complete the "time" assigned for the job to the satisfaction of both the sponsor and the courts, will be referred back to the court for traditional sentencing. In addition, the offender will be required to contribute a portion of his/her salary toward the compensation of the victim of the crime. This is certainly one of the strengths of the program, as it acknowledges the needs of victims, who are usually the most neglected party in a criminal transaction.

There are additional ways in which society would benefit. A jobs program such as this would save society the $7,900 in direct expenses which it costs per year to maintain a criminal in our jails. This figure can run as high as $10 to $12,000 when societal costs such as welfare payments to support the offender's family are added in. Likewise to avoid providing a pool of cheap labor, those who agree to hire offenders will have to pay the prevailing market rate. However, the offender would only be paid the minimum wage and the remainder would be used to compensate the victim.

In assessing the value of such a program it is helpful to take note of two programs which have been established on the local level under very similar guidelines. Both of these programs have been very successful. The Alternative Community Service Commission in Rockville, Md., was established in January 1976. In the first 8 months of operation it reviewed 41 applications referred primarily by police departments, the State attorney's office, and the Juvenile Intake Office. The eligible applicants had been charged with no more than a misdemeanor or a minor felony and had not established a major arrest record. Thirty-seven of the applications were accepted. Four cases were referred back to court. The applicants ranged from 13 to 56 years of age with an average of 19 years. The crimes they were charged with ranged from disorderly conduct and possession of marihuana to burglary and strong arm robbery. All but five were either employed, in school, or both. Work assignments ranged from 8 to 480 hours with an average of 66 hours. In nine cases of burglary and larceny, restitution to the victim totaling $5,820 was required. The program has not been in existence long enough to fully judge its effectiveness, but general consensus is that it has been very successful. Thirty-seven offenders have been taken out of the court system and placed into a productive and rehabilitative program. At the same time a certain amount of victim compensation has been undertaken. The results have been successful enough that Rockville will seek to expand it in the future.

The alternative service program in Multnomah County in Oregon, was established in December 1972 on the initiative of District Court Judge Richard L. Unis to solve the problem of first offenders on misdemeanor charges who came before him often. The Multnomah County program does not involve payment to the offender or any form of victim compensation. The participant agrees to perform a specific amount of work for a nonprofit agency, at a time which does not conflict with regular employment. The maximum sentence is 80 hours and the minimum is 24 hours. Services performed include working with youth, aiding senior citizens, counseling the poor and disadvantaged, helping groups engaged in drug and alcohol rehabilitation, and child care.

The results of this program are more tangible. As of October 1975, over 4,900 offenders had been referred for ACSP since December 1972. The success rate for these offenders has held steady at about 80 percent. The success of the program can be further measured by the fact that the number of sponsoring agencies has grown from 15 in December 1972 to more than 150 at present. In a substantial number of cases the experience has led to a continuation of volunteer work once the time has been served.

In addition to my investigations into specific programs, I have also corresponded with the Department of Labor and the Law Enforcement Assistance Administration which are both involved in funding offender related programs. The response from LEAA indicates that they have funded seven demonstration projects around the country. These projects will be evaluated at the end of 1978 by the Criminal Justice Research Center in Albany, N.Y. The Institute will address the question: "Under what conditions will restitution be an effective tool in dealing with offenders in the criminal justice system?"

I want to applaud the LEAA's involvement in this area and I await the results of their projects and study anxiously. I

believe putting offenders to work and compensating the victims of their crimes might be one of the most significant developments in the area of criminal justice. I hope we in the Congress will do all we can to increase the emphasis placed on such programs as an integral part of our criminal justice system.

A copy of my letter to LEAA and the responses of both LEAA and CETA follow:

JANUARY 26, 1977.

MR. STEVE BOYLE,
Office of Congressional Liaison, Law Enforcement Assistance Administration, Department of Justice.

DEAR MR. BOYLE: I have recently become interested in a proposal which would require municipalities to utilize a certain percentage of their Public Service Job Funds for the employment of criminal offenders. These offenders would be required to contribute one-third of their salary toward compensation of the victims of their crime. One of the major strengths of such a jobs program would be that it would provide offenders with a more effective form of rehabilitation by placing them in constructive positions of responsibility rather than in an environment which tends to reinforce criminal behavior. Secondly, a jobs program would save society the $7,900 in direct expenses, which it costs per year to house a criminal in our jails. This figure can run as high as $10–12,000 when societal costs such as welfare payments to support the family, are added in. Finally, this type of program would provide a means for compensating the victims of crimes, who are usually the most neglected party in a criminal transaction.

I am aware that similar programs are currently funded under LEAA. I would like to draw on the LEAA experience to get some indication of the success of such programs. I would be interested in any information you can give as to the design of the offender-rehabilitation LEAA-funded programs, the number and nature of sponsors who have applied for funding for offender-rehabilitation programs and the percentage that have been actually accepted. The total amounts expended, the cost per person and any other relevant material would be greatly appreciated. Finally, I would also be interested in your own judgments as to whether a program, as outlined, could be funded under current LEAA regulations. Do you feel that a new LEAA authorization would be necessary to support such programs, or would simply additional appropriations under the current authorization suffice?

I am enclosing a copy of the proposal which first roused my interest in this area for your own interest and possible comment.

All the best.

Sincerely,

EDWARD I. KOCH.

U.S. DEPARTMENT OF LABOR,
Washington, D.C., February 16, 1977.

Hon. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KOCH: Thank you for your letter of January 25, 1977, addressed to Gary Weissman of my staff, in which you elicited our comments on the concept paper written by Amitai Etzioni, and also asked our reaction to a number of questions of concern to you about offender programs under the Comprehensive Employment and Training Act (CETA) of 1973, as amended.

With two slight differences, Law Enforcement Assistance Administration (LEAA) is currently funding a 2 year experiment in precisely the kind of restitutive justice program advocated by Mr. Etzioni. LEAA has provided $2,000,000 for seven restitution programs in as many States: parole violators in California; adjudicated adults in lieu of incarceration in Maine; probationers in four judicial districts of Georgia; pre-sentenced offenders in Connecticut; offenders convicted of property crimes in Multnomah County, Oregon; prison and jail inmates on work release in Massachusetts; and a comprehensive restitution program in Colorado. The Criminal Justice Research Center in Albany, New York is conducting the research, and the final report should be ready shortly after the experiment terminates in October 1978.

The two differences between LEAA's Restitution programs and the Etzioni proposal are (1) the LEAA programs do not serve juveniles; and (2) the LEAA programs are not restricted to first offenders. We are inclined to support LEAA's decision to expand the eligibility criteria beyond first offenders. Our own experience with pre-trial diversion is that first offenders are rarely prosecuted and almost never incarcerated; consequently, they are not wont to regard enrollment in restitutional or manpower training programs as advantageous alternatives. We feel that restitutional programs for adults could easily be opened to juveniles over 16 years of age as well.

As a matter of fact, another LEAA agency, the Office of Juvenile Justice and Delinquency Prevention (OJJDP) is about to embark on a restitution program for juveniles to demonstrate the feasibility of employing a restitutionary approach as a diversion strategy. OJJDP's projected budget is $3,-500,000; and the guidelines are currently being prepared. It should be noted that there is nothing in the CETA legislation or regulations which precludes a prime sponsor's negotiation of an agreement with the local probation department (or other appropriate criminal justice agency) for assignment of adjudicated offenders to a restitutional program in lieu of incarceration. The prime sponsor for example might handle the job development and job coaching components, and the court and the probation department could arrange for the screening and repayment schedule.

As you indicate, the Department has funded prototype model offender programs which prime sponsors could replicate using existing local funds. Our models fell into two kinds of categories: those which served offenders at different intervention points in the criminal justice process (e.g. pre-trial diversion, contract parole, vocational training for inmates, and services for recently released prisoners); and those which served varying demographic sub-sets of the offender population (female offenders, youthful offenders, juveniles, older offenders, formerly addicted offenders, and Hispanic offenders).

Although the short range goal of providing a wide range of quality services to offenders was met, the long range goal of convincing prime sponsors of the urgency to allot some portion of their employment and training resources for offender services and needs was not achieved. We have, in an enclosure, provided the types of models we funded and their locations for your information.

Because of the limited funds provided under title III of CETA for offenders, our current policy is to refrain from funding any local offender activity. Instead, the Department strongly encourages prime sponsors to include offenders in the groups served by their ongoing employment and training activity and continues to provide technical assistance to ensure and facilitate the access of offenders into the CETA system.

I hope that these comments and the information in the enclosure are helpful to you. Thank you for your interest in employment and training programs for offenders.

Sincerely,

PIERCE A. QUINLAN,
Administrator, Office of Comprehensive Employment Development.

Enclosure.

Enclosure

I. Residual models. Some of the models enumerated above are still in operation. In the spring of 1975, we funded one prime sponsor in each Federal region to operate a Pre-Trial Intervention program. The sponsors comprise:

a. State of Rhode Island.
b. City of Yonkers, New York.
c. City of Wilmington, Delaware.
d. Chatham County, Georgia.
e. Wayne County, Michigan.
f. East Baton Rouge Parish, Louisiana.
g. City of Kansas City, Missouri.
h. Denver City/County, Colorado.
i. City of Los Angeles, California.
j. Pierce County, Washington.

In addition, we funded one State prime sponsor in each Federal region to operate a Model Ex-offender Project. The ten sponsors are:

a. State of Vermont.
b. Commonwealth of Puerto Rico.
c. State of Maryland.
d. State of Tennessee.
e. State of Illinois.
f. State of Texas.
g. State of Missouri.
h. State of North Dakota.
i. State of Hawaii.
j. State of Oregon.

Lastly, the Employment and Training Administration and the Law Enforcement Assistance Agency (LEAA), of the Department of Justice jointly funded a model program called the Comprehensive Offender Program Effort (COPE), in which we attempted to fashion a model for joint plans at the State level between criminal justice agencies and manpower agencies. The six grantees are:

a. State of Oregon.
b. State of Texas.
c. State of Alabama.
d. State of Michigan.
e. State of Wisconsin.
f. State of Minnesota.

The amounts expended by DOL for these programs are as follows:

Pre-Trial Intervention: $1,800,000 (+100% matching share by grantees).

Model Ex-Offender Program: $2,700,000 (+25% matching by grantees).

COPE: $2,000,000 (plus $4,000,000 contribution by LEAA).

II. Special Research Projects. ETA is also undertaking two special research and demonstration programs for offenders. One of them, Supported Work, is a program of graduated stress for ex-addicts, ex-offenders, youth, and AFDC recipients. It is operated in New York City (the Wildcat Program) and fourteen other communities in twelve States. It is a multi-million dollar venture undertaken jointly by DOL, LEAA, the National Institute of Mental Health, Economic Development Administration, and the Ford Foundation. The program has a 3 year operational phase and a 5 year research phase (accurate data will be compiled on program participants for two years after the expiration of the operational phase).

The second is the Transitional Aid Research Project (TARP), co-sponsored by LEAA, a 2-year program in which inmates in Georgia and Texas State prisons are given the equivalent of Unemployment Insurance stipends upon release to gauge the impact on recidivism.

U.S. DEPARTMENT OF JUSTICE,
Washington, D.C., February 9, 1977.

Hon. EDWARD I. KOCH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN KOCH: This is in response to your letter requesting information on Law Enforcement Assistance Administration funded programs which require offenders to contribute toward the compensation of his/her victim.

In the spring of 1976, the Rehabilitation Division of LEAA announced a $1,500,000 discretionary grant program in the area of restitutive justice. In response to the program announcement entitled "Corrections Initiative: Experiment in Restitution," twenty-one proposals were received and reviewed by a selection committee.

Grant awards were made to the following: Project and Project Director.

Victim Restitution Programming—Massachusetts: John Frazier, Massachusetts Parole Board, 100 Cambridge Street, Boston, Massachusetts 02202, (617) 727-8344.

Maine Restitution Project—Maine: Ken Finegan, Maine Criminal Justice Planning and Assistance Agency, 295 Water Street, Augusta, Maine 04330, (207) 289-3361.

Restitution Services—Connecticut: Kathleen Sloan, Director, Research and Planning, Judicial Department, Drawer N, Station A, Hartford, Connecticut 06106, (203) 566-7700.

Restitution Project—California: Mike Casados, Restitution Project Director, 1979 North E Street, San Bernadino, California 92405, (714) 383-4694.

Colorado Crime Victims Restitution Program—Colorado: Randall Klauzer, Commission on Criminal Justice Standards and Goals, State Centennial Building, 4th Floor, 1313 Sherman Street, Denver, Colorado 80203 (303) 892-2595.

Sole Sanction Restitution Program—Georgia: Bill Read, Georgia Department of Corrections Offender Rehabilitation, 800 Peachtree Street, N.W., Rm. 600, Atlanta, Georgia 30308.

Project Repay—Oregon: Chrys Martin, 1021 S.W. 4th Street, Multnomah County Courthouse, Portland, Oregon 97204.

The starting date for the seven selected projects was October 1, 1976 with a four month planning phase subsequent to accepting offenders into the programs. Because the projects are not yet operational, no results are available.

In conjunction with the demonstration awards, LEAA's National Institute of Law Enforcement and Criminal Justice awarded an evaluation grant to the Criminal Justice Research Center, Albany, New York. The evaluators, collecting data from all sites, will address the question: "Under what conditions will restitution be an effective tool in dealing with offenders in the criminal justice system?" The projects cover a range of offender status including initial sentencing, probation, institutional work release, and parole. Restitution includes both monetary payment to the victim and/or service to the community.

The proceedings from the First International Symposium on Restitution, which was funded by LEAA through a grant to the Minnesota Department of Corrections, are being reproduced and a copy will be sent to you as soon as it is available.

The current restitution projects will be in operation for twenty-four months. No additional discretionary grant funding in this program area is contemplated until there are some results from the current effort.

Your interest in this matter and the programs of the Law Enforcement Assistance Administration is appreciated.

Sincerely,

RICHARD W. VELDE,
Administrator.

"THE DEFENSE OF HUMAN RIGHTS IN THE AMERICAS"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. FASCELL) is recognized for 30 minutes.

Mr. FASCELL. Mr. Speaker, Mr. Alejandro Orfila, Secretary General of the Organization of American States, has prepared a thoughtful and valuable paper entitled, "The Defense of Human Rights in the Americas." This article is to appear in a forthcoming issue of Worldview, a publication of the Council on Religion and International Affairs of New York. I commend Mr. Orfila's comments to the attention of all Members of the House.

Human rights throughout the world is of prime concern. We have observed recently the harassment of persons in Eastern Europe and the Soviet Union which is in violation of international human rights' covenants and specifically contrary to the Helsinki accord. As Chairman of the Commission on Security and Cooperation in Europe, I recently addressed myself to these violations in the CONGRESSIONAL RECORD of January 26 and February 1.

I have a long-standing interest in Latin America and have advocated legislation which has contributed to social and economic progress in the area. There continues to be an urgent need for greater cooperation between the United States and Latin America to help close the gap between the industrialized countries and the developing nations of the world. It is my intention to continue my efforts in this direction because the ferment in Latin America recently has stemmed mostly from developmental issues. At the present, we are observing in a number of countries political unrest and adjustments which have brought on serious violations of human rights. It is no more possible to ignore such events when they concern our southern neighbors and friends than when they occur in any other part of the world.

It is evident that political change frequently brings on tensions and frustrations which may result in excesses. Political, economic and social evolution is inevitable and desirable. However, even though nations have the right to make their choices without outside interference, each, as a member of the family of nations, is accountable to world opinion for its actions and behavior. All of the Americas should be above reproach, and we are not at the present time.

This is not the occasion to address specific violations of human rights in the Hemisphere. I do, however, wish to commend the Secretary General for his review of the defense of human rights in the Americas, as he aptly has entitled his article. Mr. Orfila's article gives this subject needed perspective and realistically discusses the mechanism of the OAS for monitoring abridgment of rights and the alleviation of violations.

The OAS has made important contributions to the defense of human rights and rectification of violations. However, as Mr. Orfila says, there are constraints to its effectiveness. Only through constant attention to the subject and persistent search for acceptable procedures can we expect improvement. The United States should be a tireless participant in OAS initiatives to carry out and reinforce its ability to insure human rights among its members.

I hope that Mr. Orfila's article will be given wide circulation in the various languages of the Americas and that it receives serious attention. It should serve as a catalyst for an intensified dialogue and discussion among the member nations of the OAS.

President Carter has interpreted clearly the will of the people of our country in this matter of global concern. He has said and demonstrated that it will be of the highest priority in his foreign policy. The Congress will give him its full support. Whatever measures can be taken in concert with others through international organizations such as the Organization of American States promise positive results. We must be a prime mover in such organizations working side by side with its membership in the interest of peace and justice.

The text of Secretary General Orfila's article follows:

THE DEFENSE OF HUMAN RIGHTS IN THE AMERICAS

(By Alejandro Orfila)

Violence and instability, punctuated by terrorism and subversion, frequently seem to characterize political life in many national communities today. Throughout most of the post-war period few countries, including the liberal democracies, have been immune from having to confront the many faces of either violence or terrorism, whether coming from political forces on the left or on the right, or both.

With the continuing spread of terror and counter-terror, with increasing violence and instability, personal insecurity and fear become widespread and hard-won gains in human rights come under heavy attack. In this situation violence and terror become self-justifying because through them society will, it is argued, be once and for all time purged of all alleged evils.

This justification of violence for its own sake, of course, goes against the grain of the Western Hemisphere's traditional ideals of peace, freedom, and justice. Beneath the turmoil of political life, there is a strong love of peace and a deep respect for human dignity in the foundations of the public opinion of all our countries.

The moral conscience of the Americas originates in, and is built upon, respect for human rights. Our hemisphere differs in a privileged way from other regions of the globe in that this is the guiding principle under which our nations came into being.

Ours is a belief both in human rights and in the philosophy underlying that belief that man is the possessor of eternal values, and that for every human being there is nothing more sacred than another human being. This belief requires a continuing search for the means designed to put an end to all forms of violence in the Americas.

The ideal of human rights is an all-embracing, indivisible concept. It requires protection against a violation of human rights and redress once those rights are violated. It cannot be restricted to certain beneficiaries. It encompasses all citizens without qualifications. In pursuit of this ideal, due process of law must be demanded for those who have not received the benefit of a fair trial, and there must be an equally effective defense for the innocent bystander or for the public servant threatened by the blow of treacherous violence.

There can be no doubt that as Americans we must do everything possible to expand efforts to defend human rights. The central principle guiding these efforts is that no persons, group, or movement, no matter what their motives, no matter what their role in society, can justify actions resulting in violence and destruction of human life.

At times like the present when the protection of human rights is under challenge, it is useful to recall that Western societies have had a long and at times violent and rancorous history. This is as true of Europe and the United States as of Latin America. In consequence, our communities have sought to place bounds on government by requiring it to focus its concerns on the

order of rights that flow from the nature of man, or as some legal schools contend, from certain objective ends of human life which go beyond those found in human societies alone. A basic lesson we have all learned from history is that to extend and perfect the protection of these rights in any society is an unending struggle.

As a Western society, Latin America has aspired to the Western ideals concerning individual liberty, justice and limited ends of government. However, for many complex reasons, its political history generally differs from that of the United States and the European democracies. In the post-war period, moreover, a spirit of revolutionary nationalism has flourished in Latin America with societies and governments of every variety determined to respond in massive and rapid ways to aspirations for industrialization and integral development.

In this hemisphere we have had many forms of government. But throughout all political changes and conditions, there has been one constant reality: only a small number of Americans have claimed that as justice is pursued human rights can be ignored or that a closed society is, as a matter of principle, to be preferred to an open one. To the contrary, in fact, all Americans everywhere believe that justice and human rights must go hand-in-glove. This is true in Latin America as in North America. The classic statement for this ideal was contained in the Inter-American "Declaration of Chapultepec" in 1945: "The American man cannot conceive of living without justice, just as he cannot conceive of living without liberty."

In practice this means that both Latin and North Americans believe it would be wrong to presume that social justice in the long run can be achieved at the expense of basic human rights. It is not that one can always and everywhere determine with great precision what such protection should consist of, especially during periods of revolutionary upheaval and turmoil when the very existence of a society is at stake. There are limits beyond which no government can go, however. Many of the principles which set boundaries on the actions of governments everywhere in our hemisphere are lodged not only in such instruments as the American Declaration of the Rights and Duties of Man but in the conscience and consciousness of most Americans everywhere in our hemisphere. These principles must and do exist not only on paper but in the lives of all peoples in this hemisphere, reminding us all that the human dignity of all persons is respected so long as we respect the personal dignity and rights of each individual.

STATE OF SIEGE AND HUMAN RIGHTS

Realistically, these principles concerning human rights must be considered in the existing context of hemispheric political life. In contemporary societies everywhere it is not unusual for civilian power to be transferred to the military during periods of national upheaval.

Martial rule comes in various forms. It is known as "martial law" in the United States, where it has functioned from time to time, and as "state of siege" under Latin American and European continental law.

There is no argument about the fact that a continuing state of siege or martial law is not always a favorable sign for the political health of a national community. Yet, unfortunately, there may come a time in the lives of even strongly democratic nations when they may find themselves asking the question posed by Abraham Lincoln during the first weeks of the U.S. Civil War: "Must a government of necessity be too strong for the liberties of its peoples, or too weak to maintain its own existence?" When a society is faced by this dilemma, strong government in the form of martial law or a state of siege may result and constitutional guarantees may be suspended. Actions are then taken, as in the United States during the Second World War with the forceful removal of Japanese-Americans, which are inconsistent with the constitutional norms that are operative under normal conditions.

It is important to note that in the Western Hemisphere the provisions of the draft American Convention on Human Rights would guarantee protection of certain and specific human rights even when a state of siege is imposed in a particular nation. Regrettably, only two hemispheric countries have been willing to accept such provisions as legally binding.

THE OAS AND THE PROTECTION OF HUMAN RIGHTS

It is important to recognize that from its inception the inter-American system has been inspired as much by its desire to protect human rights as by its concern to improve economic relationships among the various nations. As early as the Panama Congress convened by Simón Bolívar in 1826 human rights concerns were codified in an international agreement when the several contracting parties to the Treaty of Panama agreed to assist in eradicating the slave trade and to recognize juridical equality between citizens of a state and foreign nationals.

From 1890 when the International Union of American Republics was established until the formation of the Organization of American States in 1948, the nations of this hemisphere approved many resolutions and recommendations on human rights and social justice. In addition, seven conventions related to specific rights were adopted. These conventions and resolutions covered a wide range of issues: extradition, the rights of aliens, asylum, labor contracts and women's rights.

Through the creation of the OAS itself these traditional concerns were brought into stronger focus as the hemispheric nations agreed that their central objective was to establish on this continent "a system of individual liberty and social justice based on respect for the essential rights of man." Throughout the 1948 Charter itself (which was revised in 1967), a variety of political, economic, cultural and social rights are set forth in light of the principle that the member states should develop social legislation designed to enrich the material well-being and personal growth of all individuals.

Beyond the Charter the OAS member states also adopted in 1948 the specific American Declaration of the Rights and Duties of Man. This went into greater detail to set forth the principles and beliefs which guide the evolution of our hemisphere, particularly stressing that the essential rights of man are "based upon attributes of his human personality . . ." and that ". . . the international protection of the rights of man should be the principal guide of an evolving American law." A wide range of human rights and duties were spelled out as being covered by the American Declaration.

Following a decade of study and experimentation the OAS member states took a further major step in evidencing their support for the protection of human rights in 1960, when the Council of the OAS approved the statutes of the Inter-American Commission on Human Rights. This Commission was created at the Fifth Meeting of the Hemisphere's Foreign Ministers in 1959. It was established as an autonomous entity whose function is to promote respect for human rights as these were set forth in the 1948 American Declaration of the Rights and Duties of Man. Composed of seven members, the Commission carries out a variety of functions including general reports, studies on the human rights situation in the American countries, the examination of communications or complaints and the preparation of specific reviews on such matters as trade union rights.

Since 1960 this OAS Commission has investigated and reported on human rights violations in nearly all OAS member countries.

There are, of course, limits on the role of the Commission, chiefly arising from the fact that, although it has greater powers than similar bodies such as the United Nations Commission on Human Rights, it can only recommend or advise. It cannot enforce or implement its own recommendations. Organizations like the Inter-American Commission on Human Rights are empowered only to call the attention of governments to alleged violations.

The Inter-American Commission on Human Rights presents its findings to the supreme organ of the OAS—the General Assembly—which reviews and pronounces upon them. Under the current agreements in force, the action taken with regard to these findings and the recommendations of the General Assembly on the matter is the prerogative of the sovereign nation involved. It is important to note that in the course of any given year, the OAS Commission on Human Rights is periodically called upon to examine situations in all parts of our hemisphere. Its reputation is for strong interest, thoroughness and independence in its work.

In November 1969 this inter-American quest to guarantee the protection of human rights assumed a new dimension with the signing of the American Convention on Human Rights by 12 countries. This was not an isolated juridical event but the outcome of an evolving and continuing political-juridical process which began many years earlier. The convention attempts to detail the rights protected, the obligation of the states to respect these rights, and mechanisms for application of sanctions when it is proved that these rights have been violated. Under its provisions all individuals have such rights as the right to be considered as a person before the law, the right to life, the right to participate in government, the right to humane treatment, the right of assembly and associations, personal liberty and security, privacy and a fair trial. A variety of other individual rights and freedoms are also specified.

This convention provides for two competent organs—an Inter-American Commission on Human Rights and an Inter-American Court of Human Rights. The Commission's function would be to promote respect for and defense of human rights, and to investigate complaints received about violations. As originally acecpted, the Court, to which the States parties and the Commission shall alone have the right to submit a case, can rule that parties have been injured and that remedies must be provided.

Only two nations—Colombia and Costa Rica—have so far ratified this Convention. Another nine countries must ratify the Convention before it becomes effective. Why most nations, including the United States, have not ratified this Convention is a complex issue. Of course the fact that the Convention has been drafted serves to stimulate continuing interest in enlarging the scope and potential for guaranteeing human rights throughout the hemisphere. At the same time, however, its non-ratification clearly indicates the need for further hemispheric action to strengthen the processes which gave rise to the idea of the Convention itself. It should be observed that while the Convention would authorize suspensions of guarantees in time of war, public danger or other emergency, it would not authorize suspension of specific guarantees including the right to humane treatment, right to nationality, and right to participate in government. This provision seems particularly germane when reflected against the backdrop of violence and instability which exists in a number of countries today.

AT SANTIAGO

At the June 1976 OAS General Assembly, the work of the OAS' Commission on Human Rights received most of the Assembly and press attention. Two reports of the Commission were considered: its regular annual report, and a report on Chile, drawn up at the request of the General Assembly. Also, a report on the situation in Cuba was issued at that time. The Chilean situation attracted

the greatest public attention but in looking at Cuba's situation the Commission reported that "during the past five years, instead of being a diminution or decrease in those violations (of human rights), there continue to be perpetrated, especially in the treatment of political prisoners, arbitrary procedures of excessive rigor that reveal a complete disdain for the dignity of the human being."

After considerable discussion the General Assembly approved three resolutions on human rights. First of all, it took note of the special report on the host country, Chile, by the Inter-American Commission on Human Rights, which said that although there had been a "quantitative drop in affronts to certain fundamental human rights," some of the legal provisions aimed at preventing violation of those rights did not have appreciable beneficial effects. The Chilean Government presented observations on the Commission's report, which according to the Assembly in some cases nullify the charges but in other cases did not sufficiently clarify information received by the Commission.

In light of this situation, the Assembly decided "to make a special appeal to the Government of Chile to continue adopting and implementing the necessary procedures and measures for effectively preserving and ensuring full respect for human rights in Chile," and requesting the government to continue cooperating with the Inter-American Commission on Human Rights.

The Commission was directed to continue considering the status of human rights in Chile and to report on the subject to next year's General Assembly.

The other two resolutions on human rights were approved unanimously. One takes note of the regular annual report of the Commission on Human Rights, which said that "the fundamental rights of life, liberty and personal security are in constant jeopardy and are frequently violated" in the hemisphere. This resolution recommends that the member states continue to adopt and apply appropriate measures and legislative provisions to protect and fully maintain human rights, in accordance with the American Declaration of the Rights and Duties of Man.

The other resolution refers to the OAS Permanent Council for study the Chilean government's proposals for revising the Statute and Regulations of the Commission on Human Rights. Chile had criticized the Commission's procedures in its rebuttal of the group's report.

THE FUTURE

History and experience teach that a right whose violation finds no redress in the administration of justice is a right with no real meaning or existence. At present, the primary way for us to demonstrate respect for the protection of human rights in this hemisphere includes, as a first step, the investigation of every alleged violation and to support the work of the OAS Commission on Human Rights. Full protection of human rights, however, is brought about through an international judicial institution. The European Court of Human Rights provides an outstanding example of a way to provide full enforcement of human rights at an international level.

Full protection of human rights in this hemisphere will require the creation of a judicial body of an inter-American nature which could be called upon to investigate and to judge alleged violations of human rights. A most urgent task before the Americas is the ratification of the inter-American Convention on Human Rights. This would authorize the creation of an inter-American court of human rights, an international organism endowed with faculties for adjudicating violations of rights or liberties protected by the convention. The court would be able to order measures for redressing violations of human rights, including the imposition of indemnity.

The history of human rights in the Americas demonstrates that this subject has been a constant preoccupation in both halves of our hemisphere. The problem, of course, has had a different origin and evolution in the United States and Latin America. In the United States the protection of human rights has primarily had a racial orientation and the obligation has been to assure full equality before the law for minorities discriminated against on racial grounds. In Latin America, the problem of human rights has involved a preoccupation with finding effective and simple means to guarantee full respect for liberty, personal integrity, freedom of opinion and freedom against arbitrary detention.

The protection of human rights is an unfinished business in both halves of the Americas. It will not end until we bring alive not only in a de jure but in a de facto manner throughout the hemisphere the major beliefs on human and social liberty that we all hold in common as Americans.

As we pursue this unfinished responsibility it will not be enough for us to engage in selective outrage against one or another political regime or society. If we support human rights we must support them in all their dimensions and in every circumstance. Those who single out a few specific societies for attack while ignoring or downplaying the equally outrageous violations which occur in other nations or communities undermine the very foundations of human rights protection by injecting ideological and political elements into a struggle which should not and cannot be co-opted by any segment of the political spectrum. A violation against any individual is a tacit justification for a violent response. Until every person is assured of protection of their basic human rights, none of us can be completely safe.

PRESIDENTIAL ELIGIBILITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. McKINNEY) is recognized for 5 minutes.

Mr. McKINNEY. Mr. Speaker, since we are celebrating George Washington's birthday today, I felt it would be particularly appropriate to touch on the Office of the Presidency and its eligibility requirements.

As you know, the Constitution states:

No person except a natural born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the Office of the President.

This particular section was fashioned in this manner since our Founding Fathers held legitimate concerns over the fear that foreign monarchs would attempt to wrest control of the new Nation. In fact, historical records show that rumors abounded at the Philadelphia Convention that there was a move afoot to name the second son of England's George III, Frederick Agustus, as King of the United States.

While these concerns seem ludicrous today, they were very real at the birth of the Nation in 1776. However, I think it is time, in this the first year of our third century, to put that fear to rest and open the process to all.

I would ask that the House give its consideration and support to House Joint Resolution 38, introduced by the distinguished gentleman from New York, Congressman JONATHAN BINGHAM.

That measure would allow naturalized citizens to seek the office of the Presidency. We are a nation of immigrants and I can see no reason why those who have adopted the United States as their native land should be denied access to its highest office.

I would point out that under current law, President Ford's Secretary of State Henry Kissinger would not be eligible for the Presidency, even though he stood in the direct line of constitutional ascendancy; and President Carter's National Security Adviser Zbigniew Brzezinski could not run either.

It should also be noted that there are Members of Congress born in foreign lands: Senators LOWELL P. WEICKER and S. I. HAYAKAWA and Congressmen THEODORE WEISS and JOHN KREBS.

These people have gained the confidence of their constituencies; why should they, and others, be discriminated against. I believe all doubt should be removed and that the phrase "all men are created equal" be given true meaning by adding the words "or naturalized" to the Constitution.

It is interesting to note that the question was debated at length at the North Carolina ratifying convention held in July 1788. I would like to share with you the eloquent comments of one of the delegates, James Iredell, whose speech can be found in the American Heritage History of the Presidency. I include that commentary in the RECORD at this point:

. . . I met by accident with a pamphlet this morning, in which the author states, as a very serious danger, that the pope of Rome might be elected president. I confess this never struck me before, and if the author had read all the qualifications of a president, perhaps his fears might have been quieted. No man but a native, and who has resided fourteen years in America, can be chosen president. . . . A native of America must have very singular good fortune, who after residing fourteen years in his own country, should go to Europe, enter into romish orders, obtain the promotion of cardinal, afterwards that of pope and at length be so much in the confidence of his own country, as to be elected president. . . . Sir, it is impossible to treat such idle fears with any degree of gravity. . . .

. . . It appears to me that it would have been dangerous, if congress could intermeddle with the subject of religion. . . . It is apprehended that Jews, Mahometans, Pagans, &c., may be elected to high offices under the government of the United States. Those who are Mahometans, or any others, who are not professors of the christian religion, can never be elected to the office of president or other high office but in one of two cases. First, if the people of America lay aside the christian religion altogether. . . . Another case is, if any persons of such descriptions, should, notwithstanding their religion, acquire the confidence and esteem of the people of America by their good conduct and practice of virtue, they may be chosen. I leave it to gentlemen's candor to judge what probability there is of the people's choosing men of different sentiments from themselves. . . .

PRESIDENT CARTER, HOUSE PANEL SUPPORT CONGRESSIONAL PAY RAISE DEFERRAL IDEA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 5 minutes.

Mr. WHALEN. Mr. Speaker, the Congressional Pay Raise Deferral Act was again reintroduced today with additional cosponsors. This brings to 85 the number of Representatives who are

sponsoring this legislation. The bill was first introduced on January 4 as H.R. 1365.

As you know, the major feature of the Congressional Pay Raise Deferral Act is its provision that any increase in congressional salary must be deferred until the Congress following the one in which it is approved. This would cause a general election to fall between the time when a pay raise is approved and the time when it goes into effect.

It is my belief that passage of this bill would help to open up the whole congressional salary debate to healthy, timely input from the public. Perhaps more importantly, this proposal would eliminate the conflict of interest that is now present whenever we act—or decline to act—on measures affecting our own salaries.

Mr. Speaker, I am delighted to note that President Jimmy Carter, who until now has been silent on the congressional pay raise issue, last week endorsed the concept of congressional pay raise deferral.

His views were reported by the United Press International on February 18. At the conclusion of this statement, I will insert in the RECORD the full text of the UPI story, as it appeared in last Friday's Washington Star.

Also, I wish to note for the record that last Wednesday the chairman of the Ad Hoc Subcommittee on the Quadrennial Commission's salary recommendations, BILL FORD of Michigan, said his panel's report is likely to contain a recommendation that the full Committee on Post Office and Civil Service give prompt attention to the concept of congressional pay raise deferral. He alluded to this recommendation again on Thursday, during debate on the floor of the House.

All of this is very encouraging to me, Mr. Speaker, and I do hope that the Congressional Pay Raise Deferral Act will receive prompt consideration in the Post Office and Civil Service Committee. If it does not, then we are again going to be confronted with the dilemma of having to vote on our own salaries—and what more clearly is the definition of conflict of interest than a situation where the vote we cast must necessarily be to our immediate and personal benefit or detriment—when the Legislative Appropriations Act comes before us in the spring.

We must not forget, too, that every fall we now come due for a cost-of-living adjustment in our salaries. And this must also be voted upon by the Congress.

Certainly, I am not arguing against us voting on what the congressional salary should be. I am merely saying that our decision should apply to the next Congress, not the one that is here and voting.

As I say, this is a recurrent problem. The sooner we face it and deal with it, the better.

Now, for your further information, I am inserting President Carter's reported views on congressional pay raise deferral.

CARTER'S ONE RESERVATION ON PAY RAISE

President Carter said today he approves the federal pay raise which goes into effect Sunday, but it should have been delayed until after the next general election.

Carter jaywalked across Pennsylvania Avenue and walked a long block through Lafayette Park to drop in at a meeting of fellow Democrats.

"I think we've had a bad time with the salary increases," he said upon arriving at the Hay-Adams Hotel. "I think the salary increases were warranted. I think the way it's been done perhaps has caused some additional disgruntlement."

Carter said he told Democrats on the House Ways and Means Committee yesterday that "in the future we (should) not ever let any salary increases go into effect until after the next general election."

"With that one single change," Carter said, "the American people would accept" what he said were needed salary increases for Congress, the judiciary and other top-level federal employes.

STATUS AND FUTURE OF OUR NAVAL COMBATANT FORCES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BOB WILSON) is recognized for 5 minutes.

Mr. BOB WILSON. Mr. Speaker, this morning I heard testimony from Adm. Hyman Rickover concerning the status and future of our naval combatant forces. It was a devastating critique of the course on which we seem to be heading.

I am dismayed by the difference in the proposals for a naval shipbuilding program publically announced this morning by the Carter administration, and the critical analysis contained in the Rickover statement.

I think the Congress should also be dismayed. We should ask, "What is going on?" Only a few months ago, after considerable debate, both Houses of Congress agreed on the kind of long-range shipbuilding program this country needs to insure control of the seas. Now suddenly that plan seems to have vanished in thin air. It is incredible.

I think we should demand immediate clarification on this Nation's shipbuilding objectives before we take any action, budget resolution or rescission, which taken in haste, might unalternately diminish our naval capability and credibility on the high seas.

The full testimony will later be printed in the RECORD of the hearings before the House Armed Services Committee, Subcommittee on Seapower.

Because of the urgency and timeliness of this viewpoint, I would like now to include in the RECORD, Admiral Rickover's summary of his remarks today:

NEED FOR HIGH CAPABILITY SHIPS

The Soviets recognize the importance of becoming the world's strongest sea power. We have now chosen not to challenge them with numbers of ships. It is, therefore, essential that the ships we do build are the most powerful and effective weapons we know how to build. This means nuclear propulsion, and the best anti-air, anti-submarine, and surface-to-surface weapons we have for major warships. The penalty for any other approach is the steady erosion of our conventional military forces; a consequent reduction in our influence and in our "options" in world affairs; and the reliance of our security on nuclear weapons which, if used, would be an unmitigated disaster.

Historically, the United States has relied on the quality of its weapons and the ability to manufacture them in large quantities to win its battles, rather than on large numbers of men. The American people do not appear to be willing to support large numbers of men under arms. Further, the complexity of modern weapons and the rapidity with which major wars can now be started preclude relying on wartime production capacity to furnish our weapons; we must plan to fight a major war with the weapons we have at its outbreak. I believe we would be following a shortsighted path if we do not provide our first line striking forces with the best weapons our technology can provide.

If the problem is that the Nation's financial managers are not willing to provide enough money to insure our present defense, and at the same time invest sufficient funds to insure our future defense, then our people must be informed of the stark reality they face. We must not do what we have done so often in the past; namely, fail to provide adequate defenses using the sugarcoated philosophy that they are not needed, only to soon find ourselves in a war which costs many times the funds "saved." In World War II, we got away with it because our Allies took the brunt of fighting while we rearmed. In Korea, we got away with it because we were able to reactivate quickly large numbers of World War II ships, as well as equipment which had just been put in reserve. In the Vietnam war, we managed to sustain ourselves by using up a great deal of material, drawing down our reserve stocks, wearing out much equipment, and because our real opponents did not fight with their first team.

Most people do not realize how badly our naval forces were allowed to deteriorate by the hiatus in naval shipbuilding in the 1960's and the reduction in fleet readiness accepted to make funds, material, resources, and personnel available for the Vietnam war.

All wars and all military development should have taught us that a war, small or large, does not follow a prescribed "scenario" laid out in advance. If we could predict the sequence of events accurately, we could probably have avoided the war in the first place. As a war progresses, we can count on constantly facing new conditions and surprises as the enemy seeks new means to probe our weaknesses; that is what we repeatedly experienced in Vietnam.

When a war starts, we must fight with what we have. You will recall that all the aircraft the U.S. used in World War II had been designed prior to that war. Further, it takes five years or more to build a large warship. This often means using our weapons for an entirely different mission than that for which they were designed. For example, consider the use of B-52's in Vietnam.

Therefore, every major weapon should be designed with the maximum possible inherent flexibility. It is the need for the flexibility in warships built to operate for 30 years or longer that makes it so obvious and so important that we use nuclear propulsion in every major surface warship we build; especially since the ships we are building today are expected to last through part of the 21st century.

Despite the fact that Congress has repeatedly taken the position that we need to build more nuclear-powered surface warships, after 25 years of studying the issue we have only eight nuclear surface ships in operation and five more under construction. This is a very slow rate of transition to nuclear power for the greatest maritime power in the world—an island nation dependent on the strength of its Navy for its security.

Decisions made today concerning nuclear propulsion will not have their effect in the Fleet until a decade from now. We delude ourselves if we do not recognize that in the intervening years the Soviets will introduce major improvements in their naval weapons systems. As they continue to try out new technological advances in their fleet, we can expect them to incorporate the lessons learned into their new design ships. They have demonstrated time and again that they are willing to invest large amounts in new concepts.

No one can tell what problems our future leaders will face. However, the defense capabilities available to them will have been decided by the decisions we make today. The issue before the Congress should be decided on the capabilities our ships must have to meet the challenge. No cost analyses; no political expediencies; no other factors should be permitted to obscure this fundamental fact. You cannot measure military capability by cost alone. To do so can be fatal to this country, especially since our likely adversary is engaged in the greatest expansion of military forces in history and continues to out-spend us. I know that with today's fiscal problems facing the Congress, it is extremely difficult to make investments for the future. However, if such investments had not been made in the past, we might not have survived as long as we have.

Our defense budget in recent years has been decreased in real dollars. It, therefore, becomes increasingly imperative that we have the best weapons our technology can provide. As for myself, I would rather fight a war with fewer, but better soldiers; with fewer but better guns, or tanks, or planes; with fewer but better ships. That is the road for a nation that excels in technology, and is reluctant to expend lives in war; yet, nevertheless, desires to win.

The systems analysts always tell us that we don't need the best ships, but they don't tell us how to counter the threat with inferior ships. For example, in the issue of nuclear powered surface warships, nowhere do they address how we should ensure that tankers can survive in areas of high threat. And without tankers, the conventional ships cannot survive.

NEED FOR A FIRM PROGRAM FOR NUCLEAR WARSHIPS

What must be done? We need a firm long-range program to build nuclear powered ships—a program that will not be drastically changed every year or two as has happened in the past. Admiral Moorer, when he was Chairman of the Joint Chiefs of Staff, and for many years an eloquent proponent of nuclear power for our striking forces, agreed with me that we must build these first-line ships during peace.

The excuse for not building better ships is always that they are "more expensive". But all weapons of war are expensive. Cheap weapons will not win a war. And if we cannot win a war, there is no sense in spending money on weapons at all.

A former Secretary of Defense said: "People keep wistfully looking for a way to provide for our national security that doesn't cost much. I'm afraid that life isn't like that."

Rarely in naval history have the leaders looked far enough ahead. They generally build ships they consider to be adequate for the present. That is why, frequently, naval leadership has been replaced once war broke out.

We should be planning now for war that may erupt 15 or more years from now. Therefore, I agree with the policy recommended by the House Armed Services Committee that now is the time to establish a firm program for making all new major combatant ships for our striking forces nuclear powered. I consider this should be a matter of national priority.

For the reasons I have presented, I consider it urgent that we continue our nuclear attack submarine building program at an adequate level and proceed now with the next nuclear carrier, the nuclear strike cruiser program, and conversion of the cruiser *Long Beach* to *Aegis*.

THE GOOD LIFE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. RAILSBACK) is recognized for 5 minutes.

Mr. RAILSBACK. Mr. Speaker, far too often we only hear about the misuses of public office, and how low Congress rating is with the American public. However, many of my colleagues are "workaholics" and are just as upset as other people by references to "the good life."

Fortunately, the Washington Post took note for one such Member, my good friend and colleague from Illinois, PAUL FINDLEY, by reprinting his schedule during the "Lincoln recess." I would hope that when one decides to sum up their Representatives, Congressmen such as PAUL FINDLEY are considered.

For the review of my colleagues, I include "The Good Life of a Congressional Recess" in the RECORD immediately following my remarks:

"THE GOOD LIFE" OF A CONGRESSIONAL RECESS

(By Paul Findley)

The article in The Washington Post of Feb. 9, "Congressional Recess, by Any Other Name . . ." smacks of a bit of jealousy, carrying with it the implication that reporters, too, might enjoy the leisurely life of a "congressional recess" or "district work period"—whatever you choose to call it.

If that is the case, I only wish you could have been with me these seven days to enjoy the good life in Illinois. Enclosed is my daily schedule for this period. As you can see, I had a ball!

Lest you be unfamiliar with Illinois' geography, I can assure you that I did not take my swimming suit and snorkel on my recess—there are no sunny beaches in Illinois at this time of year. Nor did I take my skis. There is still plenty of snow and ice in Illinois (unlike Washington) because it is usually 10 degrees colder in my district than it is here, but we have no mountains.

But I had a ball, nonetheless, and I am certain you would have also. In fact, I hope that you will make plans to join me for a later recess in the 20th district. Of course, as a hard-working reporter, you'll be prepared to stay out until midnight driving halfway across Illinois and then getting up early the next morning for a 7:30 a.m. meeting. And I'm certain that you are used to spending all day Saturday and Sunday going from one meeting to another. I assure you, it's the best way I know to meet a lot of wonderful people and learn what is on their minds. It helps me better represent them in Washington, and who knows, it might help you do a better job of reporting for them.

Oh, by the way, if you come with me next time, you'll want to bring along your wash 'n' wear shorts and shirts. In our travels we'll have to move from one motel to another almost every night, but I'm sure you're used to living out of a suitcase. And bring some Dramamine. If you aren't used to so much traveling and excitement, all this "fun" can really get to you.

THURSDAY, FEBRUARY 10

11:20 a.m. Left National, TWA 561.

1:15 p.m. Left St. Louis, Ozark 862.

1:49 p.m. Arrived in Quincy.

2:30 p.m. Visited Channel 7; Visited Herald Whig Newspaper; Visited Channel 10; Met with Joe Ourth, who wants a job.

6:30 p.m. McHugh Theater, Administration; Building, Quincy College, for Quincy; Town Meeting.

8:30 p.m. Met Bob Mays at MacHugh Theater following Town Meeting. He presented a proposal on Corps of Engineers assistance in dredging a recreational lake on Quincippi Island.

8:45 p.m. Met Dolora Whitney at MacHugh Theater following meeting with Mr. Mays Committee to Keep Telephone Operators in Quincy.

9:00 p.m. Met with approximately 15 constituents on individual problems, policies, and issues.

10:00 p.m. Stopped for a Burger Chef and milk shake.

10:47 p.m. Left Quincy, Ozark 507.

11:12 p.m. Arrived in St. Louis (Mr. Iversen met me at the Ozark ticket counter at airport and drove me to the Bel Air Hilton).

FRIDAY, FEBRUARY 11

a.m. Called Betty Kriegshauser, a patient at Barnes Hospital in St. Louis.

a.m. Talked by phone with Washington office preparing statement on Ag-Land Fund.

p.m. Attended World Food Program discussion session, Bel Air Hilton.

5:45 p.m. Dinner—Greater St. Louis World Food Program, Bel Air Hilton.

6:45 p.m. Introductions.

7:00 p.m. Speech—"Dimensions of the World Food Problem and the Role of the United States"—explained Famine Prevention Program.

SATURDAY, FEBRUARY 12

a.m. Due to fog, drove 166 miles from St. Louis to Champaign, Illinois.

Noon Annual Awards luncheon, College of Ag., University of Illinois—Awarded with Certificate of Appreciation for contributions to agriculture and its development in Illinois and the world.

p.m. Drove to Springfield, Illinois.

5:00 p.m. Tour Illinois Bell Museum, 529 South 7th, Springfield (Dick Kahne).

6:30 p.m. Reception, Abraham Lincoln Assn., Apollo Room, Forum 30.

7:30 p.m. Attended Abraham Lincoln Assn. Dinner, Forum 30, Springfield. Following dinner attended a special showing of the Lincoln Home Visitor Center film.

SUNDAY, FEBRUARY 13

a.m. Attend Church.

Noon Lunch.

1:00 p.m. Met with various constituents prior to dedication ceremonies.

8:00 p.m. Participated in dedication of Lincoln Home Visitor Center, First Presbyterian Church, 7th & Capitol, Springfield.

3:15 p.m. Attended Ribbon Cutting Ceremony at Visitor Center.

p.m. Dinner.

7:30 p.m. Springfield Town Meeting, County Farm Bureau Building, 2449 North Dirksen Parkway, Springfield.

9:00 p.m. Met with George Cashman, retired Curator of Lincoln Tomb.

9:15 p.m. Met with constituents on individual problems, policies and issues.

MONDAY, FEBRUARY 14

10:00 a.m. Alpha Jones. Received a book of poetry that she had written.

10:15 a.m. John Kirby. Discussed a highway problem.

10:30 a.m. Father Mascari. Discussed plans for a golden age retirement center for rural Americans.

10:45 a.m. Dale Rowand and Ken Redfern, Department of Ag. Discussed plans for an International Visitors Day at the State Fair.

11:30 a.m. Stopped for a hamburger.

11:45 a.m. Drove to Jacksonville.

12:15 p.m. Made visits around Jacksonville Square.

1:30 p.m. Attended Ribbon Cutting Ceremony at District Service Office of Honorable Jim Reilly, 224 West State, Jacksonville.

2:00 p.m. Jacksonville Town Meeting, City Council Chambers. Was made an honorary fireman and an honorary policeman by the City of Jacksonville and received commendation from the City Council and Mayor Hocking for assistance on solving community problems.

3:30 p.m. Met with Don Lakin in mayor's office, regarding Murrayville/Woodson water plant.

3:45 p.m. Met with Dr. Fuhrig in mayor's office, regarding Conference of Churches, Great Decisions Series, China slides.

4:30 p.m. Stopped at McDonald's for a cheeseburger.

4:45 p.m. Drove to Alton.

7:00 p.m. Alton Town Meeting, Metropolitan National Bank on Beltline, Community Room, Alton.

8:00 p.m. Met with various constituents on individual problems.

9:00 p.m. Interview with Southern Illinois University radio on foreign policy.

TUESDAY, FEBRUARY 15

10:00 a.m. Met with Mary Heitzig and Mayor Joe Susnig of Jerseyville, regarding city problems with HUD.

10:30 a.m. Met with constituent who wants to establish cable TV for Carlinville.

Noon. Lunch with Board of Directors of Alton-Wood River Chamber of Commerce.

2:00 p.m. Toured Lock and Dam 26 at Alton.

4:00 p.m. Met Harold Rice, President, Alton-Wood River Area Federation of Labor, at the Stratford, Alton.

6:30 p.m. Dinner with AFL–CIO union officials.

8:00 p.m. Drove to St. Louis.

WEDNESDAY, FEBRUARY 16

7:30 a.m. Spoke at Grain and Feed Assn. of Illinois Annual Meeting, Stauffer's Riverfront Towers, St. Louis—"The Future of On-Farm Storage."

9:00 a.m. Discussions with Grain and Feed Assn.

10:50 a.m. Lect St. Louis, TWA 482.

1:30 p.m. Arrived at National Airport.

p.m. Appointments in Washington office.

COMMONSENSE AND STRIP MINING ARE NOT COMPATIBLE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Maryland (Mr. BAUMAN) is recognized for 30 minutes.

Mr. BAUMAN. Mr. Speaker, the President's Special Assistant for Energy Matters, James Schlesinger, recently wrote to our distinguished colleague, the gentleman from Arizona (Mr. UDALL), regarding the administration's position on the strip mining legislation before us. The bottom line of Mr. Schlesinger's analysis is one I think and would hope most Members of this body share, that it is possible to expedite the development of a rational coal policy without having to forgo provisions to safeguard the land from abuses of strip mining practices. That broad conclusion is a commonsense position, and a position recognizing the necessity of increased coal production to meet the needs of an energy-short nation.

It is in this spirit, Mr. Speaker, that I must go one step further and question the wisdom of passing H.R. 2, "The Surface Mining Control and Reclamation Act of 1977," without receiving satisfactory answers to questions which have been raised about it.

The Environmental Protection Agency and the Council on Environmental Quality initiated an independent study last year with ICF, Inc. The study was to determine what impacts if any the coal strip mining legislation then being considered, H.R. 13950—which is nearly identical to H.R. 2, or the bill presently before the Interior Subcommittee, would have on both the level of production and our environment. The cost of this independent study was $200,000 and represents a year's worth of intensive research by the qualified people in the field of mining research. It was completed, and the final draft was submitted to the EPA and CEQ on January 24 of this year or about 23 days ago.

However, within the span of only 1 week, this final draft summary was almost entirely rewritten, though not by the independent experts, but by several Federal agencies in the executive department which were asked only to comment on the final draft. The executive department explains that its member agencies offered "nonsubstantive clarifying language," implying that no one seriously violated the integrity of the final draft. For the benefit of my colleagues, I have extracted specific language from both versions to give you a clear picture of what seems to be going on here. If you compare the language of the original January 24, final draft with the newly revised, February 1 version produced by the executive agencies, you will find grammatical excavation-work meeting the envy of any stripminer:

ICF STUDY OF STRIP MINING LEGISLATION

Original Version of January 24	*Modified Version as of February 1*
"However, there are numerous provisions in H.R. 13950 not directly related to costs which could create major difficulties. Such impacts include (1) substantial production impacts that could result from possible interpretations of the alluvial valley provisions, (2) delays in permitting due to inability to comply within established timetables and/or insufficient administrative funding, (3) extensive litigation resulting from ambiguous and undefined terms, (4) unintended effects due to mismatches between the apparent intent and the actual wording, and (5) losses to coal reserve base."	"However, several provisions in H.R. 13950 are subject to varying interpretations. In the event that these terms are given very stringent interpretations, the impacts could be substantially higher."
"For example, while a moderate interpretation of the alluvial valley floor provisions could affect four mines with an additional production in 1978 of 12 million tons, a worst case interpretation could impact up to 51 million tons of western production by 1978 and 211 million tons by 1985."	"For example, while a moderate scenario of the alluvial valley floor provisions could affect four mines with an additional production in 1978 of 12 million tons, a high impact interpretation could impact up to 25 million tons of western production by 1978 and 104 million tons by 1985."
"In addition there are several other non-cost provisions in H.R. 13950 in which the wording of the provisions could have effects quite different from the apparent Congressional intent."	"In addition there are several other non-cost provisions in H.R. 13950 in which the wording of the provisions could result in additional restrictions, administrative inflexibility, and/or delays."
"However, the actual wording could result in unnecessary restrictions, administrative inflexibility, and/or additional litigation."	(Language deleted in this version.)
"The reserve impacts of H.R. 13950 could range between 8.5 and 28.3 billion tons, or between 2.0 and 6.5 percent of total reserves. These impacts are equivalent to between 6.2 and 20.7 percent of strippable reserves."	"The reserve impacts of H.R. 13950 could range between 8.1 and 20.0 billion tons, or between 1.9 and 5.5 percent of total reserves. These impacts are equivalent to between 5.9 and 17.6 percent of strippable reserves."
"Imprecise wording in H.R. 13950 could lead to uncertain interpretation; which could significantly limit western surface coal mining."	*"Some words and phrases in H.R. 13950 are subject to varying interpretations. In the event that these terms were given a very stringent interpretation, the impacts of H.R. 13950 could range substantially higher.*
"Imprecise and undefined terms create a high degree of uncertainty in predicting impacts, and could likely result in extensive litigation. A distinction can be made between *flexibility* and *ambiguity*. Flexibility refers to the ability of the regulators to make case-by-case decisions based upon clearly defined criteria. Ambiguity, on the other hand, refers to poorly defined criteria, which could result in judicial interpretation and regulatory inflexibility. Such imprecise terms include "existing coal mine," "valley floor," "undeveloped range land," "adversely effect," "not significant," and "substantial loss."	"Certain phrases on Section 510(b)(5) are subject to different interpretations. For example, it is not clear whether the term "undeveloped range lands" includes lands which have the potential for hay production. Nor is it clear what kind of changes in water quality and quantity could constitute "adverse effects" within the meaning of Section 510(b)(5)(B). Other phrases may also be interpreted differently. Some of these uncertainties may be resolved when administrative regulations defining these terms are promulgated under the statute. Others will be clarified as regulatory authorities proceed to administer the Act on a permit by permit basis. Finally, the possibility exists that judicial interpretations of these terms may in some cases be sought."
"The worst case assumption, that mining would be prohibited at any proposed mine with any part of the lease area within an alluvial valley floor, could impact up to 51 million tons of production by 1978, 95 million tons by 1980 and 211 million tons by 1985. These impacts are detailed in Table D."	"The high impact assumption, that mining would be prohibited at about one-half of the proposed mines having any part of the lease area within an alluvial valley floor, could impact up to 17 million tons of production by 1978, 47 million tons by 1980 and 104 million tons by 1985. These impacts are detailed in Table D."

"Alluvial valley floor production impacts

[Millions of tons]

	Low	Moderate	Worst case
1977	0	4	35
1978	0	12	51
1979	0	16	71
1980	0	20	95
1981	0	24	107
1982	0	30	138
1983	0	32	152
1984	0	35	185
1985	0	35	211"

"It is estimated that approximately 0.8 to 8.5 billion tons of reserves could be precluded from mining due to the surface owner's consent provision."

"In the course of this analysis of the impacts of H.R. 13950, several aspects of the bill appear to merit further consideration. The characteristic common to all of the issues raised here is that the adverse effects of the bill could be exacerbated due to the actual wording employed in H.R. 13950, which may not reflect Congressional intent."

"The provisions for declaring lands as unsuitable for mining appear to offer citizens an easier means of forcing hearings than is provided by the standard permit hearing process. Further, the regulatory authority has little flexibility in deciding whether hearings are actually warranted."

"The technology which might be required to control sedimentation is phrased differently from EPA's effluent guidelines. While it was interpreted in this report to require EPA's 1983 standard of 'best available technology economically achievable' in 1978, it could be interpreted differently and could result in costly and time consuming litigation."

"Alluvial valley floor production impacts

[Millions of tons]

	Low	Moderate	High
1977	0	4	17
1978	0	12	25
1979	0	16	35
1980	0	20	47
1981	0	24	53
1982	0	30	68
1983	0	32	75
1984	0	35	91
1985	0	35	104"

"It is estimated that approximately 0.4 to 4.2 billion tons of reserves could be precluded from mining due to the surface owner's consent provision."

"In the course of this analysis of the impacts of H.R. 13950, several aspects of the bill appear to merit further consideration. The characteristic common to all of the issues raised here is that the impacts of the bill could be exacerbated due to varying interpretations, which in some cases differ from the apparent intent (as reflected in the statutory language and committee report)."

"The provisions for declaring lands as unsuitable for mining could possibly offer citizens an easier means of forcing hearings than is provided by the standard permit hearing process."

"The technology which might be required to control sedimentation is phrased differently from EPA's effluent guidelines. It was interpreted in this report to accelerate EPA's 1963 standard of 'best available technology economically achievable' into 1978."

Mr. Speaker, comparing the two versions, one sees two very different ways of looking at and reaching conclusions about the same set of numbers. One also cannot help but conclude that there is a great cavern of ambiguity in the bill before us which permits two different sets of intelligent grownups to come to radically different conclusions about the same things. Either that, or there has been a deliberate effort to deceive the Congress and the public.

There is also the matter of deciding what the real and not-later-to-be-amended position of the administration is on this study. In his appearance before the House Energy and Environment Subcommittee on February 8 or a little over a week ago, I asked Secretary Andrus if he was aware of the ICF study, and if so, did he base any of his recommendations concerning H.R. 2 on its contents. He answered, "No," to both questions. The Secretary was then asked if he would recommend that the subcommittee postpone consideration of H.R. 2 until such time as the Department got around to reviewing the study or until President Carter had formulated and forwarded to the Congress his long-range energy policy. To this, the Secretary also gave two "Nos."

I must ask my colleagues to consider what I have just described, and to ask yourselves what a reasonable, objective observer sitting up there in the gallery would conclude about what has been going on here. He would probably conclude that there has not been much hard thinking going on, that the bill before us is indeed ambiguous and the administration so seemingly divided on important aspects of stripmining that all the President's men would just as soon we vote this thing through and call it a day.

I would suggest, however, that this is not the way responsible Government works. I am less concerned about individuals or groups in the executive branch who might need to save face than I am about the millions out of work, the children sitting home away from their cold schools and the general discomfort across the land primarily due to congressional and executive indecision on implementing a workable and responsible energy policy. The energy experts universally agree that there is a real shortage of natural gas and oil in our country, and that coal is the answer. If this is so, and I tend to think that it is, we must decide once and for all whether or not national stripmining legislation is needed to promote coal development, and if so, is H.R. 2 the proper vehicle with which to do it?

Phony figures are no help at all in what is a most important energy decision facing the Congress.

JOHN GARDNER'S ENDURING LEGACY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Colorado (Mr. WIRTH) is recognized for 5 minutes.

Mr. WIRTH. Mr. Speaker, for the last 6 years, John W. Gardner has directed Common Cause, the latest in a series of superb contributions by this remarkable man. During the last 30 years, from teaching to running a leading American foundation, from leadership in educational change to leadership in political reform, from scholar to writer, John Gardner has worked in the public interest, setting an example for all to follow.

In 1965, Mr. Gardner recommended to President Johnson the establishment of the White House fellows program. Designed to bring promising young people into contact with Government, the program is now entering its 12th year. Each class of 15 to 18 young people—23 to 35 years of age—has the opportunity for 1 year to work with a member of the Cabinet or the White House staff in learning about the workings of Government, and then returning to his or her field of endeavor, hopefully with a clearer understanding of Government, and with a heightened commitment to public service.

To date almost 200 young Americans have been White House fellows, and as members of their communities across the Nation are continuing the tradition of excellence and involvement set so clearly by John Gardner. This is but one example of the many contributions made by Mr. Gardner.

Mr. Speaker, today I am entering into the RECORD a summary of the activities of Common Cause, the most recent demonstration of the impact of John Gardner on this country. This organization has had a profound impact on this House and on the American political process. As John Gardner steps down as chairman of Common Cause, it is appropriate for each of us to reflect upon the clarity of mission, commitment to quality, and integrity of action which have

been so clearly outlined in this man's career.

[From the Wall Street Journal, Feb. 18, 1977]

JOHN GARDNER'S ENDURING LEGACY IN COMMON CAUSE

(By Albert R. Hunt)

WASHINGTON.—Back in 1970 John Gardner announced he was starting an organization called Common Cause. Its purpose, he said, was nothing less than to achieve fundamental reforms in the American governmental system.

A lot of people laughed.

Washington cynics said the former Secretary of Health, Education and Welfare obviously intended for the organization to serve mainly as a device for furthering his presidential ambitions. They said he was too patrician and cerebral to lead the tough kind of political fights he was talking about. They said the whole idea of Common Cause was hopelessly naive.

Today, Mr. Gardner is preparing to step down as chairman of Common Cause. Among several other achievements during his tenure, he has proved the cynics wrong. The 64-year-old Mr. Gardner and his organization have clearly demonstrated that determined citizens can actually reshape their government.

Naturally, Common Cause has made mistakes. But overall it has pursued its goals with an effective degree of shrewdness and tenacity. As a result, it is widely acknowledged now as one of the most influential lobbying organizations in Washington and elsewhere around the country.

Common Cause was a major influence in setting off a recent series of basic reforms in the way Congress operates. It had a lot to do with the big changes that lately have occurred in the financing of political campaigns. And from its inception it has consistently pushed for the "open government" concept that Jimmy Carter now preaches.

Mr. Gardner never made it to the Oval Office; in fact, he never tried. But it's likely that few private citizens have had as lasting an impact on the government system as he.

Essentially, Common Cause has proved the validity of two elemental, but sometimes forgotten, ideas. The first is that the processes of government must be made to work well before citizens can have much impact on specific policy decisions. The second is that although it's difficult, you *can* fight city hall.

Even though Mr. Gardner and his organization frequently are assailed by the political right, these themes transcend ideology. The problems of secrecy and the need for accountability by government officials are as important to conservatives as to liberals. And the notion of effective citizen action hardly is a radical idea.

"There isn't any possibility that we can make power less seductive," Mr. Gardner said in an interview in the New Yorker magazine several years ago. "What we can do is to devise realistic arrangements that will make it more difficult for officials to separate the citizens from the levers of power and much more difficult for a tightly knit inner circle to monopolize those levers."

Operating under the maxim that "accountability is at the heart of free self-government," Mr. Gardner frequently has riled entrenched interests in an effort to achieve a more democratic system. Surprisingly often, he has succeeded.

Common Cause deserves at least part of the credit for several changes in government procedures that recently have occurred, or that are about to occur.

Some examples: Nearly all congressional committees now operate only in open sessions. Congress is preparing to pass legislation requiring lobbyists to disclose their activities. Lawmakers are expected to adopt soon a strict ethics code for themselves. California voters approved a measure minimizing government secrecy and putting restrictions on political contributions. A new Michigan law provides for taxpayer-financing of that state's gubernatorial campaigns. Florida has adopted tough financial disclosure requirements for elected officials there.

Certainly the public revulsion over the Watergate affair was a big factor in some of these developments. But when Mr. Gardner and Common Cause began pushing for such changes, Watergate was nothing more than a big apartment complex on the Potomac.

In 1971, for instance, Common Cause began lobbying to end the automatic seniority system in the House by requiring that committee chairmen be directly elected by their party caucus. Skeptics doubted that such a significant change was possible, but by 1975 it had happened.

Three committee chairmen were unseated two years ago, and this year one appropriations subcommittee chairman was ousted. "The days of the autocratic chairman are over," says a House committee chairman. "You're not going to be dictatorial to people you know can determine your fate."

The secret of Common Cause's success is its members—250,000 of them, each paying at least $15 in annual dues. Congressmen say they are perpetually badgered by letters and visits from these members. During political campaigns, local Common Cause units have been remarkably successful in getting commitments from candidates to fight for positions backed by the organization.

"Our real strength comes from having a cohesive constituency," says David Cohen, president of Common Cause. "This is basic. John Gardner understands that you have to motivate people, that the morale of our society is fundamental to dealing with problems. It's very important that people have a real sense of participation."

It's true that Common Cause members generally are more financially and socially able to participate than other citizens; one lawmaker calls the group's members the "guilty rich."

Whether that assessment applies or not, it is nonetheless salutary for thousands of Americans to band together in an effort to improve the way their government operates. Mr. Gardner, who believes it is time for him to move on to new challenges, has noted that eventually any citizen organization will "grow old and ineffective." But he adds that "the idea of citizen action will continue," and for his role in assuring that, he deserves the nation's thanks.

THE SOCIAL SECURITY COVERAGE GAP

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Wisconsin (Mr. CORNELL) is recognized for 5 minutes.

Mr. CORNELL. Mr. Speaker, one out of every seven persons in this country receives monthly social security checks. As our basic income maintenance program, the social security system provides benefits for retirees, disabled persons, surviving dependent spouses with minor children, and other survivors, under certain conditions. The program precludes payment of any benefits, however, to healthy widows between the ages of 50 and 65 who have no dependent children.

These so-called displaced homemakers comprise 2.2 million of our people. They fall into a gap that has been created by statute. Such people are generally not eligible for aid to families with dependent children, medical benefits, SSI or most other forms of categorical assistance. Ironically, displaced homemakers may be the one group most in need of help. The unemployment problems experienced by other workers pale in comparison to those experienced by displaced homemakers whose basic skills are raising a family and maintaining a home. With no other recent job experience, it is indeed difficult for these people to find employment.

The bill I am introducing today is designed to bridge the coverage gap. Under my proposal, the age at which widows, surviving divorced wives, or widowers would be eligible for social security benefits would be reduced from 60 to 50. The amount payable to beneficiaries under this plan would be the same actuarily-reduced rates which now apply to disabled widows.

Then, beginning with the month of attainment age of 65, the lower benefits being paid to widows, surviving divorced spouses, or widowers would be increased to full-rate benefits. Thus, this legislation would enable those who elected to receive a reduced interim benefit to have the full amount of their entitlement restored after reaching retirement age.

The intent of this proposal is to provide temporary relief to cushion the economic shock which accompanies loss of the major breadwinner. My purpose is not simply to reduce the retirement age for widows. We cannot replace a program which discriminates against this group with one which favors only them. Although the amount each widow, surviving divorced spouse, or widower would receive is actuarially reduced, the benefit level should be enough to provide some assistance when these people need it most without discouraging self-help.

There should be several positive results from this program. With it we will eliminate one of the glaring inequities of the present social security system by providing comprehensive coverage for all people who need assistance due to age or physical condition. We will also provide a financial cushion for those who need time to adjust after the loss of the primary wage earner. Moreover, people who are forced to tap this interim benefit will not be penalized for doing so since their benefits can be fully reinstated at retirement.

The legislation directs the Secretary of Health, Education, and Welfare to recommend ways to provide adequate financing for such a proposal. It has been estimated that the long-range cost of this measure, averaged over the next 75 years, will be about 0.21 percent of tax-

able payroll. I am confident, however, that this cost could be modified if changes in financing social security benefits are approved.

I believe Congress should pay special attention to the plight of older widows, surviving divorced spouses, and widowers who are now caught in the social security coverage gap. I hope this proposal will be given serious consideration.

RULE REQUESTED FOR CONSIDERATION OF H.R. 3477, TAX REDUCTION AND SIMPLIFICATION ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Oregon (Mr. ULLMAN) is recognized for 5 minutes.

Mr. ULLMAN. Mr. Speaker, on February 17, 1977, the Committee on Ways and Means ordered favorably reported to the House of Representatives H.R. 3477, the Tax Reduction and Simplification Act of 1977, with amendments. This bill provides economic stimulus through rebates, special payments, and employment tax credits. The bill also extends the individual and corporate tax cuts which are due to expire at the end of this year, through December 31, 1978. In addition, the bill provides tax simplification through revision of the standard deduction and the tax tables.

I take this occasion to advise my Democratic colleagues in the House as to the type of rule that I will request the Committee on Rules to provide for consideration of H.R. 3477 on the floor of the House. The committee instructed me to request the Committee on Rules to grant a closed rule for consideration of H.R. 3477 which would provide for committee amendments which would not be subject to amendment, which would provide 3 hours of general debate, to be equally divided, which would waive all points of order, and which would provide for one motion to recommit with or without instructions.

We intend to file the committee report on H.R. 3477 on Thursday, February 24, 1977. It is our intention to request a hearing before the Committee on Rules as expeditiously as possible.

GOVERNMENT REORGANIZATION: THE PRESIDENT'S REQUEST IS REASONABLE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Iowa (Mr. BLOUIN) is recognized for 5 minutes.

Mr. BLOUIN. Mr. Speaker, on February 9, I and 16 other Democratic members of the House Committee on Government Operations introduced legislation (H.R. 3407) authorizing the President to submit Government reorganization plans to the Congress.

On the same day, seven Republican members of the committee submitted an identical bill, H.R. 3442.

The approach taken in these two bills is identical to that requested by President Carter in his February 4 message to Congress. In effect, it reviews the system for submitting reorganization plans established by the Executive Reorganization Act of 1949, as amended. It permits the President to submit to Congress reorganization plans which automatically take effect unless either the House or Senate adopts a resolution opposing the plan within 60 calendar days after it is submitted.

Under this system, the President is authorized to submit reorganization plans which would transfer all or part of a Federal agency or its function to another agency, to abolish all or part of the functions of a particular agency, to consolidate or coordinate all or part of an agency, to authorize an officer to delegate his functions, or to change the name of an agency.

Under this system the President is not authorized to create new executive departments at the Cabinet level, to abolish or transfer existing executive departments, to abolish or transfer all of the functions of a Cabinet-level department, to consolidate two or more executive departments or their functions, to continue an agency beyond its statutory termination date, to authorize an agency to perform functions not specifically authorized by law, or to increase the term of office beyond that established by law.

In addition, this legislation amends the original act to permit the President to make changes in a reorganization plan within 30 days after he submits it to Congress unless the Government Operations Committee of either House has already disapproved the plan; to submit more than one plan within a 30-day period; to submit plans which are not necessarily limited to one "logically consistent" area; and to substitute management, efficiency and delivery of Federal services in lieu of financial savings as a criteria for judging the impact of a given reorganization plan. Finally, it would extend the act for a 4-year period, rather than the customary 2-year period.

I am well aware that many of my colleagues in the House doubt the constitutionality of this legislation—the so-called one-house veto approach. Many others, I suspect, doubt the propriety of the approach, its constitutionality notwithstanding.

I can appreciate their reluctance to endorse such a plan, which they feel invites the abuse of executive power. I can understand their fear that such legislation merely encourages the preeminence of the executive over the legislative branch of Government.

If, in fact, this legislation seriously threatened the delicate balance of power which makes our Federal system work, I too would strenuously oppose it. But frankly, I think those fears are severely overstated. There is no abdication of responsibility on our part in this approach. The ability of Congress to review the President's proposals—and to reject them if we wish—is carefully protected. In the final analysis, Congress will have the telling and decisive role, either approving or disapproving the President's proposals.

What does threaten our Federal system is a massive, costly and mushrooming Federal bureaucracy which effectively usurps the power of the Congress and the Executive as well. It is a wasteful and unresponsive bureaucracy which feels the public's cynicism, disillusionment and disgust with Government.

Let me be perfectly frank in saying that as a matter of practicality, I think we are surely fooling ourselves if we really believe that Congress can accomplish Government reorganization on its own—or that Congress can even take the initiative in taming the bureaucratic monster. If we leave Government reorganization to congressional initiative, we are likely never to see it finished. That is a judgment intended not as an indictment of Congress, merely as a recognition of the facts. If we are honest, we must admit that there are simply too many divergent interests represented here—too many opportunities for pressure from one special interest or another, some deserving, some not.

There are, by the President's latest estimate, some 1,300 boards, commissions, and advisory groups within the Federal bureaucracy. A large number of these apparently serve very little useful purpose; in fact, they often duplicate each other's purpose several times over. Each one should be subject to zero-based budgeting in order to fully justify its existence, and carefully reviewed to determine its usefulness. Is it realistic to expect Congress to deal fairly and effectively with a problem as complex and unwieldy as that? It seems to me that the President's approach is much more practical.

We should be moving as quickly and as expediently as we can to put the Government's house in order. Until we do, the Federal Government will continue to resemble a misguided, inefficient and costly bureaucratic jungle which cannot possibly respond effectively to people's needs and people's concerns.

We have a mandate from the American people on reorganization. The mandate is clear and unequivocal; it is sounded loudly in public opinion polls, in feedback from our constituents, and in the results of last November's elections. The American people are sick and tired of a government they cannot understand, a government they cannot respect, and a government they cannot control.

I have no doubt whatsoever that very little we do—perhaps nothing we do—has a higher priority in the minds of the people we represent than Government reorganization.

The President's request, embodied in the legislation I and other members of the Government Operations Committee introduced last week, represents a prompt and expeditious approach to Government reorganization.

It is not a novel approach; it delegates substantially no more authority to President Carter than Congress has historically delegated to his predecessors—to Presidents Truman, Eisenhower, Kennedy, Johnson, and Nixon. It is, rather, a commonsense approach—one which embodies the kind of cooperation between the President and Congress which the American people expect.

Quite frankly, I am concerned when

I read in the papers that the Congress is apparently unwilling to cooperate with the President on reorganization; when I read about an obvious "lack of enthusiasm" for the President's request among Democrats in Congress. That attitude, I think, digusts the American people. We have exhausted the public's tolerance for lengthy debates over the subtleties of power or the bruised egoes of the Nation's high and mighty.

I think it is imperative that we approve the President's request as quickly and as enthusiastically as we can. I applaud the cordiality and the cooperative spirit of the Government Operations Committee's chairman, my distinguished colleague from Texas, Mr. BROOKS.

Despite his opposition to the President's request, he has promised quick and decisive consideration by our committee. We will have the opportunity to discuss the merits of the President's specific reorganization plans at a later time and that is as it should be. If we did not insure that opportunity, then we should surely have abdicated our responsibility as a legislative body. But that will come in due course. The issue now is a procedural one, and I think we need delay no longer. I urge my colleagues' support. I urge your active participation in efforts to pass this bill.

H.R. 3652, DEEP OCEAN MINING LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Minnesota (Mr. FRASER) is recognized for 10 minutes.

Mr. FRASER. Mr. Speaker, last week, on Thursday, February 17, 1977, I introduced, along with several colleagues, the Ocean Mining Incentive Act of 1977. This is an important bill which supports the work of the Law of the Sea Conference and also provides insurance for ocean miners against physical interference or loss of continuity in the deep seabed area.

Mr. Speaker, in the interest of making the text of this legislation readily available and known to my colleagues, I include the Ocean Mining Incentive Act of 1977 in the RECORD following these comments:

H.R. 3652

A bill to insure the development of United States ocean mining capabilities and to support the continuation of the Law of the Sea Conference negotiations

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Ocean Mining Incentive Act of 1977."

SEC. 2. FINDINGS AND POLICY.

(a) FINDINGS.—The Congress finds and declares the following:

(1) It is in the national interest of the United States, and in the global interest, to encourage the development of nodule resource exploration and exploitation capability in the deep seabed area.

(2) It is in the national interest of the United States and the global interest to encourage the United Nations Conference on the Law of the Sea to reach agreement on an international treaty which will pay due regard to the rights of states and their nationals, as well as to international community interests, and will codify and create maritime law for the peaceful and orderly utilization of the oceans of the world.

(3) The economic and political interdependence among nations requires solutions to Law of the Sea problems through a treaty which will benefit the international community while at the same time allowing states and mining firms to proceed with their prototype stage operations in a manner consistent with the Law of the Sea negotiations. The absence of a legal regime constitutes an impediment to deepsea mining progress by creating investment uncertainty which will prevent the worldwide distribution of the benefits resulting from deepsea mining.

(4) The conclusion of a Law of the Sea treaty which permits exploration and exploitation of the nodule resources of the deep seabed area by states, mining firms, and consortia will enhance development of the common heritage of mankind.

(5) Before agreement on an international treaty to regulate the exploration and exploitation of nodule resources from the deep seabed, it is in the national and global interest to provide an incentive to mining firms to continue the development of their technological capacity and to proceed with prototype experimentation with a view to eventual commercial recovery.

(6) The environmental effect of deepsea bed mining is not fully understood and therefore in the interest of full compliance with the National Environmental Policy Act, as well as facilitating the normal industry development, it is important that a program of environmental assessment of deep sea mining be accelerated.

(7) During the next two or three years the United States ocean mining industry will be engaged in the prototype stage; that is, in the developing and testing of mining and processing equipment. This stage may be followed by major investments in mining operations for commercial recovery (these investment decisions being taken during prototype operations or about 1979 or 1980), and actual commercial recovery is likely to become operational during 1983–85.

SEC. 3. PURPOSES.

(a) It is therefore declared to be the purposes of the Congress in this Act—

(1) to support the work of the Third United Nations Conference on the Law of the Sea and to encourage timely agreement on a treaty;

(2) to permit United States mining firms to develop their mining capability and to provide a financial incentive for them to do so;

(3) to insure that the absence of a Law of the Sea treaty at the time of expiration of the ocean mining incentive program provided for in this Act, the Congress will act to provide United States mining firms with the necessary further incentives for actual commercial recovery of mineral-bearing nodules from the deep seabed;

(4) to accelerate a program of environmental assessment of deep sea mining and to insure the establishment of needed environmental regulation of any such mining pending regulation under an internationally agreed regime;

(5) to establish environmental standards for deepsea mining operations and to designate an appropriate Federal agency to regulate United States mining firms as regards such criteria; and

(6) to encourage a congressional review process within the Senate and the House of Representatives to assist in the transition from this Act to legislation which implements an international treaty which may result from the Law of the Sea Conference.

SEC. 4. DEFINITIONS.

As used in this Act—

(1) The term "Administrator" means the Administrator of the Environmental Protection Agency.

(2) The term "commercial recovery" means the mining of nodule resources at a substantial rate of production with the intention of marketing or otherwise commercially using such resources for profit.

(3) The term "deep seabed area" means the ocean seabed (and the subsoil thereof) beyond the economic zone of any nation which is drawn in such a manner so that each point on the outer boundary of the zone is equidistant from the baseline from which the territorial sea of the nation is measured, if such zone is consistent with international law. Such term is without prejudice to future agreement until such time as a definition of the limits of national jursidiction over deep seabed mineral resources, if agreed upon at the United Nations Conference on the Law of the Sea, takes effect.

(4) The term "Director" means the Director of the Office of Mining Incentives.

(5) The term "eligible mining firm" means any person certified as such by the Director under section 5(b)(2).

(6) The term "includes" and variants thereof should be read as if the phrase "but is not limited to" were also set forth.

(7) The term "nodule resource" means any accretion (A) located on or slightly below the seabed in any deep seabed area; and (B) contains, among other minerals, nickel, copper, cobalt, and manganese.

(8) The term "person" means—

(A) Any individual who is a citizen or national of the United States;

(B) Any corporation, partnership, association, or other legal entity organized or existing under the laws of any State; and

(C) Any joint venture or other association (whether organized or existing under the laws of any State or foreign nation) if the controlling interest in such association is held by an individual or entity described in subparagraph (A) or (B).

(9) The term "prototype operations" means any of the following:

(A) Research on, and the development and testing of, mining equipment, processing equipment, and processing facilities (but only if any such facility is located in a State) for nodule resources.

(B) Any activity conducted for the purpose of making geographical or geochemical measurements, bottom sampling, or comparable testing relating to the mining of nodule resources.

(C) Any at-sea observation and evaluation activity carried out for the purpose of establishing and documenting the nature, shape, concentration, and tenor of nodule resources, and the nature of the environmental factors which will affect the suspectibility of such resources being mined.

(D) Any at-sea recovery activity to obtain deposit samples necessary for the design, fabrication, installation, development, and testing of nodule resource mining equipment and the testing of nodule resource mining operations.

Such term does not include scientific research.

(10) The term "Secretary" means the Secretary of Commerce.

(11) The term "State" means any of the several States, the District of Columbia, the Commonwealth of Puerto Rico, American Samoa, the Virgin Islands, Guam, and any other commonwealth, territory, or possession of the United States.

SEC. 5. ADMINISTRATION OF OCEAN MINING INCENTIVE PROGRAM.

(a) Office of Ocean Mining Incentives.—(1) The Secretary shall establish within the National Oceanic and Atmospheric Administration an office to be known as the Office of Ocean Mining Incentives. The Office shall be headed by a Director.

(2) The Director shall administer the ocean mining incentive program established under section 6, and carry out any other duty placed upon him under this Act, subject to the supervision of the Secretary.

(b) Qualification as Eligible Mining

Firm.—(1) Any person who wishes to qualify for the ocean mining incentive program under section 6 shall apply to the Director in such form and manner as he shall prescribe.

(2) If the Director finds that any person who applies under paragraph (1) can demonstrate, by evidence of experience, financial capacity, and access to technology and data, that such person is prepared to engage in prototype operations, the Director shall certify such person as an eligible mining firm for the purpose of section 6. The Director, in making any finding under this paragraph with respect to any person, shall take into account such factors as he deems appropriate, including evidence that such person—

(A) has engaged in research and development with respect to the mining of nodule resources for a period of not less than 5 years before the date of application;

(B) has expended not less than $20,000,000 with respect to such research and development during such period; and

(C) will locate the processing facilities, if any, for nodule resources in places subject to the jurisdiction and laws of any State or the United States.

(c) Revocation.—(1) The Director shall revoke the certification of any eligible mining firm under subsection (b) upon—

(A) the conviction of such firm under section 10 for committing any act prohibited under section 8(1);

(B) notification to him by the firm that it has completed, or no longer wishes to engage in, prototype operations;

(C) a finding by the Secretary that such firm has abandoned all prototype operations;

(D) a finding by the Secretary that such firm, on the basis of repeated violations of regulations prescribed under section 7 and other factors deemed appropriate by the Secretary, has conducted any prototype operation in an irresponsible manner; or

(E) a finding by the Secretary that such firm has established a processing facility in, or removed an existing processing facility to, a place not subject to the jurisdiction and laws of any State or the United States.

(2) Any finding made by the Secretary under paragraph (1)(C), (D), or (E) shall be made on the record after opportunity for an agency hearing.

(2) Any finding made by the Secretary under paragraph (1)(C), or (D) shall be made on the record after opportunity for an agency hearing.

SEC. 6. OCEAN MINING INCENTIVE PROGRAM.

(a) In General.—The ocean mining incentive program shall consist of Federal insurance against certain losses suffered by eligible mining firms during prototype operations.

(b) Insurance.—(1) The Director, after consultation with the Secretary of State and the Secretary of the Interior, shall establish an insurance program. Under such program eligible mining firms may be insured, subject to the provisions of this subsection and subsection (c), by the United States against—

(A) any loss or damage suffered by them during prototype operations as a result of physical interference with, or sabotage of, such operations by any other person against whom a legal remedy does not exist or is unavailable in any legal forum to which any such mining firm has access; or

(B) any loss of continuity of operations resulting from significant change in the international status of the deep seabed area.

All claims allowed under insurance issued under this subsection shall be paid by the Director from moneys in the Ocean Mining Insurance Fund established under paragraph (7).

(2) Insurance coverage provided under this subsection—

(A) may not exceed $100,000,000 in aggregate loss or damage to any eligible mining firm;

(B) shall be limited, in the case of any eligible mining firm which is an association within the meaning of section 4(8)(C), to loss or damage to interests in the association which are owned by individuals who are citizens or nationals of the United States or by legal entities who are organized or existing under the laws of any State;

(C) shall be available only upon the request of an eligible mining firm after the Director has determined that the coverage requested is not available elsewhere to the firm at a reasonable cost;

(D) shall be issued upon payment by the eligible mining firm of an annual premium in an amount determined by the Director utilizing standard insurance practices and based upon the relative risks involved; and

(E) shall be subject to such terms and conditions as the Director deems necessary and appropriate to carry out the purposes of this subsection and to protect the interests of the United States.

(3) The Director shall prescribe, after consulting with ocean mining experts in the Department of Commerce and the Department of the Interior, such regulations as may be necessary to carry out the purposes of this subsection, including such procedures as are necessary to implement the claim procedures set forth in paragraph (4).

(4)(A) The amount of any claim paid under any insurance contract issued under this subsection shall be determined by a panel composed of an equal number of employees of the Office and of the Department of the Interior. The employees of the Office on the panel shall be appointed by the Director on the basis of their expertise in matters relating to ocean mining technology and international maritime law. The employees of the Department of the Interior on the panel shall be ocean mining experts appointed by the Secretary of the Interior.

(B) Any claim determination made by a panel under subparagraph (A) shall be in writing, contain findings of fact and conclusions separately stated, and be final unless the claimant objects to the determination in such form and within such time as the Director shall prescribe.

(5) Any claim determination to which an objection is made under paragraph (4)(B) shall be reviewed by the Secretary and the Secretary of the Interior on the basis of the record and pursuant to such procedures as they shall jointly prescribe. Except as provided in paragraph (6), a decision by the Secretaries with respect to any such claim shall be final.

(6) In the event of disagreement as to any claim after a decision thereon is made by the Secretaries under paragraph (5), an action on the claim may be brought against the United States in the district court of the United States in and for the district in which the insured is located or transacts business, and jurisdiction is conferred upon such court to hear and determine all such controversies. No such action may be brought after the close of the second year after the date of the decision by the Secretaries on the claim concerned.

(7) There is established in the Treasury of the United States, the Ocean Mining Insurance Fund. The Fund shall be available to the Director without fiscal limitation as a revolving fund for the purpose of carrying out this subsection. The Fund shall consist of—

(A) any sums appropriated to the Fund; and

(B) any premiums paid under paragraph (2)(D).

All payments made by the Director to carry out this subsection shall be paid from the Fund, only to the extent provided for in appropriation Acts. Sums in the Fund which are not currently needed for the purposes of this subsection shall be left on deposit or invested in obligations of, or guaranteed by, the United States.

(c) Limitations.—(1) No new insurance coverage may be issued under subsection (b) after whichever of the following later occurs:

(A) July 1, 1980.

(B) The entering into force and effect with respect to the United States of a treaty which establishes an international regime for the orderly development of the mineral resources of deep seabed.

(C) The enactment of law providing for the provisional application with respect to the United States of the treaty referred to in subparagraph (B).

(2) If the certification of any eligible mining firm is revoked under section 5(c), such firm shall not be eligible for insurance under subsection (b) with respect to any loss or damage occurring on or after the effective date of such revocation.

SEC. 7. ENVIRONMENTAL CRITERIA AND REQUIREMENTS.

(a) Environmental Assessment Program.—The Administrator of the National Oceanic and Atmospheric Administration shall accelerate the program of environmental assessment of deep seabed mining with a view to ascertaining the environmental impact of such mining, including associated retrieval, and landbased processing, at the earliest possible time.

(b) Impact Statement and General Criteria.—The Administrator of the National Oceanic and Atmospheric Administration shall accelerate preparation of a general programmatic environmental impact statement on deep seabed mining as required by the National Environmental Policy Act. In addition, based upon appropriate studies, he shall establish general criteria for the carrying out of prototype operations in a manner so as to protect the marine environment. Such impact statement and general criteria shall be prepared within one year after the effective date of the Act.

(c) Regulations.—Based on the assessments and environmental impact statement developed under subsections (a) and (b), the Administrator, in cooperation with the Secretary, the Secretary of State, officials of other appropriate Federal agencies, and representatives of affected industry and environmental groups, and pursuant to section 553 of title 5, United States Code, shall issue (and therafter from time-to-time revise) regulations for carrying out of prototype operations so as to protect the marine environment. Such regulations shall be applicable to each person while engaged in prototype operations and shall—

(1) implement the general criteria established by the Secretary under subsection (b);

(2) be based upon the utilization by such persons of the best available technology which is economically feasible; and

(3) include—

(A) such notification requirements as are necessary and appropriate to ensure that the Director and Administrator are timely advised by each such person of the nature and extent of each such operation being engaged in,

(B) such reporting requirements with respect to the actual or potential effect of any such operation on the marine environment as the Administrator deems necessary and appropriate, and

(C) requirements that each such person permit employees of the Office or the Environmental Protection Agency, or both (but not more than three such employees at any one time) to be aboard vessels engaging in prototype operations for purposes of monitoring, performing tests and sampling, and carrying out such other duties as the Director and the Administrator may specify for

purposes of ensuring compliance with the regulations issued to carry out this section. The regulations issued under this subsection and subsection (d) shall prohibit any at-sea processing of any nodule resource during any prototype operation until the Administrator finds that such processing is not injurious to the marine environment.

(d) Interim Regulations.—Until the general criteria required to be established under subsection (b) are available and regulations issued under subsection (c), the Administrator shall issue interim regulations for the carrying out of prototype operations in a manner so as too protect the marine environment. Such interim regulations shall include the requirements set forth in subsection (c)(3).

(e) Environmental Impact Assessments.—The Administrator shall prepare environmental impact assessments, with the cooperation of persons engaged in prototype operations, with respect to specified aspects and implications of deepsea mining technology and shall make such assessments available to the public upon request.

SEC. 8. PROHIBITED ACTS.

It is unlawful for any person—

(1) while engaging in any prototype operation or commercial recovery, to interfere unreasonably with any use of the high seas (if such use is lawful under Federal law or any treaty or other international agreement in force and effect with respect to the United States) by any person, including any individual who is a citizen or national of any foreign nation or any legal entity organized or existing under the laws of any foreign nation; or

(2) to violate any regulation or interim regulation issued under section 7 while engaged in any prototype operation.

SEC. 9. CIVIL PENALTIES

(a) Assessment of Penalty.—Any person who is found by the Administrator, after notice and an opportunity for a hearing in accordance with section 554 of title 5, United States Code, to have committeed an act prohibited by section 8(2) shall be liable to the United States for a civil penalty. The amount of such civil penalty shall not be less than $1,000 nor more than $10,000 for each violation. Each day of a continuing violation shall constitute a separate offense. The amount of such civil penalty shall be assessed by the Administrator, or his designee, by written notice. In determining the amount of such penalty, the Administrator shall take into account the nature, circumstances, extent, and gravity of the prohibited acts committed and, with respect to the violator, the degree of culpability, any history of prior offenses, ability to pay, and such other matters as justice may require.

(b) Review of Civil Penalty.—Any person against whom a civil penalty is assessed under subsection (a) may obtain review thereof in the appropriate court of the United States by filing a notice of appeal in such court within 30 days from the date of such order and by simultaneously sending a copy of such notice by certified mail to the Administrator. The Administrator shall promtply file in such court a certified copy of the record upon which such violation was found or such penalty imposed, as provided in section 2112 of title 28, United States Code. The findings and order of the Administrator shall be set aside by such court if they are not found to be supported by substantial evidence, as provided in section 706(2) of title 5, United States Code.

(c) Action Upon Failure To Pay Assessment.—If any person fails to pay an assessment of a civil penalty after it has become a final and unappealable order, or after the appropriate court has entered final judgment in favor of the Administrator, the Administrator shall refer the matter to the Attorney General of the United States, who shall recover the amount assessed in any appropriate district court of the United States. In such action, the validity and appropriateness of the final order imposing the civil penalty shall not be subject to review.

(d) Compromise or Other Action by Administrator.—The Administrator may compromise, modify, or remit, with or without conditions, any civil penalty which is subject to imposition or which has been imposed under this section.

SEC. 10. CRIMINAL OFFENSES.

(a) Offenses.—A person is guilty of an offense if he willfully and knowingly commits any act prohibited by section 8.

(b) Punishment.—Any offense described in subsection (a) is punishable by a fine of not less than $5,000 nor more than $25,000 for each day during which such offense continues.

(c) Jurisdiction.—There is Federal jurisdiction over any offense described in this section.

SEC. 11. ENFORCEMENT.

The provisions of this Act shall be enforced by the Secretary and the Administrator. Such officers may by agreement, on a reimbursable basis or otherwise, utilize the personnel, services, equipment (including aircraft and vessels) and facilities of any other Federal agency in the performance of such enforcement.

SEC. 12. INJUNCTIVE RELIEF.

The district courts of the United States shall have jurisdiction, without regard to the amount in controversy or the citizenship of the parties, to enjoin—

(1) any serious or irreparable damage to the marine environment resulting from any prototype operation being carried out by any person during the period before the regulations issued under section 7(c) first take effect; and

(2) any deep seabed mining development or other activities by any person subject to the jurisdiction of the United States that unreasonably interfere with lawful uses (including deep seabed mining activities) of the high seas by others, and in determining whether mining developments or other activities by any such person unreasonably interferes with deep seabed mining activities by others, the district court shall consider priority of the activities, the amount and priority of investments related to the competing activities, the degree of reliance on the activities in question, and the alternative equivalent opportunities for activities to be carried on in a manner that would not unreasonably interfere.

SEC. 13. THE UNITED NATIONS CONFERENCE ON THE LAW OF THE SEA.

The Congress hereby expresses—

(1) its support for United States participation in the United Nations Conference on the Law of the Sea; and

(2) its intention that this Act be considered to be supportive of the objectives of the Conference, in that this Act, in anticipation of agreement being reached at the Conference, allows United States mining firms to proceed toward ocean mining capability without rupturing the negotiating process; and

(3) its intention that, if agreement is not reached at the Law of the Sea Conference, legislation should be enacted which establishes a more comprehensive legal regime for the commercial recovery of nodule resources after July 1, 1980.

SEC. 14. TRANSITIONAL NATURE OF ACT.

It is the sense of Congress that this Act shall be considered to be transitional in nature pending—

(1) agreement on an international treaty being reached at the Third United Nations Conference on the Law of the Sea;

(2) if such agreement is not forthcoming, the conclusion of a multilateral treaty concerning the deep seabed; or

(3) if no agreement referred to in paragraph (1) or (2) is forthcoming, the implementation of any future legislative program relating to commercial recovery, by permit, of nodule resources.

SEC. 15. AUTHORIZATION FOR APPROPRIATIONS.

(a) For General Administration.—There are authorized to be appropriated such sums as may be necessary to carry out the administrative provisions of this Act (other than section 6).

(b) For Ocean Mining Insurance Fund.—There are authorized to be appropriated to the Ocean Mining Insurance Fund such sums, to remain available until expended, as may be necessary to carry out the provisions of section 6.

SEC. 16. SEVERABILITY.

If any provision of this Act, or any application theerof, is held invalid, the validity of the remainder of this Act, or any other application, shall not be affected thereby.

LEGISLATION TO PROMOTE DEVELOPMENT OF SOLAR ENERGY IN THE UNITED STATES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. MINISH) is recognized for 5 minutes.

Mr. MINISH. Mr. Speaker, I am today reintroducing my legislation to promote the development of solar energy in the United States. This measure, first submitted in the 94th Congress, is aimed at encouraging the practical application of solar energy by providing incentives in the tax code.

The natural gas crisis has made clear once again that we must accelerate our work on the development of alternate energy sources. The energy we may be able to derive from the sun represents possibly our most promising alternative to shortages in the fossil fuel area and to the hazards, however minimal, of nuclear energy.

Despite the many advantages of solar power, growth thus far has been slow. The single most significant barrier to extensive use of solar energy by homeowners is financial. At present, the cost of installing a solar heating system in a private home is nearly three times that of a conventional oil system.

The average price of solar heating for a $40,000 house is between $4,000 and $6,000. While the gap between solar and conventional systems has closed in recent years, the expense is still beyond the means of far too many Americans.

My bill is designed to encourage American homeowners to install solar energy systems in their residences through tax incentives. It would allow tax breaks on Federal personal income taxes for installers of solar systems including tax credits of 33⅓ percent of costs under $8,000. The bill also would provide a tax credit to offset any increase in local property taxes resulting from an increased assessment on a solar home.

Mr. Speaker, we are rapidly approaching an impending shortage in our traditional fuel sources, it is clear that we must begin development of alternative sources of energy like the Sun before it is too late.

U.S. CANAL ZONE: U.S. CITIZEN EN ROUTE TO WASHINGTON UNJUSTIFIABLY ARRESTED IN PANAMA BY PANAMANIAN NATIONAL GUARD

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, in various addresses in the Congress over a period of years, I have repeatedly described the Isthmus of Panama as a land of endemic revolution and endless political intrigue. Recent events in the pro-Marxist military dictatorship of Panama, under its chief of government, Omar Torrijos, have again illustrated the truth of such description.

On February 11, 1977, William R. Drummond, president of the U.S. Canal Zone Police Association, was at the Tocumen Airport in Panama en route to Washington for consultations with George S. Leonard, attorney for congressional plaintiffs in the case of Jesse A. Helms et al., against Cyrus R. Vance et al., before the U.S. District Court for the District of Columbia. At 9 a.m., while about to board the airplane, Drummond was arrested, booked, photographed by the National Guard of Panama and detained in the Panamanian counterintelligence office for interrogation by Panamanian officials.

Promptly reported to the Congress, members of this agency demanded his immediate release, which was not done until 12 m., about 3 hours after his plane had departed.

On Saturday, February 12, while waiting to board another plane for Washington, Drummond was detained a second time but only for 15 minutes, which enabled him to depart as planned.

Mr. Speaker, it should be explained that Police Officer Drummond has been a leader in the fight to protect U.S. sovereign control over the Canal Zone and Panama Canal and has rendered important services to the Congress, mostly at his own expense. Such arbitrary arrests of U.S. citizens in Panama or any other country, unless adequately resolved by our Government, will make dangerous precedents. I have written the Secretary of State for a full report on the two incidents with a request for information on what has been done or will be done to meet the challenge.

Another event of significance was the sudden resignation on February 9, 1977, of Panamanian Foreign Minister Aquilino Boyd following a disagreement with chief of government Torrijos. In response to the resignation. Torrijos used the term "national liberation," which is a Communist code term often used by Communist functionaries for communication to other Communist parties.

It was in the midst of this unstable situation that U.S. negotiators Ellsworth Bunker and Sol M. Linowitz arrived on the isthmus to start a new round of talks on February 14, with a new Panama Foreign Minister, young Nicolas González Revilla.

Mr. Speaker, it is incomprehensible that the State Department would be sending emissaries to negotiate with a government that has arrested one of our most courageous American citizens under false pretenses.

Mr. Speaker, as has been stated by various legal authorities the Canal Zone is an unincorporated territory of the United States. As such, its disposal is not a subject for surrender negotiations except pursuant to specific authorization by the Congress, which is the only agency of our Government vested with the power to dispose of territory and other property of the United States. The indicated negotiations have not been authorized, but are strongly opposed in the Congress by Members of both the Senate and House.

I would like to stress that the Canal Zone, as the indispensable protective frame of the canal, has always been an area of stability in a land of revolution. Many Panamanian leaders, seeking to escape assassination, have taken refuge there during periods of crisis. A recent example was that of Señora Torrijos during an attempt to depose her husband while he was away on a trip.

Today, there is a strong underground of opposition in Panama to the revolutionary dictatorship. This opposition, conscious of "human rights" has issued an anonymous circular with this warning: "We shall never accept a treaty signed with a tyrant."

Mr. Speaker, such facts as I have just summarized make this question more pertinent than ever: "Why should there be any negotiations at all in such a situation?" Respected Latin American leaders and officials of major countries of Latin America oppose the surrender of U.S. sovereign control over the Canal Zone and Panama Canal for they understand the situation.

In order that the Congress may have the benefit of a report on the two incidents as prepared by Mr. Drummond, a copy follows as parts of my remarks:

REPORT BY WILLIAM R. DRUMMOND

On Monday, February 7, 1977, the President of the Canal Zone Central Labor Union-Metal Trades Council, through the coordination of the Area Director of the National Maritime Union, met with the Dictator of Panama, Omar Torrijos, in the Republic of Panama for the purpose of gaining information relative to employee rights that could be expected under the Canal's joint administration with the Republic of Panama.

The CLU–MTC specifically went to this meeting to listen and not for the purpose of bargaining.

Although the labor representatives present at this meeting were given prior assurances by Torrijos' government that there would be no publicity on this meeting, it was extensively used for political purposes; the Panama press depicting U.S. Canal Zone Labor as working with the Panama government in a spirit of harmony.

Torrijos assured those Metal Trades Representatives present that his government wanted them to remain after the treaty was ratified. He stated that the Canal could not function without them.

He assured them that they could own the home they are presently renting. He stated "I think it criminal that an employee should be forced to rent a home, with no chance to buy it, during his whole working life."

He pictured the present working conditions as one of oppression in which the employee was in constant fear of losing his job over the most minor infraction.

He compared the present Canal health program at Gorgas hospital to a "training center for interns who return to the States after experimentation on Canal employees. He stated that the Panama health program had better and more modern equipment and further indicated that Canal employees should consider entering this program at the time of treaty.

He stated that those U.S. employees that remained working on the Canal would be protected, they would retain their wage and benefit rights and any future wage increases.

He stated that the U.S. negotiators were not working to protect employee rights and that only the Panama negotiators had brought up employee rights during the negotiations.

He stated that, to prove his good faith, he would pass a new law providing for these rights "before treaty", and that these special benefits would only affect U.S. employees necessary to run the Canal. He stated that treaty activities would be greatly accelerated within the next three months, and that President Carter would go on television after it is signed to sell the treaty to the American public.

In return for all this, Torrijos stated that he wanted these labor representatives to cease their anti-treaty activities and to convince their members to do the same. He stated that he expected a reply on this matter shortly.

Finally, Torrijos stated that he would set up a "high level" labor commission to periodically inform Canal Zone labor representatives on the conduct of the Treaty. The commission would be composed of all U.S. labor representatives (Union Presidents) and Panama government officials under the Director of the Panama Labor Minister Ahumada.

Present at that meeting was John Williams, President of the Pilots Association, the Area Director of the N.M.U., the President of the Canal Machinists Union, Pujol, a member of the Canal Tug Boat Captains (M.M.P.) and the President of the Metal Trades Council, A. Graham.

On February 8, 1977, Tuesday, at a joint meeting with several CLU–MTC Union representatives and the Canal Zone Governor, in which I was present, Mr. Graham, in the presence of Mr. Pujol, reported the above information.

On February 10, 1977, Thursday, at a CLU–MTC meeting Brother Graham again reported the above information in my presence.

The CLU–MTC voted to re-support the suit that has been re-introduced in the District of Columbia in which I am a co-signature. It was brought out at this meeting that to vote to support this suit was to formally take an anti-treaty position. To date, the CLU–MTC has not taken a formal public position on the treaty. The CLU–MTC further voted not to participate in the labor commission presented by Torrijos but that if Brother Graham was given a personal invitation he was free to attend in order to gather information.

The CLU–MTC voted to support my trip to Washington, at my own expense, in order to meet on priority transfer rights with the Secretary of Army's Office.

On February 11, 1977, Friday, I was arrested, transported from the Tocumen Airport to the Panama Counter-Intelligence Office where I was detained from 9:00 a.m. to 12:00 noon. (Detailed Report Attached.)

While discussing this incident with the Canal Zone Balboa District Police Commander, Mr. Gordon, he stated to me that Colonel Noreiga, Chief of the G–Z assured

him that I would not be bothered again and that he (Noreiga) "just wanted to give me a message."

Obviously, my arrest was not the subject of overreaction by some low-level security personnel at the airport. The agent that arrested me, in my presence, telephoned the G–Z headquarters to inform them that he had made the arrest. He was instructed to transport me to the Counter-Intelligence Office in Panama City.

At 3:20 a.m., Saturday, February 12, 1977, I was again detained for about 15–20 minutes at the Tocumen airplane boarding ladder. No reason was given to me for this further detention. At 3:40 a.m. I was allowed to board the plane, and it was allowed to leave for Miami. It was scheduled to depart at 3:30 a.m.

On the evening of Saturday, February 12, 1977, I was informed by telephone by the business manager of the Canal Zone electrical workers that the labor representatives that had accompanied me the second time to the Tocumen Airport, had been detained, their film confiscated and harassed.

REDUCED AIRLINE FARES

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Tennessee (Mr. FORD) is recognized for 5 minutes.

Mr. FORD of Tennessee. Mr. Speaker, I rise today as a cosponsor of H.R. 27, a bill to reduce airline fares on a space-available basis to elderly persons 65 years of age or older and to the handicapped. The bill would further extend this privilege to retired persons 60 years of age.

It has increasingly become the disposition of this democratic body to look after the needs of these heretofore neglected groups, comprising over 10 percent of the total population. This is evident in the many strides which have been made just in the last 4 years:

Increases in social security, veterans' and civil service retirement benefits to compensate for inflation.

Implementation of the supplemental security income—SSI—program, which provides benefits to 2.9 million older Americans; and

Significant expansion and improvement of the Older Americans Act, which authorizes programs that provide social services and nutritional assistance to the elderly.

Yet, our job has just begun in insuring our precious seniors and handicapped lives as full as we enjoy.

Today, there are several Federal programs which attempt to make transportation for the elderly and handicapped more available and accessible. However, there are no such special programs in the area of air transportation. It is my feeling that every citizen should know the benefit that the mobility of air transportation can afford.

As we all know, many, many seniors and handicapped persons are forced to live on fixed incomes, a large percentage of which is spent on necessities. Therefore, the merits of H.R. 27 are obvious in that it offers them air transportation, be it a luxury, to visit relatives years unseen or, an emergency trip to a sick friend; all a part of growing, all a part of living.

In addition to the benefits to the elderly and handicapped, the provisions of the bill would enable airlines to decrease their operating losses by filling otherwise vacant seats. This legislation envisions no expenditure of Federal funds and would work to the advantage of the transportation industry, as well.

Therefore, I urge my colleagues in the House to join with me going on record in support of this legislation and in support of senior citizens and handicapped persons in all of America.

THE WINTER OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from West Virginia, (Mr. STAGGERS) is recognized for 5 minutes.

Mr. STAGGERS. Mr. Speaker, there has been much in the news media about certain areas of the country that have been hard hit by our most bitter winter of this century. With this in mind, I would like to comment about the sturdy people of the Second District of West Virginia and those in Preston County in particular.

A major news service has said that two of the hardest hit areas in the entire country this winter are Buffalo, N.Y., and Preston County, W. Va.

Preston County, which sits high on the Appalachian plateau, bordering the State of Pennsylvania, and Garrett County, Md., has had over 200 inches of snow so far this winter; and just yesterday morning they woke up to 7 additional inches of new snow.

ABC–TV has had a news team in there using a helicopter and has given spot coverage to at least two rescue operations and, of course, there have been many other rescues of people who have been isolated and without food and heat.

Our new Governor of West Virginia, Jay Rockefeller, has paid a personal visit to the area to see firsthand the conditions there. He had previously called out the National Guard to assist the area and has made as much State aid available as possible. There has been a show of great concern on his part.

Just trying to keep a few of the main roads open for one-lane traffic has been a major task in Preston County, because as soon as the road crews get a road open, the winds blow and snowdrifts close it again. Sometimes the drifts are 20 feet or more high.

The people of Preston County are strong people and these conditions bring out the best in them.

A large State hospital is located at Hopemont in Preston County, and it is my understanding that the officials, doctors, nurses, and other employees there have made a gallant effort to see that the 300 or so patients all continue to receive the proper care and are well taken care of during this extraordinary winter.

Perhaps a recent half-page advertisement in one of the local Preston County weekly newspapers sums up the situation best. and I would like to quote from it:

Preston County's extreme winter condition has drawn a great deal of attention to lack of preparedness, equipment breakdowns and outright failure to cope, but the folks at The First National Bank believe it is time for all to recognize the outstanding efforts of the men and women who are working day and night, seven days a week, to do the best that can be done.

Braving wind chill temperatures of minus 70 degrees, zero visibility and giant snow drifts, these people have risked their very lives every day to protect the lives of others.

Volunteers working for the Preston County Office of Emergency Services deserve more credit than they have been given. Officials of the OES should also be given a warm note of thanks. The personnel of the Department of Highways deserve a great deal of credit for working with ailing equipment long hours each day, a little frustrated at times, but courageous enough to continue to fight the battle.

A special recognition also should be given to the members of National Guard units who have assembled in Preston County to give local agencies a helping hand. These include helicopter crews from the Med-evac Unit at Parkersburg, the 201st Artillery Division at Camp Dawson, Special Forces at Camp Dawson and the 119 Engineers from Clarksburg.

Many of these people are working under these extreme conditions using equipment that is unheated, and in many cases, totally open to the elements.

The men of the Department of Natural Resources also should be recognized for pitching in.

And finally we want to recognize the efforts of all law enforcement officials who are cooperating to the fullest extent during this emergency. This includes city, county and state police.

These people, as well as countless others, are helping us with a spirit of courage and determination. The folks at First National salute them. They are some of the most important people who make Preston.

I join in this salute to the courage and determination of the people of Preston County. They are a hardy lot, and years from now they will be telling their grandchildren of the "winter of 1977."

CARBON TET IN THE OHIO RIVER

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. LUKEN) is recognized for 5 minutes.

Mr. LUKEN. Mr. Speaker, for the past week, the headlines in the Cincinnati newspapers have been screaming that poison was flowing downriver to our waterworks intakes. The poison is in the form of carbon tetrachloride, illegally discharged from undetected industries in the Kanawha River of West Virginia, a tributary of the Ohio River.

Last Friday, February 18, while users of Cincinnati water were being advised by the Environmental Protection Agency to store water against the time when on-

coming toxic substances would reach the city, the populace waited with considerable apprehension.

On Saturday, February 19, the EPA advised that it had erred in predicting the flow rate of the position and that the most severe concentration had passed Cincinnati and had been ingested by the residents and users of the city water on Thursday, February 17, 2 days previous. It was then reported that the levels of carbon tetrachloride drawn into the water system were 102 p/b, twice the rate generally considered to be injurious to health.

Further worsening the situation from the Federal standpoint is the fact that the EPA had taken samples at 12 noon on Thursday, the 17th, of the intake of the Cincinnati waterworks and failed to alert the city, the board of health, the waterworks nor any public authority before Friday evening, after 4 p.m. Therefore, EPA grievously erred again, with the results that Cincinnatians were drinking contaminated water believed to be safe.

Moreover, EPA denies its responsibility to monitor the quality of water in the Ohio River. Orsanco, another Federal agency, admits its responsibility and jurisdiction, but as yet, does not have the equipment to do the job.

The citizens of the Second Ohio District are justifiably outraged by this performance and not a little anxious over the quality of the water they have been drinking and the protection against poisonous compounds in the future.

These events have serious implications with regard to the possible legislative amendments to the Safe Drinking Water Act.

For the present, I have requested the assistance of the President in impressing upon the agencies involved, the necessity of cooperation and coordination with local officials until remedial legislation can be considered.

The White House has contacted the agencies, and hopefully can expect a different response from EPA in the future.

PUBLIC ASSISTANCE AND UNEMPLOYMENT COMPENSATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Connecticut (Mr. COTTER) is recognized for 10 minutes.

Mr. COTTER. Mr. Speaker, I present the following testimony which was given before the Subcommittee on Public Assistance and Unemployment Compensation:

TESTIMONY OF HON. WILLIAM R. COTTER, BEFORE THE SUBCOMMITTEE ON PUBLIC ASSISTANCE AND UNEMPLOYMENT COMPENSATION OF THE HOUSE WAYS AND MEANS COMMITTEE

Mr. Chairman, members of the subcommittee: I would not take the subcommittee's time unless I felt the problem of depleted State unemployment compensation funds deserved your attention as you prepare an extension of the Federal supplemental benefits program.

A total of 23 states have been forced to take out loans from the Federal treasury as the demands of high unemployment exhausted their U.C. funds. The failure of these states to recover fully from years of recession is the major reason for their present indebtedness.

Under the terms of the Federal U.C. loans, the states involved have three years to repay the debt, or face an annual employer penalty tax of three-tenths of one per cent. For each year the debt remained unpaid, an additional three-tenths of one per cent would be added to the penalty.

In 1975, Congress realized that implementation of this tax would impose an additional burden on state economies still suffering from high joblessness. The tax, in fact, would put state employers at a competitive disadvantage and hurt their efforts to restore the jobs lost during the recession. Such a result would make it more difficult for the states involved to reduce their unemployment compensation debt.

Realizing this problem, Congress voted to delay imposition of the penalty tax until January 1, 1978, provided that the States demonstrated an active effort to finance their U.C. funds.

Now, as the new deadline approaches, the problem remains unsolved.

In addition to Puerto Rico and the District of Columbia, 11 States face the penalty tax if the deadline is allowed to pass. These States are: Alabama, Connecticut, Delaware, Illinois, Maine, Massachusetts, Michigan, Minnesota, New Jersey, Pennsylvania and Rhode Island. Six other States, which took out loans in 1976, conceivably could be penalized after their three-year grace period has elapsed.

All of the economic models I have seen show there will be no significant relief for the unemployment compensation burden of these States until the 1980's. I therefore ask this subcommittee to consider an extension of the penalty tax suspension until January 1, 1980. (The suspension provision can be found in Sec. 110(a) of Public Law 94–45 and Sec. 3302(c)(3) of the internal revenue code.)

Such an extension will give Congress the opportunity to review the findings of the national commission on unemployment compensation, which is required to report to Congress by January, 1979, with a plan to overhaul the entire U.C. system.

Thank you very much for allowing me to take a few minutes of your time. With your permission, Mr. Chairman, I would like to insert a more complete analysis of the problem along with my testimony into the hearing record.

INSERT TO TESTIMONY OF HON. WILLIAM R. COTTER, FEBRUARY 22, 1977

Title IX of the Social Security Act authorizes loans to help states pay unemployment compensation when their unemployment compensation funds have been depleted.

As the subcommittee knows, taxable payroll tends to be low when demand for benefits is highest. Therefore, if there were no u. c. loan provision in the Internal Revenue Code, adverse economic conditions could create a situation in which the need for benefits outstripped the state's revenue resources.

The basic law (Sec. 3302(c) of the Internal Revenue Code of 1954) provides not only for loan repayments, but also for penalties to be imposed if repayment is delayed after a specified time period. The penalty, an increase in federal unemployment taxes for employers, is effective if the state has not made full repayment by November 10 of the year which begins on the second January 1 following the date the loan was made.

The law levies an unemployment tax of 3.4 per cent on employers and then forgives 2.7 per cent if the state has an approved unemployment compensation law. Because all states have such a law, the effective federal tax is 0.7 per cent. Revenue from this tax is used to pay both the federal and state administrative costs for the program, to create the loan fund and to finance the federal share of the additional benefits paid in periods of high unemployment.

Section 3302(c) provides that when a state has not repaid its loan within the specified period, the federal employer tax for that state will be increased by 0.3 per cent and that additional increases of the same amount will be added for each subsequent year the loan remains unpaid.

This provision should be unnecessary when high unemployment is a temporary problem. The state should be able to get on its feet quickly and repay the loan without a significant drain on its resources. In 1975, however, Congress recognized that the states still in debt to the federal Treasury were facing a continuing unemployment problem. With high joblessness, their u. c. funds were still depleted and their businesses too pressured to absorb an additional federal tax.

A temporary provision therefore was added to the Emergency Compensation and Special Unemployment Assistance Act of 1975 (P.L. 94–45) to postpone the penalty tax until January 1, 1978, but only in those states where the Secretary of Labor found "appropriate action with respect to the financing of its unemployment programs so as substantially to accomplish the purpose of restoring the state's unemployment account in the Unemployment Trust Fund and permitting the repayment within a reasonable time of any advances."

The Secretary this year made determinations for three states: Connecticut, Vermont and Washington. Vermont and Washington could not qualify for the penalty tax suspension, and employers in the two states were required to pay the 0.3 per cent levy. Next year. Connecticut and the 12 jurisdictions that took out loans in 1975 will face the tax. The 12 jurisdictions are: Alabama, Delaware, the District of Columbia, Illinois, Maine, Massachusetts, Michigan, Minnesota, New Jersey, Pennsylvania, Puerto Rico and Rhode Island.

Six additional states took out loans in 1976. The enclosed table (prepared by the Department of Labor) shows the loans made to states through January 15, 1977.

The available evidence suggests that all of these states, even with extraordinary effort, would be unable to repay their loans fully within the next few years. Accordingly, an extension of the present provisions for suspension of the penalty tax may be appropriate. The extension would not apply automatically to all states whose loans remain unpaid, but only to those who can demonstrate that they are doing their best to retire the debt as quickly as possible.

In these states, any increase in the unemployment tax paid by employers might hinder economic recovery.

ADVANCES TO STATES FROM FEDERAL UNEMPLOYMENT ACCOUNT

[In millions of dollars per calendar year]

States	1972	1973	1974	1975	1976	1977 through Jan. 15, 1977	Total
Connecticut	31.8	21.7	8.5	190.2	111.0	24.0	[1] 387.2
Washington		40.7	3.4	50.0	55.3		149.4
Vermont			5.3	23.0	9.2	2.0	39.5
New Jersey				352.2	145.0	15.3	512.5
Rhode Island				45.8	20.0		65.8
Massachusetts				140.0	125.0		265.0
Michigan				326.0	245.0		571.0
Puerto Rico				35.0	22.0	10.0	67.0
Minnesota				47.0	76.0		123.0
Maine				2.4	12.5		14.0
Pennsylvania				173.8	379.1	90.0	642.9
Delaware				6.5	14.0	2.0	22.5
District of Columbia				7.0	26.6	5.5	39.1
Alabama				10.0	20.0		30.0
Illinois				68.8	446.5	32.1	547.4
Arkansas					20.0	1.0	21.0
Hawaii					22.5		22.5
Nevada					7.6		7.6
Oregon					18.5		18.5
Maryland					36.1		36.1
Montana					1.4	2.2	3.6
Total	31.8	62.4	17.2	1,477.7	1,813.3	184.1	3,586.5

[1] Actual loans received, $426,000,000, less repayment through reduced employer credits, $12,800,000, total, $413,200,000.

ABUSE OF DIPLOMATIC PRIVILEGES

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, our colleague, Congressman JOSEPH L. FISHER, authored an excellent article in the Washington Post of Tuesday, February 15, 1977, on all too frequent abuses of diplomatic privileges by foreign representatives residing in the United States. Congressman FISHER, in the article, calls on Congress to "take steps to protect our citizens from the abuse of the privilege of diplomatic immunity and make it possible for them to obtain prompt and proper relief when their rights are infringed."

I agree with Congressman FISHER wholeheartedly and congratulate him on the constructive legislative proposal he has sponsored to remedy this problem.

As chairman of the Subcommittee on International Relations, it is my intention to consider Mr. FISHER's proposal and related bill this year.

DIPLOMATIC IMMUNITY FROM RESPONSIBILITY

(By Joseph L. Fisher)

Last February a 19-year old Arlington man was struck and killed by an automobile, while he was working in a highway repair crew. The car was driven by a chauffeur for the Senegalese embassy, who enjoyed diplomatic immunity from prosecution (until he lost his job five months later). The car carried no liability insurance—because of diplomatic immunity, this was not required.

This case is the most shocking example of the injustice our citizens can endure as a result of our outdated laws governing diplomatic immunity. Many Americans have suffered the agony of physical injury in serious car accidents along with the despair over mounting medical bills, all the while frustrated by the near-impossibility of obtaining the prompt and proper legal relief due them. Some can never recover fully from their injuries and require life-long medical attention. Others find that lengthy hospitalization has cost them their jobs. All share the miserable misfortune of having been involved in an accident with a person protected by diplomatic immunity.

The concept of diplomatic immunity dates back thousands of years to the practices and customs of the Hittites, the Babylonians, and to some of the other earliest people whose records we have been able to read. Its purpose is to protect diplomatic officials and facilitate the conduct of relations between the nations, in the recognition that this works to mutual advantage.

Unlike most other nations, the U.S. grants full immunity from criminal, civil, and administrative jurisdiction to everyone from the ambassador and his family to private servants, whether on embassy business or on a personal outing. This law was enacted in 1790—almost 200 years ago—and modeled on an English statute of 1708, the first acknowledgment of diplomatic immunity written into Anglo-Saxon law. Unless waived by the embassy or foreign government involved, this immunity shields all embassy personnel from the consequences of acts which, if committed by ordinary citizens, would likely result in arrest, trial, and perhaps punishment. Even when immunity is waived, American citizens are reluctant to sue, and for good reason. Anyone who wrongfully sues or criminally prosecutes a diplomat can be fined or sent to jail for as many as three years.

In addition, the United States is the only major country which does not require automobile liability insurance as a condition of entry into the country, but merely "strongly urges" that diplomatic personnel carry it.

Although not subject to U.S. jurisdiction, foreign embassy personnel still "are expected" to abide by the laws of the localities in which they reside. Most do. Others, however, take advantage of the special kind of hospitality our country offers in the way of diplomatic immunity.

Tragedies such as the death of the young Arlington man from time to time spotlight the general subject of diplomatic immunity. Although interest seems to wane between dramatic incidents, the problems of diplomatic immunity—its proper use and its frequent abuse—are ongoing, especially in metropolitan areas such as Washington, D.C., and New York, where diplomatic personnel are largely concentrated.

According to the State Department, when horsepower under the hood replaced real horses, by far the greatest number of cases in which diplomatic immunity has been invoked have involved traffic accidents.

There is, too, the matter of unpaid parking tickets. In a recent 12-month period Washington, D.C., according to City Council figures, lost about $140,000 from an already tight budget because fines for about 30,000 parking violations issued to diplomatic vehicles were not paid.

Last year the D.C. City Council prepared a bill asking Congress to revise U.S. policy regarding non-payment of fines and hold diplomatic missions responsible for payment. New York City, whose budgetary crisis has been national news, lost some $3 million in parking fines unpaid by diplomatic personnel, according to a Jack Anderson column.

Problems are continuous also in regard to property rented to diplomatic personnel. Property too often is damaged and rent unpaid.

Driving around, entering into rental agreements and other contracts are civil activities that have nothing to do with the conduct of foreign policy, and much to do with the exercise of good citizenship.

Congress should take steps to protect our own citizens from the abuse of the privilege of diplomatic immunity and make it possible for them to obtain prompt and proper relief when their rights are infringed.

The last Congress took some steps toward this end with the introduction of a number of bills, but none was enacted.

Inertia and indifference seem to be the main obstacles to enactment of such legislation. For the most part, the abuses weigh heavily only on residents of the Washington and New York metropolitan areas.

Perhaps the first and broadest legislation should be repeal of the 1790 statutes in order to bring the U.S. into conformity with the Vienna Convention on Diplomatic Relations signed by the U.S. and more than 100 other nations. The convention was held in 1961 to codify the practices of diplomatic immunity that had developed through the years and bring about some uniformity among the nations. Unfortunately, in the United States, the antiquated domestic statutes take precedence over the international law in situations in which both are applicable.

The Vienna Convention restricts full diplomatic immunity to high level personnel for whom protection against arbitrary or capricious arrest, detention, and prosecution is necessary. It further narrows the use of diplomatic immunity by distinguishing between performance of official and unofficial duties. For example, embassy service staff would have immunity only while performing official duties, and household servants would lose all immunity under the Vienna Convention. By sharply limiting the number of persons who can claim immunity and the circumstances to which it attaches, the ordinary civil offense is separated somewhat from the traditional diplomatic immunity. At the end of the last Congress, thirty-one members of the House joined me and the chairman of the International Relations Committee in sponsoring a bill to repeal the 1790 statutes. The Department of State endorsed the bill. In this Congress there are more than 60 sponsors.

More narrowly, but perhaps as important, is legislation aimed directly at the use of automobiles, to require foreign non-residents who bring automobiles into this country for personal use to obtain liability insurance as a condition of entry into this country. This also received consideration by the Ways and Means Committee in the last Congress.

Finally, I think there is a strong argument in favor of the U.S. government being liable for compensating the so-called "victims" of diplomatic immunity. Diplomatic immunity will always be accorded to a certain number of foreign personnel, and rightfully so. However, as this is a courtesy which the U.S. government extends to foreign nations,

the host government should then be responsive to the problems of its own citizens who suffer physical and financial hardship as a result of the diplomatic status of foreign personnel. In extreme cases, the U.S. government can ask for recall of a diplomat, but that still provides no relief for an injured party.

Legislation is needed to provide a clear mechanism for satisfying claims awarded U.S. citizens against foreign personnel covered by diplomatic immunity.

"I am an American citizen and a taxpayer and there are simply no channels or recourse available to me," said one man confronted with the virtually impenetrable barricade of diplomatic immunity when his car was hit by an embassy limousine.

It is time he and other Americans had some remedy. We must modernize the old concept of diplomatic immunity so that it better suits the time in which we live.

RULES OF THE COMMITTEE ON WAYS AND MEANS

(Mr. ULLMAN asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ULLMAN. Mr. Speaker, pursuant to the requirement of rule XI, clause 2 (a) of the Rules of the House of Representatives, I submit herewith the Rules of the Committee on Ways and Means for the 95th Congress and ask that they be printed in the RECORD at this point. These rules were adopted by the committee in open session on January 25, 1977:

RULES OF THE COMMITTEE ON WAYS AND MEANS

Rule XI of the Rules of the House of Representatives, provides in part:

"* * * The Rules of the House are the rules of its committees and subcommittees so far as applicable, except that a motion to recess from day to day is a motion of high privilege in committees and subcommittees.

"* * * Each subcommittee of a committee is a part of that committee, and is subject to the authority and direction of that committee and to its rules so far as applicable.

"* * * Each standing committee of the House shall adopt written rules governing its procedure. Such rules * * *

"(1) shall be adopted in a meeting which is open to the public * * *

"(2) shall be not inconsistent with the Rules of the House or with those provisions of law having the force and effect of Rules of the House * * *."

In accordance with the foregoing, the Committee on Ways and Means, on January 25, 1977, adopted the following as the Rules of the Committee.

RULE 1. IN GENERAL

Except where the terms "full committee" and "subcommittee" are specifically referred to, the following rules shall apply to the Committee on Ways and Means and its subcommittees as well as to the respective chairmen.

RULE 2. MEETING DATE, QUORUM, AND QUORUM FOR TAKING TESTIMONY AND EVIDENCE

The regular meeting day of the Committee on Ways and Means shall be on the second Wednesday of each month while the House is in session. A majority of the Committee constitutes a quorum for business. Provided, however, that two members shall constitute a quorum at any regularly scheduled hearing called for the purpose of taking testimony and receiving evidence.

RULE 3. SUBCOMMITTEE MEETINGS

Insofar as possible, meetings of the Committee and its subcommittees shall not conflict. Subcommittee chairmen shall set meeting dates after consultation with the chairman and other subcommittee chairmen with a view toward avoiding simultaneous scheduling of committee and subcommittee meetings or hearings wherever possible.

RULE 4. SUBCOMMITTEES

All matters referred to the Committee on Ways and Means involving the Internal Revenue Code, except those miscellaneous measures referred to the Subcommittee on Miscellaneous Revenue Measures under paragraph 3 hereof, shall be considered by the whole Committee and not in subcommittee. The purpose of this is to expedite consideration of these matters.

There shall be six standing subcommittees as follows: Subcommittee on Social Security; Subcommittee on Health; Subcommittee on Public Assistance and Unemployment Compensation; Subcommittee on Trade; Subcommittee on Miscellaneous Revenue Measures; and Subcommittee on Oversight.

The jurisdiction of such subcommittees shall include:

1. Subcommittee on Social Security shall consist of 13 Members, 9 of whom shall be Democrats and 4 of whom shall be Republicans

In general, the jurisdiction of the Subcommittee on Social Security will include bills and matters referred to the Committee on Ways and Means which relate to the Federal Old-Age, Survivors' and Disability Insurance System and employment taxes and trust fund operations relating to that system, but shall not include those titles of the Social Security Act involving health benefits, unemployment compensation or welfare matters. The jurisdiction of this subcommittee, more specifically, will include bills and matters involving title II of the Social Security Act, as well as provisions in title VII and title XI of the Act relating to procedure and administration involving the Old-Age, Survivors' and Disability Insurance System.

2. Subcommittee on Health shall consist of 13 Members, 9 of whom shall be Democrats and 4 of whom shall be Republicans.

In general, the jurisdiction of the Subcommittee on Health includes bills and matters which are referred to the Committee on Ways and Means relating to programs which provide payments (from any source) for health care, health delivery systems, or health research. More specifically, the jurisdiction of the Subcommittee on Health includes bills and matters relating to the health care programs of the Social Security Act (including titles V, XI (Part B), XVIII, and XIX thereof) and tax credit (including tax credits where no tax is due) and deduction provisions of the Internal Revenue Code dealing with health insurance premiums and health care costs.

3. Subcommittee on Miscellaneous Revenue Measures shall consist of 7 Members, 5 of whom shall be Democrats and 2 of whom shall be Republicans.

The jurisdiction of this subcommittee shall consist of those miscellaneous revenue measures which, from time to time, shall be referred to it specifically by the Chairman of the full Committee.

4. Subcommittee on Trade shall consist of 13 Members, 9 of whom shall be Democrats and 4 of whom shall be Republicans.

In general, the jurisdiction of the Subcommittee on Trade will include customs and customs administration including tariff structure, classification, valuation of and special rules applying to imports, and special tariff provisions and procedures relating to customs operation affecting exports and imports; import trade matters, including import impact, industry relief from injurious imports, adjustment assistance, unfair import practices including antidumping and countervailing duty provisions, and import policy relating to dependence on foreign sources of supply; reciprocal trade agreements including multilateral and bilateral trade negotiations involving tariff and nontariff trade barriers to and distortions of international trade; international rules, organizations and institutional aspects of international trade agreements; and special trade-related problems involving market access, access to materials in short supply, trade with developing countries, operations of multinational corporations and state trading.

5. Subcommittee on Public Assistance and Unemployment Compensation shall consist of 13 Members, 9 of whom shall be Democrats and 4 of whom shall be Republicans.

In general, the jurisdiction of this subcommittee shall include bills and matters referred to the Committee on Ways and Means affecting those provisions of the Social Security Act relating to welfare matters, i.e., welfare reform, supplemental security income, aid to families with dependent children, social services and child support, and eligibility of welfare recipients for food stamps.

More specifically, the jurisdiction of this subcommittee shall include bills and matters relating to titles I, IV, VI, X, XIV, XVI, XVII, XX and related provisions of titles VII and XI of the Social Security Act.

The jurisdiction of this Subcommittee will also include bills and matters referred to the Committee on Ways and Means which relate to the Federal-State system of unemployment compensation, and the financing thereof, including the programs for extended and emergency benefits.

More specifically, the jurisdiction of this subcommittee shall include all bills and matters pertaining to the programs of unemployment compensation under title III, IX and XII of the Social Security Act, Chapter 23 of the Internal Revenue Code, the Federal-State Extended Unemployment Compensation Act of 1970, the Emergency Unemployment Compensation Act of 1974, and provisions relating thereto.

6. Subcommittee on Oversight shall consist of 10 Members, 7 of whom shall be Democrats and 3 of whom shall be Republicans.

The jurisdiction of this subcommittee shall include all matters within the scope of the Committee but shall be limited to existing law and said oversight jurisdiction shall not be exclusive but shall be concurrent with that of the other subcommittes, and with respect to matters involving the Internal Revenue Code said concurrent jurisdiction shall be shared with the full Committee. Before undertaking any investigation or hearing, the Chairman of the Subcommittee on Oversight shall confer with the Chairman of the full Committee and the Chairman of any other subcommittee having jurisdiction.

RULE 5. SUBCOMMITTEE CHAIRMEN

Democratic members of the Committee shall have the right in order of full committee seniority to bid for vacant subcommittee chairmanships. Such bids shall be subject to approval by a majority of those present and voting in the Democratic caucus of the Committee. If the caucus rejects a subcommittee chairmanship bid, the next senior Democratic Member may bid for the position as in the first instance. No member of the Committee who serves on the Budget Committee shall serve as a chairman of a subcommittee. A subcommittee chairmanship shall not be considered vacant while the subcommittee chairman has taken a leave of absence to serve on the Budget Committee.

RULE 6. EX-OFFICIO MEMBERS OF SUBCOMMITTEES

The Chairman and the ranking minority member may sit as ex-officio members of all subcommittees. They may be counted for purposes of assisting in the establishment of a quorum for a subcommittee. However, their absence shall not count against the establishment of a quorum by the regular members of the subcommittee. Ex-officio members shall not vote in the subcommittee.

RULE 7. REFERENCE OF LEGISLATION AND SUBCOMMITTEE REPORT

Every bill, or other matter (except bills concerning the Internal Revenue Code) referred to the Committee or initiated by the Committee shall be referred by the Chairman of the full Committee to the appropriate subcommittee within 2 weeks from the date of its receipt by the Committee unless by a majority vote of the Democratic members of the full Committee, consideration is to be by the full Committee.

No bill reported by a subcommittee shall be considered by the full Committee unless it has been presented to all members at least 48 hours prior to the meeting, together with a comparison with present law, a section-by-section analysis of the proposed change, and a section-by-section justification.

RULE 8. SUPERVISION, DUTIES OF COMMITTEE STAFFS

The staff of the Committee, both professional and clerical, shall be under the general supervision and direction of the Chairman of the full Committee except as provided in Rule XI Clause 5(d) and Clause 6 of the Rules of the House of Representatives concerning committee expenses and staff. Provided, however, that the chairman of each subcommittee shall be entitled to select and designate at least one professional staff member for said subcommittee and at least one clerical staff member for said subcommittee subject to the approval of a majority of the Democratic members of said full Committee. The ranking minority member shall have the right to designate one staff member. Said staff members shall be compensated at a salary commensurate with the responsibilities prescribed by said subcommittee chairman. Compensation shall be provided out of appropriated amounts—rather than statutory amounts allowed each committee.

RULE 9. COMMITTEE BUDGET AND EXPENSES

The Chairman, in consultation with the majority members of the Committee, shall, for each session of the Congress, prepare a preliminary budget. Such budget shall include necessary amounts for staff personnel, travel, investigation, and other expenses of the Committee. After consultation with the minority members, the Chairman shall include an amount budgeted to minority members for staff under their direction and supervision. The chairman of each subcommittee, in consultation with the majority members thereof, shall prepare a subcommittee budget to include funds for staff, travel, investigations, etc., as may be required for the work of the subcommittee. Thereafter, the Chairman shall combine such proposals into a consolidated committee budget, and shall present the same to the Committee for its approval or other action. The Chairman shall take whatever action is necessary to have the budget as finally approved by the Committee duly authorized by the House. After said budget shall have been adopted, no substantial change shall be made in such budget unless approved by the Committee.

RULE 10. WITNESSES

Witnesses who are scheduled to appear before the Committee shall file with the clerk of the Committee at least 24 hours in advance of his appearance a written statement of his proposed testimony and shall limit his oral presentation to a summary of his statement unless this provision is waived by the Chairman. Witnesses shall provide sufficient copies of his statement to the clerk for distribution to members, staff and news media.

RULE 11. QUESTIONING OF WITNESSES

Committee members may question witnesses only when recognized by the Chairman for that purpose. All members shall be limited to five minutes on the initial round of questioning. In questioning witnesses under the five minute rule, the Chairman and the ranking minority member may be recognized first after which members may be recognized in the order of their arrival at the hearing. Among the members present at the time the hearing is called to order, seniority shall be recognized. In recognizing members to question witnesss, the chairman may take into consideration the ratio of majority members to minority members and the number of majority and minority members present and shall apportion the recogntion for questioning in such a manner as not to disadvantage the members of the majority.

RULE 12. PUBLICATION OF TENTATIVE DECISIONS

A copy of any tentative or final legislative decision made by the Committee on the subject matter under consideration shall be made available to each Member of the Committee by the next meeting of the Committee, or at the latest, by the next day.

RULE 13. AMENDMENT TO PROVISION PREVIOUSLY READ

In the process of reading a bill for amendments, it shall be in order to return to a previously read portion of the bill for the purpose of considering and acting upon amendments thereto. However, if such previously read portion has been adopted by a record vote, the provisions of Rule XVIII of the Rules of the House of Representatives concerning reconsideration shall be applicable except that the term "succeeding day" shall be defined as the next day on which a quorum of the Committee is present.

RULE 14. RECORD VOTES

A record vote on an issue shall be required on the request of a Member which is supported by at least one-fifth of a quorum.

RULE 15. PREVIOUS QUESTION

The Chairman shall not recognize a Member for the purpose of moving the previous question unless the Member has first advised the chair and those Members present that this is the purpose for which recognition is being sought.

RULE 16. RECOMMENDATION FOR APPOINTMENT OF CONFEREES

Whenever in the legislative process it becomes necessary to appoint conferees, the Chairman shall recommend to the Speaker as conferees the names of those members of the subcommittee which handled the legislation in the order of their seniority upon such subcommittee and such other committee and subcommittee members as the Chairman may designate. In making recommendations of minority members as conferees the Chairman shall consult with the ranking minority member of the Committee.
